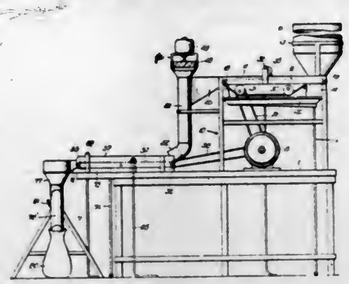
walls and depending from said guide means and extending about the outer surfaces of the hollow bodies, an inlet pipe in one end wall for directing material to be treated on to the lower portion of the conveyor, and an outlet pipe in the other end wall for receiving treated material falling from the upper portion of the conveyor.

2,437,396

BRAKE APPLYING MECHANISM

Charles S. McCarthy, Birmingham, Mich., assignor to American Forging and Socket Company, Pontiac, Mich., a corporation of Michigan

Application December 28, 1944, Serial No. 570,082
13 Claims. (Cl. 74—516)



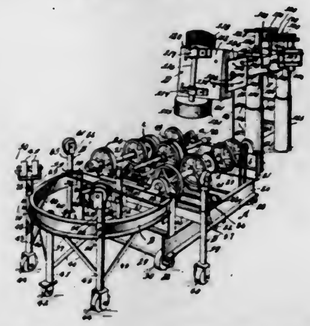
1. In brake operating means an element connected in operative relation to and movable to apply said brakes, a stationary rail, a slide movable lengthwise thereof, a link pivoted at one end to said slide and at its other end to said movable element, a stationary standard, a fulcrum link pivoted at one end to said standard and at its other end to both said element and said first-mentioned link, means for moving said slide and links, whereby to cause said first-mentioned link to change position from an initial position at an acute angle with said rail toward normalcy therewith when said slide is moved in one direction to thereby move said brake applying element.

2,437,397

DELINTING COTTON SEED

Price C. McLemore, Montgomery, Ala., assignor to Delinted Seed Company, a corporation of Delaware

Application September 13, 1944, Serial No. 553,820
5 Claims. (Cl. 47—58)



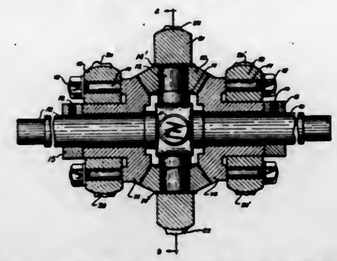
2. The method of delinting cotton seed which comprises causing the seed to travel within a spray zone, spraying gasoline upon the seed while traveling in said spray zone, immediately transferring the wet seed to a burning zone and causing it to travel therein, projecting a flame against the seed while traveling in said burning zone and while still wet with said gasoline so as to burn the lint off the seed, and then projecting a quenching spray on the seed for quenching any residual lint on the seed which may continue to smolder or burn.

2,437,398

BUFFING MACHINE

Oliver W. Mojonnier, River Forest, Ill., assignor to Mojonnier Bros. Co., a corporation of Illinois

Application March 15, 1946, Serial No. 654,623
17 Claims. (Cl. 51—50)



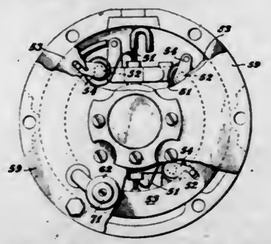
1. A buffing machine comprising a turntable for receiving the work to be buffed, a movable support for said turntable, friction gearing upon said movable support engaging the underside of said turntable near its periphery, a motor for driving said friction gearing, a horizontal support having a projecting end, a positively driven buffing wheel mounted on the projecting end of said support and operative to buff the rotating piece of work upon the turntable, and means for shifting said turntable support relative to said horizontal support and for raising and lowering the latter whereby the buffing wheel is caused to do its work of buffing.

2,437,399

MULTIPLE AIRSCREW DRIVEN FROM A COMMON SHAFT

James F. Morgan, Orlando, Fla.

Application January 25, 1945, Serial No. 574,571
7 Claims. (Cl. 170—135.5)



1. In a multiple air screw, in combination, a rotatable shaft, a spider fixed on said shaft between its ends and having radial arms, beveled gears carried by said arms, a ring gear driven by said beveled gears, blades mounted on said spider, and blades secured to and rotatable by said ring gear.

2,437,400

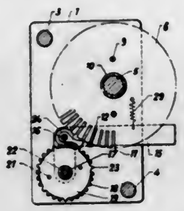
ENGINE STARTING MECHANISM

Romeo M. Nardone, Teaneck, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware

Original application April 8, 1941, Serial No. 387,541, now Patent No. 2,331,077, dated October 5, 1943. Divided and this application September 1, 1943, Serial No. 500,831
4 Claims. (Cl. 171—323)

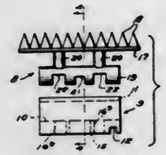
1. In a commutator-type electric starter motor, the combination of a spring for each brush arranged to press its brush toward the commutator, an oscillatable shaft for each spring arranged to vary the stated pressure of its respective brush in accordance with the angular movement of the shaft without lifting the brushes from the commutator, a manually operable means operatively connected with each shaft to turn them all through substantially the same angle upon a manual operation of said means, and a means for retaining the manually operable means in its last-set position.

2,437,401



TIME CONTROLLING MECHANISM

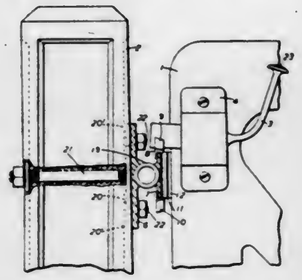
Carl Erik Jean Nilson, Storgatan, Angelholm, Sweden



Application January 7, 1946, Serial No. 639,661
In Sweden January 26, 1945
6 Claims. (Cl. 161—2)

1. In combination, a cylinder rotated at a speed proportional to the elapse of time, a movable

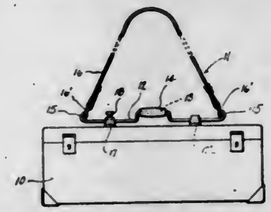
member, a roll rotatably mounted on said member and movable therewith, means for imparting step-wise rotary movement to said roll during rotation of said cylinder, peripheral projections on said roll, and pins settable in selected positions on the periphery of the cylinder and coacting, in predetermined relative positions of the cylinder and roll, with said projections to displace said roll and actuate said movable member.



2,437,402
VIBRATOR ATTACHMENT FOR ELECTRIC RAZOR ACTUATING INSTRUMENTS
Orion R. Palmer, Jr., Beverly Hills, Calif.
Application May 31, 1944, Serial No. 538,141
2 Claims. (Cl. 128—49)

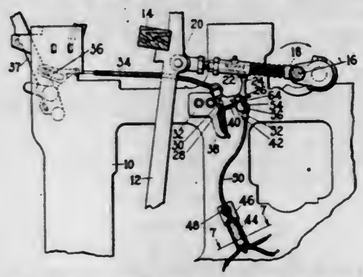
1. A vibrator attachment for mechanical-electric dry razor actuating means comprising in combination, an adapter in the form of a rectangular block having predetermined proportions, the outer half portion of said block having a longitudinal channel opening through opposite transverse ends of the block and forming a slideway, said channel further opening into an entrance slot which, in turn, opens through the outer longitudinal face of said block, the bottom of the block having a keeper notch at one end, a centrally elongated slot, and pin accommodating holes on opposite sides of the ends of said slot, said slot and pin holes opening into said slide-way, and a vibrator head comprising a substantially rectangular plate provided on its outer face with a multiplicity of massaging teats, and provided on the opposite inner face intermediate and inwardly of outer transverse ends with a pair of duplicate spaced parallel right angularly disposed studs, said studs extending into said entrance slot and being provided on their inner ends with a cylindrical reciprocating member, said member being operable in said slide-way, the studs being at right angles to the plate and member and said member being parallel and spaced in relation to the plate, the lower half portion of said cylindrical reciprocating member being provided with a central notch and a pair of larger and keeper notches on opposite sides of said central notch.

2,437,403
FASTENING AND HOLDING DEVICE FOR DOORS, GATES, AND THE LIKE
Charles John Rice, Bexleyheath, England
Application May 6, 1946, Serial No. 667,659
In Great Britain March 25, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 25, 1964
12 Claims. (Cl. 292—340)



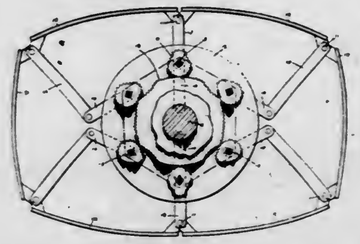
1. A fastening device for cooperation with a latch, said device including a body portion, a keeper for cooperation with the latch concerned and an abutment for the gate for which the device is intended, the said keeper and abutment being mounted for sliding movement with respect to said body portion and means being provided for offering resilient opposition to said sliding movement.

2,437,404
GOLF CLUB GRIPS
Albert P. Robinson, Seattle, Wash.
Application March 17, 1944, Serial No. 526,857
3 Claims. (Cl. 273—81)



3. A golf club comprising a head formed with a ball engaging front face and a shaft having a gripping portion formed with two longitudinally extending and projecting ribs in positions thereon to accommodate, respectively, the gripping of the club by the right hand and by the left hand, each rib positioned to serve as an abutment for the thumb and stabilizer for the fingers of the hand that is applied thereto; said ribs being located on front and back sides of the shaft, that rib at the back side extending along the upper part only of the gripping portion and that rib at the forward side extending along the lower part only of the gripping portion, and each, respectively, permitting substantial shifting of the hand therealong to extend or shorten the grip relative to the club head, and said shaft having a longitudinal flattened area adjacent its upper end in position to seat the heel of the upper hand thereagainst when said hand grips the club for normal use.

2,437,405
CARRYING DEVICE
Albert P. Robinson, Seattle, Wash.
Application December 4, 1945, Serial No. 632,714
6 Claims. (Cl. 224—45)

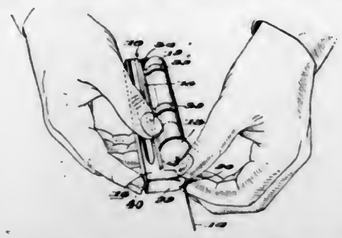


1. A carrying device comprising a resilient bar of substantial length, formed intermediate its ends with a hand grip portion, and a shoulder strap fixed at its ends to the bar ends, and mounting blocks on the bar at opposite sides of the handle portion, and adjustable therealong and adapted for attachment to the object to be carried.

2,437,406
LOOM STOP MOTION
Leonard M. Rogers, Mendon, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application January 2, 1947, Serial No. 719,874
8 Claims. (Cl. 139—353)

1. In a loom stop motion having a source of electric energy, an electric loom-condition detector, a regularly moving actuator, and a normally idle knock-off movable into the path of the actuator to initiate loom stoppage, in combination therewith: electromechanical means to move the knock-off into the path of the actuator, said means comprising electromotor means and mechanical power transmitting means connected to and arranged for actuation by said electromotor means; said electromotor means including a generally upright hollow cylindrical casing having ends the upper one of which is provided with a headed and threaded plug having a centrally located threaded opening, a solenoid coil fitted within the casing with its bore generally upright, a non-magnetic electrically conductive sleeve electrically connected to one end of said coil and arranged partly within the coil bore and extending outwardly from the lower end thereof, a solenoid core including a cylindrical solenoid core body slidably fitted within the sleeve and provided with an axially extending bore and electrical insulation on the lower end of the core body and within the bore thereof, a shunt circuit including contact means comprising a compressible spring and contact in the lower end of said casing and normally compressed by said core body and insulation and arranged to rise into electrical contact with said sleeve to close the shunt circuit when released by upward movement of the core body incident to energization of said coil; said power transmitting means comprising rod means passing through said opening and secured at one of its ends within said core body bore and positioned at its other end to actuate said knock-off, and means including an anchorage and a flexible spiral wire sheath kinked near each end surrounding and guiding said rod means and with its lower kinked end tightly fitted within said opening and with its upper kinked end in the anchorage, said anchorage positioning said rod means for cooperation with said knock-off; and electrical circuit means including connectors connecting said electric energy source, said detector, and said solenoid coil in a series electrical circuit and said shunt circuit in shunt relation to said detector.

2,437,407
TRACK WHEEL FOR VEHICLES
Otto Singer, London, England
Application August 12, 1946, Serial No. 689,936
In Great Britain August 22, 1945
6 Claims. (Cl. 305—6)



1. A track wheel comprising a plurality of hingedly connected track elements, a hub member and a plurality of crank axles supported thereby, a crank on each such axle, a link connecting each such crank to a hinge joint between track elements, and gearing interconnecting such crank axles adapted to maintain pre-determined angular relations between the positions of the respective cranks as they rotate.

2,437,408
BLOOD DRAWING INSTRUMENT
John C. Soet, Grand Rapids, Mich.
Application July 25, 1946, Serial No. 686,250
6 Claims. (Cl. 128—276)

1. A blood drawing instrument comprising an elongated handle having a head portion extending laterally from one end thereof, carriage means reciprocable longitudinally of the handle on the side toward which the head portion extends, a blood vial detachably engaged by the carriage means for reciprocation therewith and having perforable sealing means at the end adjacent the head portion, a needle adapted to perforate said

sealing means and conduct blood into the vial and resilient needle-clamping means cooperable with the head portion of the handle releasably to engage the needle intermediate its length and maintain it against longitudinal movement with

one end in position to perforate the sealing means when said sealing means is reciprocated into engagement therewith, said needle-clamping means and head portion being constructed and arranged to discharge the needle from one side of the head portion.

2,437,409

ACTIVATING AND ELECTROPLATING STAINLESS STEEL

William M. Tucker, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application August 22, 1945, Serial No. 612,138

5 Claims. (Cl. 204—49)

1. The method of activating, and prolonging that activation, of the surface of stainless steel alloys having normally a passive surface which comprises making the alloy the cathode in an electrolytic bath composed essentially of nickel chloride and hydrochloric acid, electrolyzing the bath at a current of 100 to 300 amperes per square foot of cathode area for 2 to 4 minutes followed by a continuation of the electrolyzing at 15 to 50 amperes per square foot of cathode area for 15 to 30 minutes, whereby an active surface is established on the alloy which will persist for a substantially long period.

2,437,410

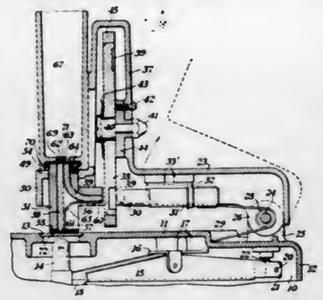
MANUFACTURE OF HYDROXY ACIDS

Karl Heinrich Walter Tuerck, Banstead, and Hans Joachim Lichtenstein, Epsom, England, assignors to The Distillers Company, Limited, Edinburgh, Scotland, a British company

No Drawing. Original application November 20, 1943, Serial No. 511,120, now Patent No. 2,411,700, dated November 26, 1946. Divided and this application June 11, 1946, Serial No. 676,094. In Great Britain April 28, 1942

7 Claims. (Cl. 260—530)

1. A process for the manufacture of alpha-chloro-beta-hydroxy propionic acid which comprises oxidising alpha-chloro-beta-hydroxy propionaldehyde in solution in an organic solvent substantially inert under the conditions of oxidation and not destructive of the said aldehyde and other reaction products of the process by the action of molecular oxygen, at an oxygen pressure greater than the partial pressure of oxygen in air, at a temperature between 40° and 80° C. and in the presence of vanadic acid as oxidation catalyst whilst maintaining intimate contact between said molecular oxygen and said aldehyde to produce a reaction mixture containing alpha-chloro-beta-hydroxy propionic acid.



2,437,411

DENSITOMETER

Clifton M. Tuttle, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application November 8, 1945, Serial No. 627,373

13 Claims. (Cl. 88—14)

1. A densitometer comprising in combination a support, two matched light sources mounted on said support in spaced relation and shielded from one another; a window disposed in the path of the rays of one of said light sources and over which a photographic negative the density of which is to be measured is adapted to be disposed for illumination; a density wedge movable across the path of the rays of the other light source; a first rod of light transmitting material on said support for transmitting the light passing through said negative to a matching field; the light entering end of said rod being disposed adjacent the surface of said negative, the other end of said rod constituting a matching field and having a plane side extending longitudinally of the rod; a second rod of light transmitting material on said support for transmitting the light passing through said density wedge to a matching field; the exit end of said rod having a plane side extending longitudinally of the rod, and constituting a second matching field, said rods so disposed relative to one another that the plane side of the exit ends thereof are in abutting relation but separated to prevent optical contact and the exit ends of the two rods constitute the matching fields and in combination form a comparison field having a line of demarcation which will substantially disappear when the two fields making up the comparison field are matched in intensity by rotation of said density wedge.

2,437,412

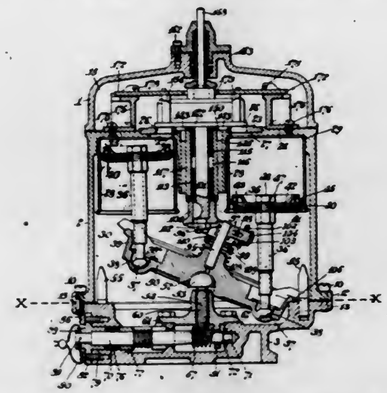
LATENT IMAGE INTENSIFICATION WITH SULFUR DIOXIDE

Walter J. Weyerts and Charles W. Wiederhold, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application July 26, 1945, Serial No. 607,273. In Great Britain November 8, 1944

5 Claims. (Cl. 95—6)

1. The method of increasing the sensitivity of a gelatino-silver halide emulsion layer, which comprises exposing said layer to an actinic light image, immersing the undeveloped layer in an aqueous solution of an alkali metal salt of an oxygen acid of sulfur which produces sulfurous acid in solution, said first-mentioned solution having a pH below about 6 and being free of photographic developing agent and other antioxidant, removing the layer from the solution and storing it in air for an appreciable period of time and then developing an image in said layer.



2,437,413

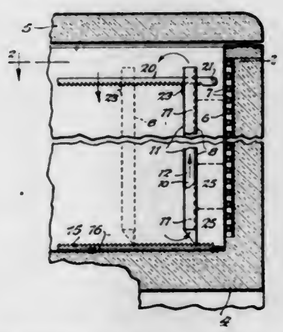
METER WITH CYLINDERS PARALLEL TO THE DRIVE SHAFT

David S. Willson, Muskegon Heights, Mich., assignor to John Wood Manufacturing Company, Inc., Philadelphia, Pa., a corporation of Delaware

Application March 2, 1946, Serial No. 651,447

3 Claims. (Cl. 121—119)

1. A meter body comprising a casing, a plurality of piston cylinders, a hub bearing for a meter crankshaft, a plurality of radial ribs extending from said hub bearing on radii running from the axis of said hub bearing to the centers of said piston cylinders and forming outlet ports around said hub bearing, and bifurcated arcuate arms at the outer ends of said ribs encompassing said piston cylinders.



2,437,414

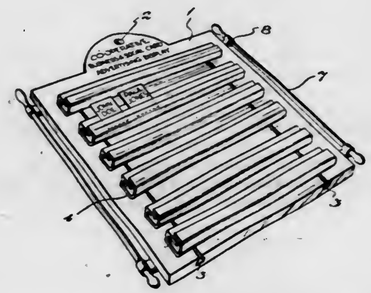
METHOD AND APPARATUS FOR QUICK-FREEZING FOODS

Joseph A. Archbald, Jr., Buffalo, N. Y.

Application May 23, 1945, Serial No. 595,313

9 Claims. (Cl. 62—173)

1. An adjustable partition member for use in a refrigerator cabinet having a wall provided with means through which a refrigerant may be circulated for chilling said wall and the air in said cabinet to a temperature at which articles of food become frozen, said member being made of a heat conducting material and extending substantially parallel to said wall and being out of contact with said refrigerant, and means for adjustably holding said member in position to press an article to be frozen against said wall and to conduct heat from said article through said member only to the air in said cabinet.



2,437,415

COOPERATIVE SOCIAL AND BUSINESS CARD DISPLAY

Clifton V. Berry, New York, N. Y.

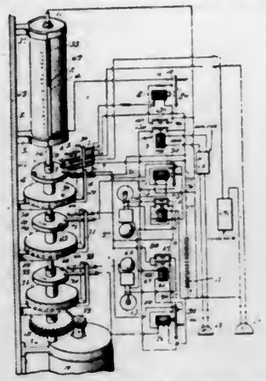
Application October 12, 1943, Serial No. 505,936

5 Claims. (Cl. 40—124)

1. A card displaying device comprising a back board formed with vertically extending channels spaced from each other transversely of the board and having throats of reduced width opening through the front face of the board, card holders extending transversely of said board one above another with portions crossing the channels, posts carried by said card holders and passing through the throats into said channels, and resilient cross strips carried by said posts and disposed within the channels transversely thereof in frictionally gripping engagement with walls of the channels to hold the card holders to the backboard and maintain the card holders in vertically adjusted positions.

2,437,416

DEEP AND SHOAL ALARM



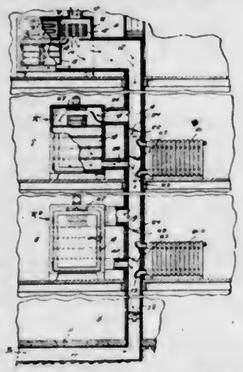
Timothy Franklin Bludworth, Summit, N. J., assignor to National-Simplex-Bludworth, Inc., a corporation of Delaware

Application November 7, 1941, Serial No. 418,135

11 Claims. (Cl. 177—311)

1. In a depth finder, a lamp, a signal transmitter and a receiver adapted to receive the echo from the transmitter, circuits for said lamp, transmitter and receiver, a constantly rotating cam means, contacts actuated by said cam means on the zero point of its rotation to close the circuit to the transmitter and the circuit to the lamp, means to maintain the lamp circuit closed until the echo is received, means to open the lamp circuit when the echo is received, a deep alarm, means to operate the deep alarm when the depth exceeds a predetermined value, and to prevent its operation when the depth is less than said predetermined value, said last named means including a relay, means whereby

the relay when operated continues to be operated until reset, and means controlled by said cam



means to reset the relay when the cam means has almost completed its revolution.

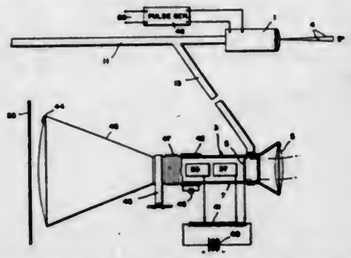
2,43

REFRIGERATING AND CONDITIONING APPARATUS

Esther D. Bookman, New York, N. Y.

Application December 20, 1944, Serial No. 569,029
9 Claims. (Cl. 62—129)

1. A refrigerating and air conditioning apparatus comprising an automatic refrigerator having a refrigerating chamber, a food storage means, a space for the circulation of cold air from the refrigerating chamber about said storage means, and an automatic refrigerating unit including an evaporator arranged in said refrigerating chamber, and a room cooling radiator located outside the refrigerator and having an inlet communicating said space and an outlet communicating with said chamber so as to provide a closed air circulating system from said chamber through said space and said radiator back to said chamber.



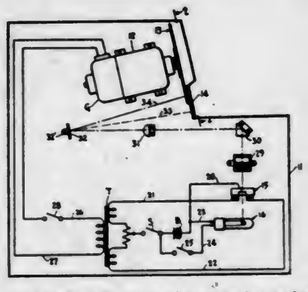
2,437,418

TELEVISION IMAGE TUBE

Madison Cawein, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana

Application May 11, 1945, Serial No. 593,154
10 Claims. (Cl. 178—6.8)

1. A television system for reproducing an image of an object comprising means for generating a light beam and for projecting it upon said object, an image tube comprising a photosensitive member, optical means for projecting the light reflected by said object upon said photosensitive member to develop an electron image representative of the brightness values of the area of the object illuminated by said beam, common means for moving said light beam, said image tube and



said optical means in unison to sweep said object with said light beam in accordance with cyclically recurring scanning patterns and to direct at each instant said optical means towards said illuminated area, a screen, and means for developing a light image on said screen composed of extended adjacent image areas, each being representative of an instantaneous electron image.

2,437,419

STROBOSCOPIC LIGHT VALVE CHECKING MACHINE

James Patrick Corcoran, West Los Angeles, Calif., assignor to Twentieth Century-Fox Film Corporation, Los Angeles, Calif., a corporation of New York

Application July 12, 1944, Serial No. 544,525
10 Claims. (Cl. 88—14)

1. In a machine for checking light valves having vibratory ribbons with a light slit therebetween, means for projecting an image of said light valve slit onto a viewing screen, means for vibrating the ribbons of said valve, and means for stroboscopically scanning said image lengthwise of said slit in timed relation to the vibrations of said ribbons.

2,437,420

VULCANIZABLE COPOLYMERS OF A VINYL ARYL COMPOUND, BUTADIENE, AND VINYL ETHERS

Gaetano F. D'Alelio, Northampton, Mass., assignor to Pro-phy-lac-tic Brush Company, Northampton, Mass., a corporation of Delaware

No Drawing. Application February 25, 1944, Serial No. 523,899
7 Claims. (Cl. 260—86.5)

1. A composition comprising the polymerization product of a mixture comprising 30 to 90 parts of a compound having the structure $CH_2{=}CR'Z$ where R' is selected from the group consisting of hydrogen and a methyl radical and Z is an aryl radical, 2 to 70 parts of a butadiene-1,3 having the formula

$$CH_2{=}\underset{R}{C}{-}\underset{R}{C}{=}CH_2$$

where R is a radical selected from the group consisting of hydrogen, alkyl, aryl, and cycloaliphatic radicals which are free of ethylenic unsaturation, and 2 to 40 parts of a monovinyl ether having the structure $CH_2{=}CHOR''$ where R'' is a hydrocarbon radical having not more than 6 carbon atoms and which is free of ethylenic and acetylenic unsaturation, the major component of said mixture being selected from the group consisting of said butadiene and the compound having the structure $CH_2{=}CR'Z$.

2,437,421

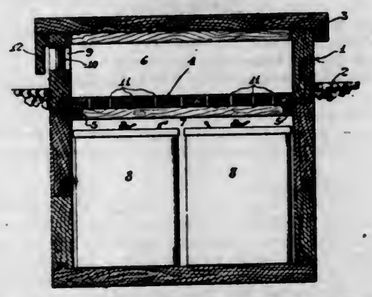
VULCANIZABLE COPOLYMERS OF ACRYLONITRILE, BUTADIENE, AND VINYL ETHERS

Gaetano F. D'Alelio, Northampton, Mass., assignor to Pro-phy-lac-tic Brush Company, Northampton, Mass., a corporation of Delaware

No Drawing. Application February 25, 1944, Serial No. 523,900
7 Claims. (Cl. 260—84.5)

1. A composition comprising the polymerization product of a mixture comprising 30 to 90 parts of a compound selected from the group consisting of acrylonitrile and methacrylonitrile, 2 to 70 parts of a butadiene-1,3 having the formula

$$CH_2{=}\underset{R}{C}{-}\underset{R}{C}{=}CH_2$$



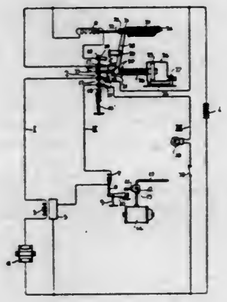
where R is a radical selected from the group consisting of hydrogen, alkyl, aryl, and cycloaliphatic radicals which are free of ethylenic unsaturation, and 2 to 40 parts of a monovinyl ether having the structure $CH_2{=}CHOR'$ where R' is a hydrocarbon radical having not more than 6 carbon atoms and which is free of ethylenic and acetylenic unsaturation, the major component of said mixture being selected from the group consisting of said acrylonitriles and said butadiene.

2,437,422

PROTECTIVE GAS-PERMEABLE CONTAINER FOR AIR-DEPOLARIZED CELLS

Le Roy S. Dunham, East Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey

Application August 24, 1944, Serial No. 551,023
7 Claims. (Cl. 136—172)



1. In combination, an air-depolarized cell, and a substantially-closed protective housing enclosing said cell and having a wall portion of porous material, said wall portion having such area, thickness and porosity as to pass oxygen of the air into said housing by molecular diffusion as the oxygen in the housing is consumed by said cell.

2,437,423

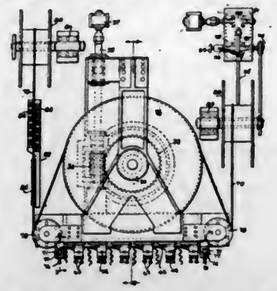
BRAKE CONTROL DEVICE

Carolus L. Eksergian, Detroit, Mich., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania

Application March 12, 1945, Serial No. 582,345
4 Claims. (Cl. 188—181)

1. In a brake control device, a brake cylinder having means for supplying it with pressure fluid under an operator's control, means responsive to wheel slip for reducing the brake cylinder pressure to prevent the wheel from reaching a sliding state and holding said pressure reduced a predetermined time sufficient to allow the wheel to regain substantially its normal speed after slipping, said means including a common source of electrical energy and primary and secondary circuits including said source, the primary circuit being adapted to be closed incident to wheel slip, means actuated by the closing of said primary circuit to close said secondary circuit and to hold it closed said predetermined time, safety means comprising a cut-out switch operative to open both said circuits, means for delaying the opening of said switch after the closure of said secondary circuit for a period appreciably longer than said predetermined time, and means for holding said cut-out switch open with the wheel slip responsive means rendered inoperative to control the brake cylinder pressure until the cut-out switch is manually restored to closed position at any time after the condition that caused the prolonged closure of the secondary circuit has been corrected.

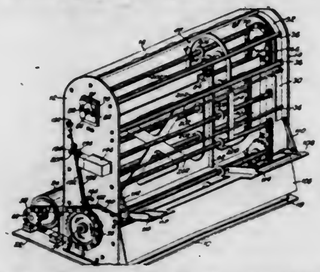
2,437,424



STEEL WOOL MACHINE

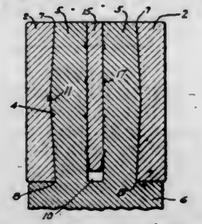
George B. Galvin, Springfield, Ohio

Application January 21, 1943, Serial No. 473,131
8 Claims. (Cl. 29—4.5)



1. A cutting tool for a wool producing machine which consists of a base member, a tool holder, a support block, a support shaft for said support block, means adjustably mounting said support block on said shaft for moving the support block normal to the shaft and substantially parallel

thereto, means for rotatably adjusting said support block upon said shaft, and means adjustably

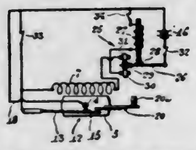


mounting said tool holder upon said support block for rotation at right angles to said shaft.

2,437,425
AMMUNITION CONTAINER
William V. Goodhue, Ipswich, and James P. Norton, Beverly, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application December 19, 1945, Serial No. 635,867
3 Claims. (Cl. 312—96)

1. An ammunition container comprising a casing having a delivery opening, means for supporting a round outside said opening and accessible to a gunner, power means for conveying successive rounds within said casing and through said opening, and a trigger mechanism operated by the weight of a round on said supporting means for terminating the operation of said power means, the said container forming a transportable and protective ammunition storage unit.

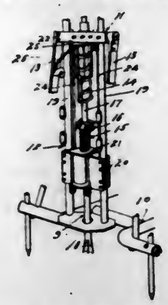
2,437,426
TOOL HANDLE FASTENING
George R. Hess, Washington, D. C.
Application April 18, 1947, Serial No. 742,414
7 Claims. (Cl. 306—33)



1. A tool handle fastening comprising a tool head provided with a handle-receiving aperture having substantially concave facing wall surfaces, a handle having an end portion engageable with said aperture, said end portion formed with substantially flat outer surfaces and further formed with a kerf having substantially convex facing wall surfaces, and wedging means engageable with said kerf to displace the material of said handle laterally whereby to cause a flattening of the convex surfaces of said kerf and thereby to bow the flat outer surfaces of the handle into the concave wall portions of the tool head aperture.

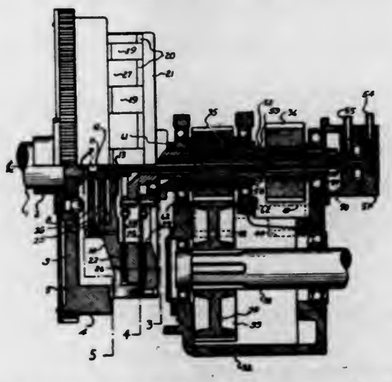
2,437,427
INSECTICIDAL COMPOSITIONS COMPRISING A PHENYL ESTER OF CAPRYLPHENOXYACETIC ACID
William F. Hester, Drexel Hill, and W E Craig, Philadelphia, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application June 14, 1945, Serial No. 599,509
12 Claims. (Cl. 167—30)

1. An insecticidal composition comprising as a toxic agent a water-insoluble, organic solvent-soluble phenyl caprylphenoxyacetate dispersed in a carrier.



2,437,428
ELECTRIC MOTOR SYSTEM AND METHOD OF CONTROLLING THE SAME
John Hornbostel, Glen Ridge, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application May 19, 1943, Serial No. 487,829
10 Claims. (Cl. 318—330)

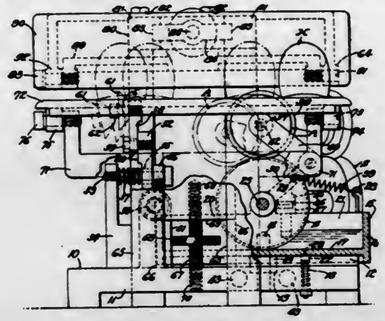
1. In a motor system including a field coil and a rotor: the combination of a field circuit for connecting said coil to a source of electric power; a first circuit interrupter serially included in said field circuit and operated according to the positioning of said rotor; and a second circuit interrupter also serially included in said field circuit and time-controlled to operate at a predetermined frequency.



2,437,429
BUFFER SPRING DEVICE FOR DRILLING MACHINES
Albert Hossfeld, Winona, Minn.; The Merchants National Bank of Winona, administrator of said Albert Hossfeld, deceased
Application January 19, 1944, Serial No. 519,071
7 Claims. (Cl. 267—1)

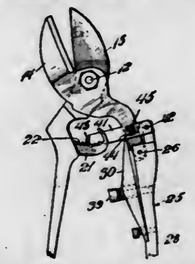
1. In a device of the class described, a structure having a spring base, means for reciprocating the structure at high speed, a sleeve extending through the spring base for relative endwise movement, said sleeve having at one end a spring seat and at its other end portion a plurality of parallel serrations, a sectional serrated collar applied to the serrated end portion of the sleeve and having serrations matching the serrations on the sleeve, the sections of the serrated collar being separable by relative lateral movement, means holding the sectional collar contracted onto the sleeve, a spring compressed between the spring base and the spring seat and yieldingly holding the collar in engagement with the spring base, and a tool extending through the sleeve for relative reciprocation and which is thrown to its

work by the reciprocating structure, said tool during movement to its work engaging the sleeve, compressing the spring and moving the collar away from the spring base, the expansion of the spring returning the tool from its work.



2,437,430
HYDRAULIC CLUTCH CONTROL
Frank Lendrum Lawrence, Vancouver, British Columbia, Canada
Application October 29, 1945, Serial No. 625,189
5 Claims. (Cl. 192—86)

1. A clutch mechanism comprising a flywheel having a hub, said hub having a piston intermediate its length, a cylinder slidable upon the hub and enclosing the piston, a shaft aligned with the hub, said shaft having a driving element non-rotatably secured thereto, a clutch plate secured to said shaft, a flange having a clutch face carried by the flywheel in proximity to the clutch plate, a flange extending from the cylinder non-rotatively coupled to the flywheel, and means for delivering fluid under pressure to the cylinder to move the cylinder flange to engage the clutch plate and drive the shaft.



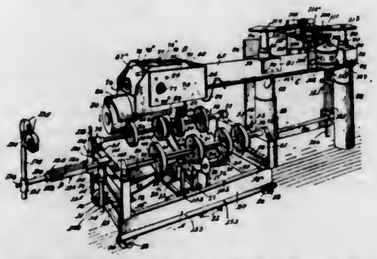
2,437,431
INKING AND EDGE SETTING MACHINE
George W. Liberty, South Lynnfield, Mass., assignor to National Development Company, Lynn, Mass., a corporation of Massachusetts
Application October 5, 1945, Serial No. 620,576
9 Claims. (Cl. 12—42)

1. A machine for finishing a concave edge portion of a shoe heel, such as the concave edge portion of a toplift attached to a shoe heel, comprising means for guiding the movement of said heel to cause said concave portion to travel along a predetermined path, means for applying ink to said edge portion, an edge setting iron, means for supporting the ink applying means and said iron for movement toward and from spaced positions projecting into said path, and resilient means tending to move the ink applying means and said

iron toward their respective spaced positions projecting into said path whereby when said heel is moved in one direction along said path the ink applying means is moved away from its position projecting into said path and then in engagement with said edge portion to ink the latter and then said iron is moved away from its position projecting into said path and then in engagement with said edge portion to set it.

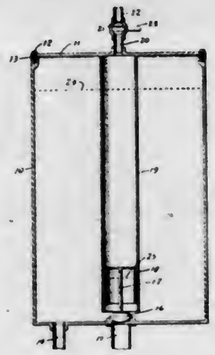
2,437,432
TOOL
Rene Martines, Cranston, R. I.
Application October 1, 1946, Serial No. 700,438
5 Claims. (Cl. 30—252)

1. In a device of the class described, a pair of members having work engaging jaws at one end thereof, means connecting said members together for movement toward and from each other, one of said members being shorter than the other member, a lever, a pivot mounting said lever intermediate its ends on the shorter member and extending from the shorter member into opposed relation with the longer member to form a hand grip on one side of the pivot and a power arm on the other side of the pivot, resilient means engaging the lever and shorter member and holding said lever so as to move as one with the shorter member until a predetermined resistance is met whereupon the lever will then swing on its pivot, means for transmitting movement of said lever about its pivot to said longer member including a link extending between said power arm and longer member and pivoted to one of them and



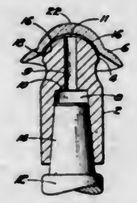
including means having steps fixed to the other of them and so arranged that said link will clear said steps and means responsive to movement of said lever on its pivot to swing said link into engagement into said steps for transmitting movement from said arm to said longer member.

2,437,433
CABLE BENDING PLIERS
Eric P. McNair, Mattoon, Ill.
Application April 12, 1946, Serial No. 661,580
1 Claim. (Cl. 81—15)



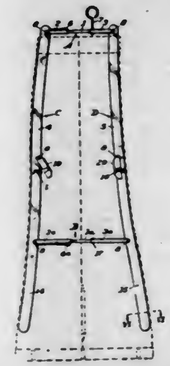
In a tool of the pivoted, cross-lever type, pivotal means about which the levers pivot, said pivotal means fixedly attached to one lever and journalled in the other lever to provide for pivoting, each of said levers having a shoulder adjacent the pivot point, a first U-shaped hook in which one side of the U is attached to said pivotal means and extends outwardly from the shoulder of the other lever, the other open side of said hook extending inwardly toward the shoulder of said other lever, the other open side of said hook being shorter than the side attached to the pivot thus providing a gap between the open side of the U-shaped hook and the outer face of said other lever, a similar second hook attached to the outer face of the shoulder portion of said other lever in parallel alignment with and faced in the same direction as said first hook so that an object may be readily inserted in both hooks when the tool is in closed position and the object thereby broken or bent when said tool is opened to the open position.

2,437,434
BUFFING MACHINE
Oliver W. Mojonnier, River Forest, Ill., assignor to Mojonnier Bros. Co., a corporation of Illinois
Application August 20, 1945, Serial No. 611,545
21 Claims. (Cl. 51—103)



18. A device of the class described comprising a movable main supporting frame, a plurality of rotary elements upon said frame for engaging the work, said elements being mounted for rotation upon parallel axes, means mounted upon said main frame operable to rotate the work resting upon said elements, a pair of fixed vertical posts, vertical supports guided upon said posts, a horizontal support fixed to said vertical supports and having a free projecting end, screw and nut mechanism for raising and lowering said vertical supports and said horizontal support with reference to said posts, a positively driven buffing wheel mounted on the free end of said horizontal support, and means for shifting said main frame toward and from said posts.

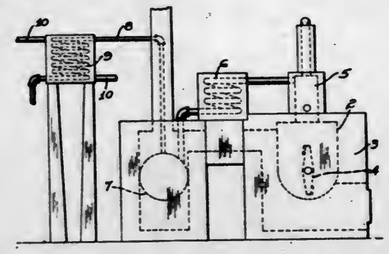
2,437,435
FLUSH TANK
Stanley H. Moyer, San Francisco, Calif., and Lawrence R. Jensen, Salt Lake City, Utah
Application May 28, 1945, Serial No. 596,332
6 Claims. (Cl. 4—28)



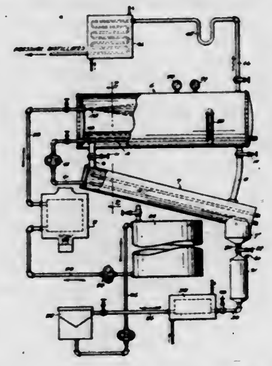
1. A flush tank comprising a fluid tight receptacle, means connecting said receptacle with a source of liquid under pressure, a discharge opening in said receptacle, a valve normally closing said opening, a float normally tending to open said valve but prevented from floating by pressure within the receptacle, and means for venting the receptacle to atmosphere to permit the float to open said valve.

2,437,436
METHOD FOR MAKING PLASTIC CONTACT LENSES
John E. Mullen, Cambridge, Mass.
Application December 15, 1947, Serial No. 791,851
6 Claims. (Cl. 51—284)

1. The method of carrying out various operations such as machining, polishing and other operational procedures on a plastic contact lens having a corneal portion and a scleral portion to provide the required final corneal lens power without having to dismount or otherwise disturb the mounting of said plastic contact lens which comprises attaching the underside of the contact lens by means of adhesion to a lens mount having a transparent area extending axially therethrough so as to visually expose the central part at least of said corneal portion for examination through said mount, mounting the attached contact lens and mount for rotation on rotating means and performing an operational procedure on said corneal portion of the contact lens, removing the said attached contact lens and mount from the rotating means, examining the optical properties of said corneal portion of the contact lens through said transparent area without dismounting the contact lens from its mount and continuing the cycle of operational procedures and testing until the required final lens power is obtained.



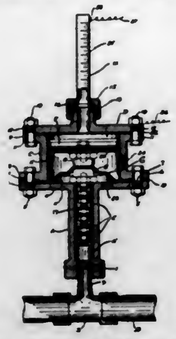
2,437,437
TROUSERS HANGER AND CREASER
Hulda C. Nelson, Pittsburgh, Pa.
Application May 24, 1946, Serial No. 672,131
1 Claim. (Cl. 223—63)



A crease-forming and restoring hanger for trousers comprising a pair of side members of thin flat form transversely hinged intermediate their ends, adjustable extensible means connecting the side members above and below the hinges, a locking means for holding the side members in an extended rigid position, said locking means comprising a slideable clamp pivotally secured on each of the side members at one side of its hinge thereof, said pivotal clamp having a central cut-out portion for spanning said hinge and end clamping portions for slidable engagement with the inner edge portions of said side members on both sides of said hinge.

2,437,438
PROCESS OF PRODUCING GASOLINE AND OTHER HYDROCARBONS FROM COCONUT OIL AND RELATED ANIMAL AND VEGETABLE OILS AND FATS
Sergius Petroff and Anthony E. Prats, Manila, P. I.
Application May 3, 1946, Serial No. 667,010
1 Claim. (Cl. 260—666)

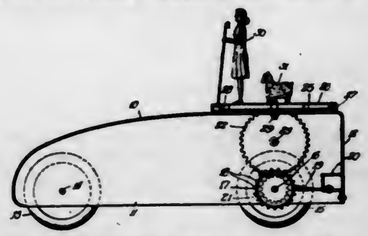
A process of producing hydrocarbons, which comprises adding to a lime soap a high boiling point hydrocarbon oil and an excess of slack lime over the stoichiometric quantity required to combine with the lime soap and produce by a double decomposition reaction hydrocarbons and calcium carbonate, heating the admixture to a temperature sufficient to produce such a double decomposition reaction, while vaporizing and removing the produced hydrocarbons and continuously stirring the reacting mixture during such reaction.



2,437,439
ART OF CONVERTING PETROLEUM CRUDES
Elmer H. Records, Tacoma, Wash.
Application October 13, 1943, Serial No. 506,109
9 Claims. (Cl. 196—59)

1. The new method of treating petroleum crudes to substantially eliminate destructive coking in heat-and-pressure conversion into products of distillation, and which consists in charging a still with a stock of the crude hydrocarbons to approximately three-elevenths of the volumetric capacity, passing the stock from the still into the lower end of a subjacent inclined retort of wide expanse and within the retort subjecting the stock to heat of internal origination removed a material distance below the ceiling wall of the retort and of sufficient intensity to boil the heaviest ends, giving access by thermal movement for return of evolved vapors from the upper limit of the retort into the still, passing off and condensing the vapors collecting in the vapor dome described above the liquid level of the still, periodically decanting heavy ends and commingled sediment from the lower limit of the retort, filtering the body so removed, and returning the filtrate to the still and additionally supplying replenishing crude to the latter as necessary to maintain the liquid level within the still, light liquid ends being pumped from the retort and, as an aspirator, pressure-injected into the still over the point of delivery of the vapors thereto for accelerating the velocity of travel of vapors passing from the retort into the still.

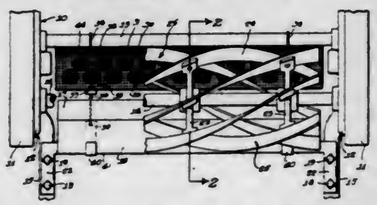
2,437,440
BALANCED PRESSURE GAGE AND SWITCH
Duncan L. Rigden, Oakland, Calif.
Application January 4, 1945, Serial No. 571,245
5 Claims. (Cl. 200—81.6)



1. A balanced visual pressure gage comprising a cylinder adapted for communication with a line that carries a fluid medium under pressure, a piston mounted in the cylinder and being moved in accordance with the varying pressures of the medium in the line, a second cylinder communicating with the first cylinder, a second piston slidably mounted in the second cylinder, a flexible diaphragm separating the two cylinders and being contacted by both pistons, a transparent calibrated tube communicating with the second cylinder, and visual pressure indicating means mounted in the tube and second cylinder and actuated by the movement of the second piston for indicating the rise and fall of pressure in the line at all times, said means comprising mercury constituting a resisting force to counterbalance the pressure of the fluid medium.

2,437,441
COLORING METAL SURFACES
Linnaeus Joslyn Rogers, Toronto, Ontario, Canada, assignor to Associated Chemical Company of Canada Limited, Toronto, Ontario, Canada, a company of Canada
No Drawing. Application February 14, 1945, Serial No. 577,928
4 Claims. (Cl. 148—6.15)

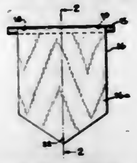
1. An aqueous solution for use in a bath for coloring copper or copper alloy surfaces consisting essentially of sodium chlorite and a hydroxide selected from the group consisting of sodium hydroxide and potassium hydroxide, and a phosphate salt selected from the group consisting of trisodium phosphate, tripotassium phosphate, sodium tetraphosphate, potassium tetraphosphate, hexametasodium phosphate, hexametapotassium phosphate, pyrophosphates and polyphosphates, the concentration of the hydroxide and sodium chlorite being between: sodium chlorite—5. g./l., hydroxide—10 g./l. to sodium chlorite—saturated solution, hydroxide—1,000 g./l. and the phosphate salt being present within the range of from about 0.5% to about 3% by weight of the chlorite and hydroxide.



2,437,442
TOY
Eugene S. Siwiec, Chicago, Ill.
Application April 3, 1946, Serial No. 660,459
1 Claim. (Cl. 46—111)

A toy vehicle comprising a body including a top wall, a pair of spaced side walls and a rear wall, an axle set within said side walls, wheels carried by said axle for imparting rotary movement to said axle when said wheels rotate, a cylinder rigidly carried by said axle in a coaxial relation therewith, a plurality of radial projections extending from said cylinder, a plurality of tonal reeds, a sounding box affixed to said rear wall, one end of said reeds being disposed adjacent said cylinder for engagement with said projections for imparting vibratory movement to said

reeds, a pinion rigidly affixed to said axle, a gear meshing with said pinion, a platform disposed above said top wall for rotary movement thereupon, said gear extending through said top wall and engaging said platform for imparting rotary movement to the latter, and figures rigidly carried by said platform, said figures being adapted to rotate with said platform in simulation of the musical effects engendered by said sounding box.



2,437,443
SHARPENING DEVICE FOR LAWN MOWERS
Albert Sporket, Detroit, Mich.
Application October 18, 1945, Serial No. 623,112
7 Claims. (Cl. 51—250)

1. A sharpening device for lawn-mowers having a bladed cutting reel, a cutter bar and a tie rod interconnecting the end plates and wheels respectively, comprising an elongated member of concavely curved cross-section engageable with the cutting reel blades and having pockets therein, loose abrasive means mounted in said pockets, and connectors extending between said member and said lawn-mower for attaching said member with said means in contacting engagement with said reel blades.

2,437,444
BANNER OR PENNANT TYPE OF DISPLAY DEVICE
Jesse Srofe, Cincinnati, Ohio
Application February 6, 1946, Serial No. 645,803
3 Claims. (Cl. 40—125)

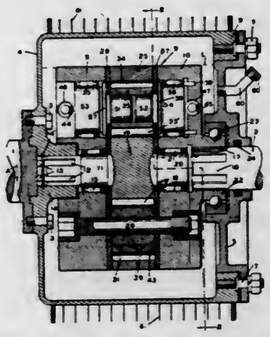
1. A display banner comprising a half-round mounting stick, a banner attached to the flat portion of said stick, spaced adhesive mounting means on the flat portion of said stick, means for rolling said banner on said stick comprising a wrapping stick adapted to be placed between said adhesive members and against the flat portion of said mounting stick, and an adhesive mounting means at the opposite end of said banner from said mounting stick for securing

said banner in rolled position on said mounting and wrapping sticks and for securing the outer end of said banner when unwrapped to the mounting surface.

2,437,445
SOUND REVERBERATING DEVICE
John David Stack, Van Nuys, Calif., assignor to Twentieth Century-Fox Film Corporation, Los Angeles, Calif., a corporation of New York
Application November 7, 1944, Serial No. 562,315
15 Claims. (Cl. 178—44)

1. A reverberating device of the character described comprising a pair of spaced substantially parallel helically wound springs, fulcrumed supports connecting the adjacent ends of said springs to form a closed metallic oscillatory circuit, an electro-mechanical transducer for oscillating said circuit, and a mechanico-electrical transducer for converting said oscillations into electrical impulses.

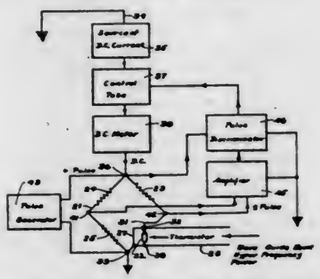
2,437,446
GAS PULSATION DAMPENING APPARATUS
Foster M. Stephens, Los Angeles, Calif., assignor to The Fluor Corporation, Ltd., Los Angeles, Calif., a corporation of California
Application July 26, 1944, Serial No. 546,657
10 Claims. (Cl. 181—48)



1. Apparatus for dampening pulsations created in a gas stream by a compressor, comprising an elongated shell containing a pair of relatively large chambers one having a gas inlet and the other a gas outlet, a pipe forming a relatively restricted and elongated induction passage of smaller area than said inlet and outlet interconnecting said chambers for series flow of the gas therethrough, the length of the pipe being greater than the shell length and the pipe containing a correspondingly extended pressure transmitting body of the gas.

2,437,447
FLY CATCHING DEVICE
John C. Tarbell, Springfield, Mass.
Application March 5, 1945, Serial No. 580,992
4 Claims. (Cl. 43—136)

3. As a new article of manufacture a fly catcher comprising in combination, a relatively rigid head member in the form of an annulus having an opening therethrough, a handle member having a manually engageable outer end portion and an inner portion, relatively yieldable connecting means between the inner portion of the handle member and said head member whereby said head and handle members are relatively yieldable, a cup at one side of said head member having an open mouth over the opening therethrough and having side and bottom walls, and means for releasably engaging said cup provided on said one side of said head, said releasably engaging means including members secured to said one side of said head member having portions thereof spaced from said head member forming therewith slots, and tabs extending outwardly radially from the side wall of said cup receivable in said slots, the inner surfaces of the walls of the cup being provided with a tacky adhesive.



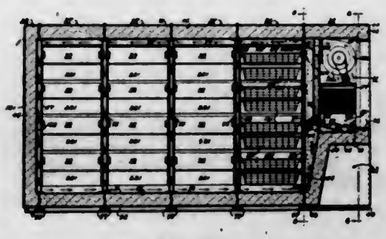
2,437,448
HYDRAULIC TRANSMISSION
Scott V. E. Taylor, Cleveland, Ohio
Application December 1, 1943, Serial No. 512,464
16 Claims. (Cl. 192—61)

1. In a hydraulic transmission, a driving member, a driven member, a rotor connected to the driven member, a gear pump associated with the rotor and comprising meshing gears journaled in the rotor and positioned within the outlines thereof, one of said gears constituting a driving

gear having an axis coinciding with the rotor axis, means for driving one of the gears from the driving member, said rotor being provided with an inlet passage from the exterior of the rotor to the pump and an exhaust passage from the pump to the exterior of the rotor and capable of discharging the liquid from the rotor at an angle to a radial line of the rotor so chosen that the reaction force produced by the discharged liquid will act on the rotor at a distance from its axis substantially greater than the pitch radius of the driving gear, and automatically operable means for maintaining a substantially constant liquid pressure in the exhaust passage.

2,437,449
REFLEX THERMAL ELECTRIC METER
Millard E. Ames, Jr., Philadelphia, and David E. Sunstein, Elkins Park, Pa., assignors to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application August 3, 1944, Serial No. 547,936
8 Claims. (Cl. 171—95)

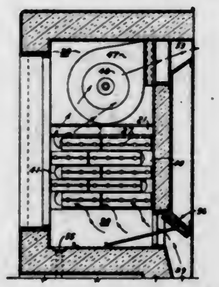
1. In a system for measuring high frequency power; a transmission line for conducting said power; a thermistor connected in said transmission line for absorbing power therefrom; a measuring device, a source of direct current energy for operating said measuring device, a source of pulsating current and means including circuit connections from said thermistor to said source of direct current power and operated by said source of pulsating current for automatically varying said power delivered by said direct current energy to said measuring device in accordance with the variations in power absorptions of said thermistor.



2,437,450
AROMATIC MERCURY ALCOHOLATES
Carl N. Andersen, Pleasantville, N. Y., assignor, by mesne assignments, to Gallowhur Chemical Corporation, a corporation of New York
No Drawing. Application April 14, 1945, Serial No. 588,417
19 Claims. (Cl. 260—410.5)

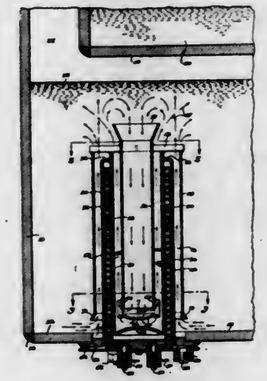
1. A compound of the general formula

$$(RHg)_xR_1$$



in which R represents an aromatic structure to a carbon atom of which the mercury is directly attached and in which none of the carbon atoms has direct linkage with any element other than hydrogen, carbon and mercury, in which x is a small whole number, and in which R_1 represents an oxygenated organic radical containing at least one acyl group attached thereto through an oxygen in an ester linkage, which radical is linked to the RHg group through the replacement of an hydroxyl hydrogen atom.

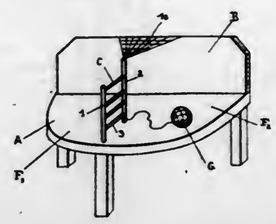
2,437,451
LOCKER REFRIGERATING SYSTEM
William McKinley Baird, Chicago, Ill.
Application April 27, 1944, Serial No. 532,977
10 Claims. (62—102)



1. A refrigerating system comprising a cabinet, a plurality of tiers of imperforate drawers positioned within said cabinet, each drawer adapted to be slidably withdrawn from and returned into said cabinet from the exterior thereof, each of said tiers of drawers spaced from the ends of the cabinet and the adjacent tier at their sides and backs to provide vertical passageways, each drawer having a front panel, and a container portion spacedly attached thereto to provide a vertical passageway in front of the container portion, the top drawers of each tier spaced from the top of said cabinet to provide a horizontal top passageway, the bottom drawers of each tier spaced from the bottom of said cabinet to provide a horizontal bottom passageway, and a primary refrigerant section within said cabinet for cooling air for use as a secondary refrigerant and having means for forcing the secondary refrigerant into said top horizontal passageway, down through said vertical passageways, and thence into said bottom horizontal passageway, said cabinet having an exit passageway leading from said bottom horizontal passageway back to said primary refrigerant section.

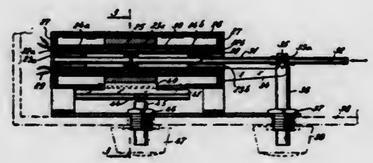
2,437,452
FORCED AIR CIRCUIT REFRIGERATING APPARATUS
William McKinley Baird, Chicago, Ill.
Application June 12, 1944, Serial No. 539,961
3 Claims. (Cl. 62—102)

1. In an insulated chamber, a plurality of primary refrigerant conduits, and a plurality of separate individual cold conducting fins, each of said fins having a horizontal face, and substantially at right angles thereto a vertical face, each horizontal face having a raised portion, and each vertical face having an opening at the inner end of said raised portion, each fin mounted on a conduit with the conduit surrounded by and extending along said raised portion and extending through said opening, each horizontal face also having an opening therein for drainage.



2,437,453
ELECTRICAL HEATING APPARATUS FOR LIQUIDS
Robert C. Belgau, Detroit, Mich.
Application July 9, 1945, Serial No. 603,776
9 Claims. (Cl. 219—38)

1. Heating apparatus for liquids, comprising a liquid container having an aperture in a wall thereof, a cylindrical member extending within the container and having at its lower portion a radially extending flange secured to the periphery of said aperture, a second cylindrical member within said first mentioned cylindrical member and spaced therefrom to form a cylindrical recess, means joining the upper ends of the cylindrical members in liquid-tight relation, a cylindrical electrical resistance element slidably seated in said recess, a cylindrical conduit positioned within the second mentioned cylindrical member and spaced therefrom and from said wall to permit circulation of liquid therebetween, and a cylindrical conduit positioned outside of the first mentioned cylindrical member and spaced therefrom and from said wall to permit circulation of liquid therebetween.

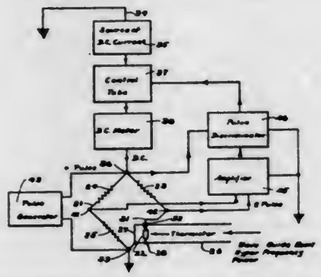


2,437,454
TETHERED BALL GAME APPARATUS
René Bergerioux, Saint-Cloud, France
Application December 29, 1939, Serial No. 311,513
In France January 7, 1939
Section 3, Public Law 690, August 8, 1946
Patent expires January 7, 1959
1 Claim. (Cl. 272—98)

A game of ball, which comprises in combination a platform, a pediment being arranged along the longest edge of the said platform, a separating unrebound partition being arranged in the shortest direction of said platform and spaced apart some distance from said pediment, in such a manner as to divide the platform into two compartments, communicating with each other through the opening between said pediment and said separating partition, and a horizontal triangular net fixed at a certain height

to said separating partition and to said pediment.

2,437,455
LOCATOR
Samuel Berman, Richmond Hill, N. Y., assignor to Waugh Equipment Company, New York, N. Y., a corporation of Maine
Application April 13, 1943, Serial No. 482,860
7 Claims. (Cl. 171—119)



1. Apparatus for detecting the presence of metallic bodies, which comprises a detecting transformer including a primary and a secondary winding in inductive relation, a balancing transformer including a primary and a secondary winding in inductive relation, the primaries of the transformers being connected in series and the secondaries being connected in series but opposed, and a control device including a primary winding connected to a source of energy, a pair of secondary windings in inductive relation to the control primary, said control secondaries being connected in series with the transformer secondaries and with one another but in opposed relation to one another, and means movable within the field of the control primary for varying the effect of said field on the respective control secondaries.

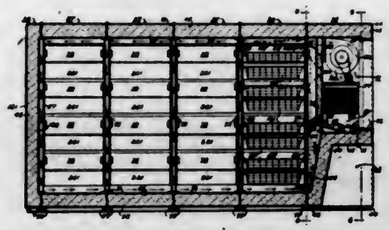
2,437,456
METHOD OF AND APPARATUS FOR TREATING WELLS
Albert G. Bodine, Jr., Burbank, Calif., assignor to the Calpat Corporation, Los Angeles, Calif., a corporation of California
Application May 14, 1941, Serial No. 393,352
9 Claims. (Cl. 166—20)

1. The method of dislodging material clogging an opening through which it is desired to conduct a fluid, which method includes the step of: transmitting sound waves under conditions of resonance through a body of liquid contacting such material; and adjusting the sound waves within said body to bring a zone of maximum pressure variation at the opening to be cleaned thereby to

gear having an axis coinciding with the rotor axis, means for driving one of the gears from the driving member, said rotor being provided with an inlet passage from the exterior of the rotor to the pump and an exhaust passage from the pump to the exterior of the rotor and capable of discharging the liquid from the rotor at an angle to a radial line of the rotor so chosen that the reaction force produced by the discharged liquid will act on the rotor at a distance from its axis substantially greater than the pitch radius of the driving gear, and automatically operable means for maintaining a substantially constant liquid pressure in the exhaust passage.

2,437,449
REFLEX THERMAL ELECTRIC METER
Millard E. Ames, Jr., Philadelphia, and David E. Sunstein, Elkins Park, Pa., assignors to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application August 3, 1944, Serial No. 547,936
8 Claims. (Cl. 171—95)

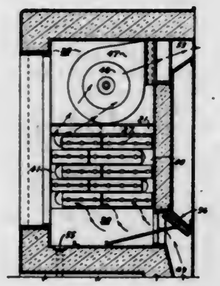
1. In a system for measuring high frequency power; a transmission line for conducting said power; a thermistor connected in said transmission line for absorbing power therefrom; a measuring device, a source of direct current energy for operating said measuring device, a source of pulsating current and means including circuit connections from said thermistor to said source of direct current power and operated by said source of pulsating current for automatically varying said power delivered by said direct current energy to said measuring device in accordance with the variations in power absorptions of said thermistor.



2,437,450
AROMATIC MERCURY ALCOHOLATES
Carl N. Andersen, Pleasantville, N. Y., assignor, by mesne assignments, to Gallowhur Chemical Corporation, a corporation of New York
No Drawing. Application April 14, 1945, Serial No. 588,417
19 Claims. (Cl. 260—410.5)

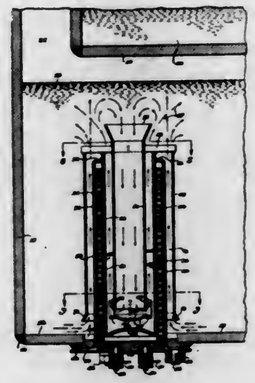
1. A compound of the general formula

$$(RHg)_xR_1$$



in which R represents an aromatic structure to a carbon atom of which the mercury is directly attached and in which none of the carbon atoms has direct linkage with any element other than hydrogen, carbon and mercury, in which x is a small whole number, and in which R_1 represents an oxygenated organic radical containing at least one acyl group attached thereto through an oxygen in an ester linkage, which radical is linked to the RHg group through the replacement of an hydroxyl hydrogen atom.

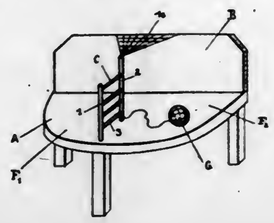
2,437,451
LOCKER REFRIGERATING SYSTEM
William McKinley Baird, Chicago, Ill.
Application April 27, 1944, Serial No. 532,977
10 Claims. (62—102)



1. A refrigerating system comprising a cabinet, a plurality of tiers of imperforate drawers positioned within said cabinet, each drawer adapted to be slidably withdrawn from and returned into said cabinet from the exterior thereof, each of said tiers of drawers spaced from the ends of the cabinet and the adjacent tier at their sides and backs to provide vertical passageways, each drawer having a front panel, and a container portion spacedly attached thereto to provide a vertical passageway in front of the container portion, the top drawers of each tier spaced from the top of said cabinet to provide a horizontal top passageway, the bottom drawers of each tier spaced from the bottom of said cabinet to provide a horizontal bottom passageway, and a primary refrigerant section within said cabinet for cooling air for use as a secondary refrigerant and having means for forcing the secondary refrigerant into said top horizontal passageway, down through said vertical passageways, and thence into said bottom horizontal passageway, said cabinet having an exit passageway leading from said bottom horizontal passageway back to said primary refrigerant section.

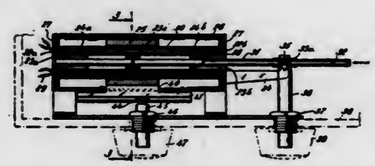
2,437,452
FORCED AIR CIRCUIT REFRIGERATING APPARATUS
William McKinley Baird, Chicago, Ill.
Application June 12, 1944, Serial No. 539,961
3 Claims. (Cl. 62—102)

1. In an insulated chamber, a plurality of primary refrigerant conduits, and a plurality of separate individual cold conducting fins, each of said fins having a horizontal face, and substantially at right angles thereto a vertical face, each horizontal face having a raised portion, and each vertical face having an opening at the inner end of said raised portion, each fin mounted on a conduit with the conduit surrounded by and extending along said raised portion and extending through said opening, each horizontal face also having an opening therein for drainage.



2,437,453
ELECTRICAL HEATING APPARATUS FOR LIQUIDS
Robert C. Belgau, Detroit, Mich.
Application July 9, 1945, Serial No. 603,776
9 Claims. (Cl. 219—38)

1. Heating apparatus for liquids, comprising a liquid container having an aperture in a wall thereof, a cylindrical member extending within the container and having at its lower portion a radially extending flange secured to the periphery of said aperture, a second cylindrical member within said first mentioned cylindrical member and spaced therefrom to form a cylindrical recess, means joining the upper ends of the cylindrical members in liquid-tight relation, a cylindrical electrical resistance element slidably seated in said recess, a cylindrical conduit positioned within the second mentioned cylindrical member and spaced therefrom and from said wall to permit circulation of liquid therebetween, and a cylindrical conduit positioned outside of the first mentioned cylindrical member and spaced therefrom and from said wall to permit circulation of liquid therebetween.

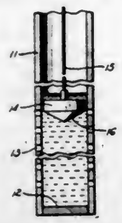


2,437,454
TETHERED BALL GAME APPARATUS
René Bergerioux, Saint-Cloud, France
Application December 29, 1939, Serial No. 311,513
In France January 7, 1939
Section 3, Public Law 690, August 8, 1946
Patent expires January 7, 1959
1 Claim. (Cl. 272—98)

A game of ball, which comprises in combination a platform, a pediment being arranged along the longest edge of the said platform, a separating unrebound partition being arranged in the shortest direction of said platform and spaced apart some distance from said pediment, in such a manner as to divide the platform into two compartments, communicating with each other through the opening between said pediment and said separating partition, and a horizontal triangular net fixed at a certain height

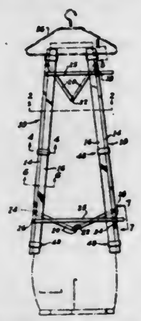
to said separating partition and to said pediment.

2,437,455
LOCATOR
Samuel Berman, Richmond Hill, N. Y., assignor to Waugh Equipment Company, New York, N. Y., a corporation of Maine
Application April 13, 1943, Serial No. 482,860
7 Claims. (Cl. 171—119)



1. Apparatus for detecting the presence of metallic bodies, which comprises a detecting transformer including a primary and a secondary winding in inductive relation, a balancing transformer including a primary and a secondary winding in inductive relation, the primaries of the transformers being connected in series and the secondaries being connected in series but opposed, and a control device including a primary winding connected to a source of energy, a pair of secondary windings in inductive relation to the control primary, said control secondaries being connected in series with the transformer secondaries and with one another but in opposed relation to one another, and means movable within the field of the control primary for varying the effect of said field on the respective control secondaries.

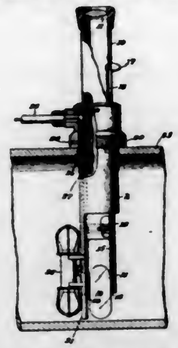
2,437,456
METHOD OF AND APPARATUS FOR TREATING WELLS
Albert G. Bodine, Jr., Burbank, Calif., assignor to the Calpat Corporation, Los Angeles, Calif., a corporation of California
Application May 14, 1941, Serial No. 393,352
9 Claims. (Cl. 166—20)



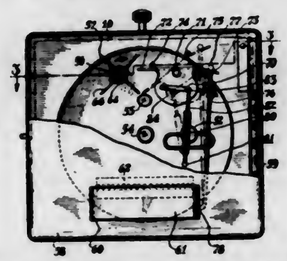
1. The method of dislodging material clogging an opening through which it is desired to conduct a fluid, which method includes the step of: transmitting sound waves under conditions of resonance through a body of liquid contacting such material; and adjusting the sound waves within said body to bring a zone of maximum pressure variation at the opening to be cleaned thereby to

thus oscillate the liquid adjacent such a material with a frequency determined by said sound waves

and with sufficient intensity to displace such material from clogging position.



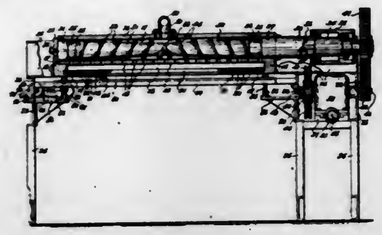
2,437,457
TROUSER-CREASING APPARATUS
Louis F. Clements, Los Angeles, Calif.
Application May 29, 1944, Serial No. 537,785
5 Claims. (Cl. 38—70)



2. In combination in a creasing device: an elongated body member having a rabbet extending longitudinally thereof and providing an upstanding side rail, a side wall of said rabbet and a presser face; a presser plate disposed in said rabbet having a presser face opposing the first mentioned presser face and a side wall opposing the first mentioned side wall; and a fabric hinge comprising two fabric strips spanning a joint between the edge of the rail adjacent said rabbet and the adjacent edge of said presser plate, one of said strips being attached to outer faces of said rail and said presser plate, and the other of said strips being attached to said opposing side walls of said rabbet and said presser plate.

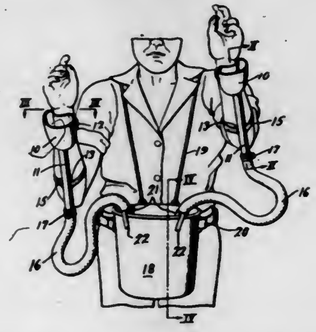
2,437,458
INSPECTION PERISCOPE
George S. Crampton, Philadelphia, Pa., assignor, by mesne assignments, to the United States of America, as represented by the Atomic Energy Commission
Application September 18, 1945, Serial No. 617,132
7 Claims. (Cl. 88—71)

1. An inspection instrument adapted for insertion through a small orifice into an enclosure to be inspected comprising a tube having an external diameter substantially equal to but less than the internal diameter of said orifice, an electric lamp assembly secured to an external surface of said tube and having an overall diameter substantially equal to but less than the diameter of said orifice, said tube having the portion thereof lying laterally adjacent and coextensive with said lamp assembly cut away to permit the insertion of said lamp assembly and attached tube portion through said orifice, after which said lamp may be moved laterally within said enclosure to permit insertion through said orifice of said tube, and a telescope assembly displaceably supported within said tube so that one end of said telescope assembly may be moved into and retracted from said cut away portion of the tube.



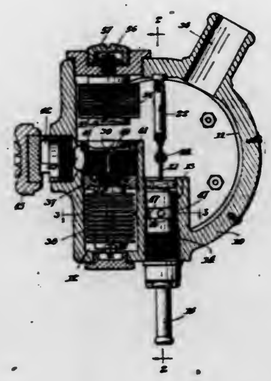
2,437,459
CLOCK
George J. Cunningham, Babylon, N. Y.
Application February 15, 1946, Serial No. 647,858
2 Claims. (Cl. 58—16)

1. Clock mechanism comprising a casing, a door hinged to said casing, alarm mechanism including a winding stem carried by said casing, an opening in said door, a closure member for said opening, means carried by the door and including resilient means movable into operative engagement with the winding stem and adapted to grip the stem when the door is closed on the casing for operating said closure member.



2,437,460
ALIMENTARY PASTE EXTRUSION APPARATUS
Joseph De Francisci, Brooklyn, N. Y.
Application March 28, 1944, Serial No. 528,401
8 Claims. (Cl. 107—14)

1. An extruding apparatus comprising a substantially horizontally disposed expresser head having a longitudinal bore in its upper portion and a paste intake port communicating with said bore, an elongated perforate die plate mounted in the lower portion of said expresser head beneath and parallel to the bore thereof, means providing communication between the side of said bore and said die plate, a scroll rotatable in said bore, the volumetric capacity of said scroll progressively diminishing from a maximum at a point thereof adjacent to the paste intake port

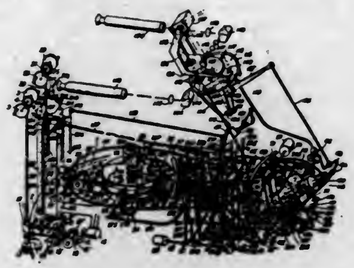


as it recedes toward an end point thereof, and an end portion of the expresser head having a clearance space to receive excess paste axially discharged from an adjacent end of said scroll.

2,437,461
DEVICE FOR CONVEYING PICKED FRUIT FROM THE HAND TO A REMOTE RECEPTACLE
Russell E. Faulkner, Chicago, Ill.
Application May 23, 1945, Serial No. 595,317
1 Claim. (Cl. 193—7)

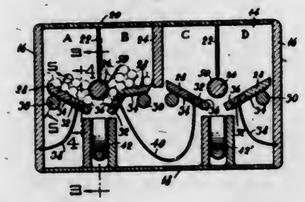
In a device of the kind described, a hopper member comprising a cup having a large opening at the upper end thereof and a smaller opening at the bottom end, and having a wall thereof curved inwardly to conform to the contour of a human wrist and forearm, means for securing said hopper member to the arm of an operator so that the upper end thereof is in position to receive articles released from the fingers and hand, a relatively rigid conduit member in open communication with the bottom of said hopper member, means for securing said relatively rigid conduit member to the forearm of the operator, a flexible conduit member in open communication with the lower end of said relatively rigid conduit member and secured thereto, and means comprising clip-like clamps at the end of the flexible conduit member remote from the relatively rigid conduit member for securing the same to a receptacle into which articles passing from said hopper member to said conduit member may be discharged.

2,437,462
DEMAND VALVE
Frederick Ernest Joseph Frye, Weston, Ontario, and Eber Allison Pollard, Ville St. Laurent, Quebec, Canada, assignors to The Honorary Advisory Council for Scientific and Industrial Research, Ottawa, Ontario, Canada, a corporation of Canada
Application March 23, 1945, Serial No. 584,292
8 Claims. (Cl. 128—142)



1. A demand valve for respiratory apparatus, comprising a mixing chamber having an outlet for connection to a mask and at least one inlet passage for each of two gases under different pressures, valve means in connection with each inlet passage for controlling the flow of gas therethrough, spring means normally holding the valve means for the gas under greater pressure in closed position, pressure responsive means operative in response to inspiration to open the spring pressed valve means, a restriction in the inlet passage between the low pressure side of the spring pressed valve means and the mixing chamber, a by-pass from such inlet passage between the spring pressed valve means and said restriction, and pressure responsive means subject on one side to the pressure influence of the gas under less pressure and on the other side to the pressure influence of the gas under greater pressure in said by-pass, said pressure responsive means being operatively connected with the valve means for the gas under less pressure to close said valve means under the pressure influence of the gas under less pressure and to open the said valve means under the pressure influence of the gas under greater pressure in said by-pass.

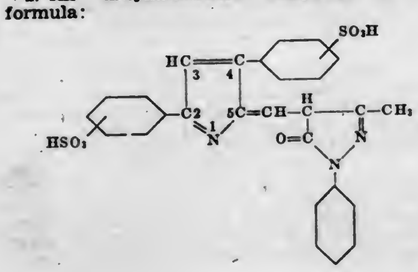
2,437,463
FIRE CONTROL INSTRUMENT
Hannibal C. Ford, Jamaica, N. Y., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a corporation of New York
Application July 21, 1928, Serial No. 294,496
37 Claims. (Cl. 33—49)



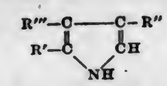
1. In a fire control instrument, the combination of a gyroscope, means settable to be self-acting to apply torques about mutually perpendicular axes of said gyroscope to precess the same in train and elevation, directional mechanism, and

independently operable connections between said gyroscope and mechanism controlled by the

former to automatically direct said mechanism in train and elevation.

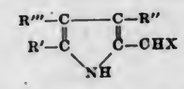


2,437,464
CIGARET DISPENSER
John J. Gerondale, Detroit, Mich., assignor of one-half to Vernon K. Stanley, Detroit, Mich.
Application July 29, 1947, Serial No. 764,292
6 Claims. (Cl. 312—83)



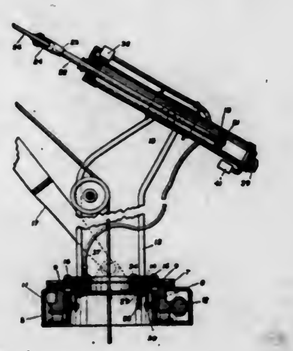
4. A dispensing device comprising a compartment having side walls and an open bottom, a pivoted door in the opening at the bottom, a floor hinged to one edge of said door, a roller adjacent the opposite edge of said door, and resilient means for urging the said opposite edge of said door toward said roller.

2,437,465
MANUFACTURE OF NEW COLORING MATTERS
Eric Paul Goodings and Maurice Arthur Thorold Rogers, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application July 9, 1943, Serial No. 494,124. In Great Britain July 13, 1942
5 Claims. Cl. 260—240)

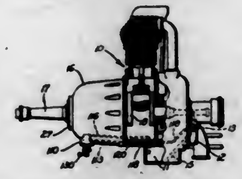


2. An unsymmetrical compound of the formula:

5. The process which comprises causing to interact a compound of the formula

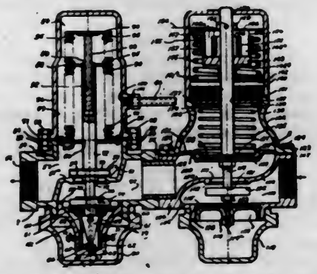


where R′ and R″ are aryl radicals and R‴ is non-reactive with aldehydes and is taken from the group consisting of hydrogen, aryl, alkyl, alkylamino, benzylidene amino and acylamino radicals, with a cyclic monoaldehyde containing a ring composed of atoms taken from the group consisting of (*a*) carbon atoms and (*b*) carbon and nitrogen atoms, said compounds being used in equimolecular proportions and only one of which contains a pyrrole radical substituted by aryl radicals in the 2- and 4-positions and recovering an asymmetrical compound of the formula



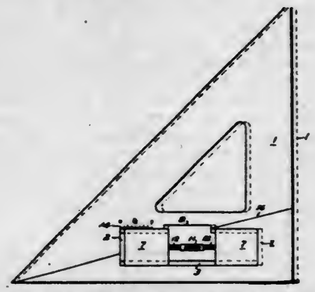
wherein R′, and R″, and R‴ have the above significance and X is a cyclic ring structure wherein the atoms are taken from the group consisting of (*a*) carbon and (*b*) carbon and nitrogen atoms.

2,437,466
HYDRAULIC HOISTING MECHANISM
Emerson Hall, Lafayette, Calif.
Application December 1, 1945, Serial No. 632,264
2 Claims. (Cl. 212—35)



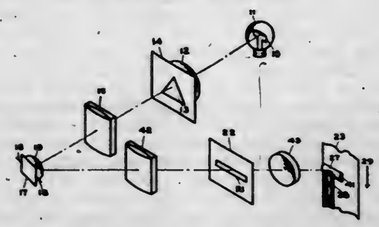
1. In a hoisting mechanism, the combination with a rotatable turntable, rotatable about a vertical axis, a boom pivotally mounted on said turntable, a pair of spaced supports mounted on said turntable, the upper ends of said supports being offset from the vertical axis of said turntable and at a point above the pivotal axis of said boom, a cylinder horizontally pivoted between said supports, a piston movable in said cylinder, a rod connecting said piston, and a cable extending from said rod to said boom at a point substantially midway of its length, whereby actuation of said piston in said cylinder will move said boom about its pivot.

2,437,467
VARIABLE-SPEED DRIVE FOR PROPELLERS
Earl R. Herring and Charles P. Sander, Glendale, Calif., assignors, by direct and mesne assignments, to Kinner Motors, Inc., a corporation
Application January 3, 1942, Serial No. 425,524
14 Claims. (Cl. 74—290)



1. A variable-speed drive adapted to operatively connect an airplane engine with a propeller shaft, including: a rotary drive member; a rotary driven member; a worm gear connected with one of said members to rotate therewith; a worm mounted on the other of said members in mesh with said worm gear; a planet gear mounted on said other of said members, said planet gear being operatively connected with said worm; a sun gear in mesh with said planet gear; clutch means to control the rotation of said sun gear, said clutch means being movable to a position to operatively connect the sun gear with one of said members for rotation of the sun gear; walls forming a hydraulic chamber, said walls including a movable wall operatively connected with said clutch means; a yieldable relief valve to release fluid from said chamber in response to fluid pressure in the space; valve means movable between a first position to cut off said relief valve from said chamber while admitting fluid under pressure into the chamber and a second position to place said relief valve in communication with the chamber; and yielding means to urge said movable wall inward, said yielding means having sufficient strength to force fluid through said relief valve.

2,437,468
TEMPERATURE CONTROL SYSTEM
Rutherford H. Hunter, Wooster, Ohio
Application November 10, 1943, Serial No. 509,697
5 Claims. (Cl. 236—48)

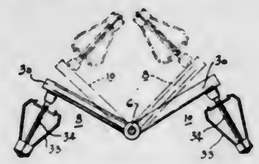


5. In apparatus for maintaining a desired temperature in an enclosed space, an enclosed casing located in said space, a normally expanded contractible container having spaced concentric contractible walls in said casing, said casing containing a volatile fluid adapted to contract said container, a valve interposed in a fuel line leading to a burner for heating said enclosed space, means operated by fluid pressure for actuating said valve, said means including a hood enclosing a bellows, means operatively connecting said bellows to said valve, a snap bellows secured to said main bellows as an extension thereto, means providing a lost motion connection between said snap bellows and said valve operating means, and a tube leading from the space between the concentric walls of said contractible container to said hood, said contractible container, tube and hood being filled with non-compressible fluid.

2,437,469
PARALLEL RULER
Julius Lachmund, San Francisco, Calif.
Application December 4, 1944, Serial No. 566,412
5 Claims. (Cl. 33—110)

5. A drafting instrument comprising a triangle having a guide slot inwardly spaced from one of its edges and having a widened section intermediate its ends, a slide mounted for reciprocating movement within the slot and comprising a pair of end pieces separately movable into sliding engagement with end portions of the slot through the widened center portion, and a turnbuckle connecting the end pieces in a desired spaced relation within the slot, the thickness of the slide being substantially the same as that of the triangle whereby the triangle and slide may lie with either face flat against a supporting surface.

2,437,470
IMPULSE RECORDING OPTICAL SYSTEM
John A. Maurer, Jr., New York, N. Y., assignor to J. A. Maurer, Inc., New York, N. Y., a corporation of New York
Original application August 2, 1940, Serial No. 349,515. Divided and this application November 21, 1944, Serial No. 564,453
7 Claims. (Cl. 88—24)



1. In an optical system, the combination of means for forming a light spot of vertically graded light flux; a mirror adapted to vibrate about a horizontal axis; means forming a horizontal slit; a recording point past which a film may move in a substantially vertical direction; first imaging means placed between said light spot and said mirror, and having first and second

conjugate foci; second imaging means placed between said mirror and said slit forming means, and having third and fourth conjugate foci; third imaging means placed between said slit forming means and said recording point, and having fifth and sixth conjugate foci; fourth imaging means placed in front of said mirror, and having seventh and eighth conjugate foci; and fifth imaging means placed between said third imaging means and said recording point, and having ninth and tenth conjugate foci: said first imaging means acting in only the horizontal plane and having said first focus at said light spot, and said second focus substantially at said mirror so that an intermediate image of said light spot is formed substantially on said mirror; said second imaging means acting in only the horizontal plane and having said third focus at said intermediate image, and said fourth focus at a position beyond said recording point; said third imaging means acting in the horizontal plane and having said fifth focus at said position, and said sixth focus at said recording point; said fourth imaging means acting in the vertical plane and having said seventh focus at said light spot, and said eighth focus at said slit; and said fifth imaging means acting in only the vertical plane and having said ninth focus at said slit, and said tenth focus at said recording point.

2,437,471

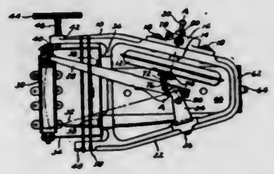
ARTICULATED BOBBIN HOLDER

William E. Moore, Philadelphia, Pa., assignor to Edward J. McBride, Philadelphia, Pa.
Application March 6, 1947, Serial No. 732,715
1 Claim. (Cl. 242—131)

In a creel, a fixed upright, a bobbin holder including a supporting arm and a bobbin-engaging element carried at one end of said arm, and means for positioning said holder on, and permitting rotation of said holder relative to, said upright, said means comprising a yoke formed at the other end of said arm, a collar between the limbs of said yoke, there being registering apertures in said collar and in said limbs of said yoke for passage therethrough of said upright and the outside diameter of said collar being greater than the diameter of the apertures in said limbs of said yoke, means for fixing said collar on said upright, a wall structure forming a rounded seat in the exterior of said collar, there being a recess formed in the end of said arm adjacent said yoke, a coil spring in said recess, and a ball intermediate said spring and said collar for yieldably pressing said ball against said collar to resist movement of said arm relative to said upright, said seat being so located with reference to said upright that when said ball engages said seat said arm will occupy a first, predetermined position in which said holder and the bobbin thereon will face toward one side of said creel, said arm being rotatable to a second position in which said holder and the bobbin thereon will face toward the opposite side of said creel to enable an operator to remove bobbins from or to replace bobbins on said holders.

2,437,472

METHOD OF AND APPARATUS FOR ROENTGENOGRAPHIC INSPECTION



John J. Moynihan, Chicago, Ill., assignor of one-half to Joseph B. Brennan, Euclid, Ohio
No Drawing. Application February 25, 1942, Serial No. 432,286
5 Claims. (Cl. 250—65)

1. In the radiographic inspection of an article, an irreversibly-photosensitive deposit adherent to a surface of said article within an umbra formed by the interception of the incident radiation by the said article, said adherence being continuous during the exposure and development of the image produced on said deposit as a result of the transmission of said radiation through said article.

2,437,473

PRESSURE SWITCH

William L. W. Ogden, Baltimore, Md., and William R. Ryan, Fairfield, Conn., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application August 29, 1944, Serial No. 551,699
4 Claims. (Cl. 200—83)

1. In a measuring instrument, a driving unit responsive to a condition under measurement and having a deflection modulus varying with a second condition, an indicating element, means including compensation means responsive to variations in said second condition linking said driving unit and said indicating element, means for adjusting the position of said driving unit in a direction parallel to the deflections thereof, means for adjusting the position of said driving unit relative to said indicating element in a direction perpendicular to said deflection direction, and means for adjusting the position of said driving unit relative to said indicating element in a direction mutually perpendicular to each of said first two mentioned directions.

2,437,474

METHOD OF ANODIC CLEANING

Gilbert H. Orosco, Euclid, Ohio, assignor to Gilbert H. Orosco and Roland A. Whitbeck, partners, doing business as Gilron Products Company, Cleveland, Ohio
No Drawing. Application March 24, 1944, Serial No. 527,956
4 Claims. (Cl. 204—141)

3. The method of cleaning and preparing metal articles for plating, which comprises removing carbonaceous film by subjecting the article anodically to a current while immersed in an aqueous alkaline cleaning bath consisting essentially of water as a solvent and a dry solute of ingredients as follows, by weight:

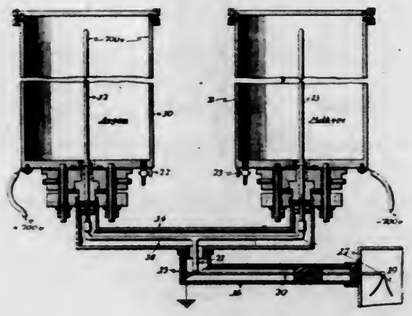
	Parts
A substance selected from the group consisting of sodium acetate and potassium acetate	5 to 50
Sodium hydroxide	10 to 55
Sodium carbonate	10 to 40

and said bath being substantially free from silicates and borates.

2,437,475

METHOD OF MITIGATING CORROSION IN WELLS

William F. Oxford, Jr., Beaumont, Tex., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
Application December 5, 1945, Serial No. 632,862
3 Claims. (Cl. 252—8.55)

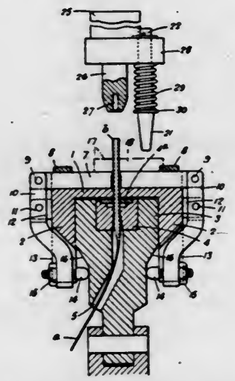


1. In the production of petroleum hydrocarbons through a well wherein the hydrocarbon flow stream contains a constituent tending to cause corrosion of the well tubing, the method of mitigating such corrosion which comprises placing within the well a granular mass of ion exchange material adapted to remove the corrosive constituent from the hydrocarbon stream by ion exchange reaction, and bringing the hydrocarbon stream in contact with the ion exchange material to remove said constituent.

2,437,476

DIFFERENTIAL TWIN CHAMBER NEUTRON METER

Herbert M. Parker, Oak Ridge, Tenn., assignor to the United States of America, as represented by the Atomic Energy Commission
Application July 8, 1944, Serial No. 544,109
4 Claims. (Cl. 250—83.6)



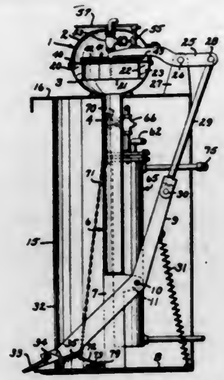
1. In combination, two spaced ionization chambers equally responsive to gamma radiation and unequally responsive to neutron radiation, and means supporting said chambers for rotation about an axis midway between said chambers so that upon being rotated 180° the two chambers mutually interchange positions, whereby differences in gamma ray ionization due to directional effects undergo a change in sign for each 180° of rotation.

2,437,477

MANUFACTURE OF ARTICLES FROM SHORT LENGTHS OF TUBES

Leslie Parkin and John Simpson, Nottingham, England
Application May 12, 1944, Serial No. 535,304
In Great Britain April 19, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires April 19, 1963
1 Claim. (Cl. 113—119)

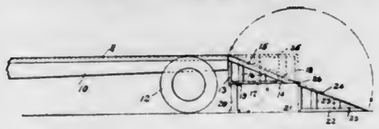
The method of forming tubular sheet metal contact pins and the like comprising the steps of applying gripping means to a tubular end portion of a continuous strip of metal, moving a shaping tool axially over the free end thereof to form a dome-shaped end and a collar on said tubular end portion, relatively moving said strip and a shaping die to form an additional length of tubing on said strip, cutting the shaped end portion of the tube from the formed strip, releasing the shaped end portion from the gripping means and feeding a predetermined length of formed strip forward through the gripping means.



2,437,478

GARMENT CLEANING MACHINE

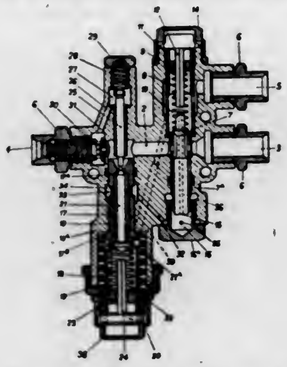
Ernest W. Pickett, Jr., Liberty, and Doyle E. McMullen, Houston, Tex., assignors of sixty-two per cent to said Pickett, Jr., and thirty-eight per cent to said McMullen
Application July 30, 1942, Serial No. 452,828
3 Claims. (Cl. 68—20)



1. In a device for removing spots from fabric, a bowl having a foraminous material thereon to support the fabric to be cleaned, an annular inner support for said material disposed within said bowl beneath said material, a second bowl having outer and inner portions adapted to engage and seal with the first bowl and said support respectively, means for flushing a cleaning fluid through the inner portion of the fabric, means for lifting said second bowl to break the seals with the fabric, and means for thereafter

flushing a drying fluid through the inner portion of the second bowl to pass through the fab-

ric with a feathering action about the area of the inner seal.

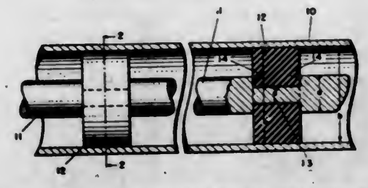


2,437,479
VEHICLE LOADING RAMP
Edwin Carl Price, Newburgh, N. Y.
Application November 29, 1945, Serial No. 631,702
1 Claim. (Cl. 214—85)

A combination like that disclosed comprising a vehicle having a load carrying platform, a structural framework of triangular form in side elevation attached to the end of said platform, and a second structural framework of similar configuration hingedly connected to said first framework, the inclined surfaces of said frameworks forming a ramp from the platform level to the ground in open position and one side of said second framework in closed position forming an extension of said platform lying in the plane thereof.

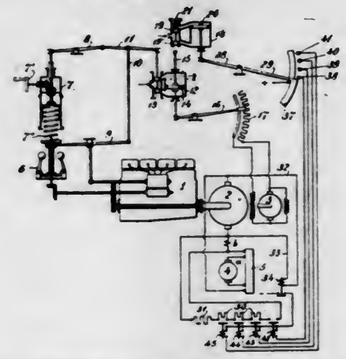
2,437,480
VALVE
Cyril Alphonso Pugh and Douglas Gerhard Booth, Ilford, and Rudolph William Rough, Romford, England, assignors to The Plessey Company Limited, Ilford, England, a British company
Application March 31, 1945, Serial No. 585,896
In Great Britain December 18, 1944
6 Claims. (Cl. 137—153)

1. A valve comprising in combination, a valve body containing a fluid pressure chamber with an inlet and outlet port for coupling to a supply and delivery line respectively and a by-pass communicating with the pressure chamber, a main spring loaded valve fitted in the by-pass actuated by a hydraulic load in said valve body and provided with means for bleeding the hydraulic load and a pilot valve control means in which a pilot valve co-operates with a movable seating and both said pilot valve and movable seating are independently spring loaded the movable seating being subjected to the supply pressure and the pilot valve, indirectly to the delivery pressure for controlling the hydraulic loading of said valve in opposition to its spring loading, the arrangement being such that, whenever, the pressure in the chamber rises above a pre-set value, said valve control means is operated, causing the hydraulic load of said main valve to increase and, therefore, open and allow



fluid entering the inlet to flow through the bypass until a lower predetermined pressure is obtained in the delivery line when said pilot valve control means returns to its normal position and thereby reduces the hydraulic load on said main valve.

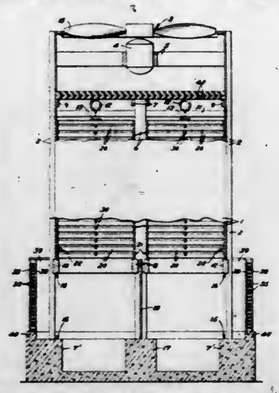
2,437,481
ROSIN DERIVATIVES
Alfred L. Rummelsburg, New Castle, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 21, 1946, Serial No. 656,166
6 Claims. (Cl. 260—97)



1. A cyclohexanol selected from the group consisting of rosin- and rosin ester-cyclohexanols.

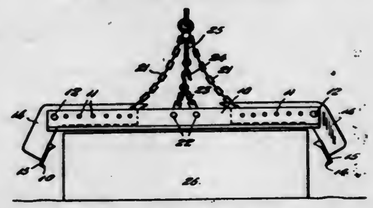
2,437,482
HIGH-FREQUENCY ELECTRICAL TRANSMISSION LINE
Winfield W. Salisbury, Arlington, Mass., assignor to the United States of America, as represented by the Secretary of the Navy
Application December 7, 1942, Serial No. 468,139
7 Claims. (Cl. 178—44)

7. An electrical transmission line comprising, in combination, an outer conductor of hollow construction, an inner conductor within said outer conductor, a plurality of spaced insulators for supporting said inner conductor within said outer conductor, the dimension of at least one of said conductors being altered at each of said insulators to provide shoulders abutting surfaces of the corresponding insulator extending substantially perpendicular to said conductors for preventing longitudinal movement of said insulators with respect to said conductors, the extent of the alteration of said dimension being such as to equalize the transmission line characteristic impedance at an insulator with the characteristic impedance of said transmission line in the space between insulators.



2,437,483
DIESEL-ELECTRIC VEHICLE WITH AUTOMATIC FIELD WEAKENING OF THE DRIVING MOTORS
Oscar Schläpfer, Winterthur, Switzerland, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland
Application March 7, 1945, Serial No. 581,473
In Switzerland March 9, 1944
3 Claims. (Cl. 290—17)

1. A Diesel-electric vehicle comprising a Diesel engine, a speed governor driven by the engine, electric current generating means driven by the engine, a regulating resistance in a field circuit of the generating means for regulating the output voltage of the generating means, a servomotor influenced by the speed governor and controlling the regulating resistance in such manner that the Diesel engine is always loaded to a predetermined value, at least one electric traction motor receiving current from the current generating means, a number of resistances each being connectable to and disconnectable from a field circuit of the traction motor for weakening that field, a number of switches associated individually with said resistances for connecting and disconnecting them from the field circuit, a second servomotor influenced by the first servomotor only when said first servomotor is in or near its end position for cutting out the regulating resistance of the generating means, and a contact device controlled by said second servomotor having a movable contact and several fixed contacts arranged in succession each of which controls one of said switches.

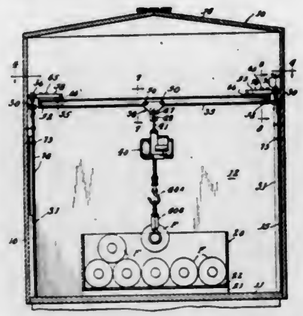


2,437,484
COOLING TOWER
Edward W. Simons, San Francisco, Calif., assignor of one-half to George W. Null, San Francisco, Calif.
Application January 22, 1945, Serial No. 573,899
9 Claims. (Cl. 261—109)

1. An induced draft cooling tower having imperforate side walls enclosing packing and having means for causing upward movement of air through said packing, a pair of spaced opposed laterally directed air inlets at the bottom of said tower for admitting said air into the lower end of said tower, a grid extending across each of said inlets, each grid comprising a substantially vertical row of vertically spaced horizontally extending strips each disposed in a horizontal plane and of airfoil cross-sectional contour with the blunt

end of each such sectional contour facing outwardly relative to the inlet across which the strip extends, the lower surface of said airfoil contoured strips being arranged at an angle relative to a horizontal plane and sloping downwardly in the direction of the trailing edge thereof.

2,437,485
BOX CLAMP
Louis Carl Sonnenschein, Milwaukee, Wis.
Application January 30, 1945, Serial No. 575,248
1 Claim. (Cl. 294—106)



A box clamp comprising a pair of spaced parallel interconnected body members having laterally extending opposed base flanges formed integrally therewith, a pair of bell crank lifting members supported between said body members and adjacent the ends thereof for horizontal adjustment, angularly toothed clamping plates on the ends of said lifting members, flexible means connected with the inwardly directed ends of said lifting members for connection with a lifting cable, and a second lifting cable secured to said body members at a point intermediate said lifting members.

2,437,486
MATERIAL-HANDLING APPARATUS
Otto K. Staiger, Chicago, Ill., assignor to American Brake Shoe Company, Wilmington, Del., a corporation of Delaware
Application July 27, 1944, Serial No. 546,823
6 Claims. (Cl. 104—98)

2. In a material-handling apparatus for loading or unloading boxcars and the like, a pair of elongated side rail units each comprising a rail

and a plurality of detachably related supporting posts adapted to be disposed with the units against the opposite inner side surfaces of a boxcar or the like with the lower ends of the posts resting on the floor of the car and with the rails supported by the posts so as to extend from the side door of

such a car to an end thereof, and a cross rail unit affording a track adapted to support and guide a roller carriage mounted thereon for movement therealong, said cross rail unit having rollers at opposite ends thereof adapted to ride in a laterally interlocked relationship upon said rails.

2,437,487

PROCESS OF REDUCING A METAL OXIDE CATALYST

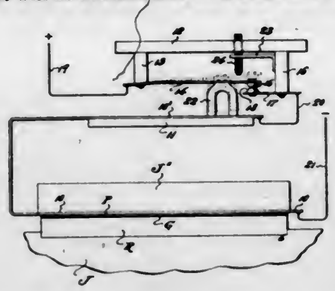
John W. Teter, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine

No Drawing. Application October 12, 1944, Serial No. 558,487

5 Claims. (Cl. 252—257)

1. The process of reducing a metal oxide catalyst in which the metal oxide is an oxide of a metal selected from the group consisting of cobalt and nickel to produce a reduced metal oxide catalyst adapted for the catalysis of the direct reaction between ammonia and olefins to produce nitrogen-containing products which includes subjecting the catalyst while at a temperature within the approximate range of 450°–750° F. to a plurality of alternate treatments with ammonia and hydrogen.

2,437,488



THERMAL CONTROL FOR GLUING STRUCTURAL ASSEMBLIES AND OTHER PURPOSES

Herman Ulanet, Newark, N. J.

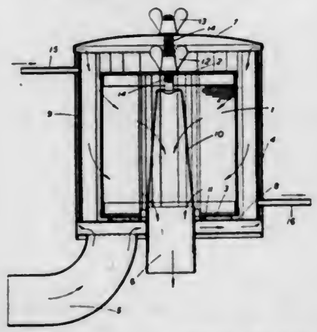
Application December 29, 1944, Serial No. 570,409

2 Claims. (Cl. 219—19)

1. In jig means for glue joining assembled structural members, opposed clamp devices between which said members are engaged and held together, at least one of said clamp devices having a ribbon-like heater element for contiguous application to areas of said members to be joined, said heater element consisting in a metal having a substantial specific resistance and being responsive to magnetic force at relatively low temperatures but non-magnetic at a relatively high temperature, a switch means comprising a movable switch arm and a cooperating relatively stationary switch arm, said switch means and heater element being connected in series in an electrical circuit, a magnet affixed to said movable switch arm, and said heater element having a portion exposed and opposed to said magnet, whereby when the heater element at relatively low temperature is responsive to magnetic force said magnet will be attracted thereto and held thereby

to hold said switch means closed, but when said heater element at relatively high temperature becomes non-magnetic said magnet will be released to thereby permit said switch means to open.

2,437,489



AIR FILTER WITH HEAT EXCHANGE ARRANGEMENTS

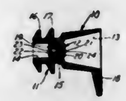
Cecil Gordon Vokes, London, England, assignor to Vokes Limited, Guilford, Surrey, England

Application March 15, 1944, Serial No. 526,572

In Great Britain January 21, 1943

2 Claims. (Cl. 183—32)

1. In combination, a casing, an air exhaust through the bottom of said casing for carburetor intake, an air filter in said casing and closing said exhaust, a thin sleeve-like container concentric with said casing and surrounding said air filter, the outer wall of said container being spaced slightly from the casing wall to form a narrow air passageway therebetween, an oil inlet pipe extending through said casing and having communication with the top of said container at one side thereof and for supplying heated oil to said container from an engine, an oil outlet pipe extending through said casing and having communication with the bottom of said container at the opposite side thereof from said inlet pipe, and an air inlet opening in the bottom part of said casing to said air passageway between said casing and said container, whereby the air must pass up and over the full height and down at least part of the height of said container and thereby cool the oil therein and preheat the air before it is exhausted to a carburetor intake.



2,437,490

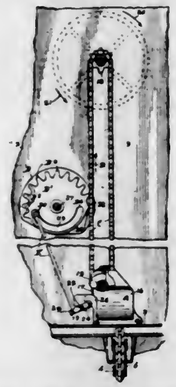
EAR DEFENDER

Norman A. Watson, Paul S. Veneklasen, Robert W. Leonard, and Robert S. Gales, Los Angeles, Calif., assignors to the United States of America

Application June 26, 1942, Serial No. 448,586

1 Claim. (Cl. 128—152)

An ear protector comprising a body of flexible resilient material including a flared outer portion, a reduced inner portion of substantially cylindrical form, spaced external sealing flanges on said inner portion for sealing with the wall of the auditory canal, a transverse internal partition in said body, and automatic pressure equalizing means carried by said partition, comprising a substantially cylindrical rigid insert extending through a central opening in said partition, radial flanges on the ends of said insert to prevent displacement of the insert, one end of said insert being open and the other end closed except for a minute orifice, said orifice having a cross-sectional area many times smaller than the inside cross-sectional area of the insert, and fibrous material packed in the hollow space within said insert to form acoustical insulation at said orifice and adapted to permit air flow through said orifice for the equalization of pressures at the opposite sides of the partition.



2,437,491

HAND BRAKE FOR RAILWAY CARS

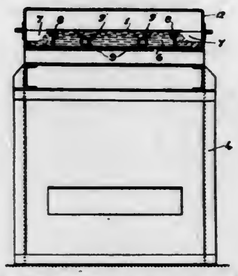
Keith Williams, Buffalo, N. Y.

Application July 11, 1945, Serial No. 604,488

13 Claims. (Cl. 74—505)

1. In a hand brake mechanism, the combination of brake operating mechanism comprising a brake chain winding drum, a driving mechanism for the drum, and a clutch for connecting and disconnecting the driving mechanism with said drum; a hand wheel located remotely from said brake operating mechanism, a driving connection between said hand wheel and the driving mechanism of said brake operating mechanism, and means associated with said driving connection for automatically actuating the clutch to disconnect the drum from the driving mechanism upon the reverse rotation of the hand wheel.

2,437,492



MEANS FOR TRANSFERRING HEAT TO OR FROM MATERIAL ON BAND CONVEYORS

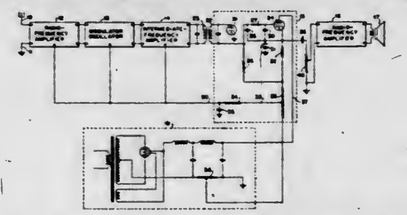
Walter Harvey Allen, Birmingham, England, assignor to Sandvik Steel Incorporated, New York, N. Y.

Application March 22, 1945, Serial No. 584,218

In Great Britain March 25, 1944

1 Claim. (Cl. 257—23)

An apparatus for cooling material carried upon a horizontal strand of an endless metal conveyor band, said apparatus comprising a vessel extending longitudinally beneath said strand and being of substantial depth throughout its length and width, said vessel having a flat bottom and upstanding side walls extending to said strand, a plurality of laterally spaced apertured pipes disposed within said vessel on the bottom thereof and extending longitudinally throughout substantially the entire length of the vessel, and means maintaining a continuous forced circulation of cooling liquid through said pipes and vessel and causing said liquid to maintain a normal level which is such that the underside of the band is in contact with the liquid and that the liquid overflows the top edges of the side wall, whereby said strand floats on the liquid and whereby jets of liquid from the apertured pipes pass through the liquid and are thoroughly mixed with the liquid already contained in the vessel before they reach said strand.

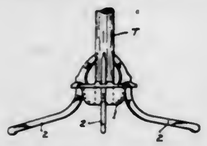


2,437,493

DIODE DETECTOR CIRCUIT

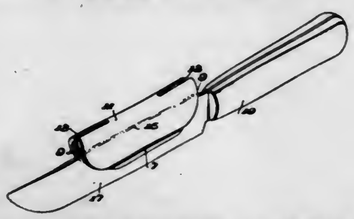
Theodore G. Anderson, Kennett Square, Pa., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois

Application June 12, 1945, Serial No. 599,002



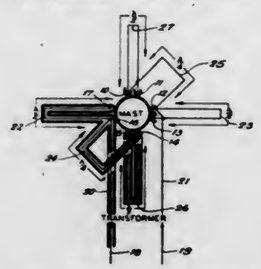
7 Claims. (Cl. 250—27)

1. A detector arrangement for a wave-signal translating system comprising, a two-element rectifier, means for applying to said rectifier an input signal having desired modulation components, a load circuit coupled to said rectifier including an impedance for deriving said desired modulation components, a modulation-signal translating circuit for said rectifier including a



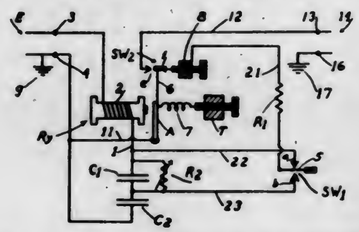
signal-translating stage having input and output circuits, means including a first portion of said load impedance for applying said modulation components to said input circuit of said stage, and means comprising a second portion of said load impedance for applying the translated modulation components in said output circuit of said stage in a regenerative sense to said load circuit of said rectifier.

2,437,494
KNOCKDOWN ARTICLE AND JOINT THEREFOR
Roy H. Anderson, Fort Dodge, Iowa
Application November 19, 1945. Serial No. 629,486
5 Claims. (Cl. 248—48)



1. A knockdown article comprising a body having a socket aperture in a plate-like portion thereof, and a bar engageable in said socket aperture by relative movement of said bar and said body non-rotatively and generally lengthwise of said bar, said bar having three projections spaced lengthwise thereof, the intermediate projection and one of the other projections projecting from different edges of said bar and being spaced apart lengthwise thereof a distance slightly greater than the thickness of said plate-like body portion, the width of said bar between such projections being sufficiently less than the corresponding width of said socket aperture as to enable said bar and said body to swing relatively through a substantial angle, and the other of said projections projecting from the edge of said bar opposite that from which said intermediate projection projects and being disposed lengthwise of said bar close to said intermediate projection, the projections at opposite sides of said intermediate projection being engageable with opposite sides of said plate-like portion, respectively, to limit relative movement of said bar and body generally lengthwise of said bar.

2,437,495
BLADE HONING DEVICE
Nels B. Anderson, Minneapolis, Minn.
Application September 10, 1946, Serial No. 695,978
3 Claims. (Cl. 51—221)



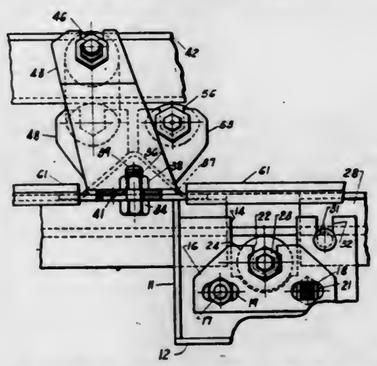
1. A device for application to a blade for controlling the angle of the blade relative to a hone when being sharpened, including a pair of blade clamping jaws connected together at the longitudinal upper edges thereof and having hone contacting surfaces disposed outside the plane of the blade engaging portions of the device, the upper longitudinal jaw connecting portion being inwardly slotted a distance from each end thereof to provide flexibility of the ends of the jaws for separation thereof.

2,437,496
PHASING NETWORK
Nathan W. Aram, Chicago, Ill., assignor to Zenith Radio Corporation, Chicago, Ill., a corporation of Illinois
Application July 2, 1942, Serial No. 449,438
21 Claims. (Cl. 178—44)

1. A phasing network for feeding a pair of lines in opposite phases and another pair of lines in opposite phases and in phase quadrature to the first said pair, comprising a main feeder line connected to one of a pair of lines at a point of connection, a line of an odd number of half wave lengths connecting said point of connection to the other of said pair, a line of an odd number of quarter wave lengths connecting said point of connection to one of the other pair of lines, and a line of an odd number of half wave lengths connecting last said line to the other line of last said pair.

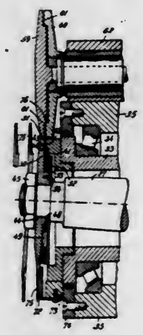
2,437,497
AUTOMATIC TELEGRAPH KEY
Forrest A. Bartlett, Gardena, Calif.
Application May 30, 1944, Serial No. 538,074
6 Claims. (Cl. 178—82)

1. In an automatic telegraph transmitter key, a plurality of condensers, a conductor interconnecting said condensers, a relay comprising a solenoid, an armature cooperatively associated therewith, a pair of spaced contacts, a switch blade actuated by said armature to engage one of said contacts when said solenoid is energized, and spring means for moving said blade into the other of said contacts when said solenoid is de-energized, a conductor connecting said blade to one potential of a current source, a conductor connecting one terminal of said solenoid to the other potential of said current source, a conductor connecting the other terminal of said solenoid to one



of said condensers, a key comprising a blade and a pair of key contacts optionally engaged by said key's blade, a conductor connecting one of said key's contacts to said conductor interconnecting said condensers, a conductor connecting the other of said key's contacts with said conductor connecting said solenoid to said condensers, a conductor connecting said key's blade to one of said relay's contacts, and means connecting the other of said relay contacts into an external circuit.

2,437,498
CLOTHESPIN DISPENSER
Katherine Vena Bell, Jersey City, N. J.
Application January 30, 1946, Serial No. 644,212
4 Claims. (Cl. 312—73)

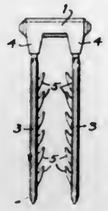


1. A clothespin dispenser comprising a receptacle having a rigid bottom and a trap door hinged thereto, means for normally holding the door in a closed position relative to the bottom, means for holding a group of clothespins within said receptacle when the door is opened relative to the bottom, and means for guiding a pin from the receptacle, said holding means including a plurality of spaced parallel strips slidably carried by said receptacle fixedly engaging the door.

2,437,499
BELT CONVEYOR FRAME CONSTRUCTION
George W. Benjamin, Birmingham, Ala., assignor to Continental Gin Company, a corporation of Delaware
Application August 23, 1945, Serial No. 612,265
9 Claims. (Cl. 198—192)

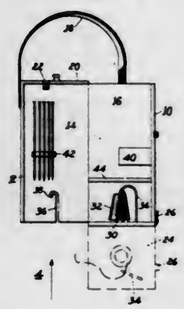
1. A sectional belt conveyor frame construction comprising laterally opposed vertical supports each having a section of a longitudinally extending rail secured thereto and each having a pair of vertically opening notches therein, a meeting rail having a button head lug engaging in one of the notches, an idler roller terminating at both ends in button heads which engage in the other notches of said vertical supports, a support for idler troughing rollers extending transversely of the rails, bolts for detachably securing said support to the rails, the ends of the bolts being peened over to prevent the removal of nuts therefrom and there being key hole slots in the rails with openings at one end large enough to receive the bolts.

2,437,500
APPARATUS FOR BENDING METAL STRIPS EDGEWISE IN MAKING HELICAL FINS
Ernest Bruegger, Massillon, Ohio, assignor to The Griscom-Russell Company, New York, N. Y., a corporation of Delaware
Application September 8, 1944, Serial No. 553,153
7 Claims. (Cl. 153—64.5)



1. Apparatus for continuously winding a metallic ribbon edgewise into a helical coil comprising, in combination, a pair of rotary discs having oppositely disposed end faces closely approaching each other at one point in their rotation and spaced more widely apart elsewhere, a circular shoulder on one of said discs, a ring between said discs surrounding said shoulder and having a circular outer surface adjacent said end faces at and adjacent said point, means for rotating said discs in unison and means for feeding a metallic ribbon between said end faces where said faces approach said point whereby said ribbon is gripped between said faces and bent around the outer surface of said ring.

2,437,501
STABILIZING METHYL-SUBSTITUTED POLYSILOXANES
Charles A. Burkhard, Alplaus, and Winton I. Patnode, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
No Drawing. Application September 28, 1946, Serial No. 700,154
3 Claims. (Cl. 260—607)

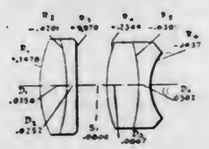


1. The method of substantially retarding gelation at elevated temperatures of a liquid methyl polysiloxane containing an average of about two methyl groups per silicon atom, which method comprises incorporating in the said polysiloxane from 0.05 to 5 per cent, by weight, ketene based on the weight of the said polysiloxane.

2,437,502
HAIRPIN
Ernest H. Butler, Arlington, Va.
Application January 16, 1947, Serial No. 722,370
6 Claims. (Cl. 132—52)

5. A hair-pin comprising an elongated head having a passage extending from end to end thereof, spaced removable prongs projecting from said head and extending into the passage aforesaid, a button member at each end of the passage, closing the same, each button member having interlocking engagement with a prong to hold the latter in the head, spring means between the buttons in the passage tending to hold them slightly projecting from the head and in interengagement with the prongs, and fastening means extending through the head and into engagement with the spring means to maintain the position of the latter and the buttons while the prongs are in operative position.

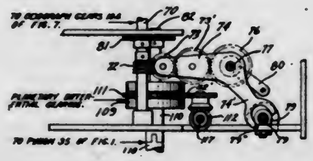
2,437,503
KNITTING BOX
Herbert S. Chase, Worcester, Mass.
Application April 9, 1946, Serial No. 660,814
5 Claims. (Cl. 223—107)



5. Knitting box or the like comprising a pair of wall sections each having angularly arranged parts, said wall sections being pivoted at corresponding edges to close the box or selectively to form a channel, a cover hinged to one part at an end of the box, a bottom closure hinged to a wall part on the other section at the opposite end of the box, a yarn holder on the bottom closure, a false bottom spaced therefrom and secured to both parts of said other section and extending across the box when closed, and a yarn guiding slot in said one wall part below the false bottom.

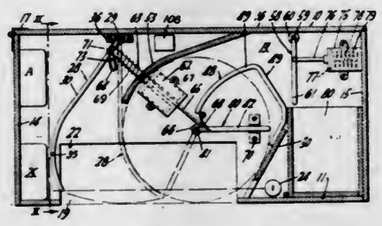
2,437,504
THIAMIN DIOCTYLSULFOSUCCINATE
John B. Conn, Scotch Plains, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application March 8, 1946, Serial No. 653,157
7 Claims. (Cl. 260—251)

2. The method of rendering vitamin B_1 preparations soluble in oils and other nonpolar solvents which comprises coupling a water-soluble salt of thiamin selected from the group which consists of thiamin chloride hydrochloride, thiamin bromide hydrobromide, and thiamin sulfate with an alkali metal salt of dioctylsulfosuccinic acid.



7. Thiamin dioctylsulfosuccinate.

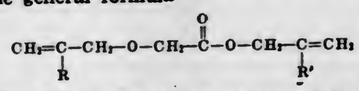
2,437,505
OPTICAL OBJECTIVE
Arthur Cox, Leicester, England, assignor to Taylor, Taylor & Hobson Limited, Leicester, England, a company of Great Britain
Application April 30, 1946, Serial No. 666,060
In Great Britain June 15, 1945
13 Claims. (Cl. 88—57)



1. A telephoto objective corrected for spherical and chromatic aberrations, coma, astigmatism and field curvature, and comprising a convergent front member and a divergent rear member, each member being in the form of a meniscus doublet with its bounding surfaces convex to the front and having a convergent element and a divergent element, the front surface of the divergent rear member having a radius of curvature lying between .20 and .30 times the equivalent focal length of the objective, whilst the radius of curvature of the rear surface of such member lies between .10 and .20 times such equivalent focal length, and the axial thickness of the convergent element of the convergent front member is not less than .045 times and not greater than .095 times such equivalent focal length.

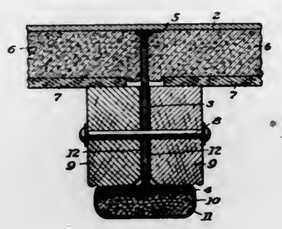
2,437,506
REPEATER COMPASS
Loring Pickering Crosman, South Orange, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a corporation of Delaware
Application June 16, 1943, Serial No. 491,260
5 Claims. (Cl. 33—222)

1. In an instrument of the character described, the combination with magnetic compass controlled motor driven follower mechanism; of direction indicating mechanism including a repeater dial and a repeater hand, part of the driving connection between the motor and the follower mechanism forming part of movement transmission means between the motor, said dial and said hand normally ineffective with respect to said dial and said hand for other than repeater compass purposes, and means including manipulable means for rendering said transmission ineffective with respect to said follower mechanism and effective with respect to said dial and said hand to drive both dial and hand in a single direction in unison to reset the same relative to the magnetic compass.



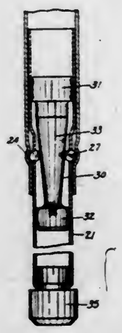
2,437,507
ANIMAL TRAP
Chester W. Crumrine, Irondquoit Township, Monroe County, N. Y., assignor, by mesne assignments, to L F C Corporation, Rochester, N. Y., a corporation of New York
Application December 17, 1942, Serial No. 469,309
8 Claims. (Cl. 43—74)

1. An animal trap comprising an unobstructed longitudinal passageway, means adjacent said passageway at one side thereof and movable partly thereacross to impel an animal in its path, other means adjacent said passageway at the other side thereof and movable to traverse the remainder of said passageway by movement toward said first means to impel an animal in its path to a predetermined zone between said two means, and a casing portion adjacent said passageway, one of said means being further movable to said casing portion to propel into said casing portion an animal impelled to said predetermined zone by either of said means.



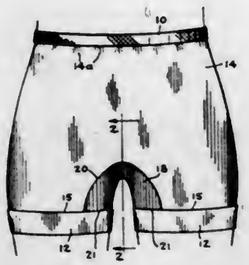
2,437,508
COPOLYMERS OF MIXTURES COMPRISING ALLYL AND METHALLYL ETHER ESTERS
Gaetano F. D'Alelio, Northampton, Mass., assignor to General Electric Company, a corporation of New York
No Drawing. Application June 28, 1944, Serial No. 542,600
2 Claims. (Cl. 260—78.3)

1. A composition comprising the product of polymerization of a mixture comprising, by weight, (1) from 1 to 20 parts of a compound of the general formula



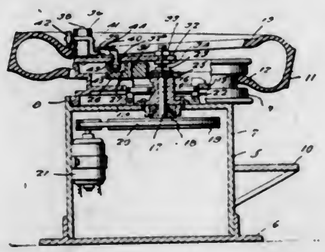
where R and R' are each a member of the class consisting of hydrogen and the methyl radical and (2) from 99 to 80 parts vinyl acetate.

2,437,509
INSULATED WALL CONSTRUCTION FOR HULLS, DECK HOUSES, AND THE LIKE
Albert J. Dawson, Sewickley, Pa., assignor to Dravo Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application February 3, 1945, Serial No. 576,060
5 Claims. (Cl. 20—4)



1. A wall construction comprising an exterior metal sheathing, metallic structural sections at spaced intervals inside the sheathing and to which the sheathing is welded, said structural sections having flanged portions at the ends opposite the welds, soft insulation laid against the sheathing between the structural sections, panels overlying the soft insulation for retaining it in place, said flanged portions overlying the edges of said panels, and battens bolted to the structural sections and overlying the edges of the panels for pressing the panels against the insulation and holding the panels in place.

2,437,510
TELESCOPING JOINT
Allan V. Ditty, Detroit, Mich.
Application September 13, 1944, Serial No. 553,871
8 Claims. (Cl. 287—119)



1. The combination comprising telescoped tubes, a freely slidable gravity actuated plunger within the inner tube having a tapered portion, and means actuated by the tapered portion of the plunger to interengage the tubes when the tubes are positioned so that the plunger tapers upwardly and outwardly with respect to said tubes and releasable when said tubes and plunger are inverted so that the plunger tapers upwardly and inwardly with respect to said tubes.

2,437,511
UNDERGARMENT FOR LADIES OR CHILDREN
Eleanor Donaldson and Jane Gibney, Minneapolis, Minn.; said Gibney assignor to Munsingwear, Inc., Minneapolis, Minn., a corporation of Delaware
Application February 27, 1946, Serial No. 650,542
3 Claims. (Cl. 2—224)

1. An underwear garment for women or girls and comprising body and leg portions and also a crotch portion having in combination, a band at the top of said garment adapted to encircle the waist, a rear piece extending downwardly from said band to a short distance above said crotch portion of the garment, said rear piece being made of material stretchable vertically, a front piece extending downwardly from said band having its bottom edge spaced above said crotch portion a considerably greater distance than said distance, said front piece being made of material stretchable transversely and being secured at its sides to the sides of said rear piece and a crotch piece secured at its rear to the bottom of said rear piece and at its front to the bottom of said front piece, said crotch piece thus being disposed principally at the front of said garment.

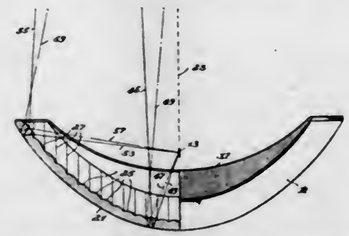
2,437,512
CIRCUMFERENTIALLY TRAVELLING ROLLER TYPE, SUPPORT MOUNTED, TIRE MOUNTING APPARATUS
Ingvald J. Ekse, Minneapolis, Minn.
Application February 20, 1945, Serial No. 578,871
3 Claims. (Cl. 157—6)

1. A tire mounting apparatus comprising a horizontal support for a wheel having a tire with its lower beading partially seated on the rim of said wheel, rotatable mechanism carried by said support including means for engaging the edge of the upper beading of said tire during a revolution of said mechanism to stretch the upper beading, normally ineffective means in association with said mechanism and rotatable therewith adapted to travel over the side wall adjacent said upper beading of said tire, and means for automatically rendering said second-named means effective during a further revolution of said rotatable mechanism, to thereby force said side wall downwardly and cooperate with said first-named means in completing the seating of the said upper beading on said rim.

2,437,513
DEFLECTION COIL AND YOKE FOR CATHODE-RAY TUBES
Richard B. Gethmann, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application October 12, 1946, Serial No. 703,055
9 Claims. (Cl. 250—157)

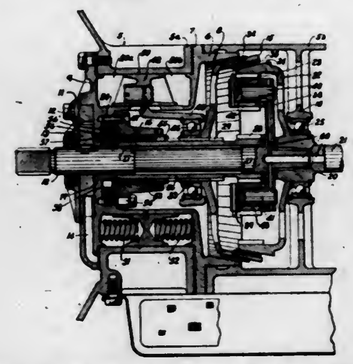
1. An electromagnetic yoke for deflecting the electron beam of a cathode ray tube comprising an annular core comprising a plurality of turns of ferromagnetic wire, a non-magnetic conductive sleeve surrounding said wire, a conductor wound on said core comprising a plurality of adjacent sections, alternate of said sections being connected to form a pair of circuits for deflecting the beam of the cathode ray tube in two transverse directions.

2,437,514
TOOL FOR CUTTING INSULATION ON ELECTRIC CONDUCTORS
Glenn G. Givens, Newport News, Va.
Application January 23, 1946, Serial No. 642,809
3 Claims. (Cl. 30—91)



1. A wire stripper comprising an elongated body having a transverse opening adapted to receive an insulated wire therein, a sleeve slidably mounted in the body for longitudinal movement thereof, a blade holder mounted for longitudinal sliding movement in the sleeve, a blade carried by the holder, and an adjusting screw threaded in the sleeve and connected to the blade holder for adjusting the blade relative to the wire.

2,437,515
CONTAINER CLOSURE
Gustave Glocker, Washington, D. C.; Eugenie Glocker, administratrix of said Gustave Glocker, deceased, assignor to Super-Seal Container Corporation, Washington, D. C., a corporation of Delaware
Application December 4, 1945, Serial No. 632,646
3 Claims. (Cl. 215—40)

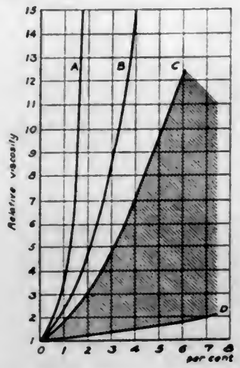


2. A closure assembly for sealing the neck of a receptacle comprising, a disc-shaped portion formed of sheet material, said sheet material extending upwardly at the periphery of the disc-shaped portion to form a raised portion and an annular chamber thereunder, an annular bead arranged above and outwardly of said raised portion providing an inverted channel around the periphery of said raised portion, a depending skirt carried by said annular bead, a layer of plastic material along the inner surface of the skirt filling said inverted channel whereby the plastic material in engaging peripheral portions of the receptacle neck is displaced into sealed engagement with an end surface of the neck, and a wall of said raised portion forming an annular abutment limiting the inward displacement of said plastic material.

2,437,516
DENTAL OPERATING LAMP CONSTRUCTION
Ernest H. Greppin, Rochester, N. Y., assignor to Wilmot Castle Company, Rochester, N. Y., a corporation of New York
Application May 8, 1946, Serial No. 668,268
10 Claims. (Cl. 240—41.38)

1. A dental operating lamp comprising an incandescent filament, and a glass catadioptric unit associated therewith, said unit having a rear surface remote from said filament silvered so as to form a reflecting surface, said reflecting surface being substantially in the shape of a portion of a prolate spheroid with said filament substantially at the adjacent focus thereof, said unit having a front surface formed of a series of convex flutes with the valleys between successive flutes lying substantially in successive spaced planes parallel to each other and to the major axis of said prolate spheroid, so that when said lamp is oriented with said major axis extending horizontally and said planes extending vertically, the beam of light emerging from said unit will, in cross section at a substantial distance in front of said unit, be relatively spread laterally in a horizontal direction and relatively confined vertically.

2,437,517
TRANSMISSION
Harry R. Greenlee, Indianapolis, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a corporation of Delaware
Application December 18, 1944, Serial No. 568,593
5 Claims. (Cl. 74—290)

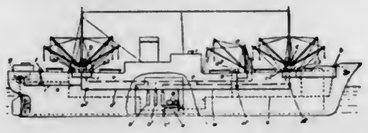


1. In a transmission having a transmission housing, gear means in said transmission housing, and drive and driven shafts having connection with said gear means, the combination of first brake means comprising a brake member fixed to said housing and having a cone brake surface, and a torque transmitting member associated with said gear means having a cone brake surface adapted to have frictional engagement with the cone brake surface of said brake member to provide drive between said drive and driven shafts through said gear means, second brake means comprising a collar member fixed to said transmission housing having a braking surface, an annular coil spring brake member disposed in said collar member and arranged in fixed relation at one end with said gear means, and means associated with the other end of said spring brake member for selectively restraining the latter against rotation or freeing the same for rotation, said spring brake member when restrained against rotation being adapted to be expanded radially into engagement with said braking surface of said collar member to maintain said drive between said drive and driven shafts upon slippage of the cone braking surfaces of said brake member and said torque transmitting member when engaged or upon disengagement thereof.

2,437,518
MANUFACTURE OF INFUSION AND INJECTION FLUIDS
Anders Johan Troed Grönwall and Björn Gustaf-Adolf Ingelman, Uppsala, Sweden, assignors to Aktiebolaget Pharmacia, Stockholm, Sweden, a company of Sweden
Application May 19, 1944, Serial No. 536,376
In Sweden July 17, 1943
10 Claims. (Cl. 167—78)

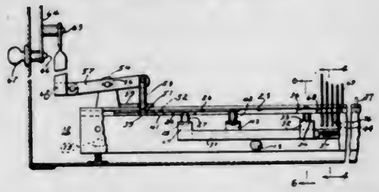
10. A process of preparing therapeutic injection and infusion fluids which comprises subjecting to a partial acid hydrolysis a water soluble polysaccharide, selected from a class consisting of dextran, levulan and galactan under condi-

tions producing hydrolytic products which are completely soluble in water and which at a concentration of about 6 per cent show a colloid-



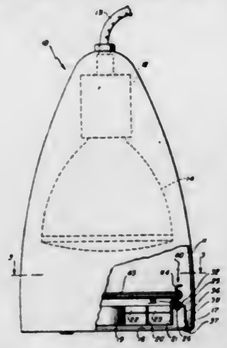
osmotic pressure of from about 50 to 1000 mm. water column, separating and purifying said hydrolytic products from the reaction medium and preparing a therapeutic fluid therefrom.

2,437,519
MANUFACTURE OF ANHYDROUS ALIPHATIC ACIDS FROM AQUEOUS SOLUTIONS THEREOF
Henri Martin Guinot, Versailles, and Pierre Chassaing, Melle, France, assignors to Les Usines De Melle (Societe Anonyme) Saint-Leger-les-Melle, France, a company of France
No Drawing. Application March 17, 1945, Serial No. 583,375. In France January 13, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires January 13, 1963
8 Claims. (Cl. 260—540)



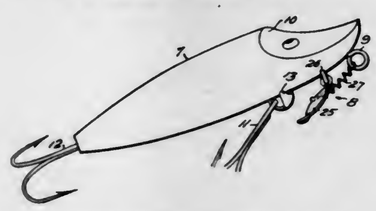
1. A method for concentrating an aqueous solution of a lower carboxylic aliphatic acid, which comprises extracting said solution with a solvent which is a compound of the group consisting of tetrahydrofurane, methyl-substituted tetrahydrofuranes and ethyl-substituted tetrahydrofuranes.

2,437,520
HYDRAULIC PLANT
Maximiliaan Frederik Gunning, Petersfield, England
Application February 22, 1945, Serial No. 579,198
In Great Britain February 2, 1944
4 Claims. (Cl. 60—51)



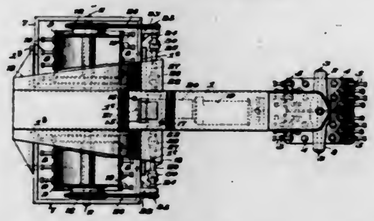
2. A hydraulic plant for operating power driven mechanism under load for short periods of time and under no load for other periods of time comprising at least one such mechanism driven by a variable capacity hydraulic motor, means for varying the torque imparted to said motor by varying the amount of pressure liquid consumed per revolution thereof, the pressure under which the liquid is supplied being maintained substantially constant, in combination with at least one accumulator of sufficient capacity to supply the necessary pressure liquid to each motor connected thereto during each said short period to the extent that and in so far as they operate simultaneously, and with a pumping plant having a capacity such that when operating under full power it can maintain the supply of pressure liquid to each accumulator sufficient for the average load but not sufficient for the maximum load for which the plant is designed.

2,437,521
VOTING MACHINE
Alvin N. Gustavson, Jamestown, N. Y., assignor to Automatic Voting Machine Corporation, Jamestown, N. Y., a corporation of Delaware
Substituted for abandoned application Serial No. 188,966, February 5, 1938. This application September 23, 1939, Serial No. 296,305
3 Claims. (Cl. 235—54)



1. In a voting machine having an entrance and exit control member and a plurality of indicator operated interlocking straps, a mechanism for controlling operation of said member comprising an auxiliary interlock, laterally movable rollers in said interlock, auxiliary interlocking straps separating said rollers and being joined to certain of said indicator operated straps, a perforated plate in said auxiliary interlock connected with and adapted to be moved as said rollers are moved, means connected with and operable by said member to enter one of said perforations when said plate is moved to occupy a predetermined position with respect to said means.

2,437,522
SPOTLIGHT
Harry Handler, Brooklyn, N. Y., assignor of one-half to Nathan Dworkin, Brooklyn, N. Y.
Application September 28, 1946, Serial No. 699,969
4 Claims. (Cl. 240—3.1)

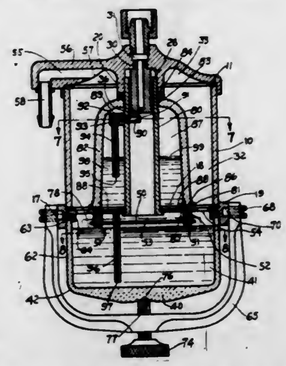


3. A spotlight of the character described, comprising a reflector casing having an opening, a ring member mounted in said reflector opening, said ring member having at least three mounting elements secured thereto adjacent the periphery thereof, in triangular spaced relationship, each of said mounting elements including a depending, outwardly pressing spring member and an upwardly extending inwardly pressing spring member, said depending spring members frictionally engaging the edge of the said reflector opening and said upwardly extending spring portions frictionally engaging the edge of a disc.

2,437,523
ARTIFICIAL BAIT
Clarence L. Hahn, Baltimore, Md.
Application April 26, 1944, Serial No. 532,826
6 Claims. (Cl. 43—46)

1. An artificial bait comprising, a body including a head portion and a tail portion, a controller hingedly carried by said body at its underside adjacent said head portion, and means to yieldably dispose said controller in a position extending forwardly from the underside of the body at a downward incline and permit it to swing to a position extending rearwardly from the underside of the body at a downward incline responsive to pressure exerted upon the forward face of the controller.

2,437,524
SELF-PROPELLED TAMPING ROLLER
John F. Harrison and Carl F. Greiner, Springfield, Ohio, assignors to The Buffalo-Springfield Roller Co., Springfield, Ohio, a corporation of Ohio
Application September 21, 1944, Serial No. 555,098
12 Claims. (Cl. 94—50)



1. A self-propelled tamping roller comprising a frame; a steering roll at one end of the frame mounted for oscillation on horizontal and vertical axes; pairs of spaced lateral extensions at opposite sides of the other end of the frame respectively; subframes journaled in the pairs of extensions on horizontal pivots; drive rolls journaled in said subframes; a source of motive power in the frame actuating a differential having laterally disposed shaft sections; flexible and elongatable shafting extending from said differential shaft sections to serve as drive means and driven means actuated by the shaft sections for driving the respective drive rolls while permitting the said rolls to oscillate freely.

2,437,525
CROCHETED HAT AND METHOD OF PRODUCING THE SAME
Velma C. Harvel, Forth Worth, Tex.
Application September 22, 1944, Serial No. 555,324
2 Claims. (Cl. 2—198)

1. In a hat, a crown, an upper circular pliable core and a lower similar core peripherally positioned in said crown at the top and bottom thereof, respectively, a crocheted brim, a circular pliable third core of larger diameter secured about the periphery of said brim, by crocheting stitches, said third core being under varying tension from the stitches of said crocheted brim at various peripheral points whereby to cause deformation of said peripheral third core into desired contour, and an ornament on said hat consisting of a loop shaped core with a crocheted portion between its sides.

2,437,526
MEANS FOR HUMIDIFYING OXYGEN
Jay A. Heidbrink, Minneapolis, and Clinton G. Herrick, Hopkins, Minn., assignors to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application October 5, 1944, Serial No. 557,310
3 Claims. (Cl. 261—21)

1. An apparatus for effecting saturation of oxygen with water vapor as it is delivered to a nasal catheter, comprising a casing, a partition dividing the casing into upper and lower chambers, the lower chamber adapted to hold a supply of water, a jet tube extending through the upper chamber and opening into the lower chamber, a source of oxygen under pressure and means controlling the flow of that oxygen to cause a high velocity jet thereof to be delivered downwardly along the tube, a bell chamber surrounding the

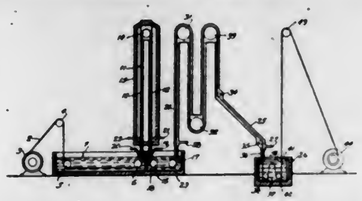
jet tube, a water pipe having a delivery nozzle in the tube adjacent the air jet and having a lateral opening into the bell chamber and having a downwardly turned end toward the partition, a second water pipe extending through the partition to a point near the bottom of the lower chamber in the body of water therein, and a multiplicity of apertures through the partition and into the bell chamber so proportioned in aggregate area that the vacuum created in the bell chamber by the jet will cause water to enter the lower part of the bell chamber and bubble about the lower end of the first-named water pipe to be delivered therethrough in a spray across the gas jet.

2,437,527

INSECTICIDAL COMPOSITIONS FROM HALO-CAPRYLPHENOXYACETIC ACID

William F. Hester, Drexel Hill, and W E Craig, Philadelphia, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application June 14, 1945, Serial No. 599,510
10 Claims. (Cl. 167—30)



1. An insecticidal composition comprising as a toxic agent a halocaprylphenoxyacetic acid and a carrier therefor.

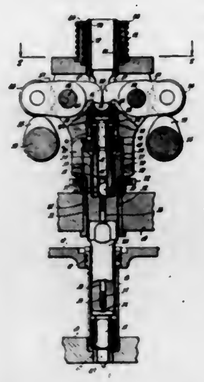
2,437,528

HIGH-TEMPERATURE CLEANING OF STEEL STRIP, INCLUDING REMOVING FERROUS CHLORIDE THEREFROM

Ralph W. Hodil, near Toledo, Ohio, assignor to Surface Combustion Corporation, Toledo, Ohio, a corporation of Ohio

Application June 8, 1945, Serial No. 598,403
4 Claims. (Cl. 134—5)

1. The method of removing ferrous chloride from the surface of steel which comprises passing the steel through a bath of molten lead at a temperature above the freezing temperature of said chloride whereby to remove said chloride from said steel by flotation.



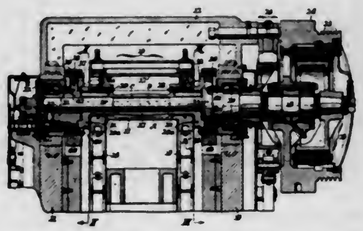
2,437,529

FUEL INJECTOR

John H. Holloway, Green Bay, Wis., assignor to Northwest Engineering Company, Green Bay, Wis., a corporation of Wisconsin

Application June 23, 1943, Serial No. 491,892
4 Claims. (Cl. 103—41)

1. In a fuel injector, the combination of a casing member, a pump barrel with a plunger working therein mounted in said member, a body member secured to said casing member, a pair of oppositely disposed plunger operating levers carried by said body member for moving the plunger in its delivery stroke, a thrust member having a spherically curved bearing surface connected with said plunger and a flat surface engaged by said levers, and spring means mounted on said body member and operatively connected



to said thrust member to move the plunger on its return stroke.

2,437,530

MEANS FOR EFFECTING RECIPROCATORY MOTION

Penrose R. Hoopes, Philadelphia, Pa., assignor to Super Speed Press Corporation, Bridgeton, N. J., a corporation of Delaware

Application February 20, 1945, Serial No. 578,843
5 Claims. (Cl. 74—571)

1. Means for effecting reciprocatory motion including an integrally-formed drive shaft element with a journal portion at one end, a laterally-offset crank extension at the other end, and a medially-located eccentric flange centered on the crank axis; a bushing coaxial with the journal portion of the drive shaft, said bushing having an eccentric bore in which the end of the crank extension is engaged, and an eccentric flange centered on the crank axis; bearings respectively for the journal portion of the shaft and the bushing; a sleeve mounted with capacity for rotative adjustment about the crank between the shaft flange and the bushing, said sleeve having an eccentric enlargement for actuating a member which is to be reciprocated, and end flanges centered on the crank axis and respectively abutting the shaft and bushing flanges; clamp means operative to connect the sleeve flanges with the shaft and bushing flanges to secure the sleeve in adjusted positions; and means whereby the sleeve is dynamically balanced about the crank axis, and whereby the crank and the sleeve are dynamically balanced about the shaft-bushing axis for all rotatively-adjusted positions of said sleeve.

2,437,531

CATALYTIC TREATMENT OF HYDROCARBONS

Hal C. Huffman, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California

No Drawing. Application December 24, 1942, Serial No. 470,027
8 Claims. (Cl. 196—52)

1. A process for the catalytic treatment of hydrocarbons which comprises subjecting said hydrocarbons to temperatures between about 800° F. and about 1300° F. under gage pressures in the range of about —14 pounds to about 1000 pounds per sq. in the presence of a catalyst consisting essentially of a major proportion of a carrier and a minor proportion of a heavy metal oxide catalytic agent distended thereon, said carrier consisting of a gel selected from the class consisting of precipitated alumina and magnesia containing between about 1% and 9% of silica precipitated in the presence of the entire hydrous precipitated gel.

2,437,532

PROCESS FOR THE CATALYTIC REFORMING OF HYDROCARBONS

Hal C. Huffman, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California

No Drawing. Application August 8, 1944, Serial No. 548,632
1 Claim. (Cl. 196—28)

A process for the catalytic reforming of hydrocarbons which comprises subjecting such hydrocarbons to a temperature between about 600° F. and about 1050° F. in the presence of a catalyst consisting substantially entirely of 80 to 99% by weight of a carrier, said carrier consisting of an activated alumina gel all of which has been stabilized by precipitating therein between about 1% and 15% of silica, and distended on said carrier, about 1% to 20% of the combined oxides of cobalt and molybdenum in the range of molecular proportions of one-half to 5 moles of cobalt oxide to one mole of molybdenum oxide.

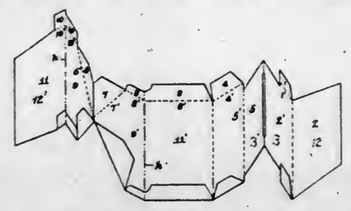
2,437,533

CATALYSTS

Hal C. Huffman, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California

No Drawing. Application August 8, 1944, Serial No. 548,633
6 Claims. (Cl. 252—206)

1. A catalyst comprising 80 to 99% by weight of a carrier, the balance being a catalytic agent distended on said carrier, said carrier consisting of an activated alumina gel containing between about 1% and about 15% of silica precipitated in the presence of the entire hydrous precipitated alumina gel, and said catalytic agent comprising essentially an oxide of a metal selected from the class consisting of the related metals which have their differentiating electron in the second from the outermost shell.



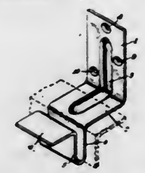
2,437,534

POCKETBOOK HAVING ALL EXPOSED SURFACES FINISHED

Morris Jackler, Brooklyn, N. Y.

Application November 1, 1944, Serial No. 561,353
3 Claims. (Cl. 150—32)

1. A receptacle of the character described made from a single blank of material faced on one surface only, said blank having scored fold lines dividing the same into a plurality of sections arranged in succession longitudinally of said blank and so folded in reverse sequence of its transverse fold lines as to form the upper and lower facial walls of the receptacle and at least one pocket on the exterior of one facial wall with the faced surface of the blank at all exposed sur-



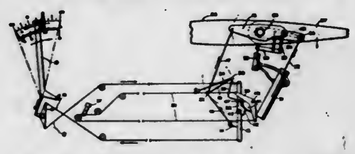
faces of the facial walls and pocket, said blank having along its longitudinal edges integral binding tabs infolded to eliminate exposed raw edges at all exposed parts of the folded blank when the receptacle is both open and closed, and a line of stitching extending along both lateral edges of the receptacle and across one end thereof to secure the sections of such blank in permanently folded relation.

2,437,535

BEDSPRING SUPPORT

Herbert E. Jenkins, Indianapolis, Ind.

Application June 6, 1946, Serial No. 674,737
2 Claims. (Cl. 5—207)

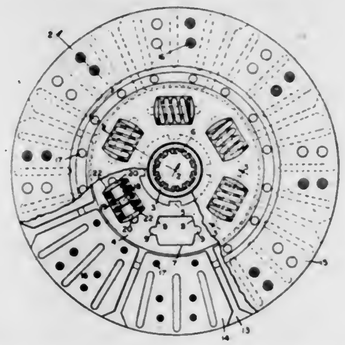


1. As a new article of manufacture, a spring supporting bracket for attachment to the inner face of the side rail of a bed comprising an L-shaped bracket, the horizontal leg of said bracket having a downwardly extending loop open at its top, the vertical leg of the bracket being adapted to be secured to the inner face of the side of a bed, and the horizontal leg of said bracket being adapted to support a bed spring.

2,437,536

BOOSTER TYPE SERVOMOTOR SYSTEM

Clarence L. Johnson, Encino, and Robert R. Richolt, Tujunga, Calif., assignors to Lockheed Aircraft Corporation, Burbank, Calif.



Application September 6, 1943, Serial No. 501,350
12 Claims. (Cl. 121—41)

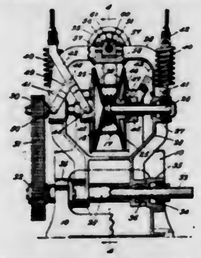
1. In an airplane control surface operating mechanism, including a manually operated con-

trol member, and a power booster system normally energized by movement of said member to supplement or boost the force applied to said control surface, linkage connecting said control member and surface for directly applying the manual effort imposed on the member to said control surface in proportion to the booster energy also imposed thereon throughout the full range of said booster system, and means for manually increasing the mechanical advantage of said linkage over a limited portion of said range upon failure of said booster system.

2,437,537
CLUTCH PLATE
Daniel Kelleher, Berea, Ohio, assignor to Ira Saks, Cleveland, Ohio
Application February 27, 1946, Serial No. 650,647
11 Claims. (Cl. 192—68)

1. In a clutch plate or the like, a pair of members rotatable relative to one another provided with overlapping portions and opposed wall portions thereof defining a space of size depending on the positions of said members relative to one another, a spring in said space for transmitting torque between said members, a seating member having a face thereof engageable with one end of said spring and another face engageable with the wall portion of one of said members, and guide means associated with said seating member fixed relative to the other of said members.

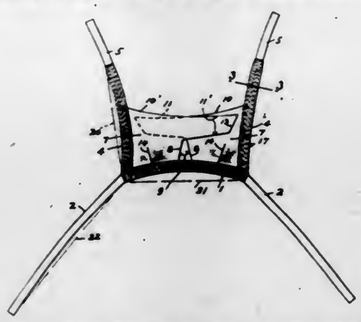
2,437,538
RUBBER COMPOSITIONS CONTAINING OCTADECANE NITRILE
John H. Kelly, Jr., Oak Park, Ill., assignor to Dryden Rubber Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application May 27, 1943, Serial No. 488,694
3 Claims. (Cl. 260—5)



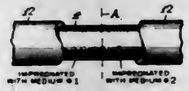
2. A composition comprising reclaimed vulcanized natural rubber, octadecane nitrile, sulfur, triphenyl guanidine, and a butadiene-acrylonitrile synthetic rubber, the sulfur being present in at least 20% and not above 23.7% by weight of the natural rubber hydrocarbon, the triphenyl guanidine being present in from three to five molecule equivalents by weight on the sulfur, the octadecane nitrile being present in from 15% to 50% on the hydrocarbon value of the natural rubber, and the natural rubber being present in not less than 28.7% by weight of the composition excluding the synthetic rubber.

2,437,539
YARN GUIDE FOR BRAIDER CARRIERS
John P. King, Pawtucket, R. I., assignor to Smith-King Company, a corporation of Rhode Island
Application December 21, 1945, Serial No. 636,374
2 Claims. (Cl. 87—57)

1. In a braider carrier, a weight, a support thereon, a one piece yarn guide bent into S shape with one loop providing one resilient jaw of a clamp to engage said support and grip the same, the other loop acting as a yarn guide through which the yarn passes.



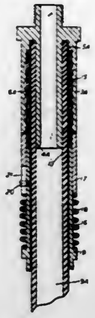
2,437,540
VARIABLE-SPEED TRANSMISSION
Hermann Klaucke, Worcester, Mass., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application June 26, 1944, Serial No. 542,113
4 Claims. (Cl. 74—230.17)



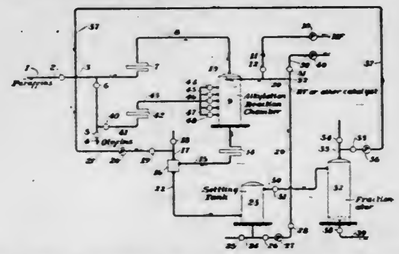
1. In a variable speed power-transmitting mechanism comprising a support, a drive belt, and an expansible pulley carried by the support and including a pair of opposed coniform members for receiving said belt between them, said members being movable toward and from one another to vary the effective diameter of the pulley; the combination of means constantly yieldably urging the coniform members toward one another, comprising a spring for each of said members having one of its ends anchored to said support; arms providing a connection between the other end of said springs and their respective pulley members; and links pivotally connected to the support and to said arms approximately medially between the ends of the latter, whereby the varying force exerted by the springs as they expand and contract will be transmitted as a substantially uniform force to the pulley members throughout their range of movement.

2,437,541
HALTER (FOR WOMEN)
Stephanie D. Koret, San Francisco, Calif.
Application September 25, 1944, Serial No. 555,610
2 Claims. (Cl. 2—42)

1. A woman's halter comprising a body embracing strap of a length adapted to pass around the wearer's body below the breasts and have its ends tied together in back of the body, two upwardly extending shoulder straps secured at their lower ends to the body embracing strap at laterally spaced points beyond the breasts and said straps being of a length adapted to pass upwardly over the shoulders of the wearer and around the back of the neck and tie in back of the neck, a pair of separate breast pocket panels of flexible material sewed each to the body embracing strap and to one only of the shoulder straps and with their inner edges free, and each pocket panel provided with an inwardly extending tie-strap at its upper inner portion of a length adapted to be tied together for adjusting the pockets formed by the panels to the particular wearer, said body embracing strap and shoulder straps formed of spaced cords stitched between layers of cloth to provide a band with inherent springiness and with rounding edges.



2,437,542
CATHETER-TYPE INSTRUMENT
Louis H. Krippendorf, White Plains, N. Y., assignor to American Catheter Corporation, Port Chester, N. Y., a corporation of New York
Application May 5, 1944, Serial No. 534,207
2 Claims. (Cl. 128—349)



1. In an elongated flexible catheter-type instrument, an initially limp fabric base impregnated with a flexible stiffening medium, said medium in one region of said base being of appreciably greater flexibility than in a longitudinally-adjacent region thereof, the flexibilities of the corresponding sections of the instrument being correspondingly affected.

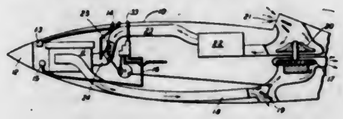
2,437,543
PIPE JOINT
Camille Clare Sprankling Le Clair, Acton, London, England
Application February 23, 1945, Serial No. 579,326
In Great Britain February 22, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 22, 1964
4 Claims. (Cl. 285—84)
(Granted under the provisions of sec. 14, act of March 2, 1927; 357 O. G. 5)

1. A hose coupling comprising, in combination, an outer ferrule part having internal indentations, an inner ferrule part, said ferrule parts being joined at one end and being separated by an annular recess, said ferrules and recess being of sizes to fit onto the end of a hose with the hose disposed in the recess, a liner of plastic material within the recess and interposed between the hose and the outer ferrule part, and means for expanding said liner of plastic material laterally of the recess by the application of force thereto in a direction endwise of the ferrules.

2,437,544
HYDROFLUORIC ACID ALKYLATION PROCESS
Milton M. Marisic, Northfield, Ill., assignor to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
Application August 2, 1944, Serial No. 547,671
4 Claims. (Cl. 260—683.4)

1. The method of forming isoparaffinic hydrocarbons from lower boiling paraffinic and olefinic hydrocarbons comprising contacting a mixture of said lower boiling paraffinic and olefinic hydrocarbons with small particles of liquid hydrofluoric acid at a temperature above the normal boiling point of hydrofluoric acid and at a pressure slightly above the critical pressure of hydrofluoric acid at the desired reaction temperature whereby to permit substantial vaporization of hydrofluoric acid upon rise in temperature and consequent cooling of the reaction mixture.

2,437,545
BASIC AMIDES OF 1-ARYL-CYCLOALKYL-1-CARBOXYLIC ACIDS
Henry Martin and Franz Häfliger, Basel, Switzerland, assignors to J. R. Geigy A.-G., Basel, Switzerland, a firm
No Drawing. Original application June 2, 1944, Serial No. 538,542. Divided and this application July 26, 1945, Serial No. 607,274
6 Claims. (Cl. 260—558)



1. The basic amides of 1-aryl-cycloalkyl-1-carboxylic acids of the general formula

$$\text{aryl}-\underset{\underset{R}{\|}}{C}-CO-N-(CH_2)_2-N(\text{alkyl})_2$$
$$\qquad\qquad\qquad\qquad\quad |\,X$$

wherein aryl means a member selected from the

group consisting of the unsubstituted phenyl radicals and the phenyl radicals substituted by methyl groups, R means a member of the group consisting of tetramethylene and pentamethylene radicals and X stands for a member selected from the group consisting of H and alkyl.

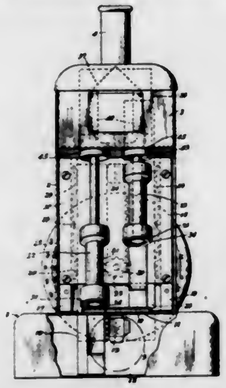
2,437,546
SUPERCHARGED ENGINE CONTROL
Edward B. Meripol, Los Angeles, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application March 18, 1943, Serial No. 479,669
2 Claims. (Cl. 170—135.6)

1. An engine and propeller control including in combination an engine having a throttle, adjustable speed propeller governor, a torque meter and a turbosupercharger having a waste gate, comprising a torque responsive governor integrating both the throttle controlling the engine and the waste gate controlling the turbosupercharger, remote control means for separately adjusting the torque responsive governor and the propeller governor, and means for simultaneously adjusting said remote control means to predetermined relationships of propeller governor adjustments and engine torque at various engine operating conditions.

2,437,547

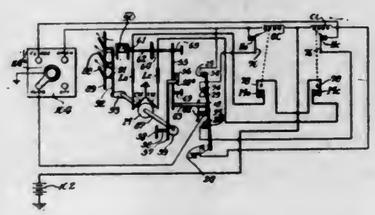
WITHDRAWN

2,437,548
TELESCOPIC FIREARM
George William Patchett, Chigwell, England
Application June 19, 1944, Serial No. 540,928
In Great Britain March 13, 1944
16 Claims. (Cl. 42—72)



1. A telescopic firearm comprising a stock section carrying trigger mechanism, a tubular member fixed to the stock section, and a barrel carried by said tubular member and extending longitudinally thereof, a butt section including a tubular member forming a breech block race, and a breech block in said tubular member of the butt section, the tubular member of the butt section being related telescopically to the tubular member fixed to the stock section to enable said sections to be relatively telescoped to shorten the firearm or extended to place the parts thereof in operative position, said trigger mechanism including a sear operative to hold said butt section extended relatively to said stock section.

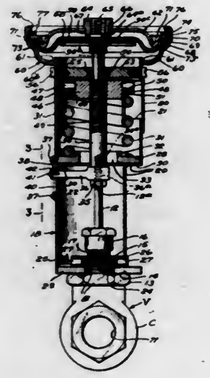
2,437,549
ARTIFICIAL BAIT
Lawrence H. Pecher, Akron, Ohio
Application June 6, 1945, Serial No. 597,747
8 Claims. (Cl. 43—46)



1. An attachment adapted for use with a fishing lure, comprising a wire member having eyes at the ends thereof and an intermediate loop, at least one said eye having a part thereof extending transversely of the eye and in close proximity to another portion of the eye so as to provide only sufficient space to permit a hook to pass between said part and that portion, whereby a hook having an eye of smaller diameter than the eye of the wire can be passed through the eye and positioned on said transversely extending part.

2,437,550
ACTUATING MEANS FOR COLORIMETRIC APPARATUS
William F. Peck, Buffalo, and Kennard W. Harper, East Aurora, N. Y., and Roger S. Estey, Arlington, Va., assignors, by mesne assignments, to American Optical Company, Southbridge, Mass., a voluntary association
Original application February 19, 1941, Serial No. 379,688. Divided and this application April 28, 1944, Serial No. 533,134
2 Claims. (Cl. 88—14)

1. In a structure for use in a colorimeter for comparing a specimen with a standard and comprising means for simultaneously and progressively altering the light transmission characteristics of each relative to the other, the combination of a source of illumination, a base housing said source and being apertured for allowing light to pass therethrough for illuminating said specimen and standard, a rotatable actuator positioned above said base, means mounting said actuator on said base, said actuator being adapted to be connected to said first mentioned means for actuating same for progressively altering said light characteristics, said actuator carrying a dial of light transmitting material concentric therewith, said dial bearing indicia thereon and having a portion thereof extending through a second aperture in said base, an index member in said base and adjacent said portion for cooperating with said indicia to indicate the angular position of said actuator, a partition in said base having an aperture for the passage of light from said light source to said portion of said dial adjacent said index member, and viewing means in said base for viewing said portion of the dial from a position adjacent the position of the colorimeter operator's eye while observing the light transmission characteristics of the specimen and standard.



2,437,551
AUTOMATIC CONTROL SYSTEM
Ralph Penn, Goshen, Ind., assignor to Penn Electric Switch Co., Goshen, Ind., a corporation of Iowa
Application February 25, 1944, Serial No. 523,839
3 Claims. (Cl. 318—32)

1. For use in conjunction with a control shaft, means for operating said shaft comprising a reversing electric motor, follow-up mechanism associated therewith, and control mechanism for said motor comprising a pilot switch, a condition responsive means responding to a condition controlled by said control shaft, dual means for operating said pilot switch from said control shaft and from said condition responsive means, relays operated by said pilot switch in opposite positions thereof and controlling said motor contacts as to its rotation in one direction or the other, said pilot switch having holding contacts for said relays, said pilot switch having relay operating contacts for operating the relays, said holding contacts being closed before the pilot switch energizes the relays by closure of said relay operating contacts and the relays being deenergized by opening of said holding contacts.

2,437,552
VALVE CONSTRUCTION
Francisco A. Quiroz, Newark, N. J., assignor to Kieley & Mueller, Inc., North Bergen, N. J., a corporation of New York
Application February 2, 1944, Serial No. 520,753
7 Claims. (Cl. 137—153)

1. A valve construction comprising a valve casing and an elongated built-up frame of relatively small transverse dimensions and in open-ended tubular form that comprises sheet metal side frame means of substantial length cross-sectioned for stiffness against bending and having a plurality of longitudinally spaced transverse members secured thereto to hold said side frame means against distortion, at least one of said transverse members being positioned intermediate of the ends of said frame means and being received and positioned internally thereof, one of said transverse members and said valve casing having means for securing them together, said valve casing having bearing means, and another of said transverse members that is remote from said valve casing having bearing means substantially coaxial with said first-mentioned bearing means, stem means slidably supported by said bearing means and extending into said valve casing, helical spring means within said tubular sheet-metal frame means and reacting between one of said transverse members and said stem

means, said helical spring means having interposed between at least one end thereof and the part with which said spring end reacts relatively rotatable bearing annuli at least one of which is of low-friction bearing material and both of which are coaxial with the stem means to thereby permit rotational movement of said spring end and prevent transmission of tortional strains of said built-up frame.

2,437,553
MOTION-PICTURE FILM CONTROL DEVICE
Archie Raskin, Englewood, N. J., and Irving Fox and Herman Puls, New York, N. Y.
Application September 20, 1945, Serial No. 617,522
2 Claims. (Cl. 192—127)

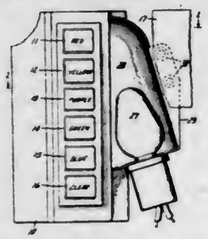
1. In a motion picture control device and in combination with an electrical switch and a carrier therefor, of a frame member supported by the carrier, a film guide roller carried by the frame member, a yoke device slidably mounted on the frame member, a pair of film guide rollers carried by said yoke device for coaction with the first named roller, a pivoted lever, a fourth film engageable roller carried by said pivoted lever, and said lever having one end operatively in register with an actuating member of the electrical switch, and manually operable means for simultaneously swinging the switch lever and sliding the yoke device.

2,437,554

DYESTUFF PREPARATIONS CONTAINING AN ACID ESTER SALT OF A LEUCO VAT DYESTUFF, A WATER-SOLUBLE ACID AMIDE AND A SALT OF A QUATERNARY AMINO ACID

Roger Ratti, Neu-Allschwil, near Basel, and Philipp Brandt, Basel, Switzerland, assignors to Durand & Huguenin S. A., Basel, Switzerland, a Swiss firm

No Drawing. Application November 29, 1943, Serial No. 512,245. In Switzerland May 5, 1941
13 Claims. (Cl. 8—70)



1. A dyestuff composition for printing textile fibers comprising a water-soluble acid amide, an ester salt of a leuco vat dyestuff and a water-soluble, stable internal salt of a tertiary to quaternary amino acid selected from the class consisting of betaines which contain an aralkyl radical and sulfobetaines which contain an aralkyl radical.

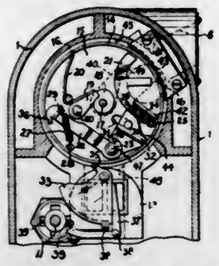
2,437,555

PUSH-BUTTON SWITCH

Gregory L. Rees, Hinsdale, Ill., assignor to Hotpoint Inc., a corporation of New York

Application October 20, 1944, Serial No. 559,498
2 Claims. (Cl. 200—167)

1. A push button indicating device for use with electric switches comprising, in combination, a supporting element, a row of push buttons carried by said element, each button comprising a member of light transmitting material and being provided with a surface disposed at an angle to the face of the button to form a prism, a light source adjacent said buttons for directing light toward the prisms when the buttons are pushed so that it is reflected toward the faces of the buttons, each of said buttons having different colors graduating from dark to light, the buttons having colors less readily visible being closer to the light source than those more readily visible so that the light transmitted by the prisms to the ends of the buttons is of substantially uniform intensity.



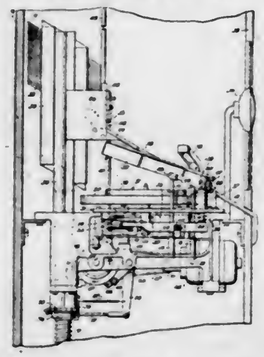
2,437,556

TIMING DEVICE

Marcus H. Rhodes, Hartford, Conn., assignor to M. H. Rhodes, Inc., Hartford, Conn., a corporation of Delaware

Original application October 25, 1943, Serial No. 507,640, which is a division of application Serial No. 349,119, August 1, 1940. Divided and this application October 1, 1945, Serial No. 619,681
2 Claims. (Cl. 194—72)

1. A coin-controlled timing device comprising a clockworks mechanism, a manually rotatable coin carrier, a coin receiver having a coin receiving space mounted on said carrier, means for permitting the insertion of a coin into said space at one rotated position of the carrier, means for releasing the coin from said space at a second rotated position of the carrier, means forming a driving connection for winding and setting said clockworks when the carrier is rotated between said rotated positions of the carrier with a coin positioned in said space, a temporary coin holder comprising a passageway for receiving a coin released from said space at the second rotated position of the carrier and a pivoted stop member normally blocking the passage of a coin



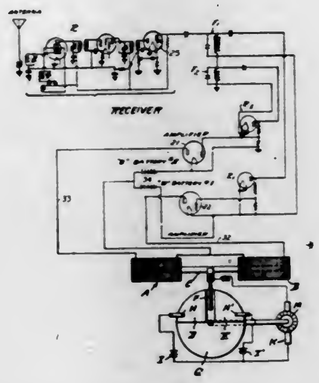
through said passageway and adapted to be pivoted to a coin releasing position, a permanent coin holder for receiving coins released from the temporary coin holder, means for temporarily pivoting said stop member to coin releasing position upon the initiation of a winding operation, and means for pivoting said stop member to coin releasing position upon completion of unwinding of the clockworks mechanism.

2,437,557

PHONOGRAPHIC APPARATUS

David C. Rockola and Irving Gil, Chicago, Ill., assignors, by mesne assignments, to Rock-Ola Manufacturing Corporation, Chicago, Ill., a corporation of Delaware

Application June 25, 1941, Serial No. 399,590
8 Claims. (Cl. 274—10)



1. In a sound recording and reproducing device, the combination which comprises a housing, a supporting frame mounted in the housing, a turntable mounted on the supporting frame, means for operating the turntable, a record-cutting arm mounted on the frame adjacent to the turntable, a record pick-up arm also mounted on the frame adjacent to the turntable, a sequence operation controlling mechanism operatively connected to the cutting arm and to the pick-up arm, means operated by the said mechanism for stopping the said mechanism whenever one of the said arms is moved to an initial operating position relative to the turntable, and means connected to said arms and operable responsively to the movement of the said arms to the ends of their respective operating positions to start the said sequence operation controlling mechanism.

2,437,558

PRECISION RADIO REMOTE-CONTROL SYSTEM

Edgar L. Rockwood, Berkeley, Calif.

Application March 12, 1943, Serial No. 478,947
2 Claims. (Cl. 318—31)

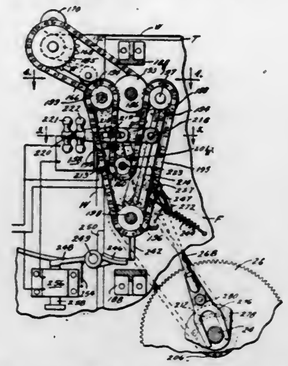
1. A remote control system in which control is effected by means of two frequencies whose amplitudes are varied jointly in opposite directions with the amplitude of one frequency decreasing while the amplitude of the other increases their sum remaining at a constant value, and which comprises a receiver, demodulating means therein, a filter system, comprising a pair of filter circuits, each circuit tuned to one of the two frequencies received for separating the same, a rectifier arrangement in each filter circuit and a pair of solenoid coils, each coil connected with one of the filter circuits and operated by the rectified filter currents, a common movable core operated by the said solenoid coils, and moved in proportion to the energization of the coils and translation means for transforming said reciprocating movement of the core into proportionate rotational movements.

2,437,559

INSULATOR AND METHOD OF MANUFACTURING SAME

Davidge H. Rowland, Brighton, N. Y., assignor to The Porcelain Insulator Corporation, Lima, N. Y., a corporation of New York

No Drawing. Application December 5, 1945, Serial No. 633,041
2 Claims. (Cl. 106—46)



1. The method of making vitreous wet process porcelain insulators which consists in forming a mix of approximately 26% ball clay, 20% flint, 32% feldspar, 22% china clay, and aluminum in finely divided form in the approximate amount of 1% by dry weight of the mix, moistening the mix and shaping the insulators therefrom, and thereafter firing the shaped insulators at temperatures ranging between approximately 2340° F. and 2450° F.

2,437,560

WRAPPING PAPER CONTROL MECHANISM

Oscar Sandberg, Defiance, Ohio, assignor to Lynch Package Machinery Corporation, Toledo, Ohio, a corporation of Ohio

Application November 3, 1943, Serial No. 508,828
7 Claims. (Cl. 74—190.5)

1. In a drive mechanism, a drive shaft, a driven shaft, and means for transmitting power from said drive shaft to said driven shaft, said transmitting means being adapted to drive said driven shaft at different speeds and comprising a pair of arms pivoted on said drive shaft, a friction drive disc carried by each arm, and a pair of friction driven discs on said driven shaft and normally engaged at one diameter by said friction drive discs, said arms when moved relative to each other changing the diameter at which said friction driven discs are engaged and thereby driven at a different speed.

2,437,561

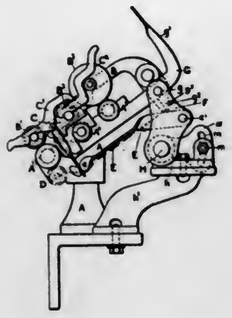
PREPARATION FOR THE CARE OF THE SKIN

Fritz Schaaf, Basel, Switzerland, assignor to Ciba Pharmaceutical Products Inc., Summit, N. J., a corporation of New Jersey

No Drawing. Application March 9, 1945, Serial No. 581,970. In Switzerland January 3, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires January 3, 1964
2 Claims. (Cl. 167—90)

2. A cosmetic preparation for the care of the skin containing a member selected from the group consisting of the naturally-occurring multi-unsaturated fatty acids and their naturally-occurring esters, plus nicotinamide.

2,437,562



WEIGHTING MOTION FOR DRAFTING ROLLERS

John Schofield, Jr., Rochdale, England

Application March 27, 1946, Serial No. 657,448
In Great Britain March 30, 1945
2 Claims. (Cl. 19—136)

1. Weighting mechanism for the top drafting rollers of the drawing heads of ring spinning frames and other textile machines comprising the combination with the front and back weighting saddles of a weighting lever arranged below the rollers and pivotally mounted on a bracket, a connecting bar connecting the front weighting saddle to the front end of the weighting lever, a two armed pressure lever also pivotally mounted on the bracket and capable of being moved about

its pivot to bring one of its arms into pressure contact with the weighting lever, a rotatable bar on which the bracket is secured, the axis of the bar being parallel to the axes of the drafting

rollers, bearings for the said bar and means for imparting an angular movement to the bar for adjusting the position of the bracket to allow of adjustment of the weighting lever.

2,437,563

HEAT-TREATMENT FOR COPPER-NICKEL-COBALT PERMANENT MAGNET ALLOYS

John D. Seaver, Marblehead, Mass., assignor to General Electric Company, a corporation of New York

No Drawing. Application July 24, 1942, Serial No. 452,205
5 Claims. (Cl. 148—12.7)

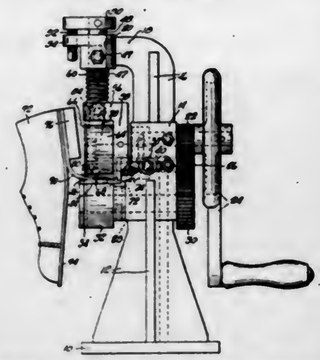
2. A method for heat treating a permanent magnet alloy consisting of about 20–85% copper, 10–50% nickel, 5–70% cobalt which comprises heating the alloy at a temperature of about 1100° C. for about eight hours, then slowly cooling the alloy to about 800 to 870° C., subjecting the alloy to mechanical work, thereafter heating the alloy at about 1100° C. for a few minutes, quenching it, and then reheating it at about 575 to 650° C. for a few hours.

2,437,564

COMPOUNDS WITH CORTINLIKE EFFECT AND INTERMEDIATES THEREOF AND A METHOD OF PRODUCING THE SAME

Arthur Serini, Berlin N. 65, and Willy Logemann, Berlin-Charlottenburg, Germany, assignors to Schering Corporation, Bloomfield, N. J., a corporation of New Jersey

No Drawing. Application June 14, 1938, Serial No. 213,630. In Germany June 14, 1937
18 Claims. (Cl. 260—397.4)



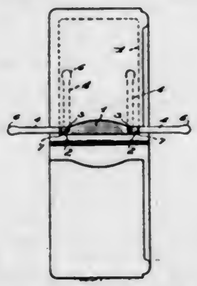
1. Process for the manufacture of 21-oxy-compounds of the pregnane series wherein pregnane compounds, which contain between the carbon atoms 20 and 21 an ethylene bond and on the carbon atom 17 a hydroxyl group, are converted with the aid of agents adding on an oxygen-containing group, followed by hydrolysis, into compounds of glycerol-like structure containing hydroxyl groups on the carbon atoms 17, 20 and 21, and from the latter water is split off.

2,437,565

LEATHER SKIVING DEVICE

Paul A. Sergio, South Bend, Ind.

Application April 8, 1946, Serial No. 660,390
16 Claims. (Cl. 12—17)



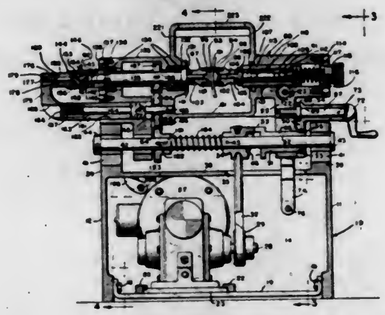
1. A leather skiving device comprising a frame mounting a work support, a work feed roll rotatable on said frame and located below and at one side of said support, a rotatable cutter spaced above said feed roll, means for supporting said cutter, a skiving blade located opposite to said support for engagement by leather fed by said roll, a blade mounting carried by said frame, means for rotating said feed roll to advance leather from said support to and past said cutter and blade, means for adjusting said cutter supporting means to groove leather to the desired depth and means for adjusting said blade mounting to skive leather at a depth corresponding to the depth of said groove.

2,437,566

SAFETY ATTACHMENT FOR BILLFOLDS

Harold E. Stonebraker, Rochester, N. Y.

Application November 15, 1945, Serial No. 628,833
1 Claim. (Cl. 150—47)



A safety attachment for a billfold including a supporting plate arranged between adjacent laminations of one of the foldable sections of the billfold, a pair of locking arms pivotally mounted at one end of the supporting plate with said end positioned adjacent to the line of fold and between the foldable sections of the billfold, each of said locking arms being offset perpendicular to the plane of the plate to clear the adjacent lap of the billfold, said arms being movable freely in opposite directions and by gravity downwardly and outwardly from a vertical position to a horizontal position extending perpendicularly to the side edges of the billfold when the billfold is positioned in a pocket with the line of fold adjacent to the bottom of the pocket, the arms when in said horizontal positions extending from opposite sides of the billfold throughout a distance slightly greater than the width of the pocket opening and no greater than the width of the body of the pocket, and stop devices carried by the supporting plate in the path of the locking arms limiting their downward movement.

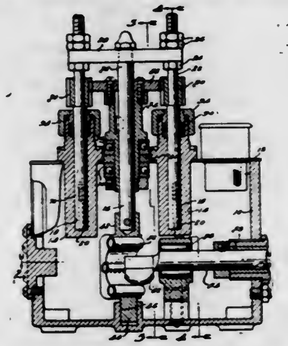
2,437,567

LENS EDGE GRINDER

Richard Colbernt Uhlemann, Barrington, Ill., assignor to Uhlemann Optical Co. of Illinois, Chicago, Ill., a corporation of Delaware

Application July 10, 1946, Serial No. 682,684
3 Claims. (Cl. 51—101)

1. A grinding machine of the class described comprising a frame, a power shaft rotatably mounted in said frame, a head angularly oscillatable and reciprocably slidable on said shaft, a first spindle rotatably mounted on said head and having an axis parallel to said power shaft, a second spindle coaxial with said first spindle and rotatable therewith, a chuck at one end of said first spindle, a chuck at the adjacent end of said second spindle, said chucks including resilient means for gripping the work therebetween, said second spindle being freely rotatable in said head, said first spindle being driven by said power shaft, there being transmission means between said first spindle and power shafts, a chuck at the opposite end of said first spindle for holding a template, an arm slidably mounted with respect to said head, said arm including a chuck adapted to engage one face of said template, and resilient means associated with said arm for applying engaging pressure to said template, said arm and head having mutually engageable means for maintaining a predetermined position of the chuck thereon with respect to said template, said means being disengageable manually for removing said template from the machine.



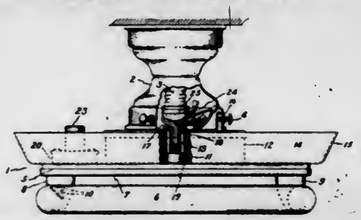
2,437,568

PUMP

Ralph F. Urso, Detroit, Mich., assignor to McCord Corporation, Detroit, Mich., a corporation of Maine

Application April 2, 1945, Serial No. 586,081
5 Claims. (Cl. 103—157)

1. A pump comprising a cylinder closed at one end and having spaced inlet and discharge ports spaced from the closed end of said cylinder, a reciprocable piston operatively arranged in said cylinder and having a port in its side and a duct extending between said port and the working face of said piston, and common means for reciprocating said piston in said cylinder and for rotating said piston to align the port therein with said inlet port at the beginning of the suction stroke of the piston and to align said port in said piston with said outlet port at the beginning of the discharge stroke of the piston, said means comprising a rotary cam, a yoke including a cam member having four pins arranged parallel to each other in a circle ninety degrees apart with the axis of said pins normal to said circle, said cam member being positioned relative to said rotary cam so that said cam upon rotation thereof will successively engage said pins, means for mounting said

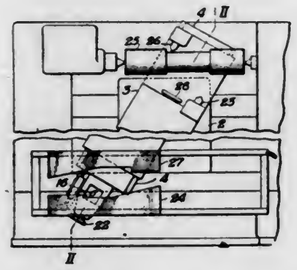


yoke for oscillation about its longitudinal axis and for reciprocating movement parallel to said axis, said yoke being connected to said piston for effecting the reciprocation thereof, said pins being arranged on said cam member so that two of them lie on the axis of oscillation and reciprocation of said yoke, said rotary cam being engageable with said two pins to effect the suction and discharge strokes of said piston and with the other two pins to oscillate said cam member about said axis between said strokes so as to position said piston port in line with said inlet port before and during the suction stroke of the piston and in line with said outlet port before and during the discharge stroke of said piston.

2,437,569

LAMP FIXTURE

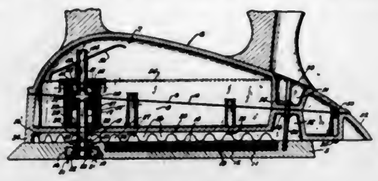
Otto H. Van Amburg, Bridgeport, and John M. Pistey, Fairfield, Conn., assignors to General Electric Company, a corporation of New York



Application March 18, 1946, Serial No. 655,106
1 Claim. (Cl. 240—51.12)

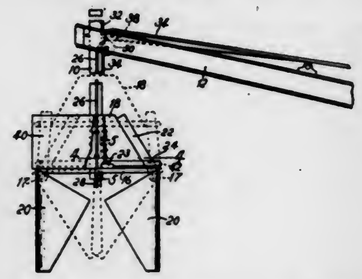
A lamp fixture for circular tubular discharge lamps comprising, in combination, a lamp holder having a support with relatively movable arms at opposite ends of the support for supporting a cir-

cular tubular lamp on the holder and for making an electrical connection therewith, said support being provided with a threaded nozzle centrally disposed between the arms, a circular dish-shaped reflector carried by said lamp holder, said reflector being formed with a central opening through which said nozzle extends, a ballast having a centrally disposed passageway mounted on said reflector, the nozzle likewise extending into said passageway, an adapter cup overlying said ballast for mounting the fixture on a support and a hollow fastening screw extending through an opening in the cup, the passageway in the ballast, and being threaded into the nozzle to hold the parts in assembled relationship.



2,437,570
LATHE
Ottomar von Zelewsky, Neuhausen-on-the-Rheinfall, Switzerland, assignor to Aktiengesellschaft der Eisen- und Stahlwerke vorm. Georg Fischer, Schaffhausen, a Swiss corporation
Application May 29, 1944, Serial No. 537,771
In Switzerland May 15, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires May 15, 1963
6 Claims. (Cl. 82—14)

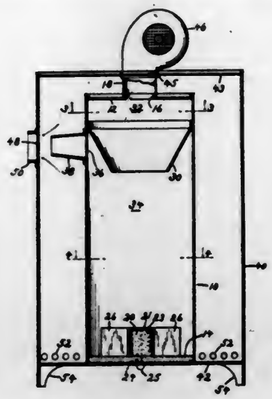
1. In a machine tool for the turning of work, having a machine frame carrying a horizontal bed, a horizontal slide slidably arranged to travel on said bed in parallelism with the rotational axis of said work, a plate carried by said slide, a hydraulically operated tool carrying member obliquely slidable on said plate, an upper tool and a lower tool carried by said member, an upper die and a lower die arranged on the bed in vertically spaced relation to each other, a pivotally mounted feeler movable with the tool carrying member for engaging one of the dies when the horizontal slide is slid in one direction during the cutting operation of one of the tools and for engaging the oppositely disposed die when said slide is slid in the opposite direction during the cutting operation of the other of said tools and means operated by said feeler for controlling said cutting operations.



2,437,571
STEAM IRON
Gilbert Waage, Sandusky, Ohio
Application December 1, 1944, Serial No. 566,122
5 Claims. (Cl. 38—77)

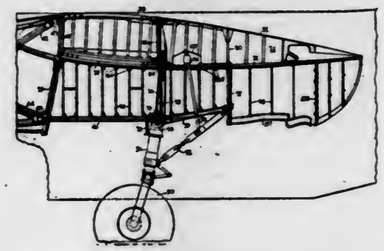
1. In a steam iron having a sole plate and having a container for water positioned over the sole plate, a heel rest, a heating element adjacent the sole plate for heating the latter, and a heating unit located in the forward end of the water container adjacent the bottom thereof to be submerged when the iron is in a normal

position of use and to be above the normal level of water in the container when the iron is at rest on its heel.



2,437,572
POWER EXCAVATING APPARATUS
Leo N. Walter, Oak Glenn, Ill.
Application January 13, 1944, Serial No. 518,064
7 Claims. (Cl. 37—187)

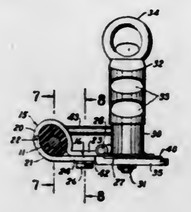
1. In an excavating apparatus, a standard, a transverse member fixed to said standard at an end thereof, a substantially triangularly shaped element slidably positioned on said standard, the base of said element being adapted to engage a surface of said transverse member, means for moving said element longitudinally of said standard, said means including a cable secured to said triangular member and extending beneath said transverse member, a pair of scoops hingedly secured to opposed ends of said transverse member, each of said scoops being provided with an angularly disposed arm adapted to engage said triangularly shaped element whereby said longitudinal movement thereof results in movement of the ends of said scoops toward and from each other.



2,437,573
HEATER CONSTRUCTION
Leo N. Walter, Oak Glenn, Ill.
Application October 10, 1945, Serial No. 621,495
7 Claims. (Cl. 219—39)

1. A portable heater comprising, a cabinet, a cylindrical member positioned within said cabinet, a duct providing inlet means extending through said cabinet and into the interior of said cylindrical member, means adjacent the base of said cabinet for admitting air into the interior thereof, separate discharge means for said cylindrical member and said cabinet positioned intermediate said inlet means, said separate discharge means being disposed to prevent a flow of air from said cabinet into said cylindrical member when the heater is in operation, power means for causing air to flow into said inlet means and outwardly through said outlet means, and

means for heating said flowing air intermediate said inlet and said outlet.

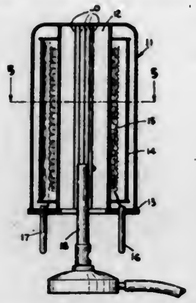


2,437,574
AIRCRAFT
Michael Watter and Ernest G. Bruce, Philadelphia, Pa., assignors to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 13, 1944, Serial No. 535,462
14 Claims. (Cl. 244—117)

1. In an airplane in combination, a wing having a spar and strong rib structure secured therebehind, a nacelle provided with a first bulkhead secured beneath the spar, a second bulkhead secured below the rib structure aft of the spar, a cantilever structure secured to and extending from the bottom of the first bulkhead to the second bulkhead and there secured, and a landing gear having a forward main thrust strut and a rearward drag strut and having its main thrust strut secured to the bottom of the first and its drag strut secured to the bottom of the second bulkhead.

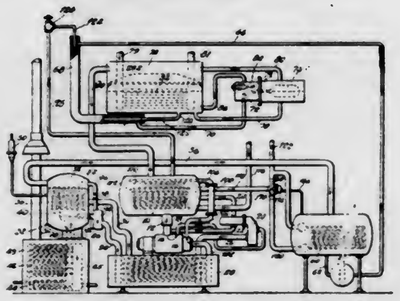
14. In an airplane in combination, a wing having a spanwise extending spar and spaced chordwise extending ribs secured to the spar, a nacelle mounted below the wing and having chordwise extending sides disposed vertically below certain of said ribs, a transverse bulkhead in the nacelle located vertically below the spar, and strut members extending from the bottom of said bulkhead upward to the bottom of said spar and thence upward to the top of said spar at each nacelle side location, said strut members including a strut element extending upward diagonally in a vertical spanwise plane.

2,437,575
STEERING DEVICE
Eber B. White, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a corporation of Delaware
Application April 12, 1946, Serial No. 661,621
3 Claims. (Cl. 74—557)



1. For combination with a steering wheel, the ring section of which is provided on the underside with finger grip formations; a steering aid for use by persons having prosthetic substitutes for natural hands, comprising a two part bracket having an upper part and a lower part so shaped as to form a clamp for attachment to the ring of said steering wheel and a bracket arm projecting into the interior of said wheel, the ring clamping portion of said lower part of the bracket being provided with conformations interfitting in complementary engagement with said finger grip formations on the underside of said steering wheel ring, means for securing together said two parts of the bracket in clamping engagement on the ring of the wheel, a two part hinge having one part stationarily secured to said bracket arm and the other part adapted to swing about an axis within and parallel to the plane of said steering wheel, a handle support member carried on said swingable part of said hinge, a handle adapted to be engaged in force transmitting relationship by one of said prosthetic substitutes, means rotatably securing said handle to said handle support whereby the handle may rotate thereon about an axis lying in plane generally perpendicular to that of said steering wheel, and spring biased handle locking means operatively interconnected between said bracket and said handle support for alternately locking said handle either in an upstanding operative position where its axis of rotation is perpendicular to the plane of the wheel or in an out of the way position wherein the axis of rotation lies within the plane of said wheel.

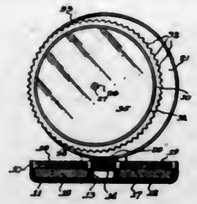
2,437,576
FLAME-HEATER CATHODE TUBE
Quintin J. Wick, Highland, Ill.
Application July 2, 1946, Serial No. 680,913
3 Claims. (Cl. 250—27.5)



1. An electron tube comprising an annular metal shell having a non-conducting portion, said shell being hermetically sealed and evacuated, an electrode in said shell, said electrode

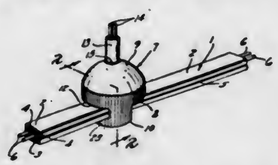
being spaced from the inner wall of the shell, and a terminal in said non-conducting portion

connected to said electrode, said inner wall being corrugated.



2,437,577
ABSORPTION REFRIGERATION SYSTEM INCLUDING CONDENSER PRESSURE CONTROL MEANS
Walter W. Williams, Bloomington, Ill., assignor to Eureka Williams Corporation, a corporation of Michigan
Original application August 3, 1940, Serial No. 350,993. Divided and this application March 27, 1944, Serial No. 528,281
7 Claims. (Cl. 62—5)

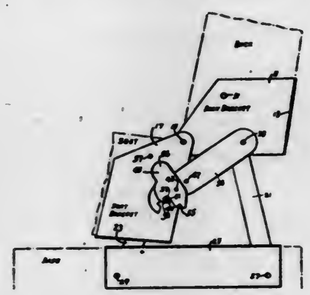
1. In an absorption type refrigerating apparatus, the combination of a condenser, cooling coils for the condenser, means for passing a cooling fluid through said coils, a valve associated with said last-mentioned means for regulating the flow of said fluid into said coils, and a pressure-responsive mechanism for operating said valve in accordance with the vapor pressure within said condenser whereby the temperature and pressure of the refrigerant in said condenser is regulated to a predetermined value.



2,437,578
VANITY CASE
Floyd M. Williamson, Detroit, Mich.
Application April 14, 1945, Serial No. 588,286
17 Claims. (Cl. 132—83.6)

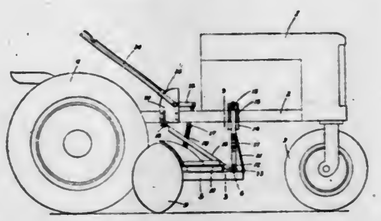
14. A vanity case comprising a container for cosmetics, a cupped cover articulated to the container for movement to open and closed positions, a mirror mounted on the inner surface of the cover and rotatable relative thereto, means extending to the outer surface of the cover and operable while the cover is in closed position to rotate the mirror, and a wiper element within

the vanity case positioned to contact the mirror when the same is being rotated.



2,437,579
ELECTRICAL OUTLET CONSTRUCTION
Robert E. Wilson, Minneapolis, Minn.
Application December 8, 1945, Serial No. 633,749
6 Claims. (Cl. 173—334.1)

1. An electrical outlet construction comprising laterally spaced electrical conductors disposed within a substantially rectangular insulating member, the opposite sides of said insulating member being provided with self-closing slits which project inwardly each to an adjacent one of said conductors, a terminal head having a passage therethrough to receive the insulating member, said passage flaring outwardly in opposite directions from its intermediate portion to permit limited rotation of the terminal head on the insulating member, contact fingers carried by the head and extending inwardly from opposite sides of opposite flared ends of said passage and adapted to enter opposite slits in the insulating member under rotation of the terminal head in one direction, and feet carried by the head and extending inwardly from the opposite sides of opposite flared ends of said passage and adapted to frictionally grip the lower face of said insulating member when the contact fingers are forced to enter the opposite slits of the insulating member under rotation of the terminal head.

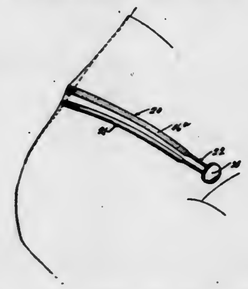


2,437,580
LATCH FOR SOFA BED HINGES
William W. Wilson, Memphis, Tenn.
Application April 14, 1944, Serial No. 531,031
17 Claims. (Cl. 5—47)

1. In a sofa bed including seat and back members shiftable to and from seating to bed positions; means each including a pivot at opposite ends of said seat and back members, hinging said members together, a hinge pin and a latch pin carried by said members respectively, one said pin being spaced backward from its related said pivot and the other thereof downward from said pivot, a latch hinged at its inner end by said hinge pin and extending outward beyond and slidably overlying said latch pin, the outer end of said latch being upwardly notched to establish an inner shoulder and an outer shoulder spaced apart for respective bracing and movement limiting engagement with said latch pin; and a dog pivotally attached to said latch in adjacency to the bracing shoulder of said notch, said dog having a major portion of its weight disposed above and forwardly of said pivot, and forwardly thereof being recessed to form a downwardly extending locking part spaced outward from said pivot and said bracing shoulder, said

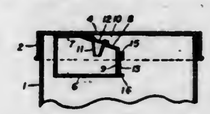
dog also being cut away to form an outwardly facing trip notch on its lower end, and means to limit turning movement of said dog when said locking means is shifted downwardly and rearwardly to a position below said latch, and oppositely when said trip notch is shifted forwardly and upwardly into overlying relation with said latch notch, under shifting movement of said seat and back.

2,437,581
PLOW ASSEMBLY MOUNT
Robert J. Wray, Modesto, Calif.
Application December 26, 1944, Serial No. 569,683
8 Claims. (Cl. 97—137)



1. In combination of a tractor having side frames and spaced front and rear wheels, and a plow structure having a substantially horizontal frame disposed under said tractor frames in the space between the front and rear wheels, vertical suspension links extending between and swivelly connected to the tractor frames and to the forward end of the plow frame, and draft bars swivelly connected to the forward end of said plow frame and extending upwardly and rearwardly at an angle lengthwise of the tractor to connection with said tractor frames at points spaced lengthwise of the tractor from the points of connection of the links therewith, the swivel connection of the links and draft bars being operable to allow the plow frame to swing laterally of the tractor frame.

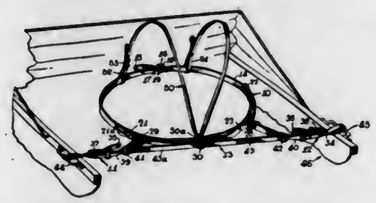
2,437,582
PROCESS FOR THE PREPARATION OF DIPENTAERYTHRITOL HEXANITRATE
Joseph A. Wyler, Allentown, Pa., assignor to Trojan Powder Company, Allentown, Pa.
No Drawing. Application October 30, 1945, Serial No. 625,697
1 Claim. (Cl. 260—467)



The method of making dipentaerythritol hexanitrate which comprises nitrating dipentaerythritol in mixed acid at a temperature not above 25° C., the mixed acid containing 5 to 23 parts of water and a total of nitric acid and sulfuric acid within the approximate range 77 to 95 parts for 100 parts of the mixed acid and containing not less than about 15 parts of sulfuric acid and not less than about 15 parts of nitric acid for 100 parts of the mixed acid, the nitration as described causing separation of dipentaerythritol hexanitrate crystals from the nitrating bath as the hexanitrate is produced.

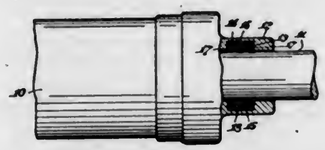
2,437,583
HOSIERY SUPPORTING MEANS
Eric J. Young, Jersey City, N. J.
Application September 17, 1945, Serial No. 616,676
10 Claims. (Cl. 2—309)

1. In a hosiery supporter the combination of a segmental-shaped leg gripping construction, a segmental-shaped hosiery gripping construction, and means resiliently connecting said two constructions so that the stocking gripping construction is normally urged resiliently away from the leg gripping construction, the outer surface of the leg gripping construction being smooth to permit a stocking to readily slide thereover, the outer surface of the hosiery gripping construction being of a non-slip nature to contact with a non-slip engagement the stocking.



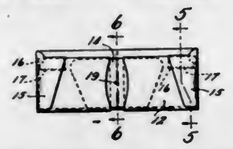
2,437,584
BALLOT BOX
Vicente Zamora, Manila, P. I.
Application May 26, 1947, Serial No. 750,423
2 Claims. (Cl. 232—2)

1. A device of the class described comprising a box for receiving ballots therein, a cover for closing said box provided with a slot in the top thereof for the insertion of ballots therethrough into said box, a closed box-like member depending from said cover beneath said slot and having



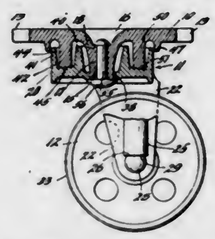
an oblique top portion forming with the top of the cover a horizontal throat extending transversely beneath said slot and flaring away from the same whereby ballots inserted in the slot are deflected to one side of the slot to drop into the box, said member blocking direct access to the box by way of said slot to prevent ballots from being fished out of said box through the slot, said member having a top opening therein extending parallel with said slot in vertical alignment therewith whereby liquid poured through said slot to ruin the ballots will descend into said member and be trapped therein, and a screen covering said opening to block entrance of ballots into said member.

2,437,585
CHILD'S SWIVEL HARNESS
Benno Zimmern, New York, N. Y.
Application July 24, 1946, Serial No. 686,028
2 Claims. (Cl. 227—49)



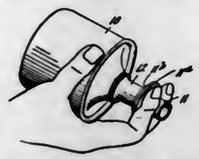
1. A child's harness comprising a belt for encircling a child's waist and provided with means for securing together the ends of the belt; a turning harness secured to said belt and retaining means for lateral securement of the turning harness to fixed points of support, said turning harness supporting the belt at not less than two spaced apart lateral points of support and provided with adjustable sliding means whereby the belt may be rotated while supported at the two spaced apart points of support without any slack appearing in the turning harness and retaining means.

2,437,586
PACKING GASKET AND STATIC SEAL
Joseph S. Aber, Philadelphia, Pa., assignor of six per cent to William S. Loeb, Philadelphia, Pa.
Application April 4, 1946, Serial No. 659,604
5 Claims. (Cl. 286—26)



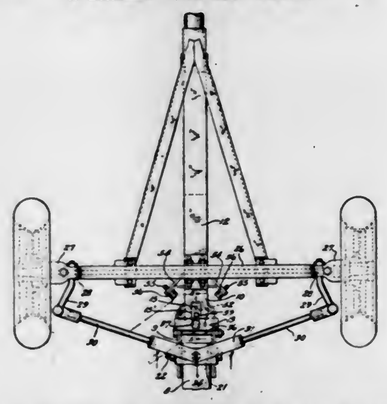
1. A packing gasket and static seal structure comprised of an elastic rubber composition ring having a circumferential groove in one of its boundaries and an elastic rubber composition ring normally round in cross section and seated in the groove of the first mentioned ring, said second ring being narrower in cross section than the groove and wider than the depth of said groove.

2,437,587
FLEXIBLE POCKET RECEPTACLE
George Barton, Racine, Wis., assignor to Buxton, Incorporated, Springfield, Mass., a corporation of Massachusetts
Application October 16, 1942, Serial No. 462,211
6 Claims. (Cl. 150—38)



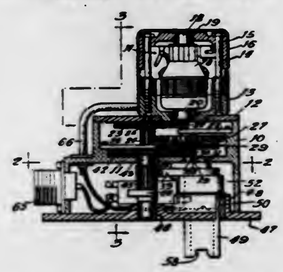
1. A flexible pocket receptacle comprising a rear wall and a front wall providing an elongated bill compartment between them, the front wall including spaced bottom closing members extending from the bottom edge of the rear wall adjacent the ends thereof, and end closing members extending one from each end of the rear wall, the adjacent end and bottom closing members being folded into superposed relation on the rear wall, said members when so folded having overlapping portions extending beyond the upper edge of the front wall, means connecting the overlapped extending portions together, said portions being freely folded downwardly into the bill compartment of the receptacle, with said connections being positioned adjacent the closed ends of the billfold.

2,437,588
CASTER
Charles A. Baum, Hamilton, Ohio
Application November 1, 1944, Serial No. 561,416
6 Claims. (Cl. 16—18)



1. A caster of the class described comprising in combination a plate adapted to be secured to a truck or the like, a depending substantially centrally disposed stem carried by said plate, a swivelling housing member having a caster wheel rotatably mounted thereon, said housing member being provided with a central opening to receive said stem with a snug bearing fit, this radial bearing between said stem and said housing member being the sole radial bearing of said caster, means for securing said housing member and said stem rotatably together, two concentric annular flanges formed on said housing member, projecting upwardly therefrom, and spaced apart to provide between them an annular pocket having substantially smooth uninterrupted side walls, the bottom of said pocket comprising an annular radially inclined uninterrupted track the radially inner side of the track being higher than the outer, the cross-section of said pocket being at least as deep as it is wide an annular downwardly projecting flange on said plate adapted to enclose the outer of the two flanges on the housing member to exclude dust and the like, and narrow annular thrust bearing means adapted to move on said track to support said plate upon said housing members.

2,437,589
TELESCOPING DISPENSING NOZZLE WITH FLUID PRESSURE-OPERATED SAFETY VALVE
Arthur R. Bink, Westfield, N. J.
Application April 23, 1945, Serial No. 589,744
7 Claims. (Cl. 222—493)

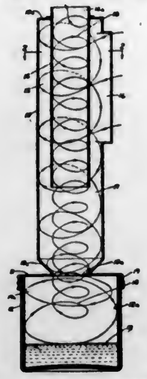


4. A fluid dispensing nozzle comprising telescoping tubular members together comprising an axially extensible and contractible duct, and means associated with the duct for normally maintaining the duct closed, said means being movable to open the duct at all times both by axial contraction of the duct and also by the pressure of fluid at the inlet end of the duct whenever it exceeds a predetermined minimum whether the duct is contracted or not.

2,437,590
STEERING GEAR FOR WHEELED VEHICLES
Thomas A. Bowe, Hilbert, Wis.
Application November 23, 1945, Serial No. 630,418
2 Claims. (Cl. 280—33.55)

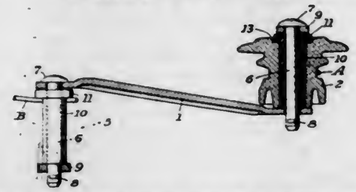
1. A steering gear, comprising a vehicle chassis including a central reach, the forward end portion of the reach having spaced horizontal flanges, wheel-carrying axle members pivotally associated with forward portions of the chassis, a steering pole having an articulated inner end section including a strap, the articulated portions of the steering pole being relatively movable in a vertical plane, the extremity of the articulated portion of the steering pole extending between the spaced flanges of the reach, means pivotally connecting said extremity of the steering pole to said flanges of the reach for horizontal turning movements, complementary, adjustable means carried by adjacent portions of the steering pole and reach for limiting relative turning movements of the same, a pair of angularly related steering rods pivotally associated at opposite ends with said axle member, a unitary member interposed between and having its opposite ends connected to said steering rods, and pivot members mounting said unitary member on said strap.

2,437,591
ELECTRIC CONTROL DEVICE
Theodore S. Briskin, Jack Briskin, and Joseph Golick, Chicago, Ill., assignors to Revere Camera Company, Chicago, Ill., a corporation of Delaware
Application April 27, 1944, Serial No. 533,086
4 Claims. (Cl. 192—150)



1. A control device for rotating a driven element in either direction through a given angle comprising a housing, a gear sector mounted on said driven element within said housing, blocking means projecting from a portion of said housing for limiting the displacement of said driven element in either direction, electrically controlled driving means for said gear sector including a forward driving circuit and a reverse driving circuit which are adapted to be alternatively energized, means to open said forward driving circuit at about the time when said gear sector has been rotated into contact with one of said blocking means, similar means to open said reverse driving circuit at about the time when said gear sector has been rotated into contact with the other of said blocking means, a cam driven by said driving means for alternately engaging one or the other of said circuit opening means, said cam being of the type which may rotate beyond the two circuit opening positions, and clutch means interposed between said driving means and said gear sector.

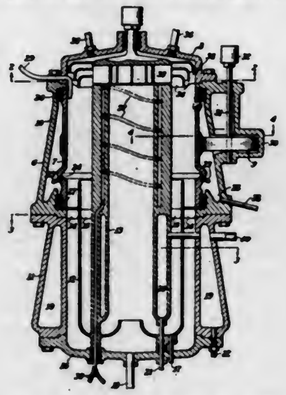
2,437,592
DUST SEPARATOR AND FILTER
Richard E. Brown, South Euclid, Ohio, assignor to Air-Maze Corporation, Cleveland, Ohio, a corporation of Delaware
Application January 8, 1945, Serial No. 571,767
2 Claims. (Cl. 183—21)



1. Means for separating dust from a stream of gas comprising a cylindrical tube open at the bottom, a second cylindrical tube extending within and downwardly from the top of said first tube to provide an annular inlet chamber, there being a space in said first tube beneath the lower end of said second tube providing a vortex chamber there, there being a gas inlet opening leading into said annular chamber, said second tube having an open bottom and top whereby a gas outlet is provided at the top thereof, and a liquid-containing reservoir in closed communication with the open bottom of said first tube, whereby the gas stream is given a whirling motion in said annular and vortex chambers causing liquid in

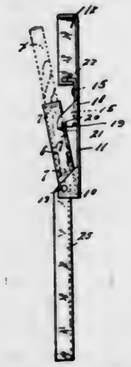
said reservoir to be mixed with said gas and thrown against the walls of said reservoir and

said vortex chamber to increase the dust separating action of said means.



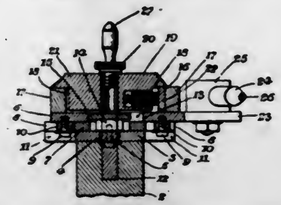
2,437,593
REINFORCED WIRE-CONTACTING INSULATOR ASSEMBLY
Rogers Case, Orange, N. J.
Application November 24, 1945, Serial No. 630,588
2 Claims. (Cl. 174—209)

1. A wire-contacting insulator assembly consisting essentially of a metallic insulator-mounting pin, a frangible spool-form insulator body having a circumferential conductor receiving groove and a pin-receiving bore extended therethrough mounted on and surrounding said insulator-mounting pin, and a tough electrically insulating liner sleeve arranged to contact and detain a wire trained on the insulator when the said frangible insulator body is broken comprising a tubular pin-embracing portion surrounding the insulator-mounting pin within the bore of the insulator body and a wire-detaining skirt extended laterally outward from the said tubular portion at one end of the bore through the said insulator body.



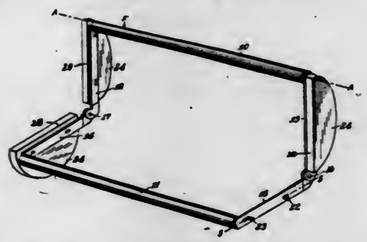
2,437,594
DISTILLATION FROM A FILM BY DIFFUSION INTO A GAS STREAM
Orban Denys, Brooklyn, N. Y., assignor to Distillation Products, Inc., Rochester, N. Y., a corporation of Delaware
Application October 10, 1944, Serial No. 558,106
6 Claims. (Cl. 202—49)

1. A fractionating process comprising maintaining a sheet of vaporizing distilland against the inner wall of a tubular member of circular cross section; simultaneously passing a stream of inert gases over the exposed surface of said sheet to effect the diffusion of the distilland vapor molecules into said stream; the velocity of said stream being such as to result in a streamline or laminar flow, this velocity being also such that the deepest transversal penetration of the diffused vapor molecules in said stream at the point where said stream leaves the liquid sheet of distilland is less than its deepest possible transversal penetration; simultaneously partitioning said stream at the base of the liquid sheet at a substantial transversal distance from said sheet, this



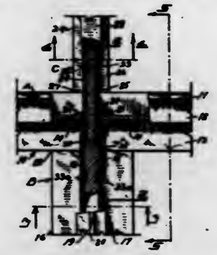
distance being also substantially less than the transversal distance from the liquid sheet to the point of the deepest possible penetration of the diffused vapor molecules and condensing separately the vapors contained in this thus divided stream.

2,437,595
CASE FOR DRILLS
Roy D. Douglass, Minneapolis, Minn.
Application December 19, 1944, Serial No. 568,858
2 Claims. (Cl. 206—17)



1. The combination with a fixed back plate, of a drill case hinged to the back plate for outwardly tilting movement, a latch plate on the case, and a latch mounted on the back member for limited sliding movement and having a lock notch that interlocks with the latch plate to hold the case closed, said latch also having a stop finger for engagement with the latch plate, when the latch is actuated to release the case, for limiting the tilting movement of the case into an open position.

2,437,596
MACHINE FOR FORMING CURVED SURFACES
Edward Oscar Garnett, Colbyn, Pretoria, Transvaal, Union of South Africa
Application August 18, 1945, Serial No. 611,421
In the Union of South Africa May 15, 1945
3 Claims. (Cl. 125—11)

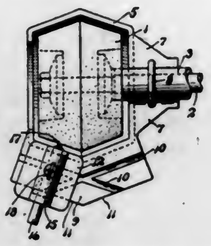


1. A machine for forming curved surfaces having in combination a tool rest plate, a tool clamp on the plate, a tool therein, supports for the plate allowing universal movement thereof in one plane on said supports, a centrally fixed spindle threaded through said plate, a circular hole of precise size in said plate and about the spindle, a removable disc of a determined diameter on said spindle, said disc being smaller in diameter than the circular hole in the tool rest plate, driving means for pressing the tool rest plate against the disc and for moving it to make contact round or partly round the circumference of the disc to provide movement of the point of the tool through a circle or a part of a circle restricted in diameter to the difference in the diameters of the circular hole in the tool rest plate and the removable disc threaded on the central spindle.

2,437,597
HANDBAG FRAME ASSEMBLY
Salvatore Giordano, Maspeth, Long Island, N. Y.
Application March 14, 1946, Serial No. 654,411
1 Claim. (Cl. 150—29)

In a bag frame provided with a pair of similar sections, said sections including leg members pivoted together at their free ends, said leg members being disposed at right angles to the axis of said frame sections, upstanding lugs struck up from said leg members and projecting outwardly therefrom at substantial right angles thereto, enlarged ends on said lugs, finishing plates provided with recesses to frictionally receive the lugs, the spacing of the recesses of the plates corresponding to the spacing of the said lugs, the said recesses being of lesser cross-sectional area than the enlarged ends of the lugs, the plates secured to the opposed leg members of said sections having straight edges designed to have abutting relation with one another when the frame sections are closed, the plates being of a softer material than the lugs so that the enlarged ends of the latter will bite into the material of the plates defining said recesses, on assembly, to interlock plates and leg members.

2,437,598
JOINT FOR METAL WINDOW FRAMES
Harry H. Goldberg, Denver, Colo.
Application May 5, 1947, Serial No. 746,089
5 Claims. (Cl. 287—51)



1. The method of interconnecting three sash frame members, each of which has two parallel flanges connected by a web and in which at least two of the members have tubular webs of different thicknesses, the openings in which are of substantially rectangular cross section, the shorter transverse inside dimension of the opening in the thicker web being the same as the shorter transverse outside dimension of the web of the other member, the distance between the outside surfaces of the flanges of all three members being the same; which consists in providing the web in the third member with an opening having a width equal to the outside shorter transverse dimension of the thicker tubular web, removing the flanges of the member having the thicker web to a point where the web walls may project through the opening in the web of the third member, with the ends of the cut back flanges in engagement with the edges of the flanges of the third member, bending the ends of the web walls that project through the opening, outwardly to overlap the sides of the opening, cutting back the flanges of the tubular web member with the thinner web to such a distance that its web walls may be telescoped into the opening in the web of the tubular web member with the thicker web, in which position the cut back flanges abut the edges of the flanges of said third member, positioning an elongated connecting member in the end of the smaller web, providing said connecting member with an end having the same shape and size as the opening in the larger web, inserting the smaller web and the connecting member into the opening in the larger web, and providing an interconnection between the ends of the connecting member and the webs with which they are in contact, whereby the interconnected frame members will be held against relative axial movement, and whereby a rigid joint is obtained.

2,437,599
GRINDING WHEEL DRESSER
Leo O. Greeley, Cadillac, Mich., assignor to General Sales Company of Cadillac, Cadillac, Mich., a limited partnership of Michigan
Application August 19, 1946, Serial No. 691,497
6 Claims. (Cl. 125—11)

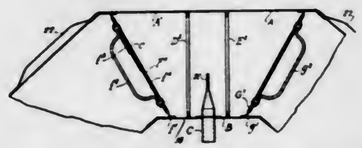
1. In combination with a grinding wheel mounted to turn about a horizontal axis, of a

hood adapted to be located over the upper portion of the grinding wheel, means for mounting said hood for movement about the axis of rotation of the wheel to thereby locate the hood under said grinding wheel, a shelf connected with the hood and in the last named position of the hood extending horizontally in front of the grinding wheel, said shelf having carrier guide means thereon, a detachable carrier adapted to be located over said shelf and having means to

cooperate with said guide means on the shelf to move the carrier in a predetermined relation to the peripheral surfaces of the grinding wheel, a rod mounted on said carrier for longitudinal adjustment toward and away from the grinding wheel peripheral surfaces, said rod at its inner end being adapted to carry a grinding wheel dressing point, and means for releasably securing said rod in positions to which longitudinally moved.

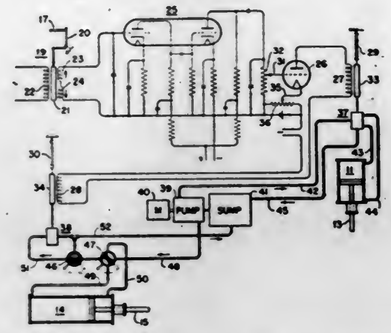
2,437,600
SYNTHESIS OF ALDEHYDES
William F. Gresham, Richard E. Brooks, and Walter M. Bruner, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 7, 1945, Serial No. 598,208
11 Claims. (Cl. 260—604)

5. A process for preparing aldehydes which comprises reacting an olefinic hydrocarbon having from two to eight carbon atoms per molecule, said hydrocarbon containing non-benzenoid olefinic unsaturation, with carbon monoxide and hydrogen, the initial molal ratio of $CO:H_2$ being about 1:1.5 to 1:10, at a temperature within the range of 75° to 250° C. and at a pressure within the range of 325 to 3000 atmospheres, in the presence of a hydrogenation catalyst containing cobalt, and thereafter separating from the resulting reaction product the aldehyde formed by the ensuing reaction.



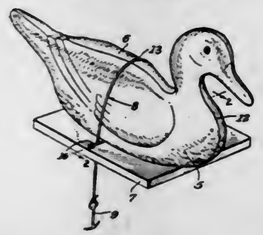
2,437,601
FLUID MIXING DEVICE
Darrel P. Hamlet, Chicago, Ill., assignor to Continental Coffee Company, Chicago, Ill., a corporation of Illinois
Application August 2, 1945, Serial No. 608,437
1 Claim. (Cl. 99—290)

In a device for making coffee of uniform strength having an urn, a coffee maker attached to the upper portion of said urn, said coffee maker adapted to hold ground coffee, means for pouring hot water into said ground coffee in said coffee maker, said coffee maker adapted to permit the coffee so made to drop therefrom, and a receptacle attached to said urn, a vessel supported below and in communication with the coffee maker and above the receptacle, said vessel having a bowl shaped body portion with upwardly diverging sides, said bowl having an opening at the bottom of said bowl, said bowl having substantially twice as many intermediate openings at a higher and wider portion as it has in its bottom, and said bowl having substantially twice as many highest openings at an equally higher and wider portion as it has intermediate openings, said opening at the bottom of the bowl being of such a small size that the strongest coffee first received in the bowl passes out of said



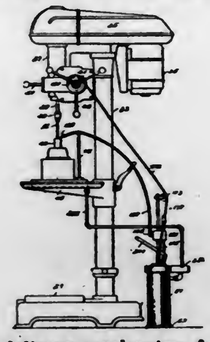
opening at a slower rate than received, thus causing an accumulation of weaker coffee up to the intermediate openings, said intermediate openings being of such a size that the coffee at that level passes out of said intermediate openings at a slower rate than received, thus causing an accumulation of still weaker coffee up to the highest openings, said openings thereby permitting coffee of varying strengths and weaknesses to fall therethrough into said receptacle and mix in said receptacle with coffee of more uniform strength.

2,437,602
INFLATABLE ARTICLE
Kenneth Graeme Hann, Brean, Wales, assignor of one-half to Elliot Equipment Limited, Cardiff, England, a British company
Application July 12, 1945, Serial No. 604,603
In Great Britain July 27, 1944
9 Claims. (Cl. 155—179)



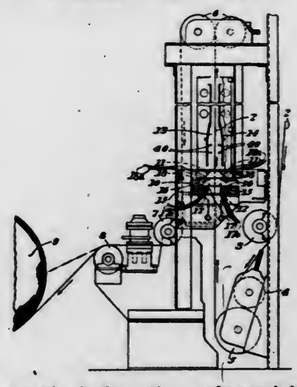
An inflatable article having a plurality of sections, one of said sections being tubular and of collapsible material, said tubular section being connected to another section of the article at one of the ends thereof, a pair of spaced, rigid diaphragms mounted in said tubular section and having their edges joined to the material of the tubular section on the interior surface thereof to provide a bellows chamber, said diaphragms, because of the collapsible nature of said tubular section, being movable towards and from one another, a non-return valve in the diaphragm intermediate the tubular section and said other section for discharge of air from the bellows chamber into the interior of said other section, and means including a non-return valve for admitting air from the atmosphere to the bellows chamber.

2,437,603
MACHINE TOOL CONTROL
Anthony J. Hornfeck, Cleveland Heights, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Application December 18, 1943, Serial No. 514,786
2 Claims. (Cl. 318—34)



1. In a material forming machine having a relatively movable tool and work piece, a pair of capacitor-run motors for effecting relative movement of said tool and work piece simultaneously in angularly related paths, a pattern having the desired shape of the work piece, a tracer mechanism scanning the pattern as the tool traverses the work piece and adapted when displaced to effect a change in an electrical characteristic in opposite directions from a normal, and an electric network including the motors and tracer, said network including a source of alternating current, a pair of saturable core reactors connected to regulate current from said source for directional speed control of one of the motors and a single saturable core reactor connected to regulate current for speed control only of the other motor, both said pair and said single reactors having cores, and means to variably saturate said cores in accordance with the characteristic change from normal.

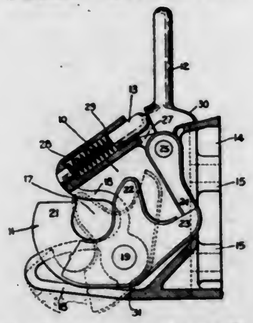
2,437,604
DECOY
Lewis C. Hufford, Manhattan Beach, Calif.
Application January 7, 1946, Serial No. 639,559
3 Claims. (Cl. 43—3)



1. A decoy comprising opposed mating sections, a buoyant base member mounting said sections, and means both holding said sections together and serving to anchor the decoy, said latter means comprising a cord trained over said sections, a connection for the cord at one side of the base, and an anchor on the free end of the cord and beneath said base.

2,437,605
COOLANT SUPPLYING MECHANISM FOR MACHINE TOOLS
Maxwell R. Karge, Brockport, N. Y.
Application January 5, 1945, Serial No. 571,523
7 Claims. (Cl. 77—55)

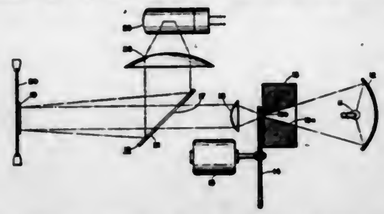
1. Coolant delivery mechanism for a machine tool, said mechanism including a reservoir for holding a supply of coolant, a plunger supported adjacent the top of said reservoir depending downwardly into the reservoir, a cylinder surrounding the lower portion of said plunger and movable upwardly and downwardly on said plunger, and means for moving said cylinder in accordance with feeding movements of the machine tool with which said mechanism is used.



2,437,606
METHOD AND APPARATUS FOR OILING SHEET METAL
George A. Kaufman, Aliquippa, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 27, 1944, Serial No. 565,315
3 Claims. (Cl. 117—93)

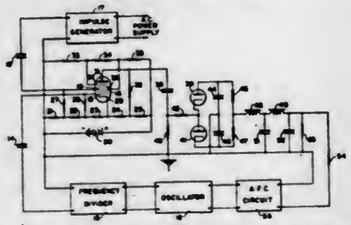
1. The method of continuously applying a thin, uniform film of oil to both sides of continuous strip metal comprising moving the strip vertically, continuously supplying oil at a predetermined rate to a plurality of air streams disposed on both sides of the strip, atomizing the oil with the air to form a mist of oil particles suspended in air, directing the mist against a plurality of heated surfaces interposed between the air streams and strip in such manner that no oil particles impinge on the strip, maintaining the heated surfaces at a temperature sufficient to vaporize the

oil particles, and charging the molecules of the vapor to a high potential with respect to the strip by causing them to pass through an electrostatic field having a strength between 8000 and 10,000 volts per inch, whereby said molecules are attracted toward the strip and condensed thereon.



2,437,607
HITCH
Joseph Kuchar, Chicago, Ill.
Application May 14, 1945, Serial No. 593,686
1 Claim. (Cl. 280—33.15)

A hitching mechanism arranged for automatic hitching and safe manual unhitching with and from a complementary hitching element, comprising a body having lower and upper spaced jaw portions defining an outwardly opening mouth, a member pivotally mounted on the lower part of the body including a hook portion a cocking arm, and a latching face, said member being biassed towards unhitched condition, a latching lever having a relatively short lower arm arranged to abut against said face to latch said member in hitching condition and a relatively long upper arm extending upwardly clear of the other hitching elements so that its favorable leverage invites manual actuation at its upper end with the operator's hand remote from the other hitch elements, means biassing said lever towards latching position, said latching lever being arranged to engage said face and hold said member with the hook portion effectually bridging the mouth so as to enclose a complementary hitching element therein and with the cocking lever near the inner end of the mouth, and means on said body engaging said member when unlatched to locate the hook member clear of the upper contour of the lower jaw and clear of the mouth, and with the cocking arm in an outward position substantially bridging the mouth, whereby the hitching mechanism may be backed on to a complementary hitching element in such manner that the cocking arm is moved inwardly towards the inner end of the mouth until the latch engages said face holding the hook portion in hitching relation.

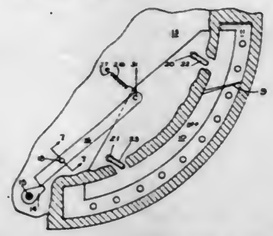


2,437,608
COAXIAL OPTICAL SYSTEM FOR DISPLACEMENT GAUGES
John H. Long, New York, and Walter Lupish, New Hyde Park, N. Y., assignors to the United States of America, as represented by the Secretary of the Navy
Application March 8, 1946, Serial No. 652,908
4 Claims. (Cl. 88—14)

1. In an optical gauge for detecting an element's displacement, a light source, a lens and reflector system aligned with the light source for projecting a substantially parallel-ray beam of light, a diffuse reflector mounted in operative position on the displaceable element in the light beam, a light transmitting mirror at approximately 45° to the axis of the light source and

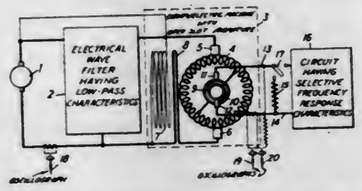
lens-reflector system and facing away from them, and a light intensity detecting device facing the mirror on an axis at approximately right angles to the first axis, the light beam passing through the mirror to the reflecting means and returning on substantially the same path to the mirror which directs it to the detecting device.

2,437,609
FREQUENCY COMPARISON APPARATUS
Louis F. Mayle, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Substituted for abandoned application Serial No. 483,139. April 15, 1943. This application August 7, 1946, Serial No. 688,852
7 Claims. (Cl. 250—36)



1. Automatic frequency control apparatus for a television timer comprising, an electronic trigger device for developing an alternating current wave, means for varying the conductivity of said trigger device in response to series of positive and negative impulses, the positive and negative energy content of said alternating current wave being determined by the phase relationship of said positive impulses with respect to said negative impulses, means for developing a control voltage representative of the predominant energy content of said alternating current wave, and means under the control of said control voltage for adjusting the phase relationship between said negative and positive impulses to synchronize said impulses.

2,437,610
COMBINED DIAL SCALE, SWITCH OPERATOR, AND POSITION INDICATOR
Eugene F. McDonald, Jr., Chicago, Ill.
Application January 21, 1944, Serial No. 519,245
5 Claims. (Cl. 250—16)



1. In radio apparatus including a dial scale lying substantially in a plane, and power supply means for said apparatus, said means including a switch arranged upon opening to interrupt the supply of such power, the combination of means

for adjustably tuning said apparatus over a range of frequencies and for indicating on said dial scale the frequency to which said apparatus is tuned, a shutter movable in a direction substantially parallel to said plane from a position exposing said scale to a position obscuring said scale, and means

for substantially simultaneously moving said shutter through said scale obscuring position and opening said switch, said shutter being arranged in scale obscuring position to give obvious indications of the interruption of the supply of such power to said apparatus.

2,437,611
ELECTRIC MOTOR SPEED CONTROLLER
Montford Morrison, Upper Montclair, N. J.
Application December 4, 1943, Serial No. 512,896
7 Claims. (Cl. 171—123)

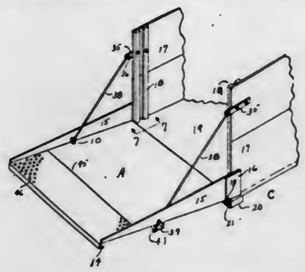
1. In a dynamoelectric machine, an inverted synchronous converter armature, an electrical wave-filter in the direct-current armature line circuit thereof, and said filter being in tuned electrical relation with the tooth-frequency of said armature to control the speed of said armature.

2,437,612
PROCESS FOR ELECTROLYTICALLY ZINC PLATING MAGNESIUM AND MAGNESIUM BASE ALLOYS
Hans Osborg, Port Washington, N. Y.
Application August 21, 1941, Serial No. 407,783
6 Claims. (Cl. 204—37)

1. A process for providing metallic magnesium and alloys thereof containing at least 51% magnesium with corrosion-resistant surface which comprises establishing an aqueous electrolyte about 1.0 normal to zinc, about 2.1 normal to CN radical, about 0.56 normal to CO_3 radical, about 0.18 normal to fluoride, about 1.45 normal to "free" alkali, and about 2.2 normal to total alkali, pretreating said aqueous electrolyte by electrolyzing said electrolyte using a magnesium test cathode at about 35 to about 400 amperes per square foot at temperatures of about 20° to about 80° C. until about 300 to about 2000 watt hours per square foot of cathode area have passed through said aqueous electrolyte and until said magnesium test cathode is provided with a continuous and adherent coating of electro-deposited zinc whereby a modified aqueous electrolyte is produced, immersing metallic magnesium as cathode in said modified electrolyte, passing an electric current through said aqueous electrolyte at a current density of less than about 40 amperes per square foot at temperatures below 35° C. and voltages exceeding 6 volts until said mag-

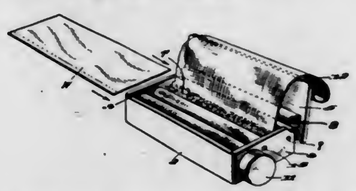
nesium is provided with a coating of electro-deposited zinc and zinc-coated magnesium is obtained, and subjecting said zinc-coated magnesium to heat treatment in an inert atmosphere at temperatures above about 600° F. until at least a portion of said zinc coating has diffused into said magnesium and said zinc coating is firmly bonded to said magnesium.

2,437,613
ELECTRIC FENCE INSULATOR
Mathew V. Redpath, near Columbiana, Ohio
Application February 8, 1945, Serial No. 576,891
4 Claims. (Cl. 174—139)



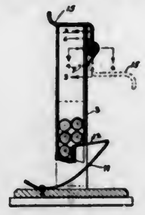
1. An insulated corner bracket for electrical barbed wire fencing including a pair of flanged base members having a U-shaped bracket pivotally attached thereto, a circular annularly grooved insulator positioned in the said bracket, and an arm pivotally attached at one end to the said base members and having wire engaging means formed on the other end thereof, the said wire engaging means comprising spaced brackets projecting from the said arm.

2,437,614
SCOOP BOARD FOR VEHICLE BOXES
Clarence B. Richey, Quincy, Ill., assignor to Electric Wheel Company, Quincy, Ill., a corporation of Illinois
Application December 11, 1944, Serial No. 567,730
2 Claims. (Cl. 296—60)



2. In combination with an open rear end vehicle box, a scoop board having forwardly and downwardly extending flanges on its sides, adapted to lie adjacent the outside of the side panels

of the box when the board is open or closed, a rearwardly extending support for the lower end of said board and positioned a short distance below the floor of the box, said board on its bottom, having formed thereon, a rearwardly extending U-shaped trench, adapted to lie on said rearwardly extending support when the board is closed or open, and having a width about equal to the distance between the floor of the box and the top surface of the support, a transverse bar secured to the rear side of the board a distance from said support, openings in the ends of said bar and registering openings in said board, anchor mem-



bers secured to the side panels of the box, adapted to extend through said openings when the board is closed, rods having spring characteristics hingedly connected to the protruding ends of said anchors, means on the free ends of said rods adapted to support the board when in its open position, projections on said board positioned to thereby limit the inward swing of the rods when the board is closed, said rods having a length whereby they may be deflected transversely inwardly and their lower ends dropped into said trench for holding the board snugly against the rear end of the box.

2,437,615
CIGARETTE MACHINE
Paul A. Rutherford, Baltimore, Md., assignor to Katherine E. Rutherford, Baltimore, Md.
Application January 9, 1945, Serial No. 572,005
5 Claims. (Cl. 131—47)

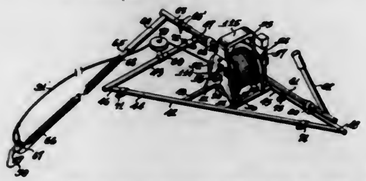
1. A cigarette machine comprising a casing having a bottom, opposite end walls and a front wall, a pair of rollers journaled in the casing in side-by-side relation, one of which is adjacent the front wall, an apron having one end attached to the roller nearest the front wall and adapted to be wound on said roller and to extend therefrom over the other roller, a cover hinged to the casing and having a wall portion thereon extending throughout the major portion of the height of the casing from the top edge thereof to the bottom and substantially closing the back of the casing and spaced from the last-mentioned roller forming a rolling space therebetween adapted to receive the apron and a cigarette wrapper in a loop in said space, said loop adapted to be filled with tobacco and to be rolled to enclose the tobacco in the wrapper upon winding of the apron on the first-mentioned roller.

2,437,616
CIGARETTE DISPENSER
Martin Satloff, Brooklyn, N. Y.
Application July 23, 1946, Serial No. 685,605
2 Claims. (Cl. 312—83)

1. An apparatus for dispensing cylindrical objects comprising in combination a base, at least one upright member mounted on said base, a chamber vertically and pivotally suspended from said upright member, a substantially horizontal dividing plate positioned to serve as a bottom for said chamber when it is tilted and a partial bottom when it is vertical, a vertical wall mounted in and movable with said chamber and so positioned as to stand immediately below the inner edge of said horizontal dividing chamber when said chamber is vertical, and a fixed bottom plate so positioned opposite and below said horizontal dividing plate as to obstruct, when said chamber is in a vertical position, that portion of the bottom of the chamber not obstructed by the horizontal dividing plate and vertical wall.

2,437,617
POST BINDER MECHANISM
John Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts
Application April 15, 1946, Serial No. 662,252
3 Claims. (Cl. 129—4)

1. In a post binder of the type having posts, a bottom bar holding the posts, a removable top tube with cross holes to receive the posts, and latch mechanism in the tube to latch it on the posts, the combination of a flattened top tube, a sheet metal slide with a multiple open channel section arranged with a central inverted U-shape channel portion and narrow U-shape portions on each side, the latter portions fitting the bottom and sides of the tube for longitudinal guided sliding movement without much friction, said slide having substantial openings for the posts in the sliding relation, bent vertical portions of the slide formed with slanting cam edges in the longitudinal relation to the tube and adjacent the side edges of said openings, means including a spring to hold said slide in one position of adjustment with relation to said posts, a latch plate for each post, means to pivot the latch plate for movement to horizontal and

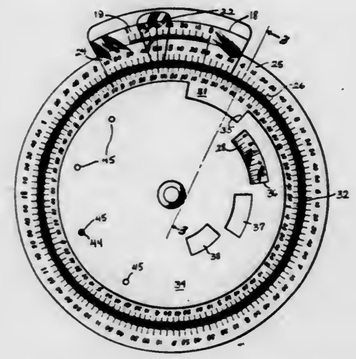


canted positions with relation to the post, such latch plate having a post hole with edges adapted to bind on the post in canted, and free the post in horizontal position, a spring for each plate to urge it to canted position to hold said cam edges near said plates when in canted position, and a finger actuated piece to move the slide to a second position of adjustment relative to said posts against its spring means to move the cam edges against said plates and the latter to horizontal position against their springs.

2,437,618
BEER DELIVERY AND DISPENSING APPARATUS
Louis Schottgen, Penwell, N. J., and Madeline J. Parkerton, New York, N. Y.
Application October 12, 1943, Serial No. 505,992
6 Claims. (Cl. 222—389)

1. Apparatus for transporting beer under relatively low pressure comprising a horizontal transporting tank having a freely movable air-tight piston dividing said tank into a liquid compartment and an air compartment, a stop member in said tank for limiting the forward travel of said piston, visible means for indicating the pressure in said tank, an adjustable air release valve communicating with said air compartment and constructed to be set to release at a definite pressure thus preventing a pressure rise in said air compartment above a predetermined maximum, means providing a source of compressed air for actuating said piston and for exerting pressure in said compartments, means for selectively directing said air into each of said compartments, float valve means permitting escape of air from said beer compartment, said valve means including a float surface of a configuration resulting in insufficient buoyancy to actuate said valve when immersed in foam but sufficient to actuate said valve when in a liquid and adjustable pressure responsive means for controlling the flow of air to maintain a predetermined pressure in one of said compartments.

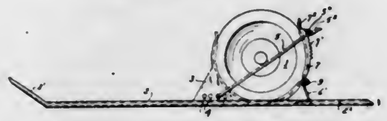
2,437,619
EMERGENCY PICKUP EQUIPMENT
Walter Hans Setz, Upper Darby, Pa., assignor to All American Aviation, Inc., Wilmington, Del., a corporation of Delaware
Application May 24, 1944, Serial No. 537,061
8 Claims. (Cl. 258—1.2)



3. In a pick-up unit for temporary use with airplanes, a triangular base comprising tubular sides rigidly united at the ends of the sides, a tubular stiffening brace united to two of the sides, and parallel with the third side, a yoke support for a drum having yoke feet united to the stiffening member and to the third side and additionally stiffening the base, a drum carried by and adapted to coast within the drum support, a brake for the drum, driving means for the drum, a pick-up arm mounted upon the base, a cable carried by the drum and mounting means for securing the unit in an airplane.

2,437,620
METHOD OF COATING MASSES OF SMALL COPPER-BEARING ALUMINUM ARTICLES
William F. Speer, Leonia, N. J., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application August 31, 1943, Serial No. 500,663
1 Claim. (Cl. 204—23)

The method of oxide coating a compact mass of small copper-bearing aluminum articles which comprises making said mass of articles the anode in an aqueous electrolyte consisting essentially of about 10 to 25 percent by weight of sulfuric acid and about 0.2 to 1 percent by weight of chromium trioxide and having a fraction of 1 percent by weight of copper introduced therein from the articles treated, said chromium trioxide preventing the deposition of copper-containing material on the surfaces of articles that are out of electrical contact as anode during the anodic treatment.



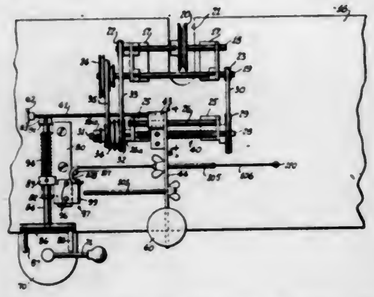
2,437,621
DEVICE FOR COMPUTING LAPSE OF TIME
Carl F. Strate, Chicago, Ill.
Application November 2, 1946, Serial No. 707,470
6 Claims. (Cl. 235—78)

1. A time interval computator comprising a mounting base, concentrically arranged discs of different diameters arranged upon said base, means for connecting said discs to said base for rotation relative to said base and for independent rotation with respect to each other, a scale on the marginal edge of each of said discs, said scale being divided into divisions and said divisions each representing one minute, a plurality of scales on the innermost of said discs and arranged concentrically with respect to each other, the outermost of said discs having an opening formed therein, through which said plurality of scales may be viewed, a cover plate pivotally connected by said means to said mounting base

over said outer disc for rotation independent of said outer disc, said cover plate having a plurality of radially positioned openings formed therein providing sight windows adapted to selectively register with a portion of the opening in said outer disc, and means for releasably latching said cover plate in selected position upon said outer disc.

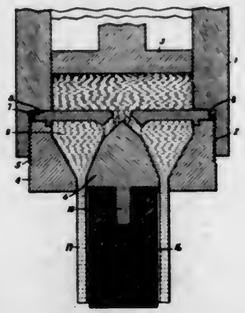
2,437,622
SKID RUNNER ATTACHMENT FOR VEHICLES
Robert D. Stryker, Collins, Ohio
Application October 3, 1945, Serial No. 620,024
3 Claims. (Cl. 280—13)

1. A skid runner attachment for vehicles comprising a runner formed to provide a mounting for a vehicle wheel, the mounting comprising a toe portion and a heel portion, the toe portion being welded to and extended upwardly from the runner, a strut mounted on the runner, the heel portion of the mounting being supported by the strut, a wheel-engaging latch pivotally secured to the heel portion, and a U-shaped clamping bar adjustably pivotally mounted at one end in the toe portion, the latch being formed with a plurality of teeth with which the other end of the clamping bar selectively engages.



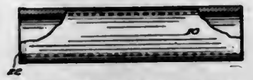
2,437,623
LIGHTER
Harold C. Sundby, Philadelphia, Pa., assignor of one-half to Thorsten Y. Olsen, Philadelphia, Pa.
Application October 8, 1945, Serial No. 621,109
2 Claims. (Cl. 67—7.1)

1. In a lighter, a casing comprising telescopic sections, a stationary carrier in one section, a tensioned flint in said carrier, a friction wheel engaging said flint, a rod on said carrier for mounting said friction wheel, said inner section having longitudinally extending openings into which the ends of said rod extend to limit relative movement of said sections and to restrict such movement to a rectilinear path, said sections having air openings adapted to register when the sections are in the igniting position, and an impregnated wick to receive sparks from said flint.



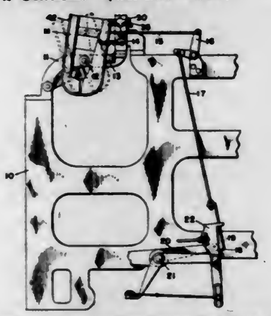
2,437,624
WORK-HOLDING AND GUIDING MECHANISM FOR SEWING MACHINES
Irving Sutker, Brooklyn, N. Y.
Application August 21, 1945, Serial No. 611,734
1 Claim. (Cl. 112—2)

A device of the character described comprising a base, a screw mounted thereon for rotation, means to rotate the screw, a guide shaft parallel to said screw, a member slidably mounted on the guide shaft, means on said member to disengageably engage the threads of the screw, a work holder on said member, a handle on said member to facilitate the swinging of said member about the axis of said shaft for disengaging the screw engaging means relative to the screw, the means for rotating the screw being controlled by a reversing switch, a rod slidably mounted on said base, said rod having a pair of arms, one arm being adapted to move the switch from one operating position to neutral, and the other arm being adapted to move the switch from reverse



operating position to neutral position, spring means to urge said rod to a position for moving the switch to neutral position, means to retain said rod in retracted position, and means to release said retaining means as said member reaches a predetermined position in one direction, and said means also serving to release said retaining means as said member reaches a predetermined position in an opposite direction.

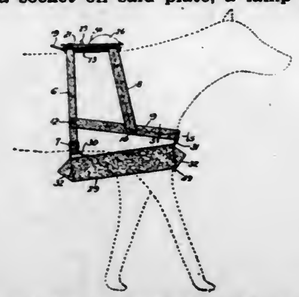
2,437,625
PROCESS AND DIE FOR EXTRUDING TUBULAR PLASTIC PRODUCTS
George F. Taylor, Grosse Point Woods, Mich., assignor to Carboloy Company, Inc., Detroit, Mich., a corporation of New York
Application October 30, 1942, Serial No. 463,885
8 Claims. (Cl. 75—22)



8. The method for making thin-walled cemented carbide tubes which comprises extruding a plastic mixture of cemented carbide ingredients in the form of a tube and around but out of contact with a refractory support, depositing the extruded tube onto said support, drying and sintering the supported tube to form a hard, dense mass having the shape of said refractory support.

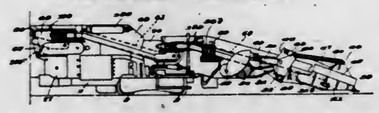
2,437,626
METHOD OF RECLAIMING USED METAL MOLDS
Clifford R. Tinsley, Beverly, N. J., assignor to United States Pipe and Foundry Company, a corporation of New Jersey
Application September 4, 1943, Serial No. 501,333
4 Claims. (Cl. 29—148.2)

1. The method of reclaiming a cylindrical metal mold employed for centrifugally casting pipe and the like and having therein contractile stresses resulting from use in casting, which comprises removing a longitudinal strip from the wall of the mold whereby said contractile stresses operate to contract said mold circumferentially and thereby bring into abutting relation the edges of the slot thus formed, and welding said edges together.



2,437,627
BRAKE AND DAMPENER FOR ROCKING BOBBIN MAGAZINES
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application April 2, 1947, Serial No. 738,883
2 Claims. (Cl. 139—232)

1. In a weft replenishing loom having a frame, a reserve bobbin magazine having an end plate, a pivotal support for the magazine on the frame, a stop on the frame, a spring holding the magazine in normal position against the stop, means rocking the magazine about said pivotal support from said normal position to a transfer position, said spring thereafter returning the magazine to normal position, and a brake and vibration dampener member pivotally and resiliently mounted with respect to the loom frame and positioned to engage said end plate when the magazine returns to normal position to retard movement thereof and remain in engagement with said end plate when the magazine is in normal position to prevent vibration thereof around said pivotal mounting.

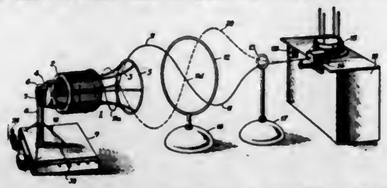


2,437,628
DOG HARNESS
John T. Warren, Long Beach, Calif.
Application March 29, 1945, Serial No. 585,462
3 Claims. (Cl. 240—59)

1. A dog harness comprising a girth portion, a back portion, a shoulder portion and a breast one end to said shoulder portion and at the rear band, said breast band being connected near thereof to said girth portion, screws securing both said shoulder and girth portions to said back portion, a plate removably secured to said back portion, a socket on said plate, a lamp in said

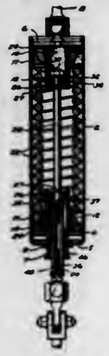
socket, a translucent hood hinged to said plate and covering said lamp, a battery carrier suspended from the bottom of said girth portion and the end of said breast portion, said lamp being in a circuit which includes the battery, and switch.

2,437,629
LOADING MACHINE
William Whaley, Knoxville, Tenn.
Application October 24, 1944, Serial No. 560,126
13 Claims. (Cl. 198—7)



1. In a loading machine, the combination of a body structure, a jib section supported at the forward end of the body structure for lateral swinging movement relative thereto, a loading device supported on the jib section for loading material, a power conveyor supported on the jib section for receiving the material from the loading device and for conveying said material rearwardly therefrom, a second power conveyor mounted in fixed position on the body structure to receive the material from the jib conveyor and to direct said material rearwardly of the body structure, a discharge conveyor mounted on the body structure for lateral swinging movement relative thereto in position to receive the material from the fixed conveyor and to discharge said material from the machine, said discharge conveyor including separate sections connected together in series with one section mounted on the body structure for swinging movement about a substantially vertical axis and supporting the other sections of said discharge conveyor thereon for lateral swinging movement, a second section connected with the first-mentioned section and pivoted thereto for upward swinging movement, and a discharge section supported by the second section.

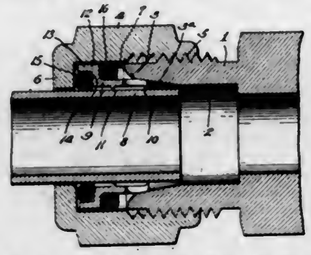
2,437,630
WIRE PAY-OFF MECHANISM
Morris F. Williams and Seymour B. Gallt, Syracuse, N. Y., assignors to Crucible Steel Company of America, New York, N. Y., a corporation of New Jersey
Application July 17, 1945, Serial No. 605,568
2 Claims. (Cl. 242—128)



1. A pay-off mechanism of the character described including a coil supporting frame having a portion receivable within a coil of wire or the

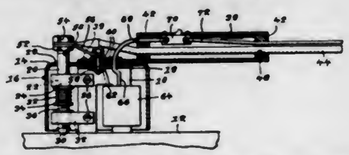
like to be unwound, mechanism for continuously pulling the wire or the like in a direction endwise of said frame, guiding means for normally producing a revolving outwardly whipping motion of the wire or the like in passing from said frame

to said pulling mechanism, a tiltable platform for supporting said frame, and means operable upon abnormal tilting movement of said platform in a direction toward said pulling mechanism for throwing the latter out of action.



2,437,631
SUPPORT
Joseph Kaye Wood, New York, N. Y., assignor to General Spring Corporation, New York, N. Y., a corporation of New York
Application April 20, 1945, Serial No. 589,373
18 Claims. (Cl. 248—54)

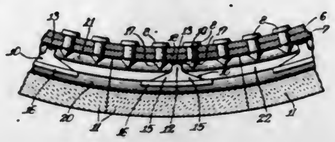
1. A device for mounting a load such as piping and other equipment subject to alternating movements, which comprises spring means arranged for elastic deflection and recovery upon movement of said load in opposite directions through a predetermined mid-point under the action of forces successively impressed thereon, said device being characterized by having means for abruptly resisting deflection of at least a part of said spring means in one direction beyond a mid-point which corresponds to said mid-point in the movement of the load, thereby to prevent harmonic oscillation, said device also having connections to the load and to an anchorage so arranged that relative movements between the load and the anchorage impress the aforementioned deflections on said spring means.



2,437,632
COUPLING FOR TUBES
John N. Wolfram, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application November 13, 1944, Serial No. 563,173
3 Claims. (Cl. 285—122)

1. A coupling for tubes comprising a body member, a nut having a threaded engagement with said body member, said nut having a flange provided with an opening through which the tube extends into the coupling, the flange in the nut being spaced away from the body member, said body member having a bore to receive the tube end which bore is tapered toward the outer end to provide a camming surface, a sleeve disposed in the nut and having the inner end thereof extending into the bore and contacting with said camming surface, the inner end of said sleeve being provided with slits extending longi-

tudinally of the sleeve and with a cutting edge at the inner end of the gripping sections formed by the longitudinal slits whereby when said sleeve is forced against the camming surface by the nut, the inner end of the sleeve will be easily contracted and the cutting edge caused to bite into the tube, and a plurality of deformable sealing gaskets one of which is located between the sleeve and the tube and the other of which is located between the sleeve and the nut for sealing the connection of the tube to the coupling.



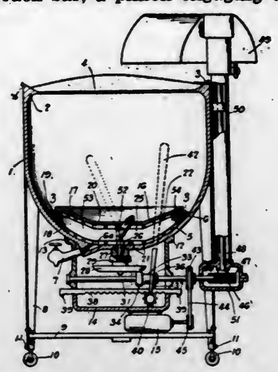
2,437,633
ELECTRIC WELDING GROUND
Oliver R. Abram, Glendale, Calif.
Application November 12, 1943, Serial No. 510,063
1 Claim. (Cl. 173—324)

In an electric welding apparatus comprising a housing having an open bottom, a horseshoe type electromagnet carried interiorly of the housing and extending below the bottom thereof, guide arms carried by one side of the electromagnet, a contact pin vertically movably supported in said guide arms, insulated bushings carried by said arms to insulate said pin from said arms and said electromagnet and a spring acting on said pin for yieldingly holding it in contact with the work.

2,437,634
SEAM PROTECTOR FOR BOILERS
John E. Anderson, Chicago, Ill., assignor to Plibrico Jointless Firebrick Company, Chicago, Ill., a corporation of Illinois
Application September 11, 1944, Serial No. 553,617
4 Claims. (Cl. 110—97)

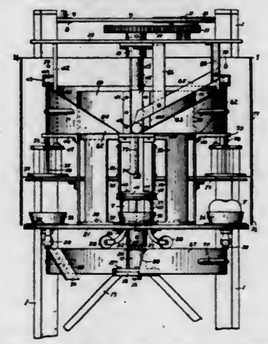
1. In boiler seam protecting means, a boiler having a riveted seam with the rivet heads projecting therebeyond, the heads of selected pairs of rivets having opposed grooves therein, substantially T-shaped hangers spaced along said seam each comprising a stem having at its end adjacent the boiler a first substantially rectangular integral head with beveled sides extending outward laterally from the stem at opposite sides thereof secured in the grooves of a pair of rivet heads and at its end away from the boiler a second substantially rectangular integral head extending outward laterally of the stem in all directions,

and refractory protecting members respectively mounted on and enclosing said second heads of said hangers extending over and protecting said seam, each of said members having therein an interior lengthwise groove open at its ends of substantially T-shape in cross section receiving the stem and said second head of the corresponding hanger.



2,437,635
ATTACHMENT PLUG AND FUSE
Johan R. S. Arentz, Chicago, Ill.
Application January 15, 1946, Serial No. 641,290
1 Claim. (Cl. 200—115.5)

A fused attachment plug comprising in combination, a bell shaped housing formed with a wire inlet aperture in the closed end thereof, a disk-like cover removably positioned in the open end of said housing, a pair of outwardly projecting prongs secured to said cover, a mounting block formed integrally with said cover and disposed in said housing, said block comprising a diametrically extending web and a substantially circular plate carried by said web, pairs of fuse holders provided at the opposing sides of said cover and said plate, said prongs being in circuit with the fuse holders on said cover, a pair of flat connector pieces provided on the remaining side of said plate, rivets extending through said plate and electrically connecting each of the fuse holders thereon to one of said connector pieces, a terminal screw provided on each of said pieces, and a pair of cartridge fuses positioned in said holders.

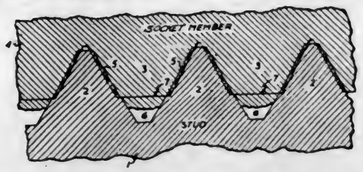


2,437,636
CLOTHES-WASHING MACHINE
John G. Becker, Los Angeles, Calif.
Application June 21, 1945, Serial No. 600,804
4 Claims. (Cl. 68—184)

1. In a washing machine, a tub for the washing fluid, a unidirectional, rotatable pump impeller mounted on a vertical axis and disposed in the bottom of the tub, a driven friction disk connected with the impeller, a friction drive element movable transversely across the face of the disc, means for actuating the drive element to actuate the impeller, means for moving the friction drive element to change the speed of the agitator or to disconnect the impeller, said means including a slidable rack bar, a pinion engaging the rack,

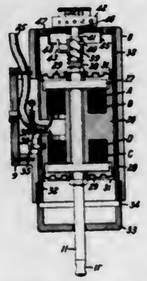
and an operating lever, and the rack connected with the friction drive element.

2,437,637
SLICING, CUTTING, AND CORE-REMOVING MACHINE
Edward W. Bridge, Philadelphia, Pa.
Application January 7, 1946, Serial No. 639,588
5 Claims. (Cl. 146—40)



1. In a fruit slicing and coring machine; a turntable on which the operating units are mounted, and which has openings through which fruit segments are discharged; a hinged trap-door for each opening; a stationary cam track located below the table; a cam-engaging roller on an arm on the trap-door for engaging said cam track and holding the door shut; a cutting plate on the trap-door to project through the turn-table opening; a cutting-head having cutting edges cooperating with said cutting plate and a funnel member mounted on the turn-table and encircling said opening and said cutting plate, said cutting plate having a central passage and slots or grooves radiating from said central passage to receive the edges of said cutting head; and a centering pin on the trap-door within said central passage.

2,437,638
STUD AND INSTALLATION THEREOF
Edwin R. Evans, Orchard Lake Village, Mich., assignor to Dardelet Threadlock Corporation, a corporation of Delaware
Application October 23, 1942, Serial No. 463,084
32 Claims. (Cl. 151—14)



1. In combination, a male member and a member having a socket for the male member, said

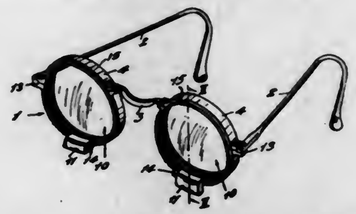
members having mating threads, the crest of one of such threads having a predetermined material interference with the groove bottom of the

other thread, the threads being designed to form voids at both flanks of each thread to receive metal displaced through said interference.

2,437,639
ELECTRICAL MEASURING APPARATUS
Frederick Kessler Floyd, Denver, Colo., assignor to Metron Instrument Company, Denver, Colo., a corporation of Colorado
Application August 19, 1943, Serial No. 499,282
12 Claims. (Cl. 33—147)

8. In a comparator gage, a gage head, a sleeve within said gage head, a single core of magnetic material removably mounted within said sleeve, said core having an axial bore therethrough, a spindle extending through said bore and carrying a gage tip, coil means mounted on said core at the ends thereof, armatures secured to said spindle and located adjacent the opposite ends of said core, and a pair of flexible diaphragms supporting said spindle from and within said sleeve for axial displacement with respect to said gage head.

2,437,640
STRIP OF SEVERABLE REINFORCING TABS FOR LOOSE-LEAF SHEETS
Charles E. Hedrick, Sr., Alexandria, Va.
Application November 17, 1944, Serial No. 563,873
4 Claims. (Cl. 206—56)



1. In a tab assembly of the class described, a C-shaped tab, the terminals of the free ends thereof being arcuately cut and therefore sector-shaped, a second C-shaped tab disposed in a plane with the first-named tab and having its central body portion arranged so that the sector-shaped ends of the first-named tab contact the outer marginal edge portions of said second-named tab, the portions of the end edges of the first-named tab adjacent the inner periphery of the latter being connected to the outer edge of the body portion of the second-named tab by circumferentially spaced readily severable webs.

2,437,641
HONING AND FILING DEVICE
Robert O. Hein, Lincolnwood, Ill.
Application July 6, 1946, Serial No. 681,718
5 Claims. (Cl. 51—205)

1. A honing device comprising a holder having end formations and an intermediate body with a flat side, one of said formations comprising a shank adapted to be held in a reciprocable socket of a filing machine or the like, a stop on said side adjacent said shank and having a beveled face forming with said side a V-notch diverging toward the other end of said body, the other formation comprising an extension of substantially reduced thickness relative to said body, said extension being substantially in the form of an inverted U when said shank is lowermost, the free arm of said extension being spaced from and overlapping said body at said side and substantially spaced from said stop, said arm having a beveled end face facing said side and diverging from said side toward said shank, said side and said beveled faces affording substantially a dovetail formation, said arm and said body having aligned holes, said hole in said arm being threaded, the other hole being enlarged at the side of said body opposite the aforesaid side, a headed screw in the hole of said body and threaded in the hole of said arm, said arm being resiliently flexible about the bight of said U toward said body in response to rotation of said screw in one direction and away from said body in response to rotation of said screw in the opposite direction, and a hone shorter than said holder and having two opposite parallel flat sides extending substantially throughout the length of said hone, one side of said hone being in substantial contact with the first mentioned side of said body, said hone having symmetrical parallel V-grooves completely across and at the ends of and normal to the axis of said hone, each groove diverging away from the other, the inclination of the faces of said grooves and the inclined faces of said stop and arm being substantially uniform relative to the first mentioned side of said body, said arm, when relaxed, being spaced from the first mentioned side of said body a distance sufficient to enable said hone to be passed freely into and out of position to be clamped by said arm, with a face of one groove between said body and said arm, and with a face of the other groove between said body and said stop, said screw being adjusted to firmly clamp said hone against said body.

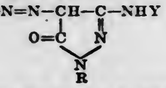
2,437,642
SPECTACLES
Francois Charles Pierre Henroteau, Liege, Belgium
Application August 16, 1946, Serial No. 690,919
1 Claim. (Cl. 88—41)

Spectacles comprising a frame having two eye pieces therein, each of said eye pieces comprising two lenses secured in a ring with a space between them, said lenses giving in combination the vision correction required by the wearer for distant vision and the opposing surfaces of said lenses bounding said space being of different curvatures, means for rotatably mounting said eye pieces in said frame, a liquid chamber secured to and rotatable with each eyepiece and having a volume at least equal to that of said space, a passage connecting each chamber to the space between the lenses in the eye piece to which it is secured, a liquid in said chamber which does not wet said lenses and has a refractive index such that, when the liquid is introduced into said space, the composite lens consisting of said two lenses and said liquid gives the vision correction required by the wearer for close vision, and stops to limit the rotation of each eye piece to 180°.

2,437,643
SEPARATION OF NEUTRAL FAT FROM TALL OIL
Alfred G. Houpt, Springdale, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 12, 1942, Serial No. 442,695
2 Claims. (Cl. 260—97.5)

1. In a process of separating the fatty acid soaps of black liquor soap from the rosin acids by forming a hot, substantially anhydrous solution of fatty acids, rosin acids and an amount of alkali sufficient to neutralize only the fatty acids in an alcoholic organic solvent in which the alkali soaps of the fatty acids are soluble hot but not cold, and in which the rosin acids are soluble hot and cold, and, after cooling said solution to precipitate the soaps of the fatty acids which are then separated from the mother liquor, the steps which comprise adding to the mother liquor sulphuric acid diluted with anhydrous alcoholic organic solvent in an amount about 0.25% in excess of that required to neutralize the alkalinity of the mother liquor, thereby setting free residual fatty acids contained therein, heating the acidified mother liquor to esterify residual fatty acids with the anhydrous alcoholic organic solvent and to isomerize rosin acids to crystallizable forms, removing the solvent by distillation, extracting the rosin acids, unsaturated fatty acid esters, hydrocarbons and sterols from the still residue with naphtha, adding to the resulting naphtha solution dilute aqueous alkali in an amount 1.1–2.0 times that equivalent to the acid present, separating the naphtha solution from the aqueous rosinate solution by gravity separation, and heating the naphtha solution from the last-named separation to distill off the naphtha and leave a residue containing sterols and esters of unsaturated fatty acids.

2,437,644
SULFOFLUORIDES OF AZOIC DYESTUFFS
Hans Zacharias Lecher, Plainfield, Robert Prescott Parker, Somerville, and Corris Mabelle Hofmann, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 31, 1944, Serial No. 547,514
12 Claims. (Cl. 260—176)



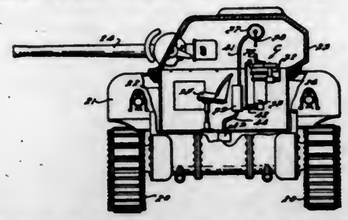
1. An azo compound having the following formula:

$$[A—N{=}N—]_nB$$

in which A is the residue of a diazotized amino benzene sulfonyl fluoride free from water solubilizing groups, B is an ice color coupling component of the acyl acetic arylide series the arylide being selected from the group consisting of arylides of the benzene series, arylides of the diphenyl series, and arylides of the naphthalene series, and n is a member selected from the group of one and two.

2,437,645
METAL COMPLEXES OF PYRAZOLONE AZO DYESTUFFS
Robert Sidney Long and Charles Edward Lewis, Somerville, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application December 8, 1944, Serial No. 567,305
15 Claims. (Cl. 260—147)

1. Dyestuffs being complexes of metals of atomic weight from 52 to 64 with azo dyes represented by the formula:

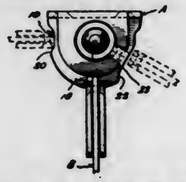


in which A is the residue of a diazotized amine selected from the group consisting of amines of the benzene and naphthalene series having in the ortho position to the amine substituent a metallizable substituent selected from the group consisting of hydroxyl, alkoxyl, and carboxylic acid groups, R is an aryl group containing not more than two fused rings, and Y is selected from the group consisting of hydrogen, acyl, and aryl radicals of the benzene series.

2,437,646
TURRET TRAVERSING MECHANISM
Victor E. Matulaitis and Teno Iavelli, Detroit, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application August 5, 1943, Serial No. 497,552
5 Claims. (Cl. 192—2)

1. Traversing mechanism comprising a driving pinion, an electric motor having a shaft connected to the pinion, a mechanical brake for the shaft, an electrical brake for the shaft,

means for supplying varying quantities of current to the motor to change the speed thereof, means operating as an incident to the initial energization of the motor to release the mechanical brake, means for supplying varying



quantities of current to the electrical brake to change the retarding effect thereof, said last named means being actuated to decrease the supply of current to the brake as the means for supplying current to the motor is actuated to increase the motor speed.

2,437,647

TAKEDOWN TYPE WALL BRACKET

Robert E. McLean, Fort Benning, Ga.

Application June 17, 1944, Serial No. 540,848
6 Claims. (Cl. 248—289)

1. A support of the character stated, comprising a body designed to be attached to a supporting structure, a pair of spaced parallel ears carried by the body, said ears having outer circular edges and the circular edge of one ear being of greater diameter than the other, the said other ear having a circular opening therethrough and a slot leading from the opening through the edge of the ear, a pivot post secured to the said one ear in concentric relation with said circular opening and extending through the space between the ears, an arm, a bearing sleeve extending across an end of the arm and adapted for extension through said opening to receive the pivot post, the slot being of a width to pass the portion of the arm adjacent the bearing sleeve, a latching pawl pivotally attached to the arm adjacent to the edge of the said one ear for sliding contact with such edge, a keeper notch formed in the edge of the said one ear to receive said latching pawl, the keeper notch being disposed in a position to maintain the arm against swinging movement in a position removed from said slot, the said edge of the said one ear having a second notch adapted to have the pawl frictionally retained therein.

2,437,648

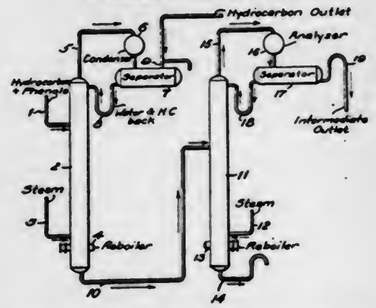
CATALYTIC OXIDATION OF UNSATURATED ORGANIC COMPOUNDS

Nicholas A. Milas, Belmont, Mass., assignor to Research Corporation, New York, N. Y., a corporation of New York

No Drawing. Application September 15, 1943, Serial No. 502,525
11 Claims. (Cl. 260—617)

1. Process for the direct production of polyhydroxy derivatives of unsaturated hydrocarbons containing at least one olefinic linkage, which comprises treating the hydrocarbon with hydrogen peroxide in a neutral and initially substantially anhydrous environment and in the presence of a catalytically active oxide of a metal which forms unstable per-acids, and recovering the resulting polyhydroxy derivative from the reaction mixture.

8. Process for the direct production of a product consisting mostly of cyclopentene-2-diol-1,4(cis) from cyclopentadiene, which comprises treating cyclopentadiene with a neutral and initially substantially anhydrous solution of hydrogen peroxide in an inert organic solvent medium in the presence of a catalytically active oxide of a metal which forms unstable per-acids, at a temperature below normal room temperature, and recovering the resulting diol from the reaction mixture.



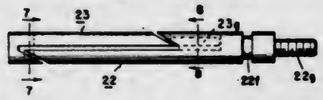
11. As a new product, cyclopentene-2-diol-1,4(cis).

2,437,649

SEPARATION OF PHENOLS FROM HYDROCARBON DISTILLATES BY STEAM DISTILLATION

David William Milner, Leeds, England, assignor to Yorkshire Tar Distillers Limited, Barnsley, England

Application March 7, 1945, Serial No. 581,557
In Great Britain November 20, 1944
8 Claims. (Cl. 202—42)



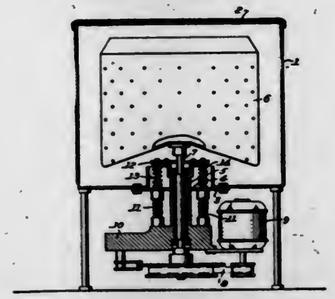
1. The process of treating hydrocarbon distillates containing phenols which distill along with the hydrocarbons when such distillates are vaporized in the absence of steam which comprises subjecting such hydrocarbon distillates to distillation in the presence of steam, driving off as vapour the major portion of the hydrocarbon components with water in the form of an azeotropic mixture and recovering the phenols in the residual or higher boiling fractions.

2,437,650

ABRADING TOOL

Levi Hester Palmer, Childersburg, Ala.

Application May 22, 1946, Serial No. 671,475
8 Claims. (Cl. 51—194)



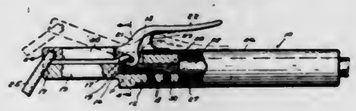
1. An abrading roll of the character set forth, comprising an elongated cylindrical member having a solid driving end, the other end of the member being tubular and having a longitudinal slot in its tubular wall, a sheet of abrasive material disposed about the periphery of the tubular end of the member with its ends passing through the slot, and clamping means contained in said tubular end and being operative to secure the ends of the abrasive sheet comprising a part mounted for rotation relative to but being normally secured against axial separation from said member, and a second part mounted to rotate in unison with said first part but being axially separable therefrom and removable from the member.

2,437,651

LAUNDRY CENTRIFUGAL

Christian Oscar Rasmussen, Copenhagen, Denmark

Application August 8, 1939, Serial No. 289,081
In Denmark August 9, 1938
Section 3, Public Law 690, August 8, 1946
Patent expires August 9, 1958
2 Claims. (Cl. 210—71)



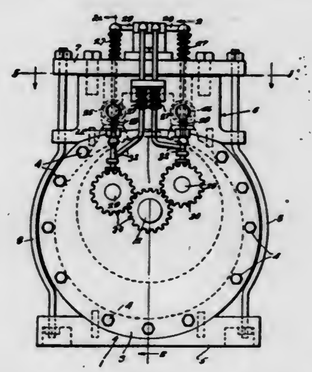
1. A laundry centrifugal comprising a casing having a bottom with a hole in it, a tubular body passing freely through said hole, said body having an upper collar within the casing and a lower collar below the casing, a set of helical compression springs of a relatively great resiliency secured to said upper collar and to said bottom and arranged in a circular row around said tubular body, a set of tension springs of a relatively small resiliency secured to said bottom and to said lower collar and arranged in a circular row around said tubular body, said tubular body constituting a shaft bearing and support, and a drum supporting shaft carried by and journaled in said tubular body.

2,437,652

WELDING ROD HOLDER

Rupert R. Reddick, Oakland, Calif.

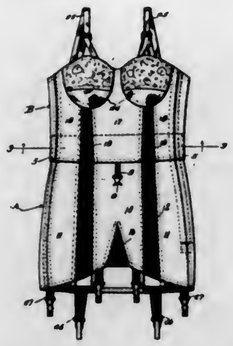
Application November 21, 1945, Serial No. 629,937
1 Claim. (Cl. 219—8)



A welding rod holder comprising a ferrule having a conductor receiving axial bore entering one end, an integral fixed jaw protruding axially from the opposite end of the ferrule, said ferrule also having a radial slot opening into the bore adjacent its junction with the fixed jaw, a pivot pin extending transversely through the ferrule substantially midway between the ends of the slot, said fixed jaw having an inclined notch in its end remote from the ferrule, a movable jaw having an inclined welding rod-receiving socket near one end adapted to align axially with the notch in the end of the fixed jaw when the jaws are parallel, an integral offset handle at the end of the movable jaw remote from the socket, a hook on the movable jaw at its junction with its integral handle, said hook engaging the pivot pin pivotally to couple the movable jaw with the fixed jaw, a tubular handle fitted over the ferrule, a spring carried by the tubular handle and engaging the handle on the movable jaw yieldingly to urge the movable jaw toward the fixed jaw and a conductor entering the bore in the ferrule and so clamped therein as to contact the hook on the movable jaw and effect good electrical contact therewith.

2,437,653

VALVE-IN-HEAD ROTARY INTERNAL-COMBUSTION ENGINE EMBODYING A ROTARY PISTON WITH RADIAL SLIDING VANES AND HAVING A COMBUSTION CHAMBER IN THE HEAD



Everett W. Rich, San Diego, Calif.

Application July 3, 1943, Serial No. 493,453
1 Claim. (Cl. 123—16)

In a rotary engine, a housing, a rotary piston eccentrically mounted in the housing and having radial sliding vanes, a head removably mounted on the housing and provided with a combustion chamber and having horizontal intake and exhaust passages opening through one side thereof, said intake and exhaust passages communicating with the housing at circumferentially spaced points, said head further having admission and outlet passages respectively connecting opposite ends of the combustion chamber with the interior of the housing at circumferentially spaced points, valve mechanism including poppet valves carried by the head and movable substantially radially of the housing for controlling said intake and exhaust passages, other valve mechanism including poppet valves movable parallel with the axis of the piston for controlling said admission and outlet passages, a charge-igniting device for the combustion chamber, and an axial shaft for the piston, said valve mechanism including cam shafts at opposite sides of and driven by said axial shaft, and means operatively connecting said cam shafts to said poppet valves.

2,437,654
FOUNDATION GARMENT
Irving Rosner, New York, N. Y., assignor to Even-Pul Foundations, Inc., New York, N. Y., a corporation of New York
Application February 27, 1945, Serial No. 579,956
1 Claim. (Cl. 2—30)

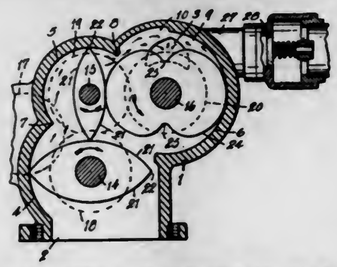
A foundation garment comprising horizontally yieldable complete brassière and girdle sections, the brassière section having a back portion composed of inelastic central and side panels respectively having central V-shaped elastic gussets in the upper and lower edges thereof, the lower portion of said brassière section being telescoped over the upper portion of said girdle section, permanent connections between the sides of the overlapped portions of said sections, elastic straps permanently attached at their upper ends to the lower edge of the back portion of said brassière section respectively centrally between and adjacent the sides of said back portion and permanently connected at their lower ends to the outer face of the back portion of the girdle section at points spaced from and below the lower edge of the brassière section to yieldingly resist relative separating movement of the back portions of said sections, a single further elastic strap permanently attached at its upper end to the lower edge of the front portion of said brassière section centrally between the sides of said front portion, and means to detachably connect the the lower end of the last named strap to the outer face of the front portion of the girdle section at a point spaced from and below the lower edge of the brassière section to yieldingly resist relative separating movement of the front portions of said sections, said permanent side connections and straps being the only connections between said sections.

2,437,655
BRASSIÈRE
Irving Rosner, Forest Hills, N. Y., assignor to Even-Pul Foundations, Inc., New York, N. Y., a corporation of New York
Application April 24, 1946, Serial No. 664,537
3 Claims. (Cl. 2—42)

1. A brassière comprising an elongated body having cooperating fastening devices for separably connecting the ends thereof at the rear of the wearer, said body comprising an intermediate front portion having upwardly diverging side edges and substantially similar inelastic end portions having inclined inner side edges permanently connected directly to the upwardly diverging side edges of said front portion, said front portion having an upper part composed of a pair of breast pockets joined together along a central seam and a lower part forming an under-breast band and permanently connected at its upper edge directly to the lower edges of the breast pockets, said lower part being composed of a

central inelastic section having upwardly diverging side edges and horizontally yieldable elastic end sections having inclined inner side edges permanently connected directly to the upwardly diverging side edges of said central section, the outer side edges of the breast pockets and of the elastic end sections being inclined and directly joined to the inclined inner side edges of the end portions of the body.

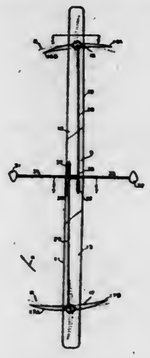
2,437,656
DUMP ATTACHMENT FOR VEHICLES
John R. Steenhoven, Springfield, Minn.
Application December 13, 1946, Serial No. 716,106
2 Claims. (Cl. 298—19)



1. A dump attachment for a four wheeled vehicle which includes a main frame adapted to lie upon the bed of a vehicle, a sub-frame adapted to fit within the main frame, a pivotal connection between the one end of the main frame and the adjacent end of the sub-frame, a fulcrum shaft carried by the main frame intermediate its ends, said fulcrum shaft extending transversely of the main frame below the under side thereof, a lift lever pivoted intermediate its ends to the fulcrum shaft adjacent each side of the main frame, a roller adjacent the end of each lift lever for engagement with the sub-frame near its free end, a transversely extending pivot bar fixed to the sub-frame near its pivoted end, said pivot bar lying intermediate the ends and in a plane above the upper side of the sub-frame, a fluid actuated ram adjacent each side of the sub-frame, one end of each ram being pivotally connected to the pivot bar and the opposite end of each ram being pivotally connected to the end of a lift lever remote from the end carrying the roller whereby when the ram is energized a lifting force will be exerted adjacent each end of the lift frame.

2,437,657
HEAT-STABLE PLASTICIZED RESIN COMPOSITIONS
Herbert J. West and Henry M. Enterline, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application January 4, 1945, Serial No. 571,368
1 Claim. (Cl. 260—45.3)

A resinous butylated urea-formaldehyde condensation product which is a reaction product of urea, formaldehyde and a butyl alcohol plasticized with a resinous reaction product of phthalic acid, glycerol and 2-ethyl hexoic acid.

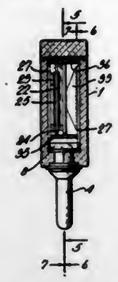


2,437,658
INTERENGAGING IMPELLER TYPE BLOWER OR PUMP
Alfred O. Williams, Battle Creek, Mich.
Application January 21, 1944, Serial No. 519,107
11 Claims. (Cl. 230—141)

1. In a blower, the combination of a casing having an inlet and an outlet and comprising first and second lobes disposed side by side with the first lobe opening to said inlet and a third lobe disposed in opposed relation to the first and second lobes and opening to the inlet, said lobes having end walls and cylindrically curved side walls, the curved side walls of the first and second lobes intersecting each other, the curve of the side wall of the third lobe intersecting the curve of the side wall of the second lobe, the outlet being in an end wall of the third lobe, the side wall of the third lobe having a recess therein adjacent the outlet, first and second impellers disposed within and coacting with the first and second lobes respectively and synchronously driven for rotation in the same direction, said first and second impellers having symmetrically curved sides and terminating in substantially pointed ends and being in coacting abutment relation to each other, and a third impeller disposed within and coacting with the third lobe and synchronously driven with said first and second impellers in the opposite direction relative to the direction of rotation of said first and second impellers, said third impeller having opposed lobes with curved ends and side recesses between the lobes, said second and third impellers being in coacting abutment relation with the side recesses of the third impeller receiving the ends of the second impeller.

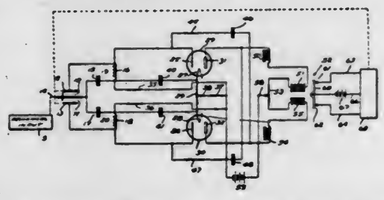
2,437,659
BALANCED IMPELLER STRUCTURE FOR WIND MOTORS
John R. Albers, Sioux City, Iowa, assignor to Wincharger Corporation, a corporation of Minnesota
Application July 19, 1943, Serial No. 495,261
3 Claims. (Cl. 170—75)

1. A wind motor comprising a two bladed impeller mounted on a shaft at right angles thereto and adapted to rotate with the shaft about the longitudinal axis of the shaft, said blades being mounted in line with each other on opposite sides of the shaft, bearing means for said shaft supporting it for rotation about its longitudinal axis, a governing member attached to each impeller blade on one face thereof, an operating mechanism for said member attached to each impeller blade on the face thereof opposite to said member, said operating mechanisms holding said governing members in inoperative position at speeds of rotation of the impeller below a predetermined speed and causing said governing members to move gradually into increasingly operative positions on increase in the speed above said predetermined speed, said governing members serving when in operative position to reduce the rate of increase of speed of the impeller upon increase in wind velocity, a pair of supporting arms mounted in line with each other on opposite sides of the impeller shaft and in a line at right angles



to the line of the impeller blades and perpendicular to the axis of the impeller shaft, and a balance weight attached to the extremity of each of said arms, said weights being streamlined for the direction of rotation of said impeller with which they rotate, said weights being adjustably mounted on the ends of said arms, said adjustment when operated serving to change the length of the moment arms of said weights about the axis of said shaft, the structure comprising said impeller blades and attached governing members and operating mechanisms and balance weights having their masses so distributed that the moment of inertia of said structure about the longitudinal axis of said supporting arms is substantially equal to the moment of inertia of said structure about the longitudinal axis of said impeller passing through the axis of said impeller shaft and that the masses of said structure on the windward and leeward sides of a plane passing through said longitudinal axes of the supporting arms and impeller blades are substantially equal.

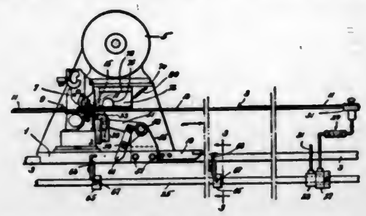
2,437,660
END-LOADED PIEZOELECTRIC UNIT
Henry M. Bach, Lawrence, N. Y., assignor to Premier Crystal Laboratories, Inc., New York, N. Y., a corporation of New York
Application April 29, 1944, Serial No. 533,316
9 Claims. (Cl. 171—327)



2. A piezo-electric device comprising a housing of insulation material having one end open for loading the crystal-electrode unit therein, a pair of contact prongs, a corresponding pair of metal

contact strips one for each electrode, and a pair of T-bolts for fastening the contact strips inter-

nally to respective prongs, the fastening being effected by turning the prongs externally.

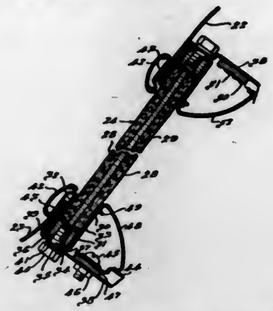


2,437,661
OSCILLATOR CONTROLLED FOLLOW-UP SYSTEM
Charles F. Coake, Indianapolis, Ind., assignor to Senn Corporation, New Augusta, Ind., a corporation of Indiana
Application February 24, 1945, Serial No. 579,628
7 Claims. (Cl. 318—31)

7. A control system comprising a pair of variable condensers formed by a pair of relatively fixed plates and an intermediate movable plate which is adapted to vary the capacities of said condensers in opposite sense in response to variations in a control element, a pair of space discharge devices having individual tuned input circuits including said condensers and having cross-connected feed-back circuits to cause said devices to oscillate in unison as a push-pull oscillator and to draw substantially equal space currents when said condensers have predetermined capacities, differential relay means including sets of contacts to be selectively actuated, and means responsive to the differential effect of said space currents to actuate said relay means in response to predetermined variations in the capacities of said condensers and follow-up means selectively energized by closing of said contacts.

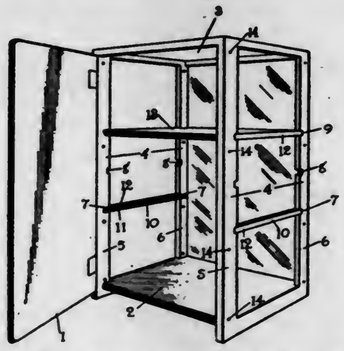
2,437,662
SLITTING AND PUNCHING ATTACHMENT FOR PIECE-END SEWING MACHINES
Wilfred N. Hadley, Springfield, Vt., assignor to Parks and Woolson Machine Company, Springfield, Vt., a corporation
Application May 5, 1943, Serial No. 485,724
14 Claims. (Cl. 112—2)

1. A sewing machine for joining cut ends of cloth having in combination stitch-forming devices, a wheel supporting the cloth during the sewing and rotating to carry the cloth past the stitching-forming devices, a cutter, and means forcing the cutter through the cloth on the op-



posite side of the seam from the cut ends while the cloth is being carried by the wheel.

2,437,663
DEVICE FOR DEPOSITING MATERIAL IN WELL HOLES
James D. Haynes, Kilgore, Tex., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application November 16, 1944, Serial No. 563,681
2 Claims. (Cl. 166—19)

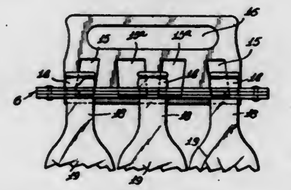


1. A dumping bailer adapted for lowering a pulverulent material into a well comprising a container for holding the pulverulent material to be dumped, a removable closure in the bottom of the container, shear pins in the bottom of the container adapted to form a support for the closure and to release the closure when sheared, a central agitator longitudinally disposed within the container and adapted for longitudinal motion therein, guide means attached to the lower end of the agitator for centralizing the lower end of the agitator within the container, a bar extending longitudinally through the agitator, upper stop means on the upper end of the bar limiting downward movement thereof relative to the agitator, lower stop means on the lower end of the bar limiting upward movement thereof relative to the agitator, said bar being of sufficient length between the said upper and lower stop means to permit longitudinal movement of the bar relative to the agitator so that the lower end of the bar may strike the removable closure, stop means attached to the upper end of the container for limiting the upward movement of the bar by engaging the upper stop means thereon, and means attached to the upper end of the bar above the upper stop means for suspending the container in the well.

2,437,664
VEHICLE WINDSHIELD CONSTRUCTION
Harold A. Hicks, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application March 27, 1944, Serial No. 528,219
6 Claims. (Cl. 296—84)

3. In combination, a vehicle body, a roof, a transparent windshield extending between the vehicle body and the roof, means acting entirely externally of the windshield to connect the lower edge of the windshield to the vehicle body for transmitting tension and compression loads between the windshield and the vehicle body, and means acting entirely externally of the windshield to connect the upper edge of the windshield to the roof for transmitting tension and compression loads between the roof and the windshield.

2,437,665
KITCHEN CABINET
James Rose, Davenport, Iowa, assignor to Luella Rose, Davenport, Iowa
Application March 19, 1945, Serial No. 583,592
3 Claims. (Cl. 211—143)

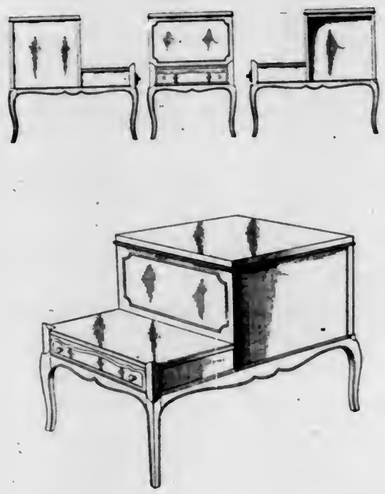


1. A cabinet of the type indicated comprising connected top, bottom, and corner posts, a shelf or shelves, and guide rails for the shelf or shelves, said posts being notched for the reception of the guide rails, the guide rails comprising two portions of unequal lengths and heights, the length of one portion being substantially the same as the distance between the remotest walls of opposed notches, and the ends of the other portion extending beyond the ends of the first mentioned portion to overlap the posts whereby to serve as retaining means for the guide rails.

2,437,666
MINERAL FEED FOR ANIMALS AND METHOD OF PRODUCING SAME
George B. Smith, Maple Park, Ill., assignor to Roberta Jane Baxter, Crystal Lake, and Marjorie Lou Smith, Evanston, Ill.
No Drawing. Application January 15, 1945, Serial No. 572,976
5 Claims. (Cl. 99—2)

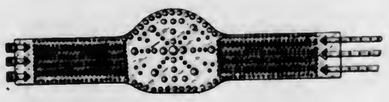
1. The method of preparing a mineral feed for animals which consists in providing a crushed iron pyrite, roasting the material to drive out part of the sulphur and to leave a predetermined percentage therein and thereby providing a relative porous crushed iron-sulphur material of greatly increased solubility in the chemicals present in the digestive tract of animals.

2,437,667
BOTTLE CARRIER
Leicester I. Smith, West Hartford, Conn., assignor of one-half to Marion R. Guthrie, Hartford, Conn.
Application December 8, 1944, Serial No. 567,196
7 Claims. (Cl. 294—87)



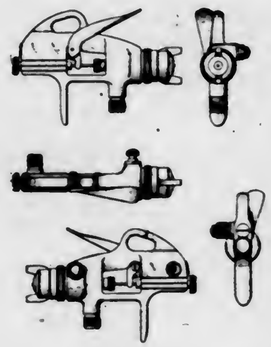
1. In a device for carrying bottles, the combination of a horizontal main frame having two parallel rows of holes for receiving the headed necks of the bottles and also having a longitudinal vertical slot parallel with the rows and between them, a handle member movable vertically through the slot in the frame and having a plurality of inclined slots therein, and a plurality of plates carried by the main frame and guided for horizontal movement to partly close the holes and grip the necks of the bottles below their heads, the said plates having portions fitting the respective slots in the handle member so that the plates are moved into and out of bottle gripping positions when the handle member is moved relatively upward and downward.

DESIGNS



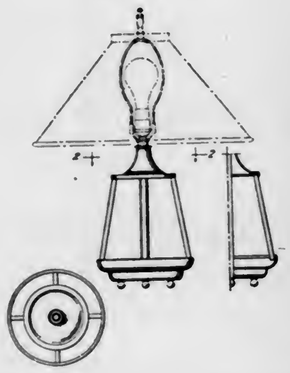
MARCH 9, 1948

148,902
DESIGN FOR A PROVINCIAL STEP TABLE
Guido Alessandrini, Grand Rapids, Mich., assignor to Townsend Manufacturing Company, Zeeland, Mich., a corporation of Michigan
Application August 5, 1946, Serial No. 132,296
Term of patent 7 years
(Cl. D33—14)



The ornamental design for a provincial step table, substantially as shown and described.

148,903
DESIGN FOR A BELT
James Samuel Ashdowne, Detroit, Mich., assignor to Joseph Buegeleisen Co., Inc., Detroit, Mich., a corporation of Michigan
Application September 16, 1946, Serial No. 133,353
Term of patent 14 years
(Cl. D3—10)



The ornamental design for a belt, as shown and described.

148,904
DESIGN FOR A SPRAY GUN OR THE LIKE
John W. Baur and Eric Gustafsson, Chicago, Ill., assignor to Binks Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application June 14, 1946, Serial No. 130,728
Term of patent 14 years
(Cl. D62—2)

The ornamental design for a spray gun or the like, as shown.

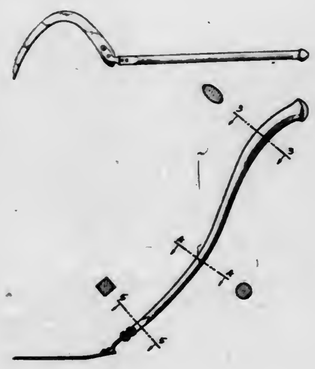
148,905
DESIGN FOR A COMBINATION LAMP AND POTTED PLANT BOWL
Robert O. Bextel, Chicago, Ill.
Application April 19, 1947, Serial No. 138,492
Term of patent 14 years
(Cl. D48—20)

The ornamental design for a combination lamp and potted plant bowl, as shown and described.

148,906
DESIGN FOR A CONDIMENT SHAKER
Boris Blecher, Philadelphia, Pa.
Application November 1, 1946, Serial No. 134,447
Term of patent 14 years
(Cl. D44—22)

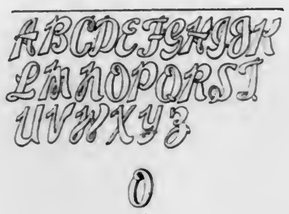
The ornamental design for a condiment shaker, as shown.

148,907
DESIGN FOR A RADIO CABINET OR THE LIKE
Frank C. Burton, Grand Rapids, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 30, 1946, Serial No. 129,141
Term of patent 3½ years
(Cl. D56—4)



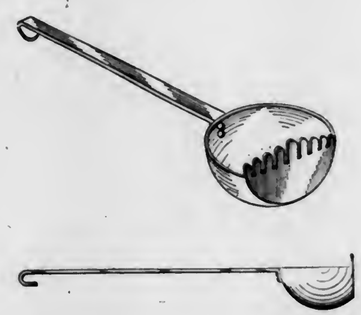
The ornamental design for a radio cabinet or the like, as shown.

148,908
DESIGN FOR AN EAR DRUM PROTECTOR
Jacob J. Cantor, Los Angeles, Calif.
Application September 11, 1943, Serial No. 111,099
Term of patent 14 years
(Cl. D83—1)



The ornamental design for an ear drum protector, as shown.

148,909
DESIGN FOR A SCYTHE
George W. Carlson, Minneapolis, Minn.
Application September 4, 1945, Serial No. 121,830
Term of patent 14 years
(Cl. D35—2)

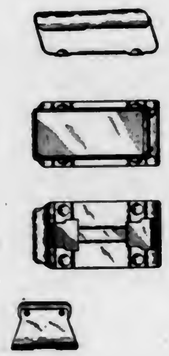


The ornamental design for a scythe, as shown.

148,910
DESIGN FOR AN ALPHABET FOR FORMING MONOGRAMS OR THE LIKE
Michael Chernow, New York, N. Y.
Application November 26, 1946, Serial No. 135,091
Term of patent 14 years
(Cl. D64—12)

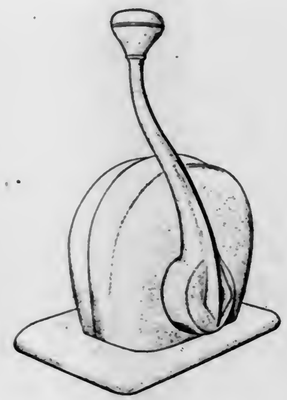
The ornamental design for an alphabet for forming monograms or the like, substantially as shown.

148,911
DESIGN FOR A LADLE
Ernest J. Comeau, Plattsburg, N. Y.
Application August 16, 1946, Serial No. 132,572
Term of patent 14 years
(Cl. D44—29)

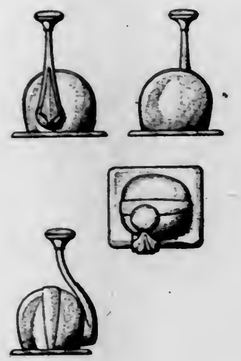


The ornamental design for a ladle, as shown.

148,912
DESIGN FOR A WORK COAT
Helen C. Cookman, New York, N. Y., assignor to Mary Ellen Cookman, New York, N. Y.
Application March 26, 1946, Serial No. 127,956
Term of patent 7 years
(Cl. D3—4)

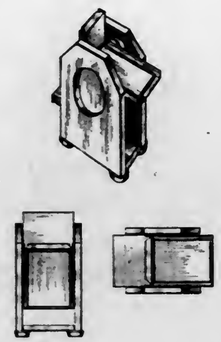


The ornamental design for a work coat, as shown and described.



148,913
DESIGN FOR A HANDLE FOR A SANDING PAD
Stephen A. Crosby, Chicago, Ill., assignor to Sterling Tool Products Company, a corporation of Illinois
Application October 25, 1946, Serial No. 134,254
Term of patent 14 years
(Cl. D37—1)

The ornamental design for a handle for a sanding pad, as shown.



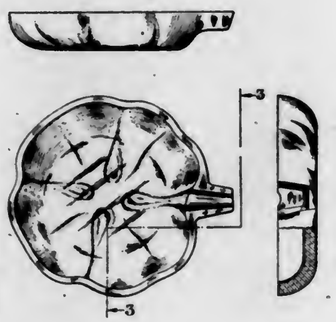
148,914
DESIGN FOR A CONTROL UNIT
Charles J. Daubenberger, Pacific Palisades, Calif., assignor to Dauby Equipment Company, Santa Monica, Calif., a corporation of California
Application October 18, 1946, Serial No. 134,063
Term of patent 7 years
(Cl. D26—5)

The ornamental design for a control unit, substantially as shown.

148,915
DESIGN FOR A REVOLVING FILE
Otto Decker, New York, N. Y.
Application November 27, 1946, Serial No. 135,129
Term of patent 3½ years
(Cl. D33—19)

The ornamental design for a revolving file, substantially as shown.

148,916
DESIGN FOR A TABLE TOP
Donald H. Dickerman, Newport Beach, Calif., and Frank H. Coburn, Sea Cliff, N. Y.
Application May 15, 1946, Serial No. 129,727
Term of patent 14 years
(Cl. D33—14)



The ornamental design for a table top, substantially as shown and described.

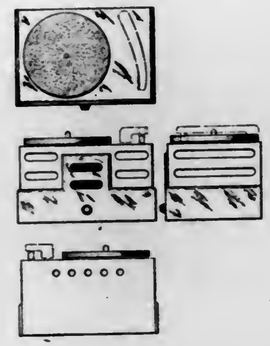
148,917
DESIGN FOR A PEN OR LIKE ARTICLE
Eugene Douglas, Brooklyn, N. Y.
Application February 28, 1947, Serial No. 137,218
Term of patent 14 years
(Cl. D74—17)

The ornamental design for a pen or like article, as shown.

148,918
DESIGN FOR AN ASH TRAY OR ARTICLE OF SIMILAR NATURE
Albert J. Dreitzer, New York, N. Y., assignor to Pitman-Dreitzer & Co., Inc., New York, N. Y., a corporation of New York
Application December 6, 1945, Serial No. 124,401
Term of patent 14 years
(Cl. D85—2)

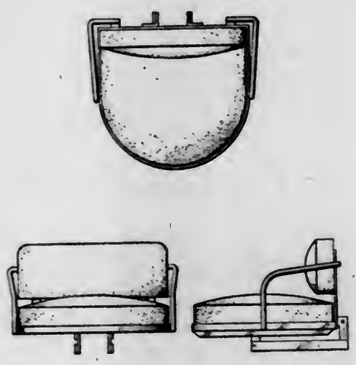
The ornamental design for an ash tray or article of similar nature, substantially as shown.

148,919
DESIGN FOR FOOD TONGS
Callie Duncan, The Dalles, Oreg.
Application September 4, 1946, Serial No. 133,055
Term of patent 14 years
(Cl. D44—4)



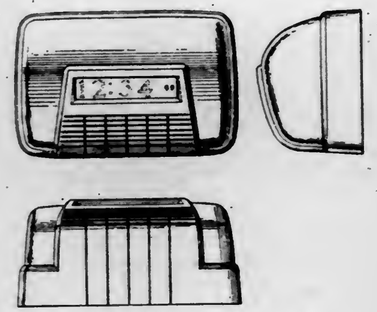
The ornamental design for food tongs, as shown.

148,920
DESIGN FOR A SCRAPER OR SIMILAR ARTICLE
Henry Eisenberg, New York, N. Y.
Application April 18, 1946, Serial No. 128,722
Term of patent 3½ years
(Cl. D9—6)



The ornamental design for a scraper or similar article, as shown and described.

148,921
DESIGN FOR A PHONOGRAPH OR THE LIKE
Harvey L. Everett, Mount Vernon, N. Y.
Application September 23, 1946, Serial No. 133,500
Term of patent 7 years
(Cl. D56—4)

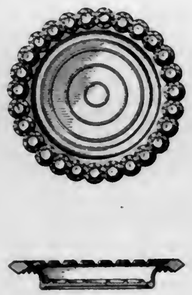


The ornamental design for a phonograph or the like, substantially as shown and described.

148,922
DESIGN FOR A MACHINE SEAT
William A. Fleischer, Grand Island, Nebr.
Application September 3, 1946, Serial No. 133,027
Term of patent 3½ years
(Cl. D15—8)

The ornamental design for a machine seat, as shown.

148,923
DESIGN FOR A WALL CLOCK
Gordon W. Florian, Bridgeport, Conn., assignor to Casco Products Corporation, Bridgeport, Conn., a corporation of Connecticut
Application October 11, 1947, Serial No. 141,867
Term of patent 14 years
(Cl. D42—7)

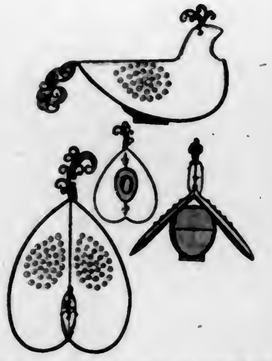


The ornamental design for a wall clock, as shown and described.

148,924
DESIGN FOR AN EMBOSSED LEATHER OR SIMILAR ARTICLE
Stephen B. Freedman, New York, N. Y.
Application July 10, 1947, Serial No. 140,184
Term of patent 14 years
(Cl. D87—3)

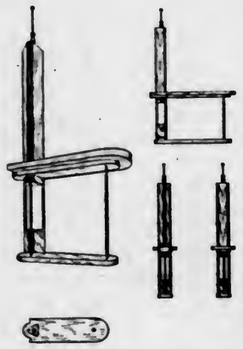
The ornamental design for an embossed leather or similar article, substantially as shown.

148,925
DESIGN FOR A COASTER OR SIMILAR ARTICLE
Harry A. Ganser, New York, N. Y.
Application March 4, 1947, Serial No. 137,337
Term of patent 14 years
(Cl. D44—10)



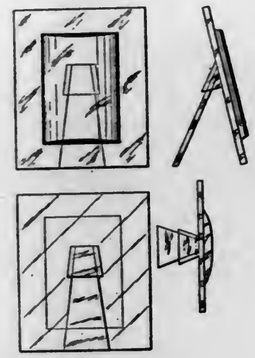
The ornamental design for a coaster or similar article, substantially as shown.

148,926
DESIGN FOR A SCARF
Abraham M. Goldberg, Denver, Colo.
Application August 23, 1946, Serial No. 132,786
Term of patent 14 years
(Cl. D3—12)



The ornamental design for a scarf, as shown and described.

148,927
DESIGN FOR A COMBINED SACHET BAG AND PERFUME BOTTLE CONTAINER
Elizabeth N. Graham, New York, N. Y.
Application February 20, 1947, Serial No. 137,034
Term of patent 14 years
(Cl. D86—10)

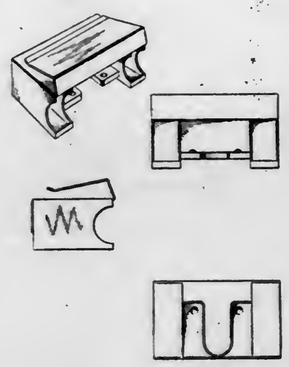


The ornamental design for a combined sachet bag and perfume bottle container, substantially as shown.

148,928
DESIGN FOR AN AUTOMOBILE SERVICE STATION ISLAND
Jean A. Hardesty, Altadena, Calif., assignor to Signal Oil Company, Los Angeles, Calif., a corporation of California
Application October 21, 1946, Serial No. 134,140
Term of patent 14 years
(Cl. D13—1)

The ornamental design for an automobile service station island, substantially as shown.

148,929
DESIGN FOR A PICTURE FRAME
Paul L. Hartnett, Leominster, Mass.
Application October 5, 1946, Serial No. 133,776
Term of patent 7 years
(Cl. D29—20)



The ornamental design for a picture frame, as shown.

148,930
DESIGN FOR A CHILD'S BRICK
Bertram Mark Hickman, London, England
Application January 23, 1946, Serial No. 125,861
In Great Britain July 25, 1945
Term of patent 14 years
(Cl. D34—15)

The ornamental design for a child's brick, substantially as shown.

148,931
DESIGN FOR A RAZOR AND BLADE HOLDER
Horner H. Hopkins, Des Moines, Iowa, assignor to Cobbs-Hopkins Company, Des Moines, Iowa
Application May 11, 1946, Serial No. 129,617
Term of patent 14 years
(Cl. D4—3)

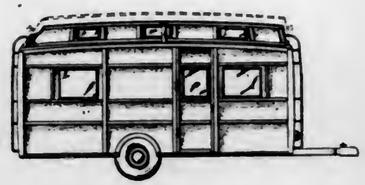
The ornamental design for a razor and blade holder, substantially as shown.

148,932
DESIGN FOR A CANDLE HOLDER
David Kaplan, New York, N. Y.
Application May 8, 1946, Serial No. 129,456
Term of patent 3½ years
(Cl. D48—2)

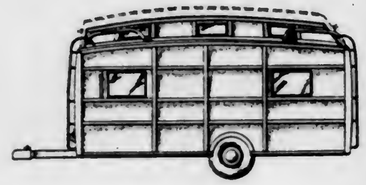
The ornamental design for a candle holder, as shown.

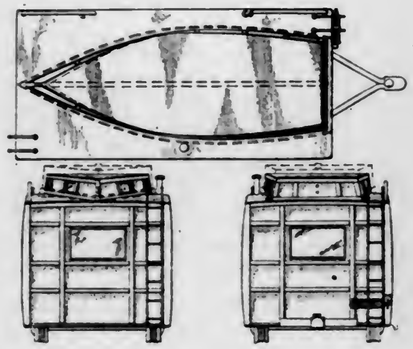
148,933
DESIGN FOR AN ADJUSTABLE LINE CONNECTOR
Edward H. Karleen, Morris Township, Morris County, N. J., assignor to Karleen, Incorporated, Morris Plains, N. J., a corporation of New Jersey
Application February 12, 1946, Serial No. 126,525
Term of patent 14 years
(Cl. D26—1)

The ornamental design for an adjustable line connector, as shown.



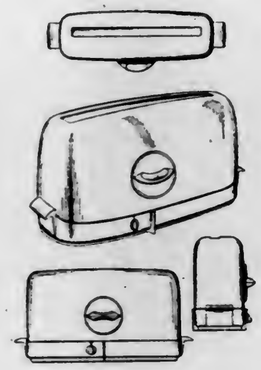
148,934
DESIGN FOR A SADDLE
Lou Kosloff, Hollywood, Calif.
Application August 28, 1946, Serial No. 132,920
Term of patent 7 years
(Cl. D38—7)

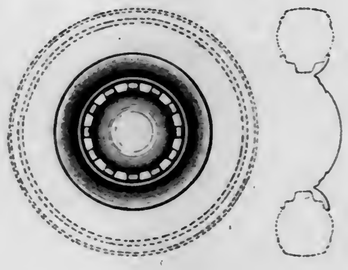




The ornamental design for a saddle, as shown.

148,935
DESIGN FOR A TRAILER
Ray F. Kuns, Cincinnati, Ohio
Application March 15, 1946, Serial No. 127,556
Term of patent 14 years
(Cl. D14—3)



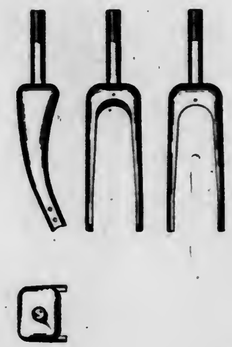


The ornamental design for a trailer, substantially as shown and described.

148,936
DESIGN FOR AN ELECTRIC TOASTER
Harry L. Laylon, Rochester, N. Y., assignor to Samson-United Corporation, Rochester, N. Y., a corporation of Delaware
Application June 13, 1946, Serial No. 130,681
Term of patent 14 years
(Cl. D81—10)

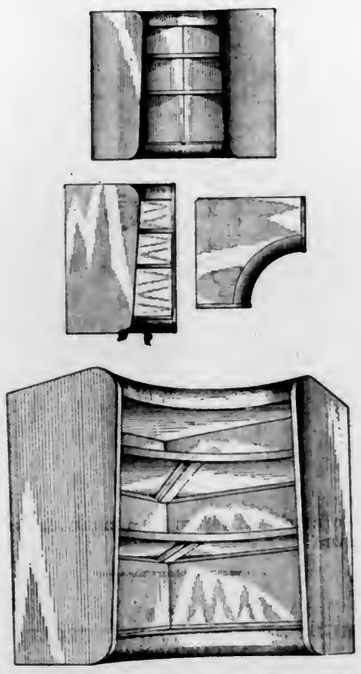
The ornamental design for an electric toaster, as shown.

148,937
DESIGN FOR A WHEEL COVER OR SIMILAR ARTICLE
George Albert Lyon, Allenhurst, N. J.
Application March 30, 1946, Serial No. 128,098
Term of patent 14 years
(Cl. D14—30)



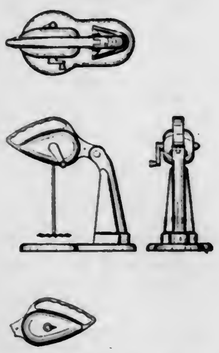
The ornamental design for a wheel cover or similar article, as shown and described.

148,938
DESIGN FOR A LUMINOUS PENDANT
John C. MacLennan, Toronto, Ontario, Canada
Application December 4, 1946, Serial No. 135,247
In Canada June 20, 1946
Term of patent 14 years
(Cl. D48—14)



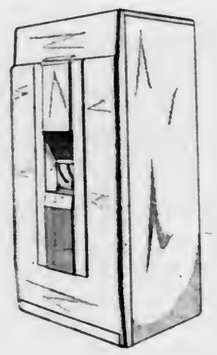
The ornamental design for a luminous pendant, as shown.

148,939
DESIGN FOR A FORK FOR BICYCLES AND VELOCIPEDES
Edward D. Martin, Milwaukee, Wis.
Application July 20, 1946, Serial No. 131,762
Term of patent 7 years
(Cl. D90—9)

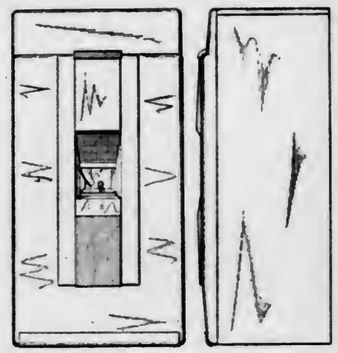


The ornamental design for a fork for bicycles and velocipedes, as shown.

148,940
DESIGN FOR A CORNER WALL CABINET
Charles S. Motter, Chicago, Ill.
Application September 26, 1946, Serial No. 133,576
Term of patent 14 years
(Cl. D33—19)

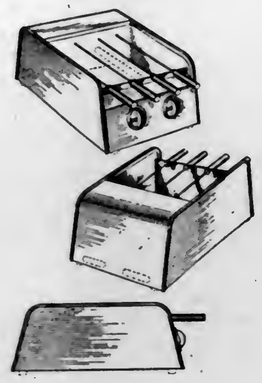


The ornamental design for a corner wall cabinet, as shown and described.

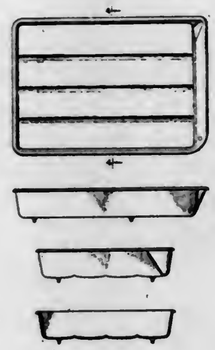


148,941
DESIGN FOR A TOY FOOD MIXER
Carl H. Muller, St. Louis, Mo.
Application November 8, 1946, Serial No. 134,631
Term of patent 7 years
(Cl. D34—15)

The ornamental design for a toy food mixer, substantially as shown.

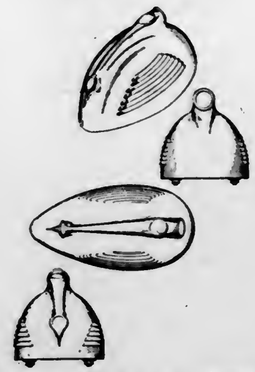


148,942
DESIGN FOR A BEVERAGE DISPENSER
Anthony Naiden, Southwick, Mass., assignor, by mesne assignments, to The Coca-Cola Company, Wilmington, Del., a corporation of Delaware
Application June 22, 1946, Serial No. 130,942
Term of patent 14 years
(Cl. D52—3)



The ornamental design for a beverage dispenser, substantially as shown.

148,943
DESIGN FOR A BARBECUE COOKER
David Nassif, Woburn, Mass.
Application May 18, 1946, Serial No. 129,833
Term of patent 14 years
(Cl. D81—10)

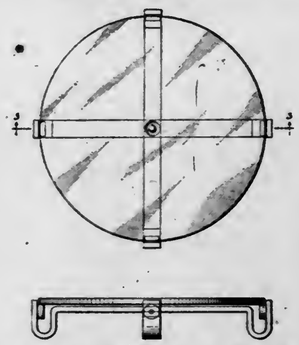


The ornamental design for a barbecue cooker, as shown and described.

148,944
DESIGN FOR A PHOTOGRAPHIC FILM AND PRINT TRAY OR SIMILAR ARTICLE
Thomas G. W. Nevell, Riverside, Conn., and Frank Samet, New York, N. Y., assignors to The F R Corporation, New York, N. Y., a corporation of New York
Application February 14, 1947, Serial No. 136,902
Term of patent 14 years
(Cl. D61—1)

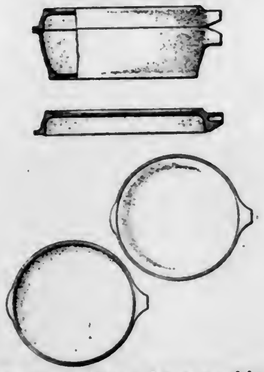
The ornamental design for a photographic film and print tray or similar article, as shown.

148,945
DESIGN FOR A SUCTION CLEANER CASING
Joseph H. Nuffer, Toledo, Ohio, and Lynn H. Latta, Los Angeles, Calif., assignors to Air-Way Electric Appliance Corporation, Toledo, Ohio, a corporation of Delaware
Application October 21, 1946, Serial No. 134,146
Term of patent 7 years
(Cl. D9—2)



The ornamental design for a suction cleaner casing, as shown.

148,946
DESIGN FOR A PLAYING CARD
George J. O'Donnell, Waterbury, Conn.
Application August 27, 1946, Serial No. 132,905
Term of patent 14 years
(Cl. D34—13)

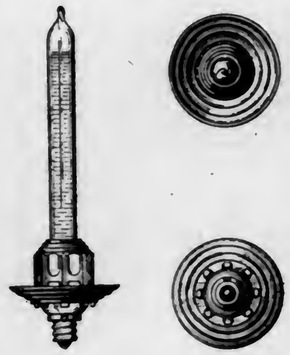


The ornamental design for a playing card, as shown and described.

148,947
DESIGN FOR A DISPLAY TRAY
Norman E. Olin, New York, N. Y.
Application June 12, 1946, Serial No. 130,660
Term of patent 7 years
(Cl. D80—9)

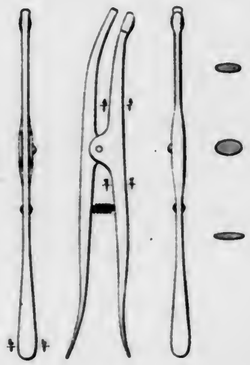
The ornamental design for a display tray, as shown.

148,948
DESIGN FOR A COMBINATION BAKING DISH, GRIDDLE, AND DUTCH OVEN
Clyde A. Ovenshire, Berkeley, Calif.
Application May 27, 1946, Serial No. 130,128
Term of patent 14 years
(Cl. D44—1)



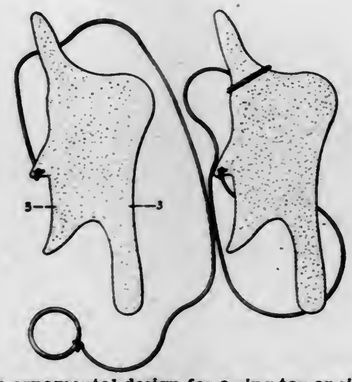
The ornamental design for a combination baking dish, griddle, and Dutch oven, as shown.

148,949
DESIGN FOR A SEWING MACHINE CABINET
Wilbur J. Peets, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application March 23, 1946, Serial No. 127,827
Term of patent 14 years
(Cl. D33—12)



The ornamental design for a sewing machine cabinet, as shown and described.

148,950
DESIGN FOR AN ILLUMINABLE BUBBLING DEVICE OR THE LIKE
John Petry, New York, N. Y., assignor to Raylite Electric Corporation, Bronx, N. Y., a corporation of New York
Application December 7, 1946, Serial No. 135,338
Term of patent 14 years
(Cl. D26—8)



The ornamental design for an illuminable bubbling device or the like, as shown.

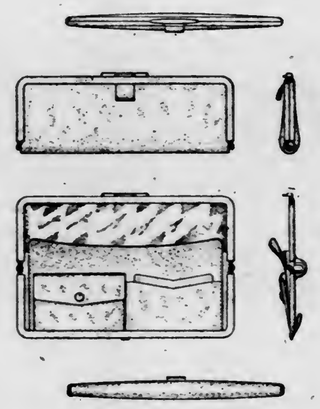
148,951
DESIGN FOR A SHOE TOE-CAP STRETCHER
Richard Pfifferling, New York, N. Y., assignor to Richard Rosen, Long Island City, N. Y.
Application April 30, 1947, Serial No. 138,716
Term of patent 3½ years
(Cl. D7—3)

The ornamental design for a shoe toe-cap stretcher, substantially as shown.

148,952
DESIGN FOR A RING TOY OR SIMILAR ARTICLE
Albert D. Phelps, Jr., Babson Park, Mass.
Application December 31, 1946, Serial No. 135,860
Term of patent 7 years
(Cl. D34—15)

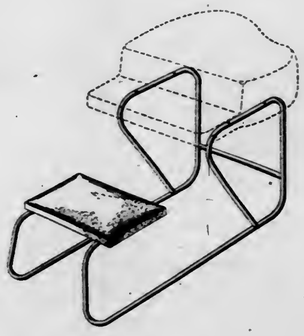
The ornamental design for a ring toy or similar article, substantially as shown.

148,953
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application October 1, 1947, Serial No. 141,681
Term of patent 7 years
(Cl. D45—19)



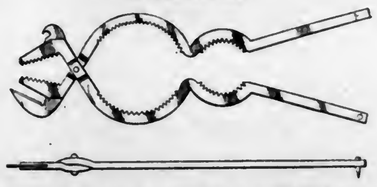
The ornamental design for a brooch or similar article, substantially as shown.

148,954
DESIGN FOR A BABY SHOE
Evelyn M. Potts, Grand Ledge, Mich.
Application February 12, 1947, Serial No. 136,853
Term of patent 14 years
(Cl. D7—7)



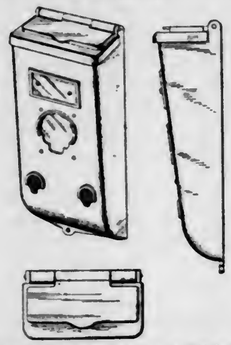
The ornamental design for a baby shoe, as shown.

148,955
DESIGN FOR A COMBINED BILLFOLD AND COIN PURSE
John P. Reis, West Bend, Wis., assignor to Amity Leather Products Co., West Bend, Wis., a corporation of Wisconsin
Application February 20, 1947, Serial No. 137,038
Term of patent 7 years
(Cl. D87—3)



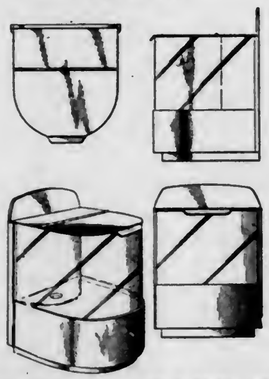
The ornamental design for a combined billfold and coin purse, substantially as shown and described.

148,956
DESIGN FOR A COMBINED ARTICLE SUPPORT AND SEAT
Harold B. Rhodes, Hollywood, Calif.
Application October 25, 1946, Serial No. 134,244
Term of patent 14 years
(Cl. D15—8)



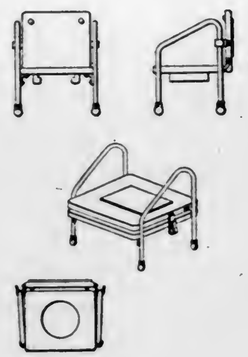
The ornamental design for a combined article support and seat, substantially as shown and described.

148,957
DESIGN FOR A COMBINATION TOOL
Lee Rice, Homeland, Fla.
Application September 6, 1946, Serial No. 133,105
Term of patent 14 years
(Cl. D44—29)



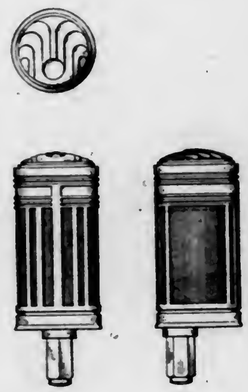
The ornamental design for a combination tool, as shown.

148,958
DESIGN FOR A MAIL BOX
Harris W. Robinette, Chicago, Ill.
Application September 21, 1946, Serial No. 133,490
Term of patent 3½ years
(Cl. D74—9)



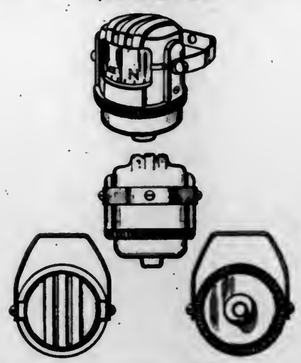
The ornamental design for a mail box, substantially as shown.

148,959
DESIGN FOR A SALAD DISPENSER
Matthew E. Ryan, Chicago, Ill.
Application August 29, 1946, Serial No. 132,946
Term of patent 14 years
(Cl. D52—2)



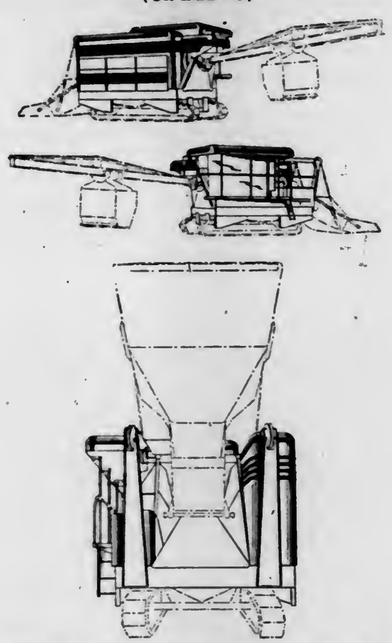
The ornamental design for a salad dispenser, as shown.

148,960
DESIGN FOR A CHILD'S TRAINING CHAIR OR SIMILAR ARTICLE
Albert B. Sawyer, Brooklyn, N. Y., assignor to Plastic Treasures, Inc., New York, N. Y.
Application June 29, 1946, Serial No. 131,165
Term of patent 3½ years
(Cl. D4—5)



The ornamental design for a child's training chair or similar article, as shown.

148,961
DESIGN FOR A BIER PIN
Earl L. Schofield, Rockford, Ill., assignor to Superior Coach Corporation, Lima, Ohio, a corporation of Ohio
Application June 28, 1946, Serial No. 131,134
Term of patent 14 years
(Cl. D19—1)

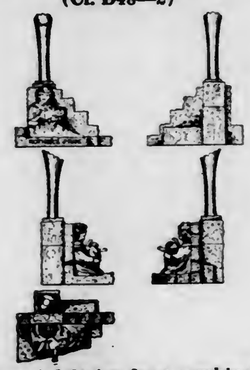


The ornamental design for a bier pin, substantially as shown.

148,962
DESIGN FOR AN AUTO COMPASS
Burl E. Sherrill, Peru, Ind., assignor to Sherrill Research Corporation, Peru, Ind., a corporation of Indiana
Application June 1, 1946, Serial No. 130,319
Term of patent 3½ years
(Cl. D52—1)

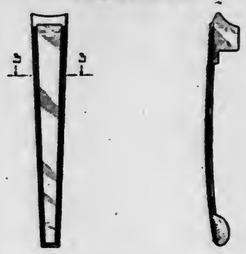
The ornamental design for an auto compass, as shown.

148,963
DESIGN FOR A ROAD PAVING MACHINE
Clifford Brooks Stevens, Fox Point, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application September 13, 1946, Serial No. 133,282
Term of patent 14 years
(Cl. D14—3)



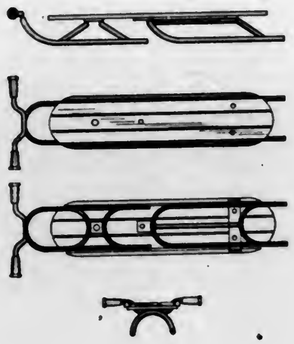
The ornamental design for a road paving machine, substantially as shown and described.

148,964
DESIGN FOR A SHOE
Isidor Tarlow, Brockton, Mass.
Application March 28, 1947, Serial No. 137,994
Term of patent 7 years
(Cl. D7—7)



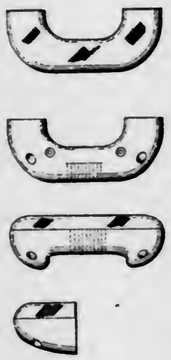
The ornamental design for a shoe, substantially as shown and described.

148,965
DESIGN FOR A COMBINED CANDELABRUM AND FLOWER VASE
Agnes E. Thienhaus, Milwaukee, Wis.
Application November 23, 1946, Serial No. 135,032
Term of patent 7 years
(Cl. D48—2)



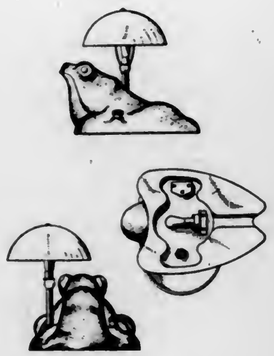
The ornamental design for a combined candelabrum and flower vase, as shown.

148,966
DESIGN FOR A FOUNTAIN PEN CLIP
Joseph Wallace, Cedarhurst, N. Y.
Application January 8, 1947, Serial No. 136,006
Term of patent 14 years
(Cl. D74—2)



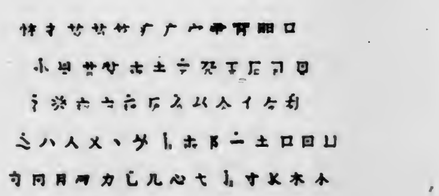
An ornamental design for a fountain pen clip, as shown.

148,967
DESIGN FOR A BOBSLED
Ralph Warrender, Sharon, Pa.
Application June 3, 1946, Serial No. 130,350
Term of patent 14 years
(Cl. D34—15)



The ornamental design for a bobsled, as shown.

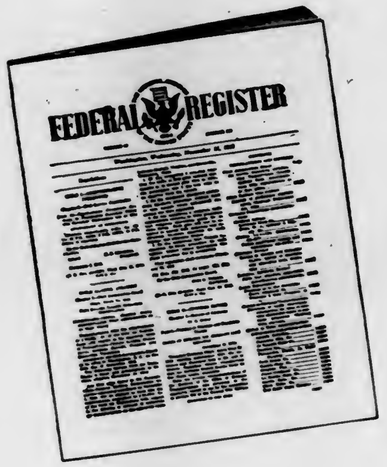
148,968
DESIGN FOR A COMBINED ARM REST AND DOOR PULL
Elmer G. Wettlaufer, Bloomfield Hills, Mich.
Application June 13, 1946, Serial No. 130,679
Term of patent 14 years
(Cl. D10—8)



The ornamental design for a combined arm rest and door pull, substantially as shown and described.

148,969
DESIGN FOR A LAMP
Thomas Woodrow Wilson, Millville, N. J.
Application May 31, 1946, Serial No. 130,260
Term of patent 14 years
(Cl. D48—20)

The ornamental design for a lamp, as shown.



148,970
DESIGN FOR A FONT OF KEYBOARD SYMBOLS
Lin Yutang, New York, N. Y.
Application May 18, 1946, Serial No. 129,826
Term of patent 14 years
(Cl. D64—12)

The ornamental design for a font of keyboard symbols, as shown.

FEDERAL REGISTER

Official Daily Service

The FEDERAL REGISTER publishes daily the full text of Presidential Proclamations and Executive orders and any order, regulation, notice, or similar document promulgated by Federal administrative agencies which has general applicability and legal effect. A partial list of subjects covered includes:

Agriculture	Housing
Aviation	Labor Relations
Business Credit	Mineral Resources
Communications	Price Control
Contracts:	Priorities
Procurement	Reconversion
Renegotiation	Securities
Termination	Shipping
Customs	Surplus Property
Fair Trade Practice	Taxation
Food and Drugs	Transportation
Foreign Relations	Wages and Hours

$1.50 A MONTH
$15 A YEAR

Condition of Applications Under Examination at Close of Business Feb. 27, 1948

(Total number of applications awaiting action, excluding Trade-Mark Division, 152,812; Trade-Mark Division, 22,624. Oldest new case, Mar. 25, 1946; oldest amended, Feb. 4, 1946.)

DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting office action: New	Amended	Applications awaiting action
1. GOLDBERG, A. J., Food Apparatus; Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons, Sewerage.	June 6	June 24	3,618
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Bee Culture; Dairy; Animal Husbandry; Presses; Tobacco; Textile Wringers; Butchering.	Apr. 19	Mar. 14	4,055
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	†May 21	Nov. 27	1,536
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Package and Article Carriers; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	July 10	June 16	4,076
5. ROBINSON, C. W., Harvesters; Acoustics; Sound Recording; Knotters	Mar. 25	Mar. 23	1,889
6. SURLE, H., Carbon Chemistry (part)	†Apr. 26	†Feb. 12	1,848
7. HANLIN, GEORGE, Optics; Photographic Apparatus	†May 8	†Jan. 27	1,806
8. IMUS, A. E., Furniture; Racks and Cabinets	May 16	May 13	4,048
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	July 18	Apr. 11	2,375
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	†Apr. 7	Sept. 26	1,351
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	†June 3	†June 2	833
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	†May 6	June 17	2,018
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	May 21	Apr. 16	2,475
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	†Mar. 31	†Jan. 21	1,183
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	Sept. 9	Apr. 4	1,965
16. LOVEWELL, N. N., Telegraphy, Telephony	†June 2	Oct. 11	1,865
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	Sept. 21	May 9	1,844
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	Aug. 26	Apr. 12	1,734
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	Aug. 16	Aug. 9	1,896
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	June 24	July 26	2,082
21. MADER, R. C., Textiles	†Apr. 16	†Jan. 2	1,189
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	Aug. 26	June 20	1,860
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	June 25	May 20	1,316
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Sewing Machines	†May 2	†May 6	1,860
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	†Jan. 31	June 14	1,728
26. YOUNG, R. R., Electricity—Generation and Motive Power	†Feb. 3	June 10	1,808
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush; Broom and Mop Making.	Sept. 13	Aug. 27	3,034
28. SOLYOM, H. L., Heating; Metallurgical Apparatus; Internal-Combustion Engines (part); Cylinders; Pistons	†Feb. 10	Oct. 21	1,205
29. SHKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools.	Oct. 10	June 5	2,943
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Illumination; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	†Feb. 18	Aug. 5	2,407
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	†May 16	†May 2	2,143
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	Apr. 6	Apr. 29	2,883
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements.	May 25	Apr. 22	3,459
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators.	July 19	Apr. 3	1,343
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	Aug. 10	June 24	2,841
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	Apr. 26	Apr. 12	2,024
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	†Apr. 9	Sept. 11	1,506
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	Oct. 10	Sept. 12	1,695
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	Apr. 13	Apr. 1	2,855
40. DRUMMOND, E. J., Receptacles (part); Packages	†Feb. 3	Aug. 12	3,020
41. HERTZ, M., Recorders; Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	Apr. 9	Mar. 8	2,717
42. MARANS, H., Electric Signaling; Variable Transformer and Reactor Structure; Electricity, Voltage Magnitude and Phase Control Systems.	†May 26	†June 10	869
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	†May 13	†Apr. 24	1,459
44. HARVEY, L. P., Refrigeration; Preserving	Apr. 2	Apr. 20	1,298
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Land Vehicles (part); Spring, Weight and Horsepower Motors.	May 9	Apr. 30	2,818
46. MUSHAKE, W. L., Concentraing Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	Aug. 2	June 4	1,882

NOTE.—The dates given are 1946 except where † indicates 1947.

(Total number of applications awaiting action, excluding Trade-Mark Division, 152,812; Trade-Mark Division, 32,624. Oldest new case, Mar. 25, 1946; oldest amended, Feb. 4, 1946.)

DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting office action: New	Amended	Applications awaiting action
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	†Mar. 17	Nov. 8	1,944
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	Aug. 28	July 31	1,549
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	†Jan. 24	July 15	1,654
50. LEVIN, SAMUEL, Synthetic Resins	†May 24	Oct. 24	2,350
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	†Apr. 10	Sept. 16	1,835
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	†Mar. 5	July 25	3,850
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter; Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	Aug. 1	Mar. 6	3,640
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	†Apr. 16	Nov. 6	1,869
55. BOWEN, S. T., Artificial Body Members; Dentistry; Surgery; Toilet	†Feb. 17	Apr. 5	1,818
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Acetylene; Gas Mixing	†Apr. 19	†Mar. 12	1,148
57. NICOLSON, G. D., Toys; Amusement and Exercising Devices; Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Jewelry; Nut and Bolt Locks.	June 28	May 1	3,568
58. DOWELL, E. F., Abrading; Bottles and Jars; Stone Working; Making Metal Tools and Implements	†Mar 28	Sept. 14	1,342
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	July 12	May 31	2,097
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	†May 1	Oct. 31	1,489
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	Aug. 19	May 11	3,217
62. PUGH, E. C., Games; Tables; Mechanical Guns and Projectors	Oct. 18	May 31	1,577
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Heterocyclic Compounds (part); Oils and Fats.	†Apr. 9	†Feb. 5	1,499
64. NASH, P. M., Compositions—Coating or Plastic (part); Fuel and Miscellaneous	†July 9	†July 3	1,821
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors	†June 10	Dec. 19	1,093
66. LISANN, I., Geometrical Instruments	May 14	Feb. 4	2,248
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	Aug. 27	June 24	2,031
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	†Mar. 20	Oct. 22	1,607
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters.	Oct. 17	June 11	906
TRADE-MARKS: MERCHANT, J. H.	†July 5	†Aug. 19	32,624
DESIGNS: BREHM, G. L.	July 10	†Sept. 13	8,210

NOTE.—The dates given are 1946 except where † indicates 1947.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

A & A Sales Co., Glendale, Calif. Hose nozzles. Serial No. 511,659, Mar. 16. Class 13.

Abbott Laboratories, North Chicago, Ill. Antiseptic preparation. Serial No. 534,858, Mar. 16. Class 6.

Affiliated Retailers, Inc., New York, N. Y. Automobile tires and tubes. Serial No. 517,445, Mar. 16. Class 35.

Aidmore Products Co., West Orange, N. J. Spot removers. Serial No. 534,714, Mar. 16. Class 4.

Airtron, Inc., Pleasant Plains, Staten Island, N. Y. Flexible waveguide. Serial No. 524,278, Mar. 16. Class 21.

Ajax Box Company, The, Chicago, Ill. Corrugated paper. Serial No. 528,601, Mar. 16. Class 37.

Aktiebolaget Malcus Holmquist, Halmstad, Sweden. Traveling cranes and slewing cranes. Serial No. 470,594, Mar. 16. Class 23.

Alumni Association of the U. S. Merchant Marine Cadet Corps, Inc., New York, N. Y. Magazine published periodically. Serial No. 506,570, Mar. 16. Class 38.

Alvin Corporation, The, Providence, R. I. Sterling silver and silverplated flatware, hollowware and cutlery. Serial No. 503,035, Mar. 16. Class 28.

American Brake Shoe Company, New York, N. Y. Metal castings. Serial No. 511,587, Mar. 16. Class 14.

American Cyanamid Company, New York, N. Y. Parathion. Serial No. 535,366, Mar. 16. Class 6.

American Pipe and Tank Lining Co.: *See*—
Jolkower, Harry.

Andreana Classics, New York, N. Y. Misses' blouses and skirts. Serial No. 525,760, Mar. 16. Class 39.

Anglo Fabrics Company, Inc., New York, N. Y. Woolen and worsted piece goods. Serial No. 502,101, Mar. 16. Class 42.

Ansul Chemical Company, Marinette, Wis. Comminuted, free-flowing fire extinguishing dry chemical. Serial No. 507,706, Mar. 16. Class 6.

Armour and Company, Chicago, Ill. Soap. Serial No. 528,670, Mar. 16. Class 4.

Ashoskie Pickle Company: *See*—
Margulies, Irving.

Ashworth (Specialties) Limited, Birmingham, England. Stuffing and forcemeat. Serial No. 503,342, Mar. 16. Class 46.

Associated Products, Inc., Chicago, Ill. Face lotions, skin bleaches, vanishing, etc., cream, etc. Serial No. 505,547, Mar. 16. Class 6.

Atlas Powder Company, Wilmington, Del. Stabilizers for amylaceous materials, etc. Serial No. 516,885, Mar. 16. Class 6.

Automatic Electric Heater Company, assignee: *See*—
Automatic Electric Heater Co., Inc.

Automatic Electric Heater Co., Inc., assignor to Automatic Electric Heater Company, Pottstown, Pa. Pressure sensitive electrical control switches and temperature sensitive electrical control switches. Serial No. 521,236, Mar. 16. Class 26.

Barber-Colman Company, Rockford, Ill. Heating, ventilating and air conditioning apparatus. Serial No. 529,864, Mar. 16. Class 34.

Barringham Rubber & Plastics Limited, Oakville, Ontario, Canada. Supported and unsupported flexible vinyl-type plastic sheeting in the piece. Serial No. 522,690, Mar. 16. Class 42.

Beau Brummell Ties, Inc., Toiletries Division: *See*—
Shearer-Neumann Co.

Bess Nut Co., Inc., Passaic, N. J. Salted and unsalted nut meats. Serial No. 523,235, Mar. 16. Class 46.

Best & Co. Inc., New York, N. Y. Iron, porcelain or enameled bath tubs. Serial No. 515,999, Mar. 16. Class 13.

Best & Co., Inc., New York, N. Y. Soap. Serial No. 516,001, Mar. 16. Class 4.

Bilfred Enterprises, Los Angeles, Calif. Paper napkins, paper covers, and paper straws. Serial No. 495,363, Mar. 16. Class 50.

Bloch, Robert and Simone V. M., New York, N. Y. Glassware. Serial No. 501,816, Mar. 16. Class 33.

Bloch, Simone V. M.: *See*—
Bloch, Robert and S. V. M.

Boker, H., & Co. Inc., New York, N. Y. Sewing needles. Serial No. 534,237, Mar. 16. Class 40.

Borden, Richard, Mills Corp., Fall River, Mass. Cotton piece goods. Serial No. 525,780, Mar. 16. Class 42.

Bricadoon Hosiery Mills, New York, N. Y. Men's hosiery. Serial No. 524,293, Mar. 16. Class 39.

Brook Electronics, Inc., Newark, N. J. Radio receivers and amplifiers. Serial No. 507,670, Mar. 16. Class 21.

Brush Development Company, The, Cleveland, Ohio. Microphones. Serial No. 516,253, Mar. 16. Class 21.

Buegeleisen, Joseph, Co., Detroit, Mich. Saddle bags. Serial No. 534,507, Mar. 16. Class 3.

Butler Company, The, Butler, Ind. Motor driven units. Serial Nos. 501,113–14, Mar. 16. Class 21.

C. I. D. E. C. Compañía Industrial Del Cuero S. A., Buenos Aires, Argentina. Tanned goat, sheep and cow hides of the antelope finish type. Serial No. 512,237, Mar. 16. Class 1.

Carson Chemicals: *See*—
Carson, Marion B.

Carson, Marion B., doing business as Carson Chemicals, Brownsville, Tex. Tick, flea, and lice powder. Serial No. 519,118, Mar. 16. Class 6.

Chicago Combustion Company: *See*—
McGlaughlin, Louis E.

Chicopee Sales Corporation, New York, N. Y. Crib sheets. Serial No. 515,538, Mar. 16. Class 42.

Clarvan Corporation, Milwaukee, Wis. Flexible protecting cover. Serial No. 507,514, Mar. 16. Class 50.

Communications Company, Inc., Coral Gables, Fla. Radio apparatus. Serial No. 503,869, Mar. 16. Class 21.

Conklin Pen Company, Inc., The, Chicago, Ill. Fountain pens and fountain pen parts. Serial No. 526,584, Mar. 16. Class 37.

Consolidated Water Power & Paper Company, Wisconsin Rapids, Wis. Coated and uncoated paper. Serial No. 527,151, Mar. 16. Class 37.

Corona S. A., Tramelan-Dessus, Switzerland. Watches and parts thereof. Serial No. 503,708, Mar. 16. Class 27.

Crescent Steel Company, Detroit, Mich. Automatic hose coupling. Serial No. 506,159, Mar. 16. Class 13.

Crown Zellerbach Corporation, doing business as Western Waxed Paper Co., San Francisco and Oakland, Calif. Waxed paper. Serial Nos. 485,386–7, Mar. 16. Class 37.

Cutler Orchards, Inc., Scottsdale, Ariz. Fresh citrus fruits. Serial No. 514,592, Mar. 16. Class 46.

Danbury Rubber Co., Inc., Danbury, Conn. Slabs and sheets of rubber or rubber-like material. Serial No. 505,340, Mar. 16. Class 50.

Delavan Manufacturing Company, Des Moines, Iowa. Vacuum power pumps. Serial No. 506,016, Mar. 16. Class 23.

Desjardins, P., & Son: *See*—
Desjardins, Philip J.

Desjardins, Philip J., doing business as P. Desjardins & Son, Fall River, Mass. Smoking pipes. Serial No. 520,555, Mar. 16. Class 8.

Detroit Lubricator Company, Detroit, Mich. Float operated valves. Serial No. 505,562, Mar. 16. Class 13.

De Vore Manufacturing Co. Inc., assignee: *See*—
Purepac Corporation.

Dunlop Tire and Rubber Corporation, Buffalo, N. Y. Capping stock, padding or undertread stock, stripping stock, etc. Serial No. 515,091, Mar. 16. Class 35.

Duraloy Company, The, Scottdale, Pa. Metal alloys. Serial No. 493,951, Mar. 16. Class 14.

Dynamatic Corporation, Kenosha, Wis. Dynamometers. Serial No. 527,433, Mar. 16. Class 26.

Eagle Products Co., Inc., Chattanooga, Tenn. Insecticides and insect sprays. Serial No. 502,810, Mar. 16. Class 6.

Medicines. C. W. Hancock. 219,242, renewed Oct. 12, 1946. O. G. Mar. 16.
Mosquito immunizing agent. G. M. Broemmel. 329,471, Oct. 29, 1935. Republished Mar. 16.
Ointments having antimycotic or fungicidal properties. Wallace & Tiernan Products, Inc. 434,395, Nov. 18, 1947. Corrected. O. G. Mar. 16.
Perfume, toilet water. E. Daltroff & Cie. 320,644, Jan. 1, 1935. Republished Mar. 16.
Pills, tonics, salves, etc. T. F. Laubach. 66,367, re-renewed Nov. 26, 1947. O. G. Mar. 16.
Powder, Tooth. R. Moosbrugger. 341,517, Dec. 8, 1936. Republished Mar. 16.
Preparation for the treatment of water. Acme Chemical Company. 322,889, Mar. 26, 1935. Republished Mar. 16.
Preparation for use in treating stomach and liver troubles. C. C. Swan. 239,041, renewed Feb. 21, 1948. O. G. Mar. 16.
Red oil. Procter & Gamble Company. 304,996, July 25, 1933. Republished Mar. 16.
Remedy for colds, throat affections, and internal and external pains. Brown Medicine Company. 31,292, re-renewed Feb. 22, 1948. O. G. Mar. 16.
Resins, molding compounds, etc., Solution of synthetic. Resinox Corporation. 296,945, Aug. 30, 1932. Republished Mar. 16.
Rouge. E. Daltroff & Cie. 339,666, Oct. 13, 1936. Republished Mar. 16.
Rouge. E. Daltroff & Cie. 343,827, Mar. 9, 1937. Republished Mar. 16.
Soda, Caustic. Chance & Hunt, Ld. 66,212, re-renewed Nov. 19, 1947. O. G. Mar. 16.
Sulphites. Monsanto Chemical Company. 319,212, Nov. 20, 1934. Republished Mar. 16.
Toilet preparation. Campana Corporation. 322,065, Feb. 26, 1935. Republished Mar. 16.
Vehicle or solvent for use with an injectable physiologically active agent. William R. Warner & Co., Inc. 437,410, Mar. 16.
Water-softening material. Arizona Minerals Corporation. 278,708, Dec. 30, 1930. Republished Mar. 16.

CLASS 7

Twine. International Harvester Company. 252,779, Feb. 12, 1929. Republished Mar. 16.

CLASS 9

Ammunition. Peters Cartridge Company. 68,209, re-renewed Mar. 17, 1948. O. G. Mar. 16.
Dynamite, Gelatin. Potts Powder Company. 68,556, re-renewed Apr. 14, 1948. O. G. Mar. 16.

CLASS 11

Inking ribbons. Burroughs Adding Machine Company. 333,341, Mar. 17, 1936. Republished Mar. 16.
Inking ribbons. Burroughs Adding Machine Company. 335,607, June 9, 1936. Republished Mar. 16.

CLASS 12

Boards, asbestos sheets, asbestos lumber, etc., Asbestos. Keasbey & Mattison Company. 346,136, May 18, 1937. Republished Mar. 16.
Brick and fire clay tile and high-temperature cement or mortar, Fire. Denver Fire Clay Company. 240,656, renewed Apr. 3, 1948. O. G. Mar. 16.
Brick and fire-clay tile, Fire. Denver Fire Clay Company. 240,711–12, renewed Apr. 3, 1948. O. G. Mar. 16.
Building blocks, Glass. Owens-Illinois Glass Company. 338,094, Aug. 25, 1936. Republished Mar. 16.
Cement or mortar, Refractory. Denver Fire Clay Company. 239,740, renewed Mar. 13, 1948. O. G. Mar. 16.
Flooring, Oak. W. M. Ritter Lumber Company. 332,256, Feb. 4, 1936. Republished Mar. 16.
Insulating material in panels, Wood pulp. Kimberly-Clark Corporation. 296,768, Aug. 23, 1932. Republished Mar. 16.
Insulating paper and board, Thermal and sound. Seaman Paper Company. 328,934, Oct. 8, 1935. Republished Mar. 16.
Insulation products. Keasbey & Mattison Company. 303,096–7, May 9, 1933. Republished Mar. 16.
Leak-sealing compound, Plastic. Furmanite Corporation. 231,409, renewed Aug. 16, 1947. O. G. Mar. 16.
Refractory concrete or plastic monolithic refractory. S. Obermayer Co. 322,560, Mar. 12, 1935. Republished Mar. 16.

CLASS 13

Caster wheels, Furniture. Bassick Company. 346,392, May 25, 1937. Republished Mar. 16.
Casters and slides, metal drawer pulls, etc., Furniture. Bassick Company. 346,203, May 18, 1937. Republished Mar. 16.
Casters, Furniture. Bassick Company. 346,202, May 18, 1937. Republished Mar. 16.
Casters, Furniture. Bassick Company. 346,206–9, May 18, 1937. Republished Mar. 16.
Chains for the transmission of power. Diamond Chain and Manufacturing Company. 338,535, Sept. 8, 1936. Republished Mar. 16.
Chains of all descriptions. Hookless Fastener Company. 319,009, Nov. 13, 1934. Republished Mar. 16.
Enameled ware. Columbian Enameling & Stamping Co. 295,023, June 14, 1932. Republished Mar. 16.
Fasteners, Separable. Hookless Fastener Company. 316,151, Aug. 14, 1934. Republished Mar. 16.
Fasteners, Slide. Hookless Fastener Company. 326,458, July 23, 1935. Republished Mar. 16.

Fasteners, Slide operated. G. E. Prentice Manufacturing Company. 346,854, June 8, 1937. Republished Mar. 16.
Handle, Radiator. Chicago Specialty Mfg. Co. 340,196, Nov. 3, 1936. Republished Mar. 16.
Hardware, Chair. Bassick Company. 346,210, May 18, 1937. Republished Mar. 16.
Horseshoe-nails. Capewell Horse Nail Company. 67,010, re-renewed Jan. 14, 1948. O. G. Mar. 16.
Iron flumes, inverted siphons, storm drains, etc. California Corrugated Culvert Co. 111,995, Aug. 15, 1916. Republished Mar. 16.
Nails, drive screws, screw drive pins, etc. Parker-Kalon Corporation. 296,096, Aug. 30, 1932. Republished Mar. 16.
Pins, screws, drive screws, etc., Drive. Parker-Kalon Corporation. 321,744, Feb. 12, 1935. Republished Mar. 16.

CLASS 14

Metal, Anti-friction. Magnolia Metal Company. 340,894, Nov. 24, 1936. Republished Mar. 16.
Welding rods (electrodes). Harnischfeger Corporation. 340,335, Nov. 3, 1936. Republished Mar. 16.

CLASS 15

Gasoline. Standard Oil Company of California. 237,260, renewed Jan. 3, 1948. O. G. Mar. 16.
Oils, Lubricating. Pure Oil Company. 296,258, Aug. 2, 1932. Republished Mar. 16.
Oils, Lubricating. Pure Oil Company. 305,057, July 25, 1933. Republished Mar. 16.
Oils, motor fuel oils, lubricating oils, etc., Illuminating. Pure Oil Company. 296,931, Aug. 23, 1932. Republished Mar. 16.

CLASS 16

Floor dressing. American Disinfecting Company. 278,149, Dec. 9, 1930. Republished Mar. 16.
Paints, Casein. I. F. Laucks, Inc. 326,753, July 30, 1935. Republished Mar. 16.
Wax in paste, powdered, or liquid form, Prepared. S. C. Johnson & Son. 241,695, renewed May 8, 1948. O. G. Mar. 16.
Wax preparation, Liquid. American Disinfecting Company. 302,385, Apr. 18, 1933. Republished Mar. 16.
Wax, Prepared liquid. Davies-Young Soap Company. 293,103, Apr. 12, 1932. Republished Mar. 16.

CLASS 19

Aeroplanes and parts therefor. Lockheed Aircraft Corporation. 319,956, Dec. 11, 1934. Republished Mar. 16.
Aeroplanes and parts thereof. Lockheed Aircraft Corporation. 320,151, Dec. 18, 1934. Republished Mar. 16.
Struts, Shock. Bendix Aviation Corporation. 296,592, Aug. 16, 1932. Republished Mar. 16.

CLASS 21

Conductors, Insulated copper. Okonite Company. 437,325, Mar. 16; Serial No. 508,388, published July 1, 1947.
Cores for transformer and coil windings. Henry L. Crowley & Co., Inc. 339,776, Oct. 20, 1936. Republished Mar. 16.
Electrical appliances. Burroughs Adding Machine Company. 333,110, Mar. 10, 1936. Republished Mar. 16.
Electrical connectors. Albert & J. M. Anderson Manufacturing Company. 437,320, Mar. 16; Serial No. 501,303, published Dec. 9, 1947.
Electrical current controlling devices. Erie Resistor Corporation. 346,828, June 8, 1937. Republished Mar. 16.
Electrodes, anodes, and carbon brushes. Acheson Graphite Company. 144,982, renewed Jan. 5, 1948. O. G. Mar. 16.
Electron tubes. Zenith Radio Corporation. 437,370, Mar. 16; Serial No. 524,844, published Dec. 9, 1947.
Fixture wire nuts, Electric. Solar Electric Corporation. 437,407, Mar. 16.
Heaters, Electric hot water. W. B. Ford. 437,332, Mar. 16; Serial No. 511,605, published Dec. 16, 1947.
Heaters, Portable electric forced air space. M. S. Aviation Co. 437,323, Mar. 16; Serial No. 505,114, published Dec. 16, 1947.
Loudspeakers. Carbonneau Industries. 437,338, Mar. 16; Serial No. 515,536, published Dec. 16, 1947.
Magnet-wires. Belden Manufacturing Company. 320,629, Jan. 1, 1935. Republished Mar. 16.
Magnetic controls, coaxial antenna, transfer relays, etc. Price Electric Corporation. 437,356, Mar. 16; Serial No. 520,767, published Dec. 16, 1947.
Motors, electric generators, motor generators, etc., Electric. Leland Electric Company. 437,357, Mar. 16; Serial No. 520,881, published Dec. 16, 1947.
Pads, Electric heating. G. C. Tong. 437,331, Mar. 16; Serial No. 511,118, published Dec. 9, 1947.
Phonographs, and radio and phonograph combinations, Electric. Bell Sound Systems, Inc. 437,366, Mar. 16; Serial No. 522,821, published Dec. 9, 1947.
Radio receivers. Atlas Supply Company. 437,355, Mar. 16; Serial No. 520,676, published Dec. 16, 1947.
Radio receivers and electrical phonographs, and electric ranges. AVCO Manufacturing Corporation. 437,363, Mar. 16; Serial No. 521,626, published Dec. 9, 1947.
Radio receivers, radio transmitters, television receivers, etc. Lorna Watch Corporation. 437,322, Mar. 16; Serial No. 502,906, published Dec. 9, 1947.
Radio receiving sets. R. M. Opisso. 437,405, Mar. 16.
Radio receiving sets. Scolam Trading Corp. 437,350, Mar. 16; Serial No. 519,987, published Dec. 9, 1947.
Radio transmitting and receiving instruments and parts. Magnus Bjorndal. 437,403, Mar. 16.
Radio tube bases, handles, and handles and cover parts, percolators, etc. Norton Laboratories, Inc. 437,371, Mar. 16; Serial No. 524,885, published Dec. 9, 1947.
Switches, Safety. D. & R. Mfg. Co. 437,326, Mar. 16; Serial No. 509,142, published Dec. 9, 1947.
Switches, Temperature-operated electric stack. Minneapolis Heat Regulator Co. 231,891, Aug. 30, 1927. Republished Mar. 16.
Television receivers. AVCO Manufacturing Corporation. 437,368, Mar. 16; Serial No. 524,517, published Dec. 9, 1947.
Transceivers, radio transmitters, radio receivers, etc. Press Wireless Manufacturing Corporation. 437,352, Mar. 16; Serial No. 520,121, published Dec. 9, 1947.
Vacuum cleaners, Electric. Masury-Young Company. 437,358, Mar. 16; Serial No. 520,956, published Dec. 9, 1947.
Winches, Portable electric. St. Anthony Machine Products Co. 437,360, Mar. 16; Serial No. 521,094, published Dec. 9, 1947.
Wire, both insulated and non-insulated. Driver-Harris Company. 437,337, Mar. 16; Serial No. 515,417, published Dec. 16, 1947.

CLASS 22

Fishing lures and baits. American Fork and Hoe Company. 341,046, Dec. 1, 1936. Republished Mar. 16.
Ice skates. Globe-Union Mfg. Co. 319,002, Nov. 13, 1934. Republished Mar. 16.
Roller skates. Marshall Field & Company. 324,717, May 28, 1935. Republished Mar. 16.

CLASS 23

Apparatus for mechanically placing articles in mailing envelopes, etc. Apex Hosiery Company. 323,096, Apr. 2, 1935. Republished Mar. 16.
Dies, Thread cutting. Niles-Bement-Pond Company. 339,044, Sept. 22, 1936. Republished Mar. 16.
Drill bits; drill sharpeners, pneumatic and manuel operated drill retainers, etc. Gardner-Denver Company. 240,974, renewed Apr. 10, 1948. O. G. Mar. 16.
Drills, Twist. Greenfield Tap and Die Corporation. 279,452, Jan. 13, 1931. Republished Mar. 16.
Equipment for sealing leaks in metal containers. Furmanite Corporation. 232,149, renewed Sept. 6, 1947. O. G. Mar. 16.
Extension-blades, shoe-knives, and tools. Hyde Manufacturing Company. 67,784, re-renewed Feb. 18, 1948. O. G. Mar. 16.
Hoists, hand hoists, cranes, etc., Electric. Robbins & Myers, Inc. 332,117, Feb. 4, 1936. Republished Mar. 16.
Liquid straining and filtering, Mechanical apparatus. Auto-Klean Strainers, Limited. 236,007, renewed Nov. 29, 1947. O. G. Mar. 16.
Lubricating equipment, apparatus and machinery. Gray Company, Inc. 301,321, Feb. 28, 1933. Republished Mar. 16.
Milking machines and parts thereof. International Harvester Company. 342,352, Jan. 12, 1937. Republished Mar. 16.
Milking machines and parts thereof. International Harvester Company. 343,690–2, Mar. 2, 1937. Republished Mar. 16.
Pastes and powders, and perfumery. E. Daltroff & Cie. 241,026, renewed Apr. 17, 1948. O. G. Mar. 16.
Razor blades. Jacob P. Segelman & Company. 231,853, renewed Aug. 30, 1947. O. G. Mar. 16.
Razors, shears, scissors, etc., All manner and kinds of. C. S. Bresnick. 235,317, renewed Nov. 15, 1947. O. G. Mar. 16.
Saws. E. C. Atkins and Company. 332,952, Mar. 3, 1936. Republished Mar. 16.
Saws, two-man crosscut saws, and circular cordwood saws, One-man crosscut. E. C. Atkins and Company. 329,141, Oct. 15, 1935. Republished Mar. 16.
Taps. Greenfield Tap and Die Corporation. 344,065, Mar. 9, 1937. Republished Mar. 16.
Tools. Bergman Tool Mfg. Co. 230,677, Aug. 2, 1927. Corrected. O. G. Mar. 16.
Tools, Metal cutting. Niles-Bement-Pond Company. 341,774, Dec. 22, 1936. Republished Mar. 16.
Typewriters, including platen twirlers, rubber feet, etc. Burroughs Adding Machine Company. 343,467, Feb. 23, 1937. Republished Mar. 16.
Wire drawing machines and parts thereof and accessories therefor. Vaughn Machinery Company. 341,589, Dec. 15, 1936. Republished Mar. 16.

CLASS 26

Aircraft instruments. United States Gauge Division of American Machine and Metals, Inc. 437,330, Mar. 16; Serial No. 510,456, published Dec. 9, 1947.
Cameras, Photographic. Agfa Ansco Corporation. 345,512, Apr. 27, 1937. Republished Mar. 16.

Electrical control apparatus, Pressure responsive. Minneapolis-Honeywell Regulator Company. 331,846, Jan. 21, 1936. Republished Mar. 16.
Gages, Dimensional. Pratt & Whitney Company. 295,015, June 14, 1932. Republished Mar. 16.
Machines, Business. Burroughs Adding Machine Company. 343,430, Feb. 23, 1937. Republished Mar. 16.
Optical pyrometers, Automatic. Minneapolis-Honeywell Regulator Company. 342,365, Jan. 12, 1937. Republished Mar. 16.
Paint mixing machine. Arco Company. 437,321, Mar. 16; Serial No. 501,624, published May 27, 1947.
Projectors, cabinets therefor, and counter display units, Slide film. Jam Handy Organization, Inc. 437,327, Mar. 16; Serial No. 509,426, published Dec. 2, 1947.
Registering apparatus and their parts, Cash and credit. National Cash Register Company. 242,365, renewed May 22, 1948. O. G. Mar. 16.
Sensitized photographic paper. Agfa Ansco Corporation. 286,706, Sept. 1, 1931. Republished Mar. 16.
Sensitized photographic film. Agfa Ansco Corporation. 339,642, Oct. 13, 1936. Republished Mar. 16.
Sensitized photographic film. Agfa Ansco Corporation. 340,438, Nov. 10, 1936. Republished Mar. 16.

CLASS 27

Clocks, and timers, Alarm. Lux Clock Manufacturing Company. 336,750, July 14, 1936. Republished Mar. 16.
Mainsprings for watches. Newall Manufacturing Company. 294,972, June 14, 1932. Republished Mar. 16.

CLASS 28

Rings, Finger. Untermeyer, Robbins & Company. 241,763, renewed May 8, 1948. O. G. Mar. 16.

CLASS 34

Boilers, and oil furnaces, Fuel oil burning. General Utilities Corporation. 437,406, Mar. 16.
Cookers for the cooking and preparing of food. Specialties Appliance Corporation. 437,409, Mar. 16.
Vats, Gas-fired automatic poultry scalding. T. N. Long. 437,408, Mar. 16.

CLASS 35

Brake lining. Marshall Asbestos Corporation. 326,584, July 30, 1935. Republished Mar. 16.
Hose, Garden. Gates Rubber Company. 343,452, Feb. 23, 1937. Republished Mar. 16.
Piston rings. Wilkening Manufacturing Company. 281,073, Mar. 10, 1931. Republished Mar. 16.
Tires and tubes, Automobile. Vogue Rubber Company. 346,494, June 1, 1937. Republished Mar. 16.
Tires, Pneumatic. General Tire & Rubber Company. 342,083, Jan. 5, 1937. Republished Mar. 16.

CLASS 36

Graphophones. Columbia Phonograph Company, General. 66,997, re-renewed Jan. 7, 1948. O. G. Mar. 16.
Musical instruments. H. N. White Company. 325,334, June 18, 1935. Republished Mar. 16.

CLASS 37

Albums. F. Burns. 437,342, Mar. 16; Serial No. 517,699, published Dec. 9, 1947.
Cards for visible index or record equipment, desk diaries, etc. Acme Card System Company. 342,738, Jan. 26, 1937. Republished Mar. 16.
Desk memorandum pads, indexed phone address pads, correspondence portfolios, etc. Ever-Handy Products Company. 437,334, Mar. 16; Serial No. 513,169, published Dec. 16, 1947.
Indicator tabs or file signals. George B. Graff Company. 302,293, Apr. 11, 1933. Republished Mar. 16.
Memorandum pads and telephone indexes. H. A. Gaensler. 437,359, Mar. 16; Serial No. 521,067, published Dec. 16, 1947.
Memorandum pads, indexed phone address pads, correspondence portfolios, etc., Desk. Ever-Handy Products Company. 437,334, Mar. 16; Serial No. 513,169, published Dec. 16, 1947.
Pads, Memorandum. Dictaphone Corporation. 236,488, renewed Dec. 13, 1947. O. G. Mar. 16.
Paper and drawing paper, Tracing. Spaulding-Moss Company. 328,117, Sept. 17, 1935. Republished Mar. 16.
Paper and lining paper, Shelf. Paper Craft Corporation. 437,339, Mar. 16; Serial No. 516,212, published Dec. 2, 1947.
Paper, Book. Kimberly-Clark Corporation. 304,183, June 27, 1933. Republished Mar. 16.
Paper, Facial tissue. Mini-Tishu Co. 437,340, Mar. 16; Serial No. 516,301, published Dec. 2, 1947.
Paper, Loose writing. Western Tablet & Stationery Corporation. 437,374, Mar. 16; Serial No. 526,002, published Dec. 2, 1947.
Paper, Loose writing. Western Tablet & Stationery Corporation. 437,383, Mar. 16; Serial No. 526,030, published Dec. 9, 1947.
Paper, Loose writing. Western Tablet & Stationery Corporation. 437,394, Mar. 16; Serial No. 526,073, published Dec. 9, 1947.
Paper, Loose writing. Western Tablet & Stationery Corporation. 437,395, Mar. 16; Serial No. 526,076, published Dec. 9, 1947.
Paper sheets, strips, and rolls. American Sales Book Company, Limited. 235,747, renewed Nov. 22, 1947. O. G. Mar. 16.
Paper sheets, strips, rolls, pads, etc. American Sales Book Company, Limited. 236,953, renewed Dec. 27, 1947. O. G. Mar. 16.
Paper, Shelf and lining. Appleton Coated Paper Co. 338,064, Aug. 25, 1938. Republished Mar. 16.
Paper tablets. Western Tablet & Stationery Corporation. 437,375, Mar. 16; Serial No. 526,003, published Dec. 2, 1947.
Paper tablets. Western Tablet & Stationery Corporation. 437,377, Mar. 16; Serial No. 526,008, published Dec. 2, 1947.
Paper tablets. Western Tablet & Stationery Corporation. 437,380, Mar. 16; Serial No. 526,016, published Dec. 2, 1947.
Paper tablets. Western Tablet & Stationery Corporation. 437,386, Mar. 16; Serial No. 526,047, published Dec. 2, 1947.
Paper tablets. Western Tablet & Stationery Corporation. 437,387, Mar. 16; Serial No. 526,052, published Dec. 9, 1947.
Paper tablets. Western Tablet & Stationery Corporation. 437,390, Mar. 16; Serial No. 526,056, published Dec. 9, 1947.
Paper tablets. Western Tablet & Stationery Corporation. 437,391, Mar. 16; Serial No. 526,063, published Dec. 9, 1947.
Paper tablets. Western Tablet & Stationery Corporation. 437,393, Mar. 16; Serial No. 526,066, published Dec. 9, 1947.
Paper tablets. Western Tablet & Stationery Corporation. 437,397, Mar. 16; Serial No. 526,081, published Dec. 9, 1947.
Paper tablets and envelopes. Western Tablet & Stationery Corporation. 437,398, Mar. 16; Serial No. 526,099, published Dec. 2, 1947.
Paper tablets and loose writing paper. Western Tablet & Stationery Corporation. 437,376, Mar. 16; Serial No. 526,007, published Dec. 2, 1947.
Paper tablets, and loose writing paper. Western Tablet & Stationery Corporation. 437,389, Mar. 16; Serial No. 526,054, published Dec. 9, 1947.

Grover, Frederic S., and K. D. Maier, Rochester, assignors to International Business Machines Corporation, New York, N. Y. Combined typewriter and support therefor. 148,985, Mar. 16.

Hamrah, Frederick P., near Charlotte, N. C. Salt and pepper dispenser. 148,988, Mar. 16.

Harrington, King, San Francisco, Calif. Pendant or similar article. 148,989, Mar. 16.

Hurwitz, Bernard, New York, N. Y. Dress. 148,990, Mar 16.

International Business Machines Corporation, assignee: *See*—
Grover, Frederic S.
Grover, Frederic S., and Maier.

Jacobson, Herbert, New York, N. Y. Jewel box or the like. 148,991, Mar. 16.

Jacobson, Herbert, New York, N. Y. Jewel box or the like. 148,992, Mar. 16.

Johnston, Reece W., and J. C. Roberts, Fort Worth, Tex. Watch standard. 148,993, Mar. 16.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 148,994, Mar. 16.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 148,995, Mar. 16.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 148,996, Mar. 16.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 148,997, Mar. 16.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 148,998, Mar. 16.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 148,999, Mar. 16.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 149,000, Mar. 16.
Lang, Sandy, Chicago, Ill. Kite. 149,001, Mar. 16.
Lang, Sandy, Chicago, Ill. Kite. 149,002, Mar. 16.
Lerman, Ben, Chicago, Ill. Clock. 149,003, Mar. 16.
Lerman, Ben, Chicago, Ill. Clock. 149,004, Mar. 16.
Lerman, Ben, Chicago, Ill. Clock. 149,005, Mar. 16.
Lerman, Ben, Chicago, Ill. Clock. 149,006, Mar. 16.
Levy, Abraham: *See*—
Punzak, Joseph F., and Levy.
Lewis, Golda, New York, N. Y. Spectacle frame. 149,007, Mar. 16.
Lindenbaum, Louis E., Brooklyn, N. Y. Lamp shade or the like. 149,008, Mar. 16.
Maier, Kenneth D.: *See*—
Grover, Frederic S., and Maier.
Marks, Max J.: *See*—
Schwartz, Martin W., and Marks.
Marks, Max J., and M. W. Schwartz, Chicago, Ill. Electric lighting fixture. 149,009, Mar. 16.
New England Trawler Equipment Co., assignee: *See*—
Peterson, Charles F.
Noziewski, Henry A., Detroit, Mich. Toy figure. 149,010, Mar. 16.
Owens, Wayne F., Sheridan, Wyo., assignor to Boeing Aircraft Company, Seattle, Wash. Egg beater or the like. 149,011, Mar. 16.
Parker, Ralph E., assignor to J. P. Carver, Wichita, Kans. Combined tricycle and trailer. 149,012, Mar. 16.
Parsons Company, The, assignee: *See*—
Vaughn, George A.
Peterson, Charles F., Arlington, assignor to New England Trawler Equipment Co., Chelsea, Mass. Gasoline hoist. 149,013, Mar. 16.
Peto, Conrad: *See*—
Briskin, Jack, and Peto.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 149,014, Mar. 16.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 149,015, Mar. 16.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 149,016, Mar. 16.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 149,017, Mar. 16.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 149,018, Mar. 16.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 149,019, Mar. 16.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 149,020, Mar. 16.
Punzak, Joseph F., and A. Levy, asignors to United Metal Goods Manufacturing Co. Inc., Brooklyn, N. Y. Clock case. 149,021, Mar. 16.
Revere Camera Company, assignee: *See*—
Briskin, Jack, and Golick.
Briskin, Jack, and Peto.
Roberts, John C.: *See*—
Johnston, Reece W., and Roberts.
Robinson, James, Jr., Cleveland, Ohio. Combination radio and lamp. 149,022, Mar. 16.
Rood, Harold C., Bridgeport, Conn. Clasp. 149,023, Mar. 16.
Roth, Alexander, assignor to Wirth-Gold Underwear Co., Inc., New York, N. Y. Negligee or similar article. 149,024, Mar. 16.
Sawyer, Lester T., Leominster, Mass. Hairpin or similar article. 149,025, Mar. 16.
Schwartz, Martin W.,: *See*—
Marks, Max J., and Schwartz.
Schwartz, Martin W., and M. J. Marks, Chicago, Ill. Electric lighting fixture. 149,026, Mar. 16.
Schwartz, Martin W., and M. J. Marks, Chicago, Ill. Electric lighting fixture. 149,027, Mar. 16.
Shepherd, Herbert J., St. Louis, Mo. Belt buckle. 149,028, Mar. 16.
Sims, Clyde, Dallas, Tex. Toilet kit. 149,029, Mar. 16.
Thurgar Bolle Limited, assignee: *See*—
Bolle, Georges.
Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
United Metal Goods Manufacturing Co. Inc., assignee: *See*—
Punzak, Joseph F., and Levy.
Vaughn, George A., Newton, Iowa. Trenching machine frame. 149,030, Mar. 16.
Vaughn, George A., assignor to The Parsons Company, Newton, Iowa. Ditching machine frame. 149,031, Mar. 16.
Vozzella, Michael, Malden, Mass. Candlestick. 149,032, Mar. 16.
Wagner, William E., Chicago, Ill. Lamp base. 149,033, Mar. 16.
Wirth-Gold Underwear Co., Inc., assignee: *See*—
Roth, Alexander.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 16TH DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott Laboratories, assignee: *See*—
Weston, Arthur W.
Ackley, Robert A., assignor to Republic Flow Meters Company, Chicago, Ill. Method of and apparatus for measuring the composition of gas. 2,437,720, Mar. 16.
Adams, Albert E., and D. Waloff, Wells, assignors to Scophony Limited, London, England. Alternating current or like motor with gyratory armature. 2,437,904, Mar. 16.
Adams, Robert E., assignor of one-half to R. P. Bernhardt, McDonough, Ga. Power driven rotary cylindrical saw. 2,437,668, Mar. 16.
Adams, Robert E., assignor of one-half to R. P. Bernhardt, McDonough, Ga. Laterally-cutting rotary cylindrical saw. 2,437,669, Mar. 16.
Adamson, Nicholas F., assignor to Twin Disc Clutch Company, Racine, Wis. Fluid operated clutch. 2,437,670, Mar. 16.
Adel Precision Products Corp., assignee: *See*—
Brant, Walter R., and Chapman.
Adler, Melvin S., Chicago, Ill. Electrical wall outlet. 2,437,802, Mar. 16.
Aero Zipp Fasteners Limited, assignee: *See*—
Engel, Erich, and Salamon.
Agriculture, United States of America as represented by the Secretary of: *See*—
Evans, Cyril D., and Manley.
Savich, Theodore R., and Goldblatt.
Stevenson, Elmer C., and Mitchell.
Air Reduction Company, Incorporated, assignee: *See*—
Vance, Robert M., and Horney.
Allen, Rex W., Palisades, assignor to Camloc Fastener Corporation, New York, N. Y. Locking means for fastener studs. 2,438,028, Mar. 16.
Allied Chemical & Dye Corporation, assignee: *See*—
Porter, Frank.
Aluminum Company of America, assignee: *See*—
Mason, Elliott W.
American Chain & Cable Company, Inc., assignee: *See*—
Conner, Edward A.
American Cyanamid Company, assignee: *See*—
Kropa, Edward L.
Lynch, Kathryn L.
Poor, Edward N., and Howard.
American Electrical Heater Company, assignee: *See*—
Kuhn, Frank, and Thomas.
American Locker Company, Inc., assignee: *See*—
Hofmann, George.
American Rolling Mill Company, The, assignee: *See*—
Oganowski, Kasimir.
American Steel and Wire Company of New Jersey, The, assignee: *See*—
Plass, Curtis E., and Sullivan.
American Viscose Corporation, assignee: *See*—
Cornwell, Ralph T. K., and Porter.
Francis, Carleton S., Jr.
Ames, Butler, Boston, assignor to The Walkabout Company, Lowell, Mass. Portable support for invalids. 2,437,778, Mar. 16.
Ames, Philip V.: *See*—
Russell, George W.
Andersen, Henry C., Lancaster, Calif. Bottle holder. 2,437,800, Mar. 16.
Andersen, Thomas K., Staten Island, N. Y. Pivotally and slidably mounted outer jaw wrench. 2,437,801, Mar. 16.
Anderson, John C., Los Angeles, Calif. Vertical current mineral concentrator. 2,437,671, Mar. 16.
Anderson, Louis E.: *See*—
Thorp, Clark E., and Anderson.
Anglo-Iranian Oil Company Limited, assignee: *See*—
Fawcett, Eric W. M., Jenkins, and Habeshaw.
Anway, Herman W., Cloquet, Minn., assignor to Weyerhaeuser Timber Company, Longview, Wash. Method of treating bark. 2,437,672, Mar. 16.
Appel, Hans, Prague, Germany; vested in the Attorney General of the United States. Low-pressure steam heating system for vehicles. 2,437,673, Mar. 16.
Armbruster, John W., East Rockaway, N. Y. Container safety lock. 2,437,674, Mar. 16.
Armstrong Cork Company, assignee: *See*—
Cornelius, Frank H.
Artzt, William W., New Rochelle, N. Y., assignor, by mesne assignments, to Lisle Mills, Inc., Allentown, Pa. Garment. 2,437,988, Mar. 16.
Artzt, William W., New Rochelle, N. Y., and E. Lesavoy, assignors to Lisle Mills, Inc., Allentown, Pa. Garment and making the same. 2,437,989, Mar. 16.
Ash, Jacob R.: *See*—
Stephan, John T., Jarvi, and Ash.
Askey, John S., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Dynamo-electric machine. 2,437,990, Mar. 16.
Attorney General of the United States: *See*—
Appel, Hans.
Bardin, Georges.
Rinia, Herre.
Atwell, Harold V., Beacon, assignor, by mesne assignments, to The Texas Company, New York, N. Y. Effecting catalytic conversions. 2,438,029, Mar. 16.
Auer, Laszlo, South Orange, assignor to Ridbo Laboratories, Inc., Paterson, N. J. Process for making rubber extenders. 2,437,925, Mar. 16.
Avco Manufacturing Corporation, assignee: *See*—
Dittmar, William R.
Bailey, Christopher E. G., Bournemouth, assignor to The Mullard Radio Valve Company Limited, London, England. Phase modulator. 2,437,872, Mar. 16.
Ball, Charles O., G. L. Swope, and F. D. Scott, Toledo, Ohio, assignors to Owens-Illinois Glass Company. Container. 2,437,926, Mar. 16.
Ballard, Seaver A.: *See*—
Winkler, De Loss E., and Ballard.
Bardin, Georges, Tournus, France; vested in the Attorney General of the United States. Current-generating gear for pocket electric lamps. 2,437,675, Mar. 16.
Barganz, Walter A., and E. W. Quirk, assignors to Brandt Automatic Cashier Company, Watertown, Wis. Coin counting machine. 2,437,721, Mar. 16.
Barlow, Elliott F., assignee: *See*—
Paul, Nathan.
Bassford, Henry H., Jr.: *See*—
Mahoney, John F., and Bassford.
Baston, Cyril E., Irwin, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control apparatus. 2,437,991, Mar. 16.
Bates, Albert H., Rockford, Ill. Piston ring boring machine. 2,437,676, Mar. 16.
Batori, Oscar E., New York, N. Y. Slide rule. 2,437,722, Mar. 16.
Beattie, Horace S.: *See*—
Page, Ralph E., and Beattie.
Watson, Thomas J., Beattie, and Fuller.
Beatty, Elmer W.: *See*—
Millard, Irwin W., and Beatty.
Becker, Vernie R., Port Huron, Mich. Valve stem facing fixture. 2,437,927, Mar. 16.
Bell & Howell Company, assignee: *See*—
Swanson, Keith N.
Bell, John L., Royal Oak, Mich. Fish lure. 2,437,803, Mar. 16.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Jansky, Karl G.
Lang, Wilmarth Y.
Pierce, John R.
Bemis, Watson A.: *See*—
Brown, James M., Bemis, and Monroe.
Bendix Aviation Corporation, assignee: *See*—
Havill, Clinton H.
Bennett, Barney, New York, N. Y. Carburetor attachment for conserving fuel. 2,437,992, Mar. 16.
Bennett, Clark F., Montpelier, Ind. Holder for double edged wafer type blades. 2,437,928, Mar. 16.
Bennett, William O., Jr., assignor to Hamilton Watch Company, Lancaster, Pa. Timing apparatus. 2,437,929, Mar. 16.
Benning, Anthony F., Woodstown, N. J., and J. D. Park, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Fluorination of acyclic olefinic compounds. 2,437,993, Mar. 16.
Benson, Alfred B.: *See*—
Carroll, Fred M., and Benson.
Bergsteinsson, Ingolfur, Billings, Mont., and J. R. Scheibli, Oakland, assignors to Shell Development Company, San Francisco, Calif. Production and recovery of olefin oxides. 2,437,930, Mar. 16.
Bergström, Hilding O. V., Stocksund, G. B. Heijmer, Enebyberg, and K. G. Trobeck, Stockholm, Sweden. Indurating boards of fibrous materials. 2,437,931, Mar. 16.
Bernhardt, Richard P.: *See*—
Adams, Robert E.
Beward, Chalmer L., assignor to The General Tire & Rubber Company, Akron, Ohio. Making vehicle tires. 2,437,873, Mar. 16.

Beyer, Charles M., Flemington, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Blanking apparatus. 2,437,994, Mar. 16.

Bitney, Dewey H., assignor to Union Steel Products Company, Albion, Mich. Transporting and storage crate. 2,438,030, Mar. 16.

Black, Elam L., assignee, et al.: *See*—
Black, James E.

Black, James E., Chicago, assignor to J. E., E. L., W. J., and V. Black, a partnership doing business as Black Systems, Chicago, Ill. Shingle. 2,437,874, Mar. 16.

Black Systems, assignee: *See*—
Black, James E.

Black, Virginia, assignee, et al.: *See*—
Black, James E.

Black, Whitfield, assignee, et al: *See*—
Black, James E.

Blackburn, Wayne E., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Selenium rectifiers. 2,437,995, Mar. 16.

Blumstein, Abraham, Forest Hills, N. Y. Decorative chain structure. 2,437,932, Mar. 16.

Bonard, Claude, administrator: *See*—
Dreyfus, Henry.
Dreyfus, Henry, and Pool.

Bonner, Frank E., Pontiac, Mich. Toy submarine. 2,438,031, Mar. 16.

Borg-Warner Corporation, assignee: *See*—
Roth, Jay M., and Lauck.

Brandt Automatic Cashier Company, assignee: *See*—
Barganz, Walter A., and Quirk.

Brant, Walter R., and H. G. Chapman, Jr., Glendale, Calif., assignors to Adel Precision Products Corp. Poppet valve. 2,437,723, Mar. 16.

Braun, Albert E.: *See*—
Childs, David, Braun, and Hanson.

Bready, William M., assignor to Cleaver-Brooks Company, Milwaukee, Wis. Cargo trailer hitch. 2,438,032, Mar. 16.

Brennan, Joseph B., Cleveland, Ohio. Hose fitting. 2,437,933, Mar. 16.

Brink, John G., Evanston, Ill., assignor to Rand, McNally & Company. Closure. 2,437,934, Mar. 16.

British Oxygen Company Limited, assignee: *See*—
Godfrey, Robert C.

Brown, James M., Melrose, W. A. Bemis, West Medford, and F. A. Monroe, Jr., Melrose, assignors to Revere Sugar Refinery, Charlestown, Mass. Dextrose syrups. 2,438,033, Mar. 16.

Brown, Leo H., Glenville, Conn. Gun aiming post having parabolic reflecting surface. 2,437,677, Mar. 16.

Brown, Morris C., Richmond Heights, assignor to Carter Carburetor Corporation, St. Louis, Mo. Manifold heat valve control. 2,437,724, Mar. 16.

Brown Service Funeral Homes Company, Inc., assignee: *See*—
Lackey, Rufus M.

Bruce, Lawrence Richard, Incorporated, assignee: *See*—
Michaels, Edwin B., and Lustig.

Brügger, Albert, Horgen, Switzerland. Thread tension arrangements in textile machines. 2,438,034, Mar. 16.

Brumhill, Claude W., Leicester, and A. Pateman, Rothley, assignors to The Imperial Typewriter Company Limited, Leicester, England. End thrust type bar action for typewriting machines. 2,437,804, Mar. 16.

Brunner, Eugene M., El Cerrito, and E. S. Mardock, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Radiological measurement of the permeability of porous media. 2,437,935, Mar. 16.

Bruson, Herman A., Rydal, assignor to The Resinous Products & Chemical Company, Philadelphia, Pa. Cyanoalkyl ethers of polyhydric alcohols. 2,437,905. Mar. 16.

Bruson, Herman A., Rydal, and W. D. Niederhauser, assignors to The Resinous Products & Chemical Company, Philadelphia, Pa. Cyanoethylation of carbonylic compounds. 2,437,906, Mar. 16.

Buckendale, Lawrence R., Detroit, Mich. Vehicle driving mechanism. 2,437,678, Mar. 16.

Buhman, Conrad J., and L. E. Mendel, assignors to Criffen and Sexton Company, Chicago, Ill. Stove. 2,438,035, Mar. 16.

Bunting, Ernest V.: *See*—
Chambers, John M., and Bunting.

Burgess, Archie R., St. Louis, Mo. Multiple snap gage. 2,437,679, Mar. 16.

Burroughs Wellcome & Co. (U. S. A.) Inc., assignee: *See*—
Hitchings, George H.

Camloc Fastener Corporation, assignee: *See*—
Allen, Rex W.
Freesx, Tibor.
Hennessey, Silas W., Jr.
Summers, J. Mills.

Carnegie, Herbert S., and H. Dolan, Stafford, assignors to The English Electric Company Limited, London, England. Induction motor control by electric brake. 2,437,996, Mar. 16.

Carpentier, Leoni, Montreal, Quebec, Canada. Toolholder. 2,437,779, Mar. 16.

Carraway, Thomas W., Dallas, Tex. Air conditioning apparatus. 2,437,936, Mar. 16.

Carroll, Fred M., Binghamton, and A. B. Benson, Union, assignors to International Business Machines Corporation, New York, N. Y. Plural storage device accounting machine. 2,438,036, Mar. 16.

Carruthers, J. H., & Company Limited, assignee: *See*—
Johnstone, George K.

Carson, Clarence M., Cuyahoga Falls, assignor to Wingfoot Corporation, Akron, Ohio. Packaging. 2,438,089, Mar. 16.

Carter Carburetor Corporation, assignee: *See*—
Brown, Morris C.

Casper, Ervin J., assignor of one-half to K. K. Casper, Vallejo, and one-half to W. H. Wilson, San Francisco, Calif. Caster. 2,437,907, Mar. 16.

Casper, Kenneth K., assignee, et al.: *See*—
Casper, Ervin J.

Celanese Corporation of America, assignee: *See*—
Dreyfus, Henry.
Dreyfus, Henry, and Pool.
Moncrieff, Robert W.
Moncrieff, Robert W., and Pool.

Chambers, John M., and E. V. Bunting, assignors to Harry Ferguson, Inc., Dearborn, Mich. Automatic depth control for groundworking implements. 2,437,875, Mar. 16.

Chapman, Harvey G., Jr.: *See*—
Brant, Walter R., and Chapman.

Chapman, Matthew H., Jr., Providence, R. I. Finger tip moistener for baseball pitchers. 2,438,037, Mar. 16.

Charlin, André M. B., Montrouge, France. Winding device for cinematograph films and other applications. 2,437,997, Mar. 16.

Chemical Laboratories, Inc., assignee: *See*—
Whitner, Thomas C.

Chiappe, Caesar F., Philadelphia, and J. W. Kroeger, Drexel Hill Plaza, Pa., assignors to Fred'k H. Levey Co., Incorporated, New York, N. Y. Printing ink. 2,437,908, Mar. 16.

Chicago Eye Shield Company, assignee: *See*—
Malcom, Robert L.

Chilcote, Archibald M., Glen Ellyn, Ill. Hand garden cultivator and furrow former. 2,437,805, Mar. 16.

Childs, David, A. E. Braun, and J. Hanson, Sunnyvale, Calif., assignors to Libby, McNeill & Libby, Chicago, Ill. Treating tomatoes. 2,437,937, Mar. 16.

Cislak, Francis E., and W. R. Wheeler, assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind. Catalytic oxidation of substituted pyridine bases. 2,437,938, Mar. 16.

Clarostat Mfg. Co., Inc., assignee: *See*—
Mucher, George J.

Cleaver-Brooks Company, assignee: *See*—
Bready, William M.

Clifford, Albert M., and J. G. Lichty, Stow, assignors to Wingfoot Corporation, Akron, Ohio. Beta-halogenated unsaturated nitriles. 2,437,998, Mar. 16.

Clifford, Albert M., Stow, and J. G. Lichty, Cuyahoga Falls, assignors to Wingfoot Corporation, Akron, Ohio. Dialkoxy propionitriles. 2,438,090, Mar. 16.

Cohn, Seymour B., Cambridge, Mass., assignor to the United States of America, as represented by the Secretary of War. Signal receiver and warning device. 2,437,876, Mar. 16.

Colaiaco, August P.: *See*—
Cox, Joseph H., Colaiaco, and Rose.
Stoltenberg, Glenn R., and Colaiaco.

Collette, Hiawatha F.: *See*—
Whitson, Mercer L., and Collette.

Columbia Broadcasting System, Inc., assignee: *See*—
Goldmark, Peter C.

Conner, Edward A., Stratford, assignor to American Chain & Cable Company, Inc., Bridgeport, Conn. Winding machine. 2,437,725, Mar. 16.

Cooley, Austin G., New York, N. Y., assignor to Times Facsimile Corporation. Support for electrooptical apparatus. 2,437,848, Mar. 16.

Cooper, Howell C., Sewickley, Pa. Storage means for liquefied gas. 2,437,909, Mar. 16.

Cornelius, Frank H., assignor to Armstrong Cork Company, Lancaster, Pa. Moisture control device. 2,437,680, Mar. 16.

Cornell Research Foundation, Inc., assignee: *See*—
Steward, Colby W., and Rivenburgh.

Corning Glass Works, assignee: *See*—
Hyde, James F., and Johannson.

Cornwell, Ralph T. K., and D. S. Porter, Fredericksburg, Va., assignors, by mesne assignments, to American Viscose Corporation, Wilmington, Del. The clarification of fermented liquors. 2,437,939, Mar. 16.

Cox, Fred W., Cuyahoga Falls, and J. M. Wallace, Jr., assignors to Wingfoot Corporation, Akron, Ohio. Color stabilization of vinyl halide resins. 2,438,102, Mar. 16.

Cox, Joseph H., Pittsburgh, A. P. Colaiaco, Wilkinsburg, and H. A. Rose, Pittsburgh, Pa., assignors, by mesne assignments, to the United States of America, as represented by the United States Atomic Energy Commission. Pump. 2,437,849, Mar. 16.

Cramer, Roy A., Jr.: *See*—
Cramer, Roy A., H. W., and R. A., Jr.

Cramer, Roy A., H. W., and R. A. Jr., Kansas City, Mo Pivoted spring back rest. 2,437,940, Mar. 16.

Craver, John K., Webster Groves, assignor to Monsanto Chemical Company, St. Louis, Mo. Removing paint, varnish, and lacquer films from surfaces. 2,438,038, Mar. 16.

Cribben and Sexton Company, assignee: *See*—
Buhman, Conrad J., and Mendel.

Crockett, Robert E., and P. S. Haselton, Montclair, N. J. Submerged-belt type magnetic separator. 2,437,681, Mar. 16.

Croft, Harold S., Elwood, Victoria, Australia. Unitary sanitary napkin. 2,438,039, Mar. 16.

Crosby, Murray G., Riverhead, N. Y., assignor to Radio Corporation of America. Receiver and wave monitor. 2,437,910, Mar. 16.

Curd, Francis H. S., C. G. Raison, and F. L. Rose, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. Pyrimidine compounds and making the same. 2,437,682, Mar. 16.

Curd, Francis H. S., C. G. Raison, and F. L. Rose, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. Pyrimidine compounds and method of producing same. 2,437,683, Mar. 16.

Curson, Thomas: *See*—
Dowell, John H., Sternberg, and Curson.

Curtiss-Wright Corporation, assignee: *See*—
Griffin, Harry M.
Jones, Dedger.

Custer, Willard R., Hagerstown, Md. Aircraft having high-lift wing channels. 2,437,684, Mar. 16.

Cutler-Hammer, Inc., assignee: *See*—
Rosing, Theodore F., and Seeger.

Dana, Charles A., North Plainfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Locking apparatus for elevator platforms. 2,437,999, Mar. 16.

Davies, Ray L.: *See*—
Earley, Samuel C. and N. B., and Sanders, Skareen, Davies, and Hughes.

Davis, Arthur C., Burbank, Calif. Polarized relay. 2,437,726, Mar. 16.

Dempster, George R., Knoxville, Tenn. Transporting equipment. 2,437,806, Mar. 16.

Dennis, William O., San Dimas, Calif. Grinding apparatus. 2,437,850, Mar. 16.

Derr, Willard A., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Telemetering system. 2,438,000, Mar. 16.

Dexter Folder Company, assignee: *See*—
Schneider, Walter E.

Dittmar, William R., Williamsport, Pa., asisgnor to Avco Manufacturing Corporation. Link-pin retaining device for radial engines. 2,437,877, Mar. 16.

Dockendorff, Ralph L., Goose Creek, Tex., assignor to Standard Oil Development Company. Toluene sulfonic acid treatment of aromatic hydrocarbons. 2,438,001, Mar. 16.

Dolan, Harry: *See*—
Carnegie, Herbert S., and Dolan.

Donnelly, Emmett, administrator, assignee et al.: *See*—
Thorp, Clark E., and Anderson.

Dorgelo, Eduard G., Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Electron discharge tube with partially coated grid. 2,437,941, Mar. 16.

Dorr Company, The, assignee: *See*—
Scott, Charles H.
Scott, Charles H., and Graner.

Dowell, John H., London, R. S. Sternberg, Ilford, and T. Curson, Foleshill, Coventry, assignors to Alfred Herbert Limited, Coventry, England. Optical projection dividing head. 2,437,807, Mar. 16.

Drettmann, Henry, Detroit, Mich. Loading device. 2,437,808, Mar. 16.

Dreyfus, Henry, deceased, London, England; C. Bonard, administrator, assignor to Celanese Corporation of America. Process and apparatus for the melt extrusion of artificial materials. 2,437,685, Mar. 16.

Dreyfus, Henry, deceased, London, England; C. Bonard, administrator, assignor to Celanese Corporation of America. Process for the extrusion of fused artificial materials. 2,437,686, Mar. 16.

Dreyfus, Henry, deceased, London, and W. Pool, Spondon, near Derby, England; C. Bonard, administrator, assignors to Celanese Corporation of America. Melt extrusion of artificial filaments, films, and the like and apparatus therefor. 2,437,687, Mar. 16.

Drumheller, Edward L., Buena Vista, Va. Toy gun. 2,437,727, Mar. 16.

Drumheller, Edward L., Buena Vista, Va. Rotary magazine for toy guns. 2,437,728, Mar. 16.

Duggan, William H., Chicago, Ill. Measuring device with gravity operated valves. 2,438,002, Mar. 16.

Duhaime, Marshall D., White Plains, N. Y. Hydraulic wheel drive. 2,438,040, Mar. 16.

Dunford, Ernest, assignor to Landis Machine Company, St. Louis, Mo. Pad support for shoe presses. 2,437,942, Mar. 16.

Dunville, John G., assignor to Sears, Roebuck and Co., Chicago, Ill. Thermostatic damper control. 2,437,878. Mar. 16.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Benning, Anthony F., and Park.
Laucius, Joseph F., and Williams.
Leach, Elden E., Jr.
Plass, Curtis E., and Sullivan.
Roland, John R.
Verbanc, John J.
Walling, Cheves.

Dutcher, Harris A., Borger, Tex., assignor to Phillips Petroleum Company. Producting styrene from butadiene. 2,438,041, Mar. 16.

Earley, Norman B.: *See*—
Earley, Samuel C. and N. B., and Sanders, Skareen, Davies, and Hughes.

Earley, Samuel C. and N. B., E. J. Sanders, W. C. Skareen, R. L. Davies, and J. A. Hughes, Toledo, Ohio, assignors, by mesne assignments, to Evans Products Company, Detroit, Mich. Variable pitch fan blade assembly. 2,437,810, Mar. 16.

Earman, John B., West Palm Beach, Fla. Pontic tooth. 2,437,943, Mar. 16.

Easter, Edward M., Detroit, Mich. Belt buckle. 2,437,729, Mar. 16.

Edgarton, Frank, assignor to Stromberg-Carlson Company, Rochester, N. Y. Selector switch. 2,438,042, Mar. 16.

Edwards, Charles E., Santa Paula, Calif. Vehicle turn signal. 2,437,944, Mar. 16.

Edwards, Karl C., Chase, and D. D. Jones, Towson, Md., assignors to Western Electric Company, Incorporated, New York, N. Y. Closure. 2,438,003, Mar. 16.

Elsinger, Roger W., Washington, D. C. Window. 2,437,730, Mar. 16.

Elder, Lucius W., Madison, and H. S. Levenson, Orange, N. J., assignors to General Foods Corporation, New York, N. Y. Hydrocaffeic acid and esters as antioxidants. 2,437,731, Mar. 16.

Engel, Erich, Tonteg, near Pontypridd, and M. Salamon, Cardiff, Wales, assignors to Aero Zipp Fasteners Limited, London, England. Press tool. 2,437,945, Mar. 16.

Engelbrecht, Henry C., Carthage, Mo. Switch operator for lamp tables. 2,437,809, Mar. 16.

English Electric Company Limited, The, assignee: *See*—
Carnegie, Herbert S., and Dolan.

Ernst, Gottlieb, Cordell, Okla. Mail box. 2,438,043, Mar. 16.

Evans, Cyril D., Peoria, Ill., and R. H. Manley, St. Paul, Minn., assignors to United States of America as represented by the Secretary of Agriculture. Plasticized prolamine composition. 2,437,946, Mar. 16.

Evans Products Company, assignee: *See*—
Earley, Samuel C. and N. B., and Sanders, Skareen, Davies, and Hughes.

Falkoff, Adin D., Brooklyn, assignor to Universal Camera Corporation, New York, N. Y. Mounting for and including optical refracting means and method of forming the same. 2,437,947, Mar. 16.

Fawcett, Eric W. M., G. I. Jenkins, and J. Habershaw, Sunbury-on-Thames, assignors to Anglo-Iranian Oil Company Limited, London, England. Production of branched chain hydrocarbons catalyzed by a metal halide catalyst supported by a composite of alumina and titania. 2,437,948, Mar. 16.

Ferguson, Harry, Inc., assignee: *See*—
Chambers, John M., and Bunting.

Ferguson, Henry G., Arlington, Belfast, Ireland. Two-way plow. 2,437,879, Mar. 16.

Ferrel, Clyde B., San Francisco, Calif., assignor to Ferrel Industries, Inc., Reno, Nev. Apparatus for propelling and increasing the lift of airplanes. 2,437,732, Mar. 16.

Ferrell Industries, Inc., assignee: *See*—
Ferrel, Clyde B.

Fincher, Walter, Salina, Kans. Roll stabilizer for taking up play in bearings of roll mills. 2,437,733, Mar. 16.

Firing, Osborne, Staten Island, N. Y., and R. M. Gibbons, Jr., Meadville, Pa., assignors to Talon, Inc. Tape for slide fasteners. 2,437,734, Mar. 16.

First Industrial Corporation, assignee: *See*—
Saretzky, Simon.

Flagstad, Cornell, Minneapolis, Minn. Grain car door implement. 2,437,780, Mar. 16.

Folden, Russell E., Oakland, Calif. Emergency tire carrier. 2,437,811, Mar. 16.

Forsell, Eric G., Kenmore, N. Y., assignor to W. H. Miner, Inc., Chicago, Ill. Apparatus for X-ray photographing tubular steel castings. 2,437,688, Mar. 16.

Fox, Martin, and G. F. Hassel, Chicago, Ill., assignors to The Seng Company. Sofa bed hinge structure. 2,437,949, Mar. 16.

Francis, Carleton S., Jr., West Harwick, Mass., assignor, by mesne assignments, to American Viscose Corporation, Wilmington, Del. Process for making needle felts. 2,437,689, Mar. 16.

Frankowiak, Nicholas W., Schaller, Iowa. Pump jack. 2,437,911, Mar. 16.

Freel, John A., Bay City, Mich. Frenum guide. 2,437,812, Mar. 16.

Freesx, Tibor, assignor to Camloc Fastener Corporation, New York, N. Y. Fastener construction. 2,438,044, Mar. 16.

French Look, Inc., The, assignee: *See*—
Licht, Anna.

Frondel, Clifford, Flushing, assignor to Reeves-Ely Laboratories, Inc., New York, N. Y. Quartz oscillator plate. 2,437,912, Mar. 16.

Frondel, Clifford, Flushing, assignor to Reeves-Ely Laboratories, Inc., New York, N. Y. Quartz oscillator plate. 2,437,913, Mar. 16.

Frondel, Clifford, Flushing, assignor to Reeves-Ely Laboratories, Inc., New York, N. Y. Quartz oscillator plate. 2,437,914, Mar. 16.

Frondel, Clifford, Flushing, assignor to Reeves-Ely Laboratories, Inc., New York, N. Y. Quartz oscillator plate. 2,437,915, Mar. 16.

Fuller, Frederick L.: *See*—
Watson, Thomas J., Beattie, and Fuller.

Gaddini, Norman E., Winters, Calif. Machine for distributing fruit in rows on drying trays. 2,437,950, Mar. 16.

Garbuny, Max, and W. E. Pakala, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Lead-in bushing for vapor electric devices. 2,438,004, Mar. 16.

Garrett Corporation, Airesearch Manufacturing Company division, The, assignee: *See*—
Jensen, Raymond W.

Geigy, J. R., A. G., assignee: *See*—
Grun, Adolf.

General Aniline & Film Corporation, assignee: *See*—
Von Glahn, William H., and Stanley.

General Controls Co., assignee: *See*—
Ray, William A.

General Electric Company, assignee: *See*—
Godet, Sidney.
Langmuir, Irving, and Schaefer.
Reich, Philip J.
Schmitz, Anton W.

General Foods Corporation, assignee: *See*—
Elder, Lucius W., and Levenson.
Nickerson, John T. R.

General Motors Corporation, assignee: *See*—
Hutchinson, Philip H.

General Tire & Rubber Company, The, assignee: *See*—
Beward, Chalmer L.
Winkeljohn, Thomas H.

Gerhardt, Andrew H., Skokie, and A. P. Schulz, Hinsdale, Ill., assignors to Thor Corporation. Control dial assembly. 2,438,045, Mar. 16.

Getaz, James L., New York, N. Y. Method of and apparatus for separating knitted fabrics. 2,437,735, Mar. 16.

Giannuzzi, George A., Vestal, and K. J. Miller, Binghamton, assignors to International Business Machines Corporation, New York, N. Y. Making electrical units, such as commutators. 2,438,046, Mar. 16.

Gibbons, Robert M., Jr.: *See*—
Firing, Osborne, and Gibbons.

Gleason Works, assignee: *See*—
Wildhaber, Ernest.

Godet, Sidney, Albany, N. Y., assignor to General Electric Company. Follow-up control. 2,437,951, Mar. 16.

Godfrey, Robert C., assignor to The British Oxygen Company Limited, London, England. Cooling of fluids. 2,437,851, Mar. 16.

Goldblatt, Leo A.: *See*—
Savich, Theodore R., and Goldblatt.

Goldman, Samuel J., Philadelphia, Pa. Wig construction. 2,438,005, Mar. 16.

Goldmark, Peter C., New Canaan, Conn., assignor to Columbia Broadcasting System, Inc., New York, N. Y. Color television. 2,437,690, Mar. 16.

Good, James A., Grosse Pointe, Mich. Carrier for marine craft hulls and the like. 2,437,736, Mar. 16.

Graebe, Herman C., Bridgewater, Mass., assignor to The Murray Company, Dallas, Tex. Linter gin. 2,438,047, Mar. 16.

Graff, William R., Plainfield, and W. S. Harmon, Elizabeth, assignors to Merck & Co., Inc., Rahway, N. J. Separating diacetone and monoacetone sorbose. 2,437,852, Mar. 16.

Graham, William J., Rego Park, N. Y. Bookmark. 2,438,048, Mar. 16.

Graner, Frank L.: *See*—
Scott, Charles H., and Graner.

Grant Oil Tool Company, assignee: *See*—
Santiago, James J.

Greenwald, Willard F., Woodmere, assignor to Philip Morris & Company, Ltd., Inc., New York, N. Y. Apparatus for examining living tissue. 2,437,916, Mar. 16.

Griffin, Harry M., Webster Groves, Mo., assignor to Curtiss-Wright Corporation. Control for machine tools. 2,437,813, Mar. 16.

Gruender, Oscar C., assignor to Nordberg Manufacturing Company, Milwaukee, Wis. Pedestal type gyratory crusher. 2,438,049, Mar. 16.

Grün, Adolf, assignor to J. R. Geigy A. G., Basel, Switzerland. Manufacture of 2:4-diamino 1:3:5-triazines. 2,437,691, Mar. 16.

Gustafson, Gilbert E., River Forest, Ill., assignor to Zenith Radio Corporation. Electric cord. 2,438,006, Mar. 16.

Guyer, Reynolds, assignor to Waldorf Paper Products Company, St. Paul, Minn. Method and apparatus for packing containers. 2,437,952, Mar. 16.

Habeshaw, John: *See*—
Fawcett, Eric W. M., Jenkins, and Habeshaw.

Hagglund, Eold J., Erie, Pa. Toothbrush holder. 2,437,781, Mar. 16.

Halby, Edwin G., Marion, Ohio, assignor to Marion Power Shovel Company. Clutch operating mechanism. 2,437,737, Mar. 16.

Halien, Robert O., Los Angeles, assignor to Lockheed Aircraft Corporation, Burbank, Calif. Sealing means. 2,437,814, Mar. 16.

Hamilton Watch Company, assignee: *See*—
Bennett, William O., Jr.

Hänggi, Max, Fehren, Switzerland. Shearing machine drive. 2,437,738, Mar. 16.

Hanna, Raymond P., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Trolley conductor device. 2,438,007, Mar. 16.

Hansen, George H., Jr., assignor to C. E. Hovey, trustee, Kansas City, Mo. Bottle decapping and pouring mechanism for vending machines. 2,438,050, Mar. 16.

Hansgirg, Fritz J., Black Mountain, N. C., assignor to The Permanente Metals Corporation, Oakland, Calif. Magnesium production. 2,437,815, Mar. 16.

Hanson, James: *See*—
Childs, David, Braun, and Hanson.

Harmon, William S.: *See*—
Graff, William R., and Harmon.

Harris, Clarence E., Laurens, S. C. Connecting the dobby jack and the harness frame of a loom. 2,437,739, Mar. 16.

Harrison, Schuyler B., executor, et al.: *See*—
Watson, Thomas J., Beattie, and Fuller.

Hart, Edward W., San Diego, Calif. Magnetic compass. 2,437,692, Mar. 16.

Hartford National Bank and Trust Company, trustee, assignee: *See*—
Dorgelo, Eduard G.
Schmidt, Gerrit.

Hartman, Carl H., New Rochelle, assignor to St. Regis Paper Company, New York, N. Y. Heat-sealed valve bag. 2,437,693, Mar. 16.

Harwood Company, assignee: *See*—
Horowitz, Milton.

Harwood, Louis J., assignee: *See*—
Horowitz, Milton.

Harwood, Milton G., assignee: *See*—
Horowitz, Milton.

Haselton, Page S.: *See*—
Crockett, Robert E., and Haselton.

Hassel, George F.: *See*—
Fox, Martin, and Hassel.

Hastings, Russell, Jr., Wellesley, assignor to Lewis-Shepard Company, Watertown, Mass. Elevating truck. 2,437,953, Mar. 16.

Havill, Clinton H., South Orange, assignor to Bendix Aviation Corporation, Bendix, N. J. Accessory drive control. 2,437,954, Mar. 16.

Hawley, Don M., administrator, assignee, et al.: *See*—
Thorp, Clark E., and Anderson.

Hawley, Jesse B., assignee, et al.: *See*—
Thorp, Clark E., and Anderson.

Hawley Products Company, assignee: *See*—
Thorp, Clark E., and Anderson.

Haynes, Thomas M., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Replaceable nose for spot welding tips. 2,437,740, Mar. 16.

Hedstrom, Gustav V.: *See*—
Wahlberg, Nils E., and Hedstrom.

Heijmer, Gustaf B.: *See*—
Bergstrom, Hilding O. V., Heijmer, and Trobeck.

Hekman, Edsko and L. H., Grand Rapids, Mich., assignors to H. W. Jonkhoff, New York, N. Y. Steerable vehicle running gear. 2,437,816, Mar. 16.

Hekman, Louis H.: *See*—
Hekman, Edsko and L. H.

Hemphill Company, assignee: *See*—
St. Pierre, Eugene.

Hennessey, Silas W., Jr., Amityville, assignor to Camloc Fastener Corporation, New York, N. Y. Stud receptacle. 2,438,051, Mar. 16.

Hennessy, James J., Montclair, N. J. Railway journal lubricator. 2,437,817, Mar. 16.

Herbert, Alfred, Limited, assignee: *See*—
Dowell, John H., Sternberg, and Curson.

Hercules Powder Company, assignee: *See*—
Lister, Donald A.

Hernández, Norberto D., Rio Piedras, P. R. Safety container. 2,438,052, Mar. 16.

Hersh, Herman I., Toledo, Ohio, assignor to Owens-Illinois Glass Company. Producing molding compounds comprising furfuryl alcohol reaction products. 2,437,955, Mar. 16.

Hessel, Ernest R., Spokane, Wash. Token holder. 2,437,956, Mar. 16.

Hettinga, Ralph M., assignor to Shakespeare Products Company, Kalamazoo, Mich. Motion transmitting device. 2,438,053, Mar. 16.

Hetzler, Walter A., Decatur, Ill. Machine for cutting potatoes, including a stationary cutter and reciprocating plunger. 2,437,818, Mar. 16.

Heuser, Marion F., Cincinnati, Ohio. Game apparatus. 2,437,819, Mar. 16.

Hickman, Clarence N., Jackson Heights, N. Y., assignor to United States of America, as represented by the Secretary of War. Method for blending powder grains. 2,437,694, Mar. 16.

Hitchings, George H., Tuckahoe, assignor to Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y. Preparation of dihydroxanthopterin and xanthopterin. 2,437,853, Mar. 16.

Hoach, Roy H., Detroit, Mich. Window ventilator. 2,437,741, Mar. 16.

Hoeb, Charles, Santa Rosa, Calif. Apparatus for preparing livestock feed. 2,437,917, Mar. 16.

Hofmann, George, assignor to American Locker Company, Inc., Boston, Mass. Coin controlled lock. 2,437,742, Mar. 16.

Hoinowski, Jakob, Nekoosa, Wis. Toy airplane. 2,437,743, Mar. 16.

Holliday, Margaret M., Detroit, Mich. Sadiron holder. 2,438,054, Mar. 16.

Holohan, Bartholomew, New York, assignor to Nelpin Manufacturing Company, Long Island City, N. Y. Lathe center. 2,437,957, Mar. 16.

Holt, William E., Oakland, Calif. Floor surfacing machine. 2,437,958, Mar. 16.

Hoop, John G., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Gas-tight seal and terminal for electric furnaces. 2,438,008, Mar. 16.

Hopkins, Robert K., assignor to The M. W. Kellogg Company, New York, N. Y. Manufacture of composite metal articles. 2,437,782, Mar. 16.

Horney, Amos G.: *See*—
Vance, Robert M., and Horney.

Horowitz, Milton, assignor to Harwood Company, Farmingdale, N. J., a firm composed of M. G. Harwood and L. J. Harwood. Poultry blinder clip. 2,437,959, Mar. 16.

Horvath, John W., Bronx, N. Y. Telescope attachment for firearms. 2,437,744, Mar. 16.

Hovey, C. Earl, trustee, assignee: *See*—
Hansen, George H., Jr.

Howard, Kenneth L.: *See*—
Poor, Edward N., and Howard.

Hudson, Edwin B., Middletown, Ohio. Rotary shaft construction. 2,437,820, Mar. 16.

Hughes, John T., Chicago, Ill. Fender structure. 2,437,960, Mar. 16.

Hughes, Joseph A.: *See*—
Earley, Samuel C. and N. B., and Sanders, Skareen, Davies, and Hughes.

Hughes, Leigh E., Indianapolis, Ind. Hydraulic pulsator system and make-up means therefor. 2,437,821, Mar. 16.

Hutchinson, Philip H., Montclair, N. J., assignor to General Motors Corporation, Detroit, Mich. Work gauging device for bore grinding machines. 2,437,783, Mar. 16.

Hyde, James F., and O. K. Johannson, assignors to Corning Glass Works, Corning, N. Y. Preparation of salts of mono-organo silanols. 2,438,055, Mar. 16.

I. T. E. Circuit Breaker Company, assignee: *See*—
Scott, William M., Jr.

Imperial Chemical Industries Limited, assignee: *See*—
Curd, Francis H. S., Raison, and Rose.

Imperial Trust for the Encouragement of Scientific and Industrial Research, The, assignee: *See*—
Walls, Leslie P.

Imperial Typewriter Company Limited, The, assignee: *See*—
Brumhill, Claude W., and Pateman.

Industrial Patents Corporation, assignee: *See*—
Petrullo, Felice.

Ingersoll-Rand Company, assignee: *See*—
Lincoln, Paul A.

Ingraham, Lloyd L.: *See*—
Lyons, Daniel J., Lazar, and Ingraham.

Carroll, Fred M., and Benson.
Giannuzzi, George A., and Miller.
Johnson, Reynold B., and Larrabee.
Luhn, Hans P.
Page, Ralph E., and Beattie.
Watson, Thomas J., Beattie, and Fuller.

International Harvester Company, assignee: *See*—
Mott, Carl W.
Orendorff, John W.
Pool, Stuart D.
Welty, Albert B.

Jacobs, Irvin N., Kansas City, Mo., and Herbert C. Jones, Easton, Kans. Mechanical pitching and batting device for baseball games. 2,437,745, Mar. 16.

Jansky, Karl G., Little Silver, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Three-dimension radio direction finder. 2,437,695, Mar. 16.

Jarvi, Reino A.: *See*—
Stephan, John T., Jarvi, and Ash.

Jeffrey Manufacturing Company, The, assignee: *See*—
Mercier, Stanley M.
Whitney, Paul V.

Jenkins, Gwilym I.: *See*—
Fawcett, Eric W. M., Jenkins, and Habeshaw.

Jensen, Raymond W., assignor to The Garrett Corporation, Airesearch Manufacturing Company division, Los Angeles, Calif. Thermostatic shutter control and surge protection. 2,437,961, Mar. 16.

Johannson, Oscar K.: *See*—
Hyde, James F., and Johannson.

Johnson, Reynold B., and C. E. Larrabee, Binghamton, assignors to International Business Machines Corporation, New York, N. Y. Ratio computing phase shift indicator. 2,438,056, Mar. 16.

Johnstone, George K., assignor to J. H. Carruthers & Company Limited, Glasgow, Scotland. Slide valve assembly for the fluid pressure power cylinders of duplex reciprocators. 2,437,854, Mar. 16.

Jones, David D.: *See*—
Edwards, Karl C., and Jones.

Jones, Dedger, Columbus, Ohio, assignor to Curtiss-Wright Corporation. Combined drill and deburring tool. 2,437,822, Mar. 16.

Jones, Herbert C.: *See*—
Jacobs, Irvin N., and Jones.

Jonkhoff, Henri W., assignee: *See*—
Hekman, Edsko and L. H.

Jonkhoff, Henri W., New York, N. Y. Wheeled carriage for vehicles. 2,437,823, Mar. 16.

Jorgensen, Bernhardt, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Machine for operating on shoes. 2,437,696, Mar. 16.

Kaiser Fleetwings, Inc., assignee: *See*—
Knox, Thomas.

Kalon, Lawrence, Chicago, Ill. Electrical probe. 2,437,697, Mar. 16.

Keall, Frank B., Leicester, England, assignor to United Shoe Machinery Corporation, Flemington, N. J. Fastener inserting machine. 2,437,746, Mar. 16.

Keller-Dorian Colorfilm Corporation, assignee: *See*—
Wright, Arthur.

Kellogg, M. W., Company, The, assignee: *See*—
Hopkins, Robert K.

Kilham, Peter, Attleboro, Mass. Bending brake having unitary actuating means for clamping and bending sheet metal. 2,438,057, Mar. 16.

Kincheloe, Dwight N., Quincy, Ill. Air supply device for respirators. 2,438,058, Mar. 16.

King, George E., Swissvale, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric motor control system. 2,438,010, Mar. 16.

Kinn, Theodore P., and D. R. Tashjian, Baltimore, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system. 2,438,009, Mar. 16.

Kishline, Floyd F., assignor to Nash-Kelvinator Corporation, Kenosha, Wis. Method of assembling pistons. 2,437,824, Mar. 16.

Klain, Benjamin V., assignee: *See*—
Miller, Elwood A.

Knox, Thomas, Newtown, Pa., assignor, by mesne assignments, to Kaiser Fleetwings, Inc. Shock absorbing strut for aircraft. 2,438,011, Mar. 16.

Koenig, Paul, assignee: *See*—
Rich, Carl.

Kohn, Max, Brooklyn, N. Y. Lampshade. 2,437,825, Mar. 16.

Koppers Company, Inc., assignee: *See*—
Rhodes, Philip H.

Kroeger, John W.: *See*—
Chiappe, Caesar F., and Kroeger.

Kropa, Edward L., Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y. Copolymers of allyl esters of polybasic acid with saturated monohydric alcohol esters of unsaturated polycarboxylic acid. 2,437,962, Mar. 16.

Kuhn, Frank, Detroit, and L. H. Thomas, Birmingham, assignors to American Electrical Heater Company, Detroit, Mich. Electrically heated tool. 2,437,747, Mar. 16.

Kusch, Polykarp, New York, N. Y., assignor to the United States of America, as represented by the Secretary of War. Cathode support structure. 2,437,880, Mar. 16.

La Brant, Alvin M., San Diego, Calif. Rotatable holder for ice cards. 2,437,826, Mar. 16.

Lackey, Rufus M., Birmingham, Ala., assignor to Brown Service Funeral Homes Company, Inc. Folding cot. 2,438,059, Mar. 16.

Laidig, Alfred H., Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Lamp holders. 2,438,012, Mar. 16.

Landis Machine Company, assignee: *See*—
Dunford, Ernest.

Lang, Wilmarth Y., Towaco, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Printer and control system therefor. 2,437,698, Mar. 16.

Langmuir, Irving, and V. J. Schaefer, Schenectady, N. Y., assignors to General Electric Company. Method and apparatus for producing aerosols. 2,437,963, Mar. 16.

Larrabee, Clinton E.: *See*—
Johnson, Reynold B., and Larrabee.

Lasdell Products Co.: *See*—
Laskin, Louis J.

Laskin, Louis J., assignor to W. I. Zidell and L. J. Laskin, both of Los Angeles, Calif., doing business as Lasdell Products Co., Los Angeles, Calif. Nonspillable cup. 2,437,784, Mar. 16.

Lathrop-Paulson Company, The, assignee: *See*—
Rufus, Otto B.

Laucius, Joseph F., Wilmington, Del., and W. W. Williams, Albany, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Copper complexes of dianisidine disazo dyes. 2,437,699, Mar. 16.

Lauck, John A.: *See*—
Roth, Jay M., and Lauck.

Lawson, Birdsall P., assignor to Pilling Chain Company, Providence, R. I. Mechanism for bending slider bodies. 2,438,060, Mar. 16.

Lazar, Arthur: *See*—
Lyons, Daniel J., Lazar, and Ingraham.

Leach, Elden E., Jr., Norristown, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Veneering elastomers. 2,437,855, Mar. 16.

Lear, Incorporated, assignee: *See*—
Lear, William P.

Lear, William P., North Hollywood, Calif., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich. Remote positioning control. 2,438,061, Mar. 16.

Lenehan, Bernard E.: *See*—
Young, Douglass A., Lunas, and Lenehan.

Lesavoy, Ely: *See*—
Artzt, William W., and Lesavoy.

Levenson, Harold S.: *See*—
Elder, Lucius W., and Levenson.

Lever Brothers Company, assignee: *See*—
Paterson, William J.

Levey, Fred'k H., Co., Incorporated, assignee: *See*—
Chiappe, Caesar F., and Kroeger.

Lewis-Shepard Company, assignee: *See*—
Hastings, Russell, Jr.

Libby, McNeill & Libby, assignee: *See*—
Childs, David, Braun, and Hanson.

Licht, Anna, New York, N. Y., assignor to The French Look, Inc., Paterson, N. J. Lady's garment. 2,438,062, Mar. 16.

Lichty, Joy G.: *See*—
Clifford, Albert M., and Lichty.

Lincoln, Paul A., Bloomsbury, N. J., assignor to Ingersoll-Rand Company, New York, N. Y. Pressure fluid controlling device. 2,437,856, Mar. 16.

Lisle Mills, Inc., assignee: *See*—
Artzt, William W.
Artzt, William W., and Lesavoy.

Lister, Donald A., Brunswick, Ga., assignor to Hercules Powder Company, Wilmington, Del. Terpene product. 2,437,857, Mar. 16.

Lloyd, Robert V., New York, N. Y. Nursing bottle attachment. 2,438,066, Mar. 16.

Lobley, Frederick A., and W. E. Lowell, assignors to Miles Laboratories, Inc., Elkhart, Ind. Crushing roll apparatus for reducing to powder materials packaged in tablet form. 2,437,881, Mar. 16.

Lockheed Aircraft Corporation, assignee: *See*—
Hallen, Robert O.

Lorenz-Risler, Louise, assignor to A. L. Lutz, Zurich, Switzerland. Ribbon threading mechanism. 2,438,063, Mar. 16.

Loux, John H., assignor to The Salem Engineering Company, Salem, Ohio. Heating and quenching apparatus. 2,438,064, Mar. 16.

Love, James E., Garfield, Wash. Harvesting mechanism. 2,438,065, Mar. 16.

Lowell, Walter E.: *See*—
Lobley, Frederick A., and Lowell.

Luhn, Hans P., Armonk, assignor to International Business Machines Corporation, New York, N. Y. Circuit breaker. 2,438,067, Mar. 16.

Lukowitz, Bernard V., Milwaukee, Wis. Trick walking cane. 2,438,014, Mar. 16.

Lunas, Lawrence J.: *See*—
Young, Douglass A., Lunas, and Lenehan.

Lund, Werner J., Staples, Minn. Hand operated abrading and polishing tool. 2,437,827, Mar. 16.

Lustig, Bernard: *See*—
Michaels, Edwin B., and Lustig.

Lutz, Alfred L., assignee: *See*—
Lorenz-Risler, Louise.

Lynch, Kathryn L., Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. Aspartic acid esters and their preparation. 2,438,091, Mar. 16.

Lynch, Kathryn L., Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. N-sulfodicarboxylic acid aspartates. 2,438,092, Mar. 16.

Lynn, Clarence, Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Shunted brush. 2,438,015, Mar. 16.

Lyons, Daniel J., Martinez, A. Lazar, Berkeley, and L. L. Ingraham, Los Angeles, assignors to Tide Water Associated Oil Company, San Francisco, Calif. Alkylation of aromatic hydrocarbons with sulfuric acid catalyst avoiding sulfonation of product. 2,437,828, Mar. 16.

MacFarland, Jay W., Jr., U. S. Navy. Aircraft. 2,437,700, Mar. 16.

Mahoney, John F., Westfield, and H. H. Bassford, Jr., Garwood, assignors to Merck & Co., Inc., Rahway, N. J. Treating diacetone sorbose and monoacetone sorbose. 2,437,858, Mar. 16.

Malcom, Robert L., Chicago, Ill., assignor to Chicago Eye Shield Company. Adjustable headband construction. 2,437,748, Mar. 16.

Mallick, Leo M., Chicago, Ill. Bottle closure. 2,437,882, Mar. 16.

Mallory, B. L., The, assignee: *See*—
Mallory, Bonnie L.

Mallory, Bonnie L., Cleveland Heights, Ohio, assignor to The B. L. Mallory Company, Hazel Park, Mich. Shock absorber. 2,437,749, Mar. 16.

Mallory, Marion, Detroit, Mich. Engine governor. 2,437,883, Mar. 16.

Mallory, P. R., & Co., Inc., assignee: *See*—
Haynes, Thomas M.
Wall, Alexander C.

Manley, Ralph H.: *See*—
Evans, Cyril D., and Manley.

Mann, John D., National City, Calif. Shear testing device. 2,437,750, Mar. 16.

Marathon Corporation, assignee: *See*—
Riege, Harold, and Siewert.

Mardock, Edwin S.: *See*—
Brunner, Eugene M., and Mardock.

Marion Power Shovel Company, assignee: *See*—
Halby, Edwin G.

Marling, Paul E., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Finish remover composition. 2,437,964, Mar. 16.

Mason, Elliott W., Spokane, Wash., assignor to Aluminum Company of America, Pittsburgh, Pa. Scalping machine control apparatus. 2,437,829, Mar. 16.

Maynard, Charles E., assignor to The Pro-Phy-Lac-Tic Company, Florence, Mass. Method for making plastic comb holders. 2,437,884, Mar. 16.

McAllister, Alma S., Morris, Minn. Combination girdle and pantie. 2,437,830, Mar. 16.

McComb, Richard J.: *See*—
Woodings, Wilbert H., Skowron, and McComb.

McCormack, Robert B., Milltown, N. J., assignor to E. R. Squibb & Sons, New York, N. Y. Producing penicillin. 2,437,918, Mar. 16.

McCoy, Howard M., Fairfield, Ohio. Aircraft propeller. 2,437,701, Mar. 16.

McGreal, Martin E.: *See*—
Niederl, Joseph B. and V., and McGreal.

McMurray, Harry G., Wakefield, assignor to Safety Box Toe Company, Holliston, Mass. Safety shoe and process of making the same. 2,438,016, Mar. 16.

Mendel, Leo E.: *See*—
Buhman, Conrad J., and Mendel.

Mercier, Stanley M., Bexley, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company. Conveyor slack take-up mechanism. 2,438,068, Mar. 16.

Merck & Co., Inc., assignee: *See*—
Graff, William R., and Harmon.
Mahoney, John F., and Bassford.
Wolf, Donald E., and Shabica, Jr.

Merstick, Frank W., Cleveland, Ohio. Motor vehicle refrigerator. 2,437,885, Mar. 16.

Michaels, Edwin B., and Bernard Lustig, assignors to Lawrence Richard Bruce, Incorporated, Stamford, Conn. Relaxing keratinous fibres. 2,437,965, Mar. 16.

Miles Laboratories, Inc., assignee: *See*—
Lobley, Frederick A., and Lowell.

Millard, Irwin W., and E. W. Beatty, Danville, Ill. Protecting device for industrial gloves. 2,437,886, Mar. 16.

Miller, Elwood A., assignor of fifty per cent to Benjamin V. Klain, Indianapolis, Ind. Invalid bed. 2,438,093, Mar. 16.

Miller, Kenneth J.: *See*—
Giannuzzi, George A., and Miller.

Miller Pottery Engineering Company, assignee: *See*—
Miller, William J., and Reek.

Miller, William J., Swissvale, and A. J. Reek, Carrick, assignors to Miller Pottery Engineering Company, Swissvale, Pa. Conveyer for transporting pottery molds. 2,437,702, Mar. 16.

Miner, W. H., Inc., assignee: *See*—
Forssell, Eric G.

Mingea, John, Long Island City, N. Y. Facial invigorating apparatus. 2,438,069, Mar. 16.

Missouri Automatic Control Corporation, assignee: *See*—
Yelda, John O.

Mitchell, John W.: *See*—
Stevenson, Elmer C., and Mitchell.

Mitchell, Robert, Detroit, Mich. Lock nut. 2,437,751, Mar. 16.

Moncrieff, Robert W., Spondon, near Derby, England, assignor, by mesne assignments, to Celanese Corporation of America. Process and apparatus for the extrusion of fused artificial materials. 2,437,703, Mar. 16.

Moncrieff, Robert W., and W. Pool, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America. Method and apparatus for the melt extrusion of artificial materials. 2,437,704, Mar. 16.

Monroe, Frank A., Jr.: *See*—
Brown, James M., Bemis, and Monroe.

Monsanto Chemical Company, assignee: *See*—
Craver, John K.
Marling, Paul E.
Mowry, David T.
Seymour, Raymond B., and Mowry.
Stephan, John T., Jarvi, and Ash.

Montagné, Elisée, Saint-Girons, assignor to Societe L'Entreprise Industrielle, Paris, France. Apparatus for regulating water streams and sand clearing devices. 2,438,103, Mar. 16.

Moore, John C., assignor to Rex Manufacturing Company, Inc., Connersville, Ind. Apparatus for applying insulation. 2,437,831, Mar. 16.

Morris, Philip, & Company, Ltd., Inc., assignee: See—
Greenwald, Willard F.

Mott, Carl W., La Grange, Ill., assignor to International Harvester Company. Pump. 2,437,887, Mar. 16.

Moultrop, Orville Lee, Selma, assignor to Western Frozen Foods Co., Fresno, Calif. Preparing fresh green vegetables. 2,437,859, Mar. 16.

Mowry, David T.: *See*—
Seymour, Raymond B., and Mowry.

Mowry, David T., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Interpolymer of styrene and fumarodinitrile plasticized with an alkyl phthalyl alkyl glycollate. 2,437,966, Mar. 16.

Mucher, George J., assignor to Clarostat Mfg. Co., Inc., Brooklyn, N. Y. Electrical instrument coupling. 2,437,785, Mar. 16.

Mullard Radio Valve Company Limited, The, assignee: *See*—
Bailey, Christopher E. G.

Murcek, Slavo J., Duquesne, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system. 2,438,017, Mar. 16.

Murphy, John P., Jr., Chicago, Ill. Lading brace for freight cars. 2,437,832, Mar. 16.

Murray Company, The, assignee: *See*—
Graebe, Herman C.

Narkl, Bettie, Cleveland, Ohio. Thread case. 2,437,888, Mar. 16.

Nash, John C., Providence, R. I. Tenter machine clip. 2,437,967, Mar. 16.

Nash-Kelvinator Corporation, assignee: *See*—
Kishline, Floyd F.
Wahlberg, Nils E., and Hedstrom.

Nelpin Manufacturing Company, assignee: *See*—
Holohan, Bartholomew.

Nickerson, John T. R., Wakefield, Mass., assignor to General Foods Corporation, New York, N. Y. Stabilization of frozen grapefruit. 2,437,752, Mar. 16.

Niederhauser, Warren D.: *See*—
Bruson, Herman A., and Niederhauser.

Niederl, Joseph B., Brooklyn, and V. Niederl, Round Top, N. Y., and M. E. McGreal, Somersworth, N. H. N-benzyl-N-myristyl morpholinium halides. 2,437,833, Mar. 16.

Niederl, Victor: *See*—
Niederl, Joseph B. and V., and McGreal.

Nixon, Alan C., and D. L. Yabroff, Berkeley, assignor to Shell Development Company, San Francisco, Calif. Treating hydrocarbons. 2,438,018, Mar. 16.

Nordberg, Charles H., Chicago Heights, Ill., assignor to Pettibone Mulliken Corporation. Cast rail crossing structure. 2,438,070, Mar. 16.

Nordberg Manufacturing Company, assignee: *See*—
Gruender, Oscar C.

Nordsieck, Arnold T., New York, N. Y., assignor to the United States of America, as represented by the Secretary of War. High-frequency tuning device. 2,437,889, Mar. 16.

Nunes, Robert K., assignee: *See*—
Overton, George N.

Oberdorf, George S., and T. J. Oberdorf, Chula Vista, Calif. Tether apparatus. 2,437,786, Mar. 16.

Oberdorf, Thelma J.: *See*—
Oberdorf, George S. and T. J.

Oganowski, Kasimir, Franklin, assignor to The American Rolling Mill Company, Middletown, Ohio. Improving the adherence of aluminum coatings. 2,437,919, Mar. 16.

Olin Industries, Inc., assignee: *See*—
Wilson, Golder P.

Oliver, John R., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Roughening machine. 2,437,753, Mar. 16.

Orendorff, John W., Canton, Ill., assignor to International Harvester Company. Dump cart. 2,437,890, Mar. 16.

Overton, George N., assignor of one-half to Robert Karl Nunes, Kingston, Jamaica, British West Indies. Vaccination syringe. 2,437,920, Mar. 16.

Owens-Illinois Glass Company, assignee: *See*—
Ball, Charles O., Swope, and Scott.
Hersh, Herman I.

Pace, Henry A., assignor to Wingfoot Corporation, Akron, Ohio. Preparing fumaric nitrile. 2,438,019, Mar. 16.

Packard, Olive M., assignee, et al.: *See*—
Tietsema, Tim.

Page, Ralph E., West Orange, N. J., and H. S. Beattie, Poughkeepsie, assignors to International Business Machines Corporation, New York, N. Y. Perforated card controlled alphabet and numeral printer. 2,438,071, Mar. 16.

Pakala, William E.: *See*—
Garbuny, Max, and Pakala.

Palotsee, John J., Youngstown, Ohio. Washer for articles or the like. 2,437,968, Mar. 16.

Park, Joseph D.: *See*—
Benning, Anthony F., and Park.

Parke, Davis & Company, assignee: *See*—
Rieveschl, George, Jr.

Parker, Van A., San Diego, Calif. Panoramic camera tripod control. 2,437,787, Mar. 16.

Pastoret, John E.: *See*—
Rambo, Rawdon E., and Pastoret.

Pateman, Arthur: *See*—
Brumhill, Claude W., and Pateman.

Patents Corporation, The, assignee: *See*—
Tanner, Robert R.

Paterson, William J., Newton Highlands, Mass., assignor to Lever Brothers Company. Hydrobleaching and hardening glyceride oils. 2,437,705, Mar. 16.

Paterson, William J., Newton Highlands, assignor to Lever Brothers Company, Cambridge, Mass. Hydrobleaching glyceride oils. 2,437,706, Mar. 16.

Paul, Nathan, Long Island, assignor to Elliott F. Barlow, Yonkers, N. Y. Deformable switch. 2,437,969, Mar. 16.

People in the Territory of the United States, Dedicated to the free use of the: *See*—
Sweet, Carroll V.

Peritz, Bernard B., New York, N. Y. Cuticle stick and nail cleaner. 2,437,834, Mar. 16.

Permanente Metals Corporation, The, assignee: *See*—
Hansgirg, Fritz J.

Petrullo, Felice, Jersey City, N. J., assignor to Industrial Patents Corporation, Chicago, Ill. Elevator switch. 2,438,094, Mar. 16.

Pettibone Mulliken Corporation, assignee: *See*—
Nordberg, Charles H.

Phillips, John G., executor, et al.: *See*—
Watson, Thomas J., Beattie, and Fuller.

Phillips Petroleum Company, assignee: *See*—
Dutcher, Harris A.
Whaley, Thomas H.

Phinney, William E., Milton, N. H., assignor to Wright-Batchelder Corporation, Boston, Mass. Seam-filling shoe welt. 2,438,095, Mar. 16.

Picciani, James M., Brooklyn, N. Y. Shoulder pad. 2,438,072, Mar. 16.

Pierce, John R., Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Communication system employing pulse code modulation. 2,437,707, Mar. 16.

Pilling Chain Company, assignee: *See*—
Lawson, Birdsall P.

Place Corporation, assignee: *See*—
Wait, Clyde F.

Plass, Curtis E., Worcester, Mass., and D. J. Sullivan, Fairfield, Conn.; said Sullivan assignor to E. I. du Pont de Nemours & Company, Wilmington, Del.; said Plass assignor to The American Steel and Wire Company of New Jersey. Semiconducting tape for electric cable. 2,437,708, Mar. 16.

Pool, Stuart D., Moline, Ill., assignor to International Harvester Company. Flexible coupling. 2,437,891, Mar. 16.

Pool, William: *See*—
Dreyfus, Henry, and Pool.
Moncrieff, Robert W., and Pool.

Poor, Edward N., Stamford, and K. L. Howard, Old Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y. Stabilization of rosin sizes. 2,438,096, Mar. 16.

Porter, Donald S.: *See*—
Cornwell, Ralph T. K., and Porter.

Porter, Frank, Syracuse, N. Y., assignor to Allied Chemical & Dye Corporation. Phenol recovery. 2,437,921, Mar. 16

Pro-Phy-Lac-Tic Company, The, assignee: *See*—
Maynard, Charles E.

Quirk, Earl W.: *See*—
Barganz, Walter A., and Quirk.

Radio Corporation of America, assignee: *See*—
Crosby, Murray G.
Rundle, Henry Mc D.
Usselman, George L.

Raison, Clifford G.: *See*—
Curd, Francis H. S., Raison, and Rose.

Rambo, Rawdon E., and J. E. Pastoret, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Gear housing. 2,438,020, Mar. 16.

Rambo, William R., Cambridge, Mass., assignor to the United States of America, as represented by the Secretary of War. Voltage control circuit. 2,437,892, Mar. 16.

Rand McNally & Company, assignee: *See*—
Brink, John G.

Rane Tool Company, Inc., assignee: *See*—
Varmee, Ernest H.

Rassmann, Hugo C., Minneapolis, Minn. Sugar-beet harvester. 2,437,709, Mar. 16.

Ray, William A., Glendale, Calif., assignor to General Controls Co. Electromagnetic operator. 2,437,893, Mar. 16.

Ray, William A., Glendale, Calif., assignor to General Controls Co. Fuel pressure ignition control for burner systems. 2,437,894, Mar. 16.

Reconstruction Finance Corporation, assignee: *See*—
Tandler, William S., and Walker.

Reek, Ashley J.: *See*—
Miller, William J., and Reek.

Reeves-Ely Laboratories, Inc., assignee: *See*—
Frondel, Clifford.

Rehfeld, George W., Manhattan, Kans. Jetty. 2,437,754, Mar. 16.

Reich, Philip J., Bridgeport, Conn., assignor to General Electric Company. Pulse communication. 2,437,970, Mar. 16.

Reid Brothers Company, Inc., assignee: *See*—
Woodbury, Stephen E.

Reilly Tar & Chemical Corporation, assignee: *See*—
Cislak, Francis E., and Wheeler.

Republic Flow Meters Company, assignee: *See*—
Ackley, Robert A.

Republic Steel Corporation, assignee: *See*—
Whitehouse, Irving P.

Resinous Products & Chemical Company, The, assignee: *See*—
Bruson, Herman A.
Bruson, Herman A., and Neiderhauser.

Revere Sugar Refinery, assignee: *See*—
Brown, James M., Bemis, and Monroe.

Rex Manufacturing Company, Inc., assignee: *See*—
Moore, John C.

Rhodes, Philip H., Portland, Maine, assignor, by mesne assignments, to Koppers Company, Inc. Production of resins from a methylol monohydric phenol and a polyhydric phenol. 2,437,710, Mar. 16.

Rich, Carl, assignor of one-half to P. Koenig, Montreal, Quebec, Canada. Gas mask. 2,437,755, Mar. 16.

Richard, Joseph U., Montreal, Quebec, Canada. Sanding device for motor vehicles. 2,437,788, Mar. 16.

Ridbo Laboratories, Inc., assignee: *See*—
Auer, László.

Riege, Harold, and E. C. Siewert, Wausau, assignors to Marathon Corporation, Rothschild, Wis. Collapsible carton. 2,437,835, Mar. 16.

Rieveschl, George, Jr., Grosse Pointe Woods, assignor to Parke, Davis & Company, Detroit, Mich. Beta-cyclohexylaminoethyl benzhydryl ether and salts thereof. 2,437,711, Mar. 16.

Rinia, Herre, Eindhoven, Netherlands; vested in the Attorney General of the United States. Manufacturing optical elements. 2,437,860, Mar. 16.

Ritter Company, Inc., assignee: *See*—
Wester, Edwin J., and Ziegler.

Rivenburgh, Malcolm R.: *See*—
Steward, Colby W., and Rivenburgh.

Robins, Samuel D., New York, N. Y. Aircraft provided with fixed and rotary wings for convertible types of flight. 2,437,789, Mar. 16.

Rogers, Thomas H., Jr., and R. D. Vickers, assignors to Wingfoot Corporation, Akron, Ohio. Thermosetting vinyl chloride-vinylidene chloride copolymer compositions. 2,438,097, Mar. 16.

Rohr, Charles B., Alum Bridge, W. Va. Sphygmomanometers. 2,437,861, Mar. 16.

Roland, John R., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Ethylene-polyhaloethylene reaction products. 2,438,021, Mar. 16.

Rose, Francis L.: *See*—
Curd, Francis H. S., Raison, and Rose.

Rose, Herbert A.: *See*—
Cox, Joseph H., Colaiaco, and Rose.

Rose, Jay, New York, N. Y. Rotor for synchronous electric motors. 2,437,922, Mar. 16.

Rose, Laurence, Washington, D. C. Connecting rod assemblage. 2,437,895, Mar. 16.

Rosing, Theodore F., Whitefish Bay, and E. W. Seeger, Wauwatosa, assignors to Cutler-Hammer, Inc., Milwaukee, Wis. Electromagnetic timing relay. 2,437,756, Mar. 16.

Roth, Bert W., Riverdale, assignor to Trans-Lux Corporation, New York, N. Y. Electric circuit controller. 2,437,790, Mar. 16.

Roth, Jay M., Euclid, and J. A. Lauck, South Euclid, Ohio, assignors, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Pump with unloading bushing. 2,437,791, Mar. 16.

Rouse, Ardie A., Orange, Tex. Magazine razor blade holder. 2,437,862, Mar. 16.

Rufus, Otto B., assignor to The Lathrop-Paulson Company, Chicago, Ill. Can treating device. 2,437,757, Mar. 16.

Rundle, Henry Mc D., Morrestown, N. J., assignor to Radio Corporation of America. Projection device for television apparatus. 2,438,022, Mar. 16.

Russell, George W., assignor of one-half to Philip V. Ames, Los Angeles, Calif. Skiver. 2,437,971, Mar. 16.

Rutledge, Marcus J., Chicago, Ill. Sliding wallpaper base trimmer. 2,437,896, Mar. 16.

Safety Box Toe Company, assignee: *See*—
McMurray, Harry G.

St. Pierre, Eugene, Pawtucket, R. I., assignor to Hemphill Company. Suture. 2,437,841, Mar. 16.

St. Regis Paper Company, assignee: *See*—
Hartman, Carl H.
Yorke, Nelson R.

Salamon, Maks: *See*—
Engel, Erich, and Salamon.

Salem Engineering Company, The, assignee: *See*—
Loux, John H.

Sanders, Elmore J.: *See*—
Earley, Samuel C. and N. B., and Sanders, Skareen, Davies, and Hughes.

Santiago, James J., assignor to Grant Oil Tool Company, Los Angeles, Calif. Safety pressure release. 2,437,836, Mar. 16.

Saretzky, Simon, Brookline, assignor to First Industrial Corporation, Boston, Mass. Voltage regulator. 2,437,837, Mar. 16.

Saulsberry, Jay L., Tucumcari, N. Mex. Darning last. 2,437,758, Mar. 16.

Saur, George E., St. Louis, Mo. Colostomy tube. 2,438,073, Mar. 16.

Savich, Theodore R., and L. A. Goldblatt, New Orleans, La., assignors to the United States of America as represented by the Secretary of Agriculture. Pyrolyzing alpha-pinene to allo-ocimene in liquid phase. 2,437,759, Mar. 16.

Schaefer, Vincent J.: *See*—
Langmuir, Irving, and Schaefer.

Scheibli, James R.: *See*—
Bergsteinsson, Ingolfur, and Scheibli.

Schmidt, Gerrit, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, as trustee, Hartford, Conn. Electrode spacer for electron discharge tubes. 2,437,972, Mar. 16.

Schmitz, Anton W., Schenectady, N. Y., assignor to General Electric Company. Electrical tensioning control system. 2,437,973, Mar. 16.

Schneider, Walter E., assignor to Dexter Folder Company, Pearl River, N. Y. Sheet feeding apparatus. 2,437,792, Mar. 16.

Schulz, Arthur P.: *See*—
Gerhardt, Andrew H., and Schulz.

Schwartz, Frank M., New York, N. Y. Garment article and making same. 2,437,974, Mar. 16.

Schwartzberg, Louis, Chicago, Ill. Device for assembling collapsible egg cartons. 2,438,074, Mar. 16.

Scophony Limited, assignee: *See*—
Adams, Albert E., and Waloff.

Scott, Charles H., Summit, N. J., assignor to The Dorr Company, New York, N. Y. Sediment raking mechanism for a settling tank comprising a central support and a hinged body between the support and the raking mechanism. 2,437,761, Mar. 16.

Scott, Charles H., Summit, N. J., and F. L. Graner, assignors to The Dorr Company, New York, N. Y. Raking classifier. 2,437,760, Mar. 16.

Scott, Franklin D.: *See*—
Ball, Charles O., Swope, and Scott.

Scott, William M., Jr., Bryn Mawr, assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa. Circuit breaker movable contact. 2,437,863, Mar. 16.

Seals, Garlin E., San Antonio, Tex. Fuel pump for internal-combustion engines. 2,437,838, Mar. 16.

Seaman, Charles, Jamaica Estates, N. Y. Sewing machine and attachment therefor for making cross-stitches. 2,437,975, Mar. 16.

Seaman, Charles, Jamaica Estates, N. Y. Hemmed material and making the same. 2,437,976, Mar. 16.

Seaman, Charles, Jamaica Estates, N. Y. Blind-stitched piping and method of producing same. 2,437,977, Mar. 16.

Seaman, Charles, Jamaica Estates, N. Y. Sewing machine. 2,437,978, Mar. 16.

Seaman, Charles, Jamaica Estates, N. Y. Piping and producing same. 2,437,979, Mar. 16.

Sears, Roebuck and Co., assignee: *See*—
Dunville, John G.

Seeger, Edwin W.: *See*—
Rosing, Theodore F., and Seeger.

Seng Company, The, assignee: *See*—
Fox, Martin, and Hassel.

Seymour, Raymond B., and D. T. Mowry, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo. Chlorobenzalacetone copolymer. 2,437,980, Mar. 16.

Shabica, Anthony C., Jr.: *See*—
Wolf, Donald E., and Shabica.

Shakespeare Products Company, assignee: *See*—
Hettinga, Ralph M.

Sheldon, Malcolm H., New York, N. Y. Electrical control system. 2,437,712, Mar. 16.

Shell Development Company, assignee: *See*—
Bergsteinsson, Ingolfur and Scheibli.
Brunner, Eugene M., and Mardock.
Nixon, Alan C., and Yabroff.
Winkler, De Loss E., and Ballard.

Siewert, Edwin C.: *See*—
Riege, Harold, and Siewert.

Silberman, David, New York, N. Y. Zipper manufacturing machinery. 2,437,793, Mar. 16.

Simonin, Louis, Hillsboro, Ill. Hook inserting tool. 2,437,762, Mar. 16.

Sirp, Emil, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for cutting wires and forming and attaching a sleeve thereto. 2,438,023, Mar. 16.

Skareen, Willard C.: *See*—
Earley, Samuel C. and N. B., and Sanders, Skareen, Davies, and Hughes.

Skowron, Edmund A.: *See*—
Woodings, Wilbert H., Skowron, and McComb.

Slaymaker, Frank H., assignor to Stromberg-Carlson Company, Rochester, N. Y. Modulation booster. 2,437,839, Mar. 16.

Smith, Newell R., Bridgeport, Conn. Contact pin and method of making the same. 2,438,075, Mar. 16.

Societe L'Entreprise Industrielle, assignee: *See*—
Montagne, Elisée.

Sonn, Emanuel J., Riverton, N. J. Smoking pipe. 2,437,763, Mar. 16.

Spence, John D., La Crescenta, Calif. Sprinkler control. 2,437,764, Mar. 16.

Squibb, E. R., & Sons, assignee: *See*—
McCormack, Robert B.

Staley, Elmer B., Natrona Heights, Pa. Fire escape. 2,437,864, Mar. 16.

Standard Oil Development Company, assignee: *See*—
Dockendorff, Ralph L.

Stanley, Lester N.: *See*—
Von Glahn, William H., and Stanley.

Stareck, Jesse E., Detroit, Mich., assignor to United Chromium, Incorporated, New York, N. Y. Electrodepositing copper and baths and compositions therefor. 2,437,865, Mar. 16.

Statham, Noel, Greenwich, Conn. Adjustable fastening device. 2,437,765, Mar. 16.

Stelter, Francis C. W., New York, N. Y. Electrical burglar alarm system. 2,438,076, Mar. 16.

Stephan, John T., R. A. Jarvi, and J. R. Ash, assignors, by mesne assignments, to Monsanto Chemical Company, Seattle, Wash. Phenolic resin adhesive. 2,437,981, Mar. 16.

Sternberg, Robert S.: *See*—
Dowell, John H., Sternberg, and Curson.

Stevenson, Elmer C., Takoma Park, and J. W. Mitchell, Silver Spring, Md., assignors to United States of America, as represented by the Secretary of Agriculture. Method of culturing fungi. 2,437,766, Mar. 16.

Steward, Colby W., Kenmore, and M. R. Rivenburgh, Williamsville, N. Y., assignors, by mesne assignments, to Cornell Research Foundation, Inc. Method of multi-arc welding. 2,437,840, Mar. 16.

Stoltenberg, Glenn R., New York, N. Y., and A. P. Colaiaco, Wilkinsburg, Pa., assignors, by mesne assignments, to the United States of America, as represented by the United States Atomic Energy Commission. Pump. 2,437,897, Mar. 16.

Stransky, Joseph, Chilton, Wis. Milk bottle utility device. 2,438,024, Mar. 16.

Stromberg-Carlson Company, assignee: *See*—
Edgarton, Frank.
Slaymaker, Frank H.

Sullivan, David J.: *See*—
Plass, Curtis E., and Sullivan.

Summers, J. Mills, Englewood, N. J., assignor to Camloc Fastener Corporation, New York, N. Y. Lock nut. 2,438,077, Mar. 16.

Sutphen, Henry R., New York, N. Y. Collapsible golf cart. 2,438,078, Mar. 16.

Swanson, Keith N., Hollywood, Calif., assignor to Bell & Howell Company, Chicago, Ill. Auto-focus photographic enlarger of the folded-light-path type. 2,437,898, Mar. 16.

Sweet, Carroll V., Madison, Wis., dedicated to the free use of the people in the territory of the United States. Panel construction. 2,438,079, Mar. 16.

Swope, Gerald L.: *See*—
Ball, Charles O., Swope, and Scott.

Taliaferro, William R., Edgewood, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Switchboard. 2,438,025, Mar. 16.

Talon, Inc., assignee: *See*—
Firing, Osborne, and Gibbons.

Tandler, William S., and D. S. Walker, assignors, by mesne assignments, to Reconstruction Finance Corporation, New York, N. Y. Photoelectric control mechanism for flame-cutting devices. 2,438,098, Mar. 16.

Tannenberg, Joseph, Batavia, N. Y. Apparatus for embedding simultaneously a plurality of tissues for histological purposes. 2,437,713, Mar. 16.

Tanner, Robert R., Detroit, Mich., assignor to The Patents Corporation. Treated steel sheet and process. 2,438,013, Mar. 16.

Tashjian, David R.: *See*—
Kinn, Theodore P., and Tashjian.

Texas Company, The, assignee: *See*—
Atwell, Harold V.

Thomas, Laurence H.: *See*—
Kuhn, Frank and Thomas.

Thomason, Walter A., Jr., U. S. Army, Charlotte, N. C. Trouser and suspender combination. 2,437,714, Mar. 16.

Thompson Brothers, assignee: *See*—
Thompson, Donald W.

Thompson, Donald W., Windham, N. Y., assignor to Thompson Brothers. Sleigh. 2,437,767, Mar. 16.

Thor Corporation, assignee: *See*—
Gerhardt, Andrew H., and Schulz.

Thorp, Clark E., Chicago, and L. E. Anderson, Chicago Heights, Ill., assignors to J. B. Hawley, deceased, Babson Park, Fla., D. M. Hawley, and E. Donnelly, administrators, assignors to Hawley Products Company. Consistency control. 2,437,715, Mar. 16.

Tide Water Associated Oil Company, assignee: *See*—
Lyons, Daniel J., Lazar, and Ingraham.

Tiefenthal, Joseph, West Babylon, N. Y. Hand-operated loom. 2,437,716, Mar. 16.

Tietsema, Oleva I., administratrix, assignee: *See*—
Tietsema, Tim.

Tietsema, Tim, Oviedo, Fla., O. I. Tietsema, administratrix of said T. Tietsema; assignor of one-half to O. I. Tietsema and one-half to O. M. Packard. Hydraulic drum jack and carrier. 2,437,982, Mar. 16.

Timberlake, Journey F., Charlottesville, Va. Method and apparatus for making beverages. 2,437,768, Mar. 16.

Times Facsimile Corporation, assignee: *See*—
Cooley, Austin G.

Trans-Lux Corporation, assignee: *See*—
Roth, Bert W.

Traylor, John B., Denver, Colo. Mechanical pencil with step-by-step feed. 2,437,769, Mar. 16.

Trobeck, Karl G.: *See*—
Bergstrom, Hilding O. V., Heijmer, and Trobeck.

Twin Disc Clutch Company, assignee: *See*—
Adamson, Nicholas F.

Uhler, Frank G., Alexandria, Va. Mortar and cement compositions. 2,437,842, Mar. 16.

Union Steel Products Company, assignee: *See*—
Bitney, Dewey H.

United Chromium, Incorporated, assignee: *See*—
Stareck, Jesse E.

United Shoe Machinery Corporation, assignee: *See*—
Jorgensen, Bernhardt.
Keali, Frank B.
Oliver, John R.

United States Atomic Energy Commission, United States of America, as represented by the, assignee: *See*—
Cox, Joseph H., Colaiaco, and Rose.
Stoltenberg, Glenn R., and Colaiaco.

Universal Camera Corporation, assignee: *See*—
Falkoff, Adin D.

Usselman, George L., Port Jefferson, N. Y., assignor to Radio Corporation of America. Wave length modulation. 2,437,923, Mar. 16.

Vance, Robert M., Cleveland, Ohio, and A. G. Horney, Plattsburg, assignors to Air Reduction Company, Incorporated, New York, N. Y. Method for the preparation of 1-chloro-3-bromo-2-(2-chloroethoxy)-propane and the compound prepared. 2,437,866, Mar. 16.

Van Meeteren, Donald, Sheldon, Iowa. Poultry feeder. 2,438,080, Mar. 16.

Van Ness, Henry E., Elmira, N. Y. Resilient bushing. 2,437,843, Mar. 16.

Van Olden, Jacques T., Durban Natal, Union of South Africa. Combination implement. 2,437,770, Mar. 16.

Varmee, Ernest H., assignor to Rane Tool Company, Inc., Jamestown, N. Y. Metalworking machine. 2,437,794, Mar. 16.

Verbanc, John J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Organic isocyanates. 2,437,867, Mar. 16.

Vibro-Plus Corporation, assignee: *See*—
Wenander, Harald S.

Vickers, Robert D.: *See*—
Rogers, Thomas H., Jr., and Vickers.

Von Glahn, William H., Loudonville, and L. N. Stanley, Delmar, assignors to General Aniline & Film Corporation, New York, N. Y. Diazotype layers containing resorcinol monoesters. 2,437,868, Mar. 16.

Wahlberg, Nils E., Chicago, Ill., and G. V. Hedstrom, Kenosha, assignors to Nash-Kelvinator Corporation, Kenosha, Wis. Wheel suspension. 2,437,844, Mar. 16.

Walt, Clyde F., assignor to Palace Corporation, Flint, Mich. Stack. 2,437,771, Mar. 16.

Waldorf Paper Products Company, assignee: *See*—
Guyer, Reynolds.

Walkabout Company, The, assignee: *See*—
Ames, Butler.

Walker, David S.: *See*—
Tandler, William S., and Walker.

Wall, Alexander C., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Electrical harness tester circuit. 2,437,772, Mar. 16.

Wallace, James M., Jr.: *See*—
Cox, Fred W., and Wallace.

Walling, Cheves, Montclair, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Processes of making organic phosphines. 2,437,795, Mar. 16.

Walling, Cheves, Montclair, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Making organic phosphorus halides. 2,437,796, Mar. 16.

Walling, Cheves, Montclair, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. New metal salts of organic phosphines and making the same. 2,437,797, Mar. 16.

Walling, Cheves, Montclair, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. New secondary organic phosphorus halides and making the same. 2,437,798, Mar. 16.

Walls, Leslie P., Teddington, assignor to The Imperial Trust for the Encouragement of Scientific and Industrial Research, Westminster, England. Phenanthridine derivatives. 2,437,869, Mar. 16.

Waloff, Dmitri: *See*—
Adams, Albert E., and Waloff.
War, United States of America, as represented by the Secretary of: *See*—
Cohn, Seymour B.
Hickman, Clarence N.
Kusch, Polykarp.
Nordsieck, Arnold T.
Rambo, William R.
Watson, Thomas J., New Canaan, Conn., H. S. Beattie, East Orange, and F. L. Fuller, deceased, West Orange, by S. B. Harrison, East Orange, N. J., and J. G. Phillips, New York, executors, assignors to International Business Machines Corporation, New York, N. Y. Record controlled accounting machine. 2,438,081, Mar. 16.
Welty, Albert B., Moline, Ill., assignor to International Harvester Company. Suction-type grain dryer and cooler. 2,437,899, Mar. 16.
Wenander, Harald S., Riksby, Stockholm, Sweden, assignor to Vibro-Plus Corporation, New York, N. Y. Vibrator. 2,437,983, Mar. 16.
Werner, Le Roy L., Washington, D. C. Vibration damping mount. 2,437,717, Mar. 16.
Wester, Edwin J., Rochester, and E. R. Ziegler, Spencerport, assignor to Ritter Company, Inc., Rochester, N. Y. Reeling device awitch. 2,438,082, Mar. 16.
Western Electric Company, Incorporated, assignee: *See*—
Beyer, Charles M.
Edwards, Karl C., and Jones.
Sirp, Emil.
Western Frozen Foods Co., assignee: *See*—
Moulthrop, Orville L.
Westinghouse Electric Corporation, assignee: *See*—
Askey, John S.
Baston, Cyril E.
Blackburn, Wayne E.
Dana, Charles A.
Derr, Willard A.
Garbuny, Max and Pakala.
Hanna, Raymond P.
Hoop, John G.
King, George E.
Kinn, Theodore P., and Tashjian.
Laidig, Alfred H.
Lynn, Clarence.
Murcek, Slavo J.
Rambo, Rawdon E., and Pastoret.
Taliaferro, William R.
Wrathall, Jay R.
Young, Douglass A., Lunas, and Lenehan.
Weston, Arthur W., Waukegan, assignor to Abbott Laboratories, North Chicago, Ill. Preparation of gamma-dibutylaminopropanol. 2,437,984, Mar. 16.
Weyerhaeuser Timber Company, assignee: *See*—
Anway, Herman W.
Whaley, Thomas H., Bartlesville, Okla., assignor to Phillips Petroleum Company. Process for the production of diolefins. 2,437,773, Mar. 16.
Wheeler, William R.: *See*—
Cislak, Francis E., and Wheeler.
Whitehouse, Irving P., South Euclid, assignor to Republic Steel Corporation, Cleveland, Ohio. Roof structure. 2,438,099, Mar. 16.
Whitner, Thomas C., Elizabeth, N. J., assignor to Chemical Laboratories, Inc. Bleaching cellulose textile fibers. 2,438,100, Mar. 16.
Whitney, Paul V., Columbus, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company. Conveyor. 2,438,083, Mar. 16.
Whitson, Mercer L., Norfolk, and H. F. Collette, Portsmouth, Va. Expanding mandrel. 2,437,718, Mar. 16.
Wildhaber, Ernest, Brighton, assignor to Gleason Works, Rochester, N. Y. Producing face clutches. 2,437,902, Mar. 16.
Willcox, Frederick P., Arlington, Va. Direct reading photoelectric exposure meter. 2,437,774, Mar. 16.
Williams, Thomas J., Buenos Aires, Argentina. Treating sulfidic tungsten or concentrates. 2,437,870, Mar. 16.
Williams, William E., Pasadena, Calif. Optical micrometer for measuring the thickness of transparent or translucent bodies. 2,437,775, Mar. 16.
Williams, William W.: *See*—
Lauclus, Joseph F., and Williams.
Wilson, Golder P., Alton, Ill., assignor to Olin Industries, Inc. Electric induction furnace for continuously heating metal strip. 2,437,776, Mar. 16.
Wilson, William H., assignee, et al.: *See*—
Casper, Ervin J.
Wingfoot Corporation, assignee: *See*—
Carson, Clarence M.
Clifford, Albert M., and Lichty.
Cox, Fred W., and Wallace.
Pace, Henry A.
Rogers, Thomas H., Jr., and Vickers.
Winkeljohn, Thomas H., Wabash, Ind., assignor to The General Tire & Rubber Company, Akron, Ohio. Liquid seal. 2,437,900, Mar. 16.
Winkeljohn, Thomas H., Wabash, Ind., assignor to The General Tire & Rubber Company, Akron, Ohio. Sealing ring. 2,437,901, Mar. 16.
Winkler, De Loss E., Berkeley, and S. A. Ballard, Oakland, assignors to Shell Development Company, San Francisco, Calif. Production of thioketones. 2,437,985, Mar. 16.
Wolf, Donald E., and A. C. Shabica, Jr., Rahway, N. J., assignors to Merck & Co., Inc. A benzoic acid di-cis-2-(4'-carboxybutyl)-3:4-diamino-tetrahydrothiophene sulfate complex. 2,437,719, Mar. 16.
Wolfenden, Harry C., Attleboro, Mass. Spacer and protector for yarn-holding devices. 2,437,987, Mar. 16.
Wood, Alfred R., Portland, Maine. Magnetic coupling. 2,437,871, Mar. 16.
Wood, Allison A., Lanett, Ala. Yarn smoothing apparatus and method. 2,438,084, Mar. 16.
Woodbury, Stephen E., assignor to Reid Brothers Company, Inc., Beverly, Mass. Cross-feed mechanism. 2,437,986, Mar. 16.
Woodings-Verona Tool Works, assignee: *See*—
Woodings, Wilbert H., Skowron, and McComb.
Woodings, Wilbert H., Oakmont, E. A. Skowron, Pittsburgh, Pa., and R. J. McComb, Chicago, Ill., assignors to Woodings-Verona Tool Works, Verona, Pa. Rail anchor. 2,438,085, Mar. 16.
Wooley, Ernest G., Wichita, Kans. Side file and jointer for spring and swage tooth saws. 2,438,086, Mar. 16.
Wrathall, Jay R., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Dynamometer. 2,438,026, Mar. 16.
Wright, Arthur, Forest Hills, assignor to Keller-Dorian Colorfilm Corporation, New York, N. Y. Light-sensitive element for color photography. 2,437,924, Mar. 16.
Wright-Batchelder Corporation, assignee: *See*—
Phinney, William E.
Wright, Richard H., Cleveland, Ohio. Cord equalizer for Venetian blinds. 2,438,101, Mar. 16.
Wurdeman, Edward, Minneapolis, Minn. Mop wringer with pressure rollers and carrying bail. 2,438,087, Mar. 16.
Wyeth, Ralph S., Newark, Ohio. Windshield cover. 2,437,845, Mar. 16.
Wyss, Alphons, Bottmingen, near Basel, Switzerland. Device for discharging hollow glassware blown in a finishing mold. 2,438,088, Mar. 16.
Yarbroff, David L.: *See*—
Nixon, Alan C., and Yabroff.
Yelda, John O., Herculaneum, Mo., assignor, by mesne assignments, to Missouri Automatic Control Corporation. Follow-up control. 2,437,846, Mar. 16.
Yorke, Nelson R., Trenton, N. J., assignor to St. Regis Paper Company, New York, N. Y. Craze-resistant synthetic resin coated product and process of making it. 2,437,799, Mar. 16.
Young, Douglass A., East Orange, L. J. Lunas, Cedar Grove, and B. E. Lenehan, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical measuring instrument. 2,438,027, Mar. 16.
Zajc, Karol, New York, N. Y. Door open signal system. 2,437,777, Mar. 16.
Zelse, Alfred A., Minneapolis, Minn. Precision locating tool. 2,437,847, Mar. 16.
Zenith Radio Corporation, assignee: *See*—
Gustafson, Gilbert E.
Zidell, William I., assignee: *See*—
Laskin, Louis J.
Ziegler, Eugene R.: *See*—
Wester, Edwin J., and Ziegler.
Züllig, Otto, Zurich, Switzerland. Sports vehicle. 2,437,903, Mar. 16.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 16TH DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Anchor. W. S. McLeish. Re. 22,988, Mar. 16.
Calculating machine. A. J. Fettig. Re. 22,986, Mar. 16.
Control apparatus. M. E. Chandler. Re. 22,984, Mar. 16.
Control for gaseous fuel burners, Safety. W. F. Jackson and T. H. Jeffers. Re. 22,987, Mar. 16.
Lubricant composition. A. T. Collins. Re. 22,985, Mar. 16.

LIST OF PLANT INVENTIONS

Chrysanthemum plant. E. Prushek. 790, Mar. 16.
Rose plant. E. S. Boerner. 789, Mar. 16.
Rose plant. H. C. Swim. 791, Mar. 16.
Rose plant. H. C. Swim. 792, Mar. 16.

LIST OF DESIGN INVENTIONS

Ashtray and light, Combination. G. D. Amato. 148,971, Mar. 16.
Base, Lamp. W. E. Wagner. 149,033, Mar. 16.
Beater or the like, Egg. W. F. Owens. 149,011, Mar. 16.
Box or the like, Jewel. H. Jacobson. 148,991–2, Mar. 16.
Brooch or similar article. A. Katz. 148,994–5, Mar. 16.
Brooch or similar article. A. Katz. 148,997, Mar. 16.
Brooch or similar article. A. Katz. 148,999, Mar. 16.
Brooch or similar article. A. Philippe. 149,015–17, Mar. 16.
Brooch or similar article. A. Philippe. 149,020, Mar. 16.
Brooch or similar article, Separable. A. Katz. 148,998, Mar. 16.
Buckle, Belt. H. J. Shepherd. 149,028, Mar. 16.
Camera. J. Briskin and J. J. Golick. 148,975, Mar. 16.
Camera. J. Briskin and J. J. Golick. 148,977, Mar. 16.
Camera. G. Fassin. 148,983, Mar. 16.
Candlestick. M. Vozzella. 149,032, Mar. 16.
Case, Clock. J. F. Punzak and A. Levy. 149,021, Mar. 16.
Casing, Lamp. C. M. Cruze. 148,982, Mar. 16.
Clasp. H. C. Rood. 149,023, Mar. 16.
Clock. B. Lerman. 149,003–6, Mar. 16.
Dispenser, Salt and pepper. F. P. Hamrah. 148,988, Mar. 16.
Dress. B. Hurwitz. 148,990, Mar. 16.
Earring or similar article. A. Katz. 149,000, Mar. 16.
Earring or similar article. A. Philippe. 149,014, Mar. 16.
Earring or similar article. A. Philippe. 149,018–19, Mar. 16.
Fixture, Electric lighting. M. W. Schwartz and M. J. Marks. 149,026–7, Mar. 16.
Fork, Table. J. G. Fenety. 148,984, Mar. 16.
Frame, Ditching machine. G. A. Vaughn. 149,031, Mar. 16.
Frame, Spectacle. G. Bolle. 148,974, Mar. 16.
Frame, Spectacle. G. Lewis. 149,007, Mar. 16.
Frame, Trenching machine. G. A. Vaughn. 149,030, Mar. 16.
Guard, Automobile radiator. L. Bustin. 148,978–80, Mar. 16.
Hairpin or similar article. L. T. Sawyer. 149,025, Mar. 16.
Hanger, Coat. J. M. Cless. 148,981, Mar. 16.
Hoist, Gasoline. C. F. Peterson. 149,013, Mar. 16.
Kit, Toilet. C. Sims. 149,029, Mar. 16.
Kite. S. Lang. 149,001–2, Mar. 16.
Lighting fixture, Electric. M. J. Marks and M. W. Schwartz. 149,009, Mar. 16.
Necklace or similar article. A. Katz. 148,996, Mar. 16.
Negligee or similar article. A. Roth. 149,024, Mar. 16.
Penholder. B. Blecher. 148,973, Mar. 16.
Pendant or similar article. K. Harrington. 148,989, Mar. 16.
Projector, Movie. J. Briskin and C. Peto. 148,976, Mar. 16.
Radio and lamp, Combination. J. Robinson, Jr. 149,022, Mar. 16.
Shade or the like, Lamp. L. E. Lindenbaum. 149,008, Mar. 16.
Stand, Calendar. B. Blecher. 148,972, Mar. 16.
Toy figure. H. A. Nozewski. 149,010, Mar. 16.
Tricycle and trailer, Combined. R. E. Parker. 149,012, Mar. 16.
Typewriter and desk support therefor, Combined. F. S. Grover. 148,986–7, Mar. 16.
Typewriter and support therefor, Combined. F. S. Grover and K. D. Maier. 148,985, Mar. 16.
Watch standard. R. W. Johnston and J. C. Roberts. 148,993, Mar. 16.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 16TH DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Accessory drive control. C. H. Havill. 2,437,954, Mar. 16.
Accounting machine, Record controlled. T. J. Watson, H. S. Beattie, and F. L. Fuller. 2,438,081, Mar. 16.
Acid esters and their preparation, Aspartic. K. L. Lynch. 2,438,091, Mar. 16.
Adherence of aluminum coatings, Improving the. K. Oganowski. 2,437,919, Mar. 16.
Adhesive, Phenolic resin. J. T. Stephan, R. A. Jarvi, and J. R. Ash. 2,437,981, Mar. 16.
Aerosols, Method and apparatus for producing. I. Langmuir and V. J. Schaefer. 2,437,963, Mar. 16.
Air conditioning apparatus. T. W. Carraway. 2,437,936, Mar. 16.
Aircraft. J. W. MacFarland, Jr. 2,437,700, Mar. 16.
Aircraft having high-lift wing channels. W. R. Custer. 2,437,684, Mar. 16.
Aircraft provided with fixed and rotary wings for convertible types of flight. S. D. Robins. 2,437,789, Mar. 16.
Air supply device for respirators. D. N. Kincheloe. 2,438,058, Mar. 16.
Alkylation of aromatic hydrocarbons with sulfuric acid catalyst avoiding sulfonation of product. D. J. Lyons, A. Lazar, and L. L. Ingraham. 2,437,828, Mar. 16.
Alphabet and numeral printer, Perforated card controlled. R. E. Page and H. S. Beattie. 2,438,071, Mar. 16.
Alternating current or like motor with gyratory armature. A. E. Adams and D. Waloff. 2,437,904, Mar. 16.
Anchor, Rail. W. H. Woodings, E. A. Skowron, and R. J. McComb. 2,438,085, Mar. 16.
Apparatus for applying insulation. J. C. Moore. 2,437,831, Mar. 16.
Apparatus for cutting wires and forming and attaching a sleeve thereto. E. Sirp. 2,438,023, Mar. 16.
Apparatus for embedding simultaneously a plurality of tissues for histological purposes. J. Tannenberg. 2,437,713, Mar. 16.
Apparatus for examining living tissue. W. F. Greenwald. 2,437,916, Mar. 16.
Apparatus for preparing livestock feed. C. Hoch. 2,437,917, Mar. 16.
Apparatus for propelling and increasing the lift of airplanes. C. B. Ferrel. 2,437,732, Mar. 16.
Apparatus for regulating water streams and sand clearing devices. E. Montagné. 2,438,103, Mar. 16.
Apparatus for X-ray photographing tubular steel castings. E. G. Forssell. 2,437,688, Mar. 16.
Assembling pistons. F. F. Kishline. 2,437,824, Mar. 16.
Auto-focus photographic enlarger of the folded-light-path type. K. N. Swanson. 2,437,898, Mar. 16.
Automatic depth control for groundworking implements. J. M. Chambers and E. V. Bunting. 2,437,875, Mar. 16.
Bag: *See*—
  Heat-sealed valve bag.
Bark, Treating. H. W. Anway. 2,437,672, Mar. 16.
Bed, Invalid. E. A. Miller. 2,438,093, Mar. 16.
Belt buckle. E. M. Easter. 2,437,729, Mar. 16.
Benzoic acid di-cis-2-(4'-carboxybutyl)-3:4-diamino-tetrahydrothiophene sulfate complex. D. E. Wolf and A. C. Shabica, Jr. 2,437,719, Mar. 16.
Beta-cyclohexylaminoethyl benzhydryl ether and salts thereof. G. Rieveschl, Jr. 2,437,711, Mar. 16.
Beta-halogenated unsaturated nitriles. A. M. Clifford and J. G. Lichty. 2,437,998, Mar. 16.
Beverages, Method and apparatus for making. J. F. Timberlake. 2,437,768, Mar. 16.
Blanking apparatus. C. M. Beyer. 2,437,994, Mar. 16.
Blending powder grains. C. N. Hickman. 2,437,694, Mar. 16.
Blind-stitched piping and producing same. C. Seaman. 2,437,977, Mar. 16.
Bookmark. W. J. Graham. 2,438,048, Mar. 16.
Bottle closure. L. M. Mallick. 2,437,882, Mar. 16.
Bottle decapping and pouring mechanism for vending machines. G. H. Hansen, Jr. 2,438,050, Mar. 16.
Bottle holder. H. C. Andersen. 2,437,800, Mar. 16.
Box: *See*—
  Mail box.
Brace for freight cars, Lading. J. P. Murphy, Jr. 2,437,832, Mar. 16.
Brake having unitary actuating means for clamping and bending sheet metal, Bending. P. Kilham. 2,438,057, Mar. 16.
Brush, Shunted. C. Lynn. 2,438,015, Mar. 16.
Bushing for vapor electric devices, Lead-in. M. Garbuny and W. B. Pakala. 2,438,004, Mar. 16.
Bushing, Resilient. H. E. Van Ness. 2,437,843, Mar. 16.
Camera tripod control, Panoramic. V. A. Parker. 2,437,787, Mar. 16.
Can treating device. O. B. Rufus. 2,437,757, Mar. 16.
Cane, Trick walking. B. V. Lukowitz. 2,438,014, Mar. 16.
Car door implement, Grain. C. Flagstad. 2,437,780, Mar. 16.
Carburetor attachment for conserving fuel. B. Bennett. 2,437,992, Mar. 16.
Carriage for vehicles, Wheeled. H. W. Jonkhoff. 2,437,823, Mar. 16.
Carrier: *See*—
  Emergency tire carrier.
Carrier for marine craft hulls and the like. J. A. Good. 2,437,736, Mar. 16.
Cart: *See*—
  Collapsible golf cart. Dump cart.
Carton, Collapsible. H. Riege and E. C. Siewert. 2,437,835, Mar. 16.
Case: *See*—
  Thread case.
Caster. E. J. Casper. 2,437,907, Mar. 16.
Catalytic conversions, Effecting. H. V. Atwell. 2,438,029, Mar. 16.
Catalytic oxidation of substituted pyridine bases. F. E. Cislak and W. R. Wheeler. 2,437,938, Mar. 16.
Cathode support structure. P. Kusch. 2,437,880, Mar. 16.
Cellulose textile fibers, Bleaching. T. C. Whitner. 2,438,100, Mar. 16.
Chain structure, Decorative. A. Blumstein. 2,437,932, Mar. 16.
Chlorobenzalacetone copolymer. R. B. Seymour and D. T. Mowry. 2,437,980, Mar. 16.
Circuit: *See*—
  Voltage control circuit.
Circuit breaker. H. P. Luhn. 2,438,067, Mar. 16.
Circuit breaker movable contact. W. M. Scott, Jr. 2,437,863, Mar. 16.
Clarification of fermented liquors. R. T. K. Cornwell and D. S. Porter. 2,437,939, Mar. 16.
Clip: *See*—
  Poultry blinder clip. Tenter machine clip.
Closure. J. G. Brink. 2,437,934, Mar. 16.
Closure. K. C. Edwards and D. D. Jones. 2,438,003, Mar. 16.
Clutch: *See*—
  Fluid operated clutch.
Clutch operating mechanism. E. G. Halby. 2,437,737, Mar. 16.
Coin controlled lock. G. Hofmann. 2,437,742, Mar. 16.
Coin counting machine. W. A. Barganz and E. W. Quirk. 2,437,721, Mar. 16.
Collapsible golf cart. H. R. Sutphen. 2,438,078, Mar. 16.
Color stabilization of vinyl halide resins. F. W. Cox and J. M. Wallace, Jr. 2,438,102, Mar. 16.
Colostomy tube. G. E. Saur. 2,438,073, Mar. 16.
Combined drill and deburring tool. D. Jones. 2,437,822, Mar. 16.
Communication system employing pulse code modulation. J. R. Pierce. 2,437,707, Mar. 16.
Compass, Magnetic. E. W. Hart. 2,437,692, Mar. 16.
Compositions, Mortar and cement. F. G. Uhler. 2,437,842, Mar. 16.
Connecting rod assemblage. L. Rose. 2,437,895, Mar. 16.
Consistency control. C. E. Thorp and L. E. Anderson. 2,437,715, Mar. 16.
Contact pin and making the same. N. R. Smith. 2,438,075, Mar. 16.
Container: *See*—
  Safety container.
Container. C. O. Ball, G. L. Swope, and F. D. Scott. 2,437,926, Mar. 16.
Container safety lock. J. W. Armbruster. 2,437,674, Mar. 16.
Containers, Method and apparatus for packing. R. Guyer. 2,437,952, Mar. 16.
Control apparatus. C. E. Baston. 2,437,991, Mar. 16.
Control for machine tools. H. M. Griffin. 2,437,813, Mar. 16.
Control system. T. P. Kinn and D. R. Tashjian. 2,438,009, Mar. 16.
Control system. S. J. Murcek. 2,438,017, Mar. 16.
Conveyer for transporting pottery molds. W. J. Miller and A. J. Reek. 2,437,702, Mar. 16.
Conveyor. P. V. Whitney. 2,438,083, Mar. 16.

Conveyor slack take-up mechanism. S. M. Mercier. 2,438,068, Mar. 16.
Cooling of fluids. R. C. Godfrey. 2,437,851, Mar. 16.
Copolymers of allyl esters of polybasic acid with saturated monohydric alcohol esters of unsaturated polycarboxylic acid. E. L. Kropa. 2,437,962, Mar. 16.
Copper complexes of dianisidine disazo dyes. J. F. Laucius and W. W. Williams. 2,437,699, Mar. 16.
Cord equalizer for Venetian blinds. R. H. Wright. 2,438,101, Mar. 16.
Cot, Folding. R. M. Lackey. 2,438,059, Mar. 16.
Coupling: *See*—
  Electrical instrument coupling. Flexible coupling. Magnetic coupling.
Cover: *See*—
  Windshield cover.
Cross-feed mechanism. S. E. Woodbury. 2,437,986, Mar. 16.
Crossing structure, Cast rail. C. H. Nordberg. 2,438,070, Mar. 16.
Crusher, Pedestal type gyratory. O. C. Gruender. 2,438,049, Mar. 16.
Crushing roll apparatus for reducing to powder materials packaged in tablet form. F. A. Lobley and W. E. Lowell. 2,437,881, Mar. 16.
Cultivator and furrow former, Hand garden. A. M. Chilcote. 2,437,805, Mar. 16.
Culturing fungi. E. C. Stevenson and J. W. Mitchell. 2,437,766, Mar. 16.
Cup, Nonspillable. L. J. Laskin. 2,437,784, Mar. 16.
Current-generating gear for pocket electric lamps. G. Bardin. 2,437,675, Mar. 16.
Current mineral concentrator, Vertical. J. C. Anderson. 2,437,671, Mar. 16.
Cyanoalkyl esthers of polyhydric alcohols. H. A. Bruson. 2,437,905, Mar. 16.
Cyanoethylation of carbonylic compounds. H. A. Bruson and W. D. Niederhauser. 2,437,906, Mar. 16.
Deformable switch. N. Paul. 2,437,969, Mar. 16.
Device for assembling collapsible egg cartons. L. Schwartzberg. 2,438,074, Mar. 16.
Device for discharging hollow glassware blown in a finishing mold. A. Wyss. 2,438,088, Mar. 16.
Dextrose syrups. J. M. Brown, W. A. Bemis, and F. A. Monroe, Jr. 2,438,033, Mar. 16.
Dial assembly, Control. A. H. Gerhardt and A. P. Schulz. 2,438,045, Mar. 16.
Dialkoxy propionitriles. A. M. Clifford and J. G. Lichty. 2,438,090, Mar. 16.
Diazotype layers containing resorcinol monoesters. W. H. von Glahn and L. N. Stanley. 2,437,868, Mar. 16.
Direct reading photoelectric exposure meter. F. P. Willcox. 2,437,774, Mar. 16.
Dobby jack and the harness frame of a loom, Connecting the. C. E. Harris. 2,437,739, Mar. 16.
Dryer and cooler, Suction-type grain. A. B. Welty. 2,437,899, Mar. 16.
Dump cart. J. W. Orendorff. 2,437,890, Mar. 16.
Dynamo electric machine. J. S. Askey. 2,437,990, Mar. 16.
Dynamometer. J. R. Wrathall. 2,438,026, Mar. 16.
Electric circuit controller. B. W. Roth. 2,437,790, Mar. 16.
Electric cord. G. E. Gustafson. 2,438,006, Mar. 16.
Electric induction furnace for continuously heating metal strip. G. P. Wilson. 2,437,776, Mar. 16.
Electric motor control system. G. E. King. 2,438,010, Mar. 16.
Electrical burglar alarm system. F. C. W. Stelter. 2,438,076, Mar. 16.
Electrical control system. M. H. Sheldon. 2,437,712, Mar. 16.
Electrical harness tester circuit. A. C. Wall. 2,437,772, Mar. 16.
Electrical instrument coupling. G. J. Mucher. 2,437,785, Mar. 16.
Electrical measuring instrument. D. A. Young, L. J. Lunas, and B. E. Lenehan. 2,438,027, Mar. 16.
Electrical probe. L. Kalom. 2,437,697, Mar. 16.
Electrical tensioning control system. A. W. Schmitz. 2,437,973, Mar. 16.
Electrical units, such as Commutators, Making. G. A. Giannuzzi and K. J. Miller. 2,438,046, Mar. 16.
Electrical wall outlet. M. S. Adler. 2,437,802, Mar. 16.
Electrically heated tool. F. Kuhn and L. H. Thomas. 2,437,747, Mar. 16.
Electrode spacer for electron discharge tubes. G. Schmidt. 2,437,972, Mar. 16.
Electrodepositing copper and baths and compositions therefor. J. E. Stareck. 2,437,865, Mar. 16.
Electromagnetic operator. W. A. Ray. 2,437,893, Mar. 16.
Electromagnetic timing relay. T. F. Rosing and E. W. Seeger. 2,437,756, Mar. 16.
Electron discharge tube with partially coated grid. E. G. Dorgelo. 2,437,941, Mar. 16.
Elevator switch. F. Petrullo. 2,438,094, Mar. 16.
Emergency tire carrier. R. E. Folden. 2,437,811, Mar. 16.
End thrust type bar action for typewriting machines. C. W. Brumhill and A. Pateman. 2,437,804, Mar. 16.
Engine governor. M. Mallory. 2,437,883, Mar. 16.
Ethylene-polyhaloethylene reaction products. J. R. Roland. 2,438,021, Mar. 16.
Expanding mandrel. M. L. Whitson and H. P. Collette. 2,437,718, Mar. 16.
Extrusion of artificial filaments, films and the like and apparatus therefor, Melt. H. Dreyfus and W. Pool. 2,437,687, Mar. 16.
Extrusion of artificial materials, Method and apparatus for the melt. R. W. Moncrieff and W. Pool. 2,437,704, Mar. 16.
Extrusion of artificial materials, Process and apparatus for the melt. H. Dreyfus. 2,437,685, Mar. 16.
Extrusion of fused artificial materials. H. Dreyfus. 2,437,686, Mar. 16.
Extrusion of fused artificial materials, Process and apparatus for the. R. W. Moncrieff. 2,437,703, Mar. 16.
Face clutches, Producing. E. Wildhaber. 2,437,902, Mar. 16.
Fastener construction. T. Freesz. 2,438,044, Mar. 16.
Fastener inserting machine. F. B. Keall. 2,437,746, Mar. 16.
Fastener studs, Locking. R. W. Allen. 2,438,028, Mar. 16.
Fastening device, Adjustable. N. Statham. 2,437,765, Mar. 16.
Feeder: *See*—
  Poultry feeder.
Fender structure. J. T. Hughes. 2,437,960, Mar. 16.
File and jointer for spring and swage tooth saws, Side. E. G. Wooley. 2,438,086, Mar. 16.
Finger tip moistener for baseball pitchers. M. H. Chapman, Jr. 2,438,037, Mar. 16.
Finish remover composition. P. E. Marling. 2,437,964, Mar. 16.
Fire escape. E. B. Staley. 2,437,864, Mar. 16.
Fish lure. J. I. Bell. 2,437,803, Mar. 16.
Fixture, Valve stem facing. V. R. Becker. 2,437,927, Mar. 16.
Flexible coupling. S. D. Pool. 2,437,891, Mar. 16.
Floor surfacing machine. W. E. Holt. 2,437,958, Mar. 16.
Fluid operated clutch. N. F. Adamson. 2,437,670, Mar. 16.
Fluorination of acyclic olefinic compounds. A. F. Benning and J. D. Park. 2,437,993, Mar. 16.
Follow-up control. S. Godet. 2,437,951, Mar. 16.
Follow-up control. J. O. Yelda. 2,437,846, Mar. 16.
Fresh green vegetables, Preparing. O. L. Moulthrop. 2,437,859, Mar. 16.
Frozen grapefruit, Stabilization of. J. T. R. Nickerson. 2,437,752, Mar. 16.
Fuel pressure ignition control for burner systems. W. A. Ray. 2,437,894, Mar. 16.
Fuel pump for internal-combustion engines. G. E. Seals. 2,437,838, Mar. 16.
Fumaric nitrile, Preparing. H. A. Pace. 2,438,019, Mar. 16.
Gage: *See*—
  Multiple snap gage.
Game apparatus. M. F. Heuser. 2,437,819, Mar. 16.
Garment. W. W. Artzt. 2,437,988, Mar. 16.
Garment and making the same. W. W. Artzt and E. Lesavoy. 2,437,989, Mar. 16.
Garment article and making same. F. M. Schwartz. 2,437,974, Mar. 16.
Garment, Lady's. A. Licht. 2,438,062, Mar. 16.
Gauge: *See*—
  Multiple snap gage.
Gear: *See*—
  Steerable vehicle running gear.
Gear housing. R. E. Rambo and J. E. Pastoret. 2,438,020, Mar. 16.
Gin, Linter. H. C. Graebe. 2,438,047, Mar. 16.
Girdle and pantie, Combination. A. S. McAllister. 2,437,830, Mar. 16.
Glyceride oils, Hydrobleaching and hardening. W. J. Paterson. 2,437,705–6, Mar. 16.
Grinding apparatus. W. O. Dennis. 2,437,850, Mar. 16.
Guide, Frenum. J. A. Freel. 2,437,812, Mar. 16.
Hand-operated abrading and polishing tool. W. J. Lund. 2,437,827, Mar. 16.
Hand-operated loom. J. Tiefenthal. 2,437,716, Mar. 16.
Harvester, Sugar beet. H. C. Rassmann. 2,437,709, Mar. 16.
Harvesting mechanism. J. E. Love. 2,438,065, Mar. 16.
Headband construction, Adjustable. R. L. Malcom. 2,437,748, Mar. 16.
Heat-sealed valve bag. C. H. Hartman. 2,437,693, Mar. 16.
Heating and quenching apparatus. J. H. Loux. 2,438,064, Mar. 16.
Heating system for vehicles, Low-pressure steam. H. Appel. 2,437,673, Mar. 16.
Hemmed material and making the same. C. Seaman. 2,437,976, Mar. 16.
High-frequency tuning device. A. T. Nordsieck. 2,437,889, Mar. 16.
Hitch, Cargo trailer. W. M. Bready. 2,438,032, Mar. 16.
Holder: *See*—
  Bottle holder. Sadiron holder.
  Magazine razor blade holder. Token holder.
  Toothbrush holder.
Holder for double-edged wafer type blades. C. F. Bennett. 2,437,928, Mar. 16.

Holder for ice cards, Rotatable. A. M. La Brant. 2,437,826, Mar. 16.
Holders, Lamp. A. H. Laidig. 2,438,012, Mar. 16.
Holders, Making plastic comb. C. E. Maynard. 2,437,884, Mar. 16.
Hook inserting tool. L. Simonin. 2,437,762, Mar. 16.
Hose fitting. J. B. Brennan. 2,437,933, Mar. 16.
Hydraulic drum jack and carrier. T. Tietsema. 2,437,982, Mar. 16.
Hydraulic pulsator system and make-up means therefor. L. E. Hughes. 2,437,821, Mar. 16.
Hydraulic wheel drive. M. D. Duhaime. 2,438,040, Mar. 16.
Hydrocaffeic acid and esters as antioxidants. L. W. Elder and H. S. Levenson. 2,437,731, Mar. 16.
Hydrocarbons, Treating. A. C. Nixon and D. L. Yabroff. 2,438,018, Mar. 16.
Implement, Combination. J. T. Van Olden. 2,437,770, Mar. 16.
Indicator: *See*—
Ratio computing shift indicator.
Induction motor control by electric brake. H. S. Carnegie and H. Dolan. 2,437,996, Mar. 16.
Indurating boards of fibrous materials. H. O. V. Bergström, G. B. Heijmer, and K. G. Trobeck. 2,437,931, Mar. 16.
Ink, Printing. C. F. Chiappe and J. W. Kroeger. 2,437,908, Mar. 16.
Interpolymer of styrene and fumarodinitrile plasticized with an alkyl phthalyl alkyl glycolate. D. T. Mowry. 2,437,966, Mar. 16.
Invigorating apparatus, Facial. J. Mingea. 2,438,069, Mar. 16.
Jack: *See*—
Pump jack.
Jetty. G. W. Rehfeld. 2,437,754, Mar. 16.
Knitted fabrics, Method of and apparatus for separating. J. L. Getaz. 2,437,735, Mar. 16.

Moisture control device. F. H. Cornelius. 2,437,680, Mar. 16.
Molding compounds comprising furfuryl alcohol reaction products, Producing. H. I. Hersh. 2,437,955, Mar. 16.
Motion transmitting device. R. M. Hettinga. 2,438,053, Mar. 16.
Mounting for and including optical refracting means and method of forming the same. A. D. Falkoff. 2,437,947, Mar. 16.
Multiarc welding. C. W. Steward and M. R. Rivenburgh. 2,437,840, Mar. 16.
Multiple snap gage. A. R. Burgess. 2,437,679, Mar. 16.
N-benzyl-N-myristyl morpholinium halides. J. B. and V. Niederl and M. E. McGreal. 2,437,833, Mar. 16.
N-sulfodicarboxylic acid aspartates. K. L. Lynch. 2,438,092, Mar. 16.
Needle felts, Making. C. S. Francis, Jr. 2,437,689, Mar. 16.
New metal salts of organic phosphines and making the same. C. Walling. 2,437,797, Mar. 16.
New secondary organic phosphorus halides and making the same. C. Walling. 2,437,798, Mar. 16.
Nose for spot welding tips, Replaceable. T. M. Haynes. 2,437,740, Mar. 16.
Nursing bottle attachment. R. V. Lloyd. 2,438,066, Mar. 16.
Nut, Lock. R. Mitchell. 2,437,751, Mar. 16.
Nut, Lock. J. M. Summers. 2,438,077, Mar. 16.
Oils, Hydrobleaching glyceride. W. J. Paterson. 2,437,706, Mar. 16.
Olefin oxides, Production and recovery of. I. Bergsteinsson and J. R. Scheibli. 2,437,930, Mar. 16.
Optical micrometer for measuring the thickness of transparent or translucent bodies. W. E. Williams. 2,437,775, Mar. 16.
Optical projection dividing head. J. H. Dowell, R. S. Sternberg, and T. Curson. 2,437,807, Mar. 16.
Organic isocyanates. J. J. Verbanc. 2,437,867, Mar. 16.
Organic phosphines, Making. C. Walling. 2,437,795, Mar. 16.
Organic phosphorus, Making. C. Walling. 2,437,796, Mar. 16.
Packaging. C. M. Carson. 2,438,089, Mar. 16.
Pad: *See*—
Shoulder pad.
Pad support for shoe presses. E. Dunford. 2,437,942, Mar. 16.
Paint, varnish, and lacquer films from surfaces, Removing. J. K. Craver. 2,438,038, Mar. 16.
Panel construction. C. V. Sweet. 2,438,079, Mar. 16.
Pencil with step-by-step feed, Mechanical. J. B. Traylor. 2,437,769, Mar. 16.
Penicillin, Producing. R. B. McCormack. 2,437,918, Mar. 16.
Phase modulator. C. E. G. Bailey. 2,437,872, Mar. 16.
Phenanthridine derivatives. L. P. Walls. 2,437,869, Mar. 16.
Phenol recovery. F. Porter. 2,437,921, Mar. 16.
Photoelectric control mechanism for flame-cutting devices. W. S. Tandler and D. S. Walker. 2,438,098, Mar. 16.
Pipe: *See*—
Smoking pipe.
Piping and producing same. C. Seaman. 2,437,979, Mar. 16.
Piston ring boring machine. A. H. Bates. 2,437,676, Mar. 16.
Pitching and batting device for baseball game, Mechanical. I. N. Jacobs and H. C. Jones. 2,437,745, Mar. 16.
Pivotally and slidably mounted outer jaw wrench. T. K. Andersen. 2,437,801, Mar. 16.
Plasticized prolamine composition. C. D. Evans and R. H. Manley. 2,437,946, Mar. 16.
Plate, Quartz oscillator. C. Frondel. 2,437,912–15, Mar. 16.
Plural storage device accounting machine. F. M. Carroll and A. B. Benson. 2,438,036, Mar. 16.
Polarized relay. A. C. Davis. 2,437,726, Mar. 16.
Poppet valve. W. R. Brant and H. G. Chapman, Jr. 2,437,723, Mar. 16.
Post having parabolic reflecting surface, Gun aiming. L. H. Brown. 2,437,677, Mar. 16.
Poultry blinder clip. M. Horowitz. 2,437,959, Mar. 16.
Poultry feeder. D. Van Meeteren. 2,438,080, Mar. 16.
Precision locating tool. A. A. Zeise. 2,437,847, Mar. 16.
Preparation of dihydroxanthopterin and xanthopterin. G. H. Hitchings. 2,437,853, Mar. 16.
Preparation of gamma-dibutylaminopropanol. A. W. Weston. 2,437,984, Mar. 16.
Preparation of 1-chloro-3-bromo-2-(2-chloroethoxy)-propane and the compound prepared. R. M. Vance and A. G. Horney. 2,437,866, Mar. 16.
Preparation of salts of mono-organo silianols. J. F. Hyde and O. K. Johannson. 2,438,055, Mar. 16.
Press tool. E. Engel and M. Salamon. 2,437,945, Mar. 16.
Pressure fluid controlling device. P. A. Lincoln. 2,437,856, Mar. 16.
Pressure release, Safety. J. J. Santiago. 2,437,836, Mar. 16.
Printer and control system therefor. W. Y. Lang. 2,437,698, Mar. 16.
Production of branched chain hydrocarbons catalyzed by a metal halide catalyst supported by a composite of alumina and titania. E. W. M. Fawcett, G. I. Jenkins, and J. Habeshaw. 2,437,948, Mar. 16.
Production of diolefins. T. H. Whaley. 2,437,773, Mar. 16.
Production of thioketones. De L. E. Winkler and S. A. Ballard. 2,437,985, Mar. 16.
Projection device for television apparatus. H. McD. Rundle. 2,438,022, Mar. 16.
Propeller, Aircraft. H. M. McCoy. 2,437,701, Mar. 16.
Protecting device for industrial gloves. I. W. Millard and E. W. Beatty. 2,437,886, Mar. 16.
Pulse communication. P. J. Reich. 2,437,970, Mar. 16.

Pump. J. H. Cox, A. P. Colaiaco, and H. A. Ross. 2,437,849, Mar. 16.
Pump. C. W. Mott. 2,437,887, Mar. 16.
Pump. G. R. Stoltenberg and A. P. Colaiaco. 2,437,897, Mar. 16.
Pump jack. N. W. Franzkowiak. 2,437,911, Mar. 16.
Pump with unloading bushing. J. M. Roth and J. A. Lauck. 2,437,791, Mar. 16.
Pyrimidine compounds and making the same. F. H. S. Curd, C. G. Raison, and F. L. Rose. 2,437,682, Mar. 16.
Pyrimidine compounds and producing same. F. H. S. Curd, C. G. Raison, and F. L. Rose. 2,437,683, Mar. 16.
Pyrolyzing alpha-pinene to allo-ocimene in liquid phase. T. R. Savich and L. A. Goldblatt. 2,437,759, Mar. 16.
Radio direction finder, Three-dimension. K. G. Jansky. 2,437,695, Mar. 16.
Radiological measurement of the permeability of porous media. E. M. Brunner and E. S. Mardock. 2,437,935, Mar. 16.
Railway journal lubricator. J. J. Hennessy. 2,437,817, Mar. 16.
Raking classifier. C. H. Scott and F. L. Graner. 2,437,760, Mar. 16.
Ratio computing phase shift indicator. R. B. Johnson and C. E. Larrabee. 2,438,056, Mar. 16.
Receiver and wave monitor. M. G. Crosby. 2,437,910, Mar. 16.
Receptacle: *See*—
Stud receptacle.
Reeling device switch. E. J. Wester and E. R. Ziegler. 2,438,082, Mar. 16.
Refrigerator, Motor vehicle. F. W. Merstick. 2,437,885, Mar. 16.
Regulator: *See*—
Voltage regulator.
Relaxing keratinous fibres. E. B. Michaels and B. Lustig. 2,437,965, Mar. 16.
Remote positioning control. W. P. Lear. 2,438,061, Mar. 16.
Resin coated product and making it, Craze-resistant synthetic. N. R. Yorke. 2,437,799, Mar. 16.
Resins from a methylol monohydric phenol and a polyhydric phenol, Production of. P. H. Rhodes. 2,437,710, Mar. 16.
Ribbon threading mechanism. L. Lorenz-Risler. 2,438,063, Mar. 16.
Ring: *See*—
Sealing ring.
Roll stabilizer for taking up play in bearings of roll mills. W. Fincher. 2,437,733, Mar. 16.
Roof structure. I. P. Whitehouse. 2,438,099, Mar. 16.
Rotary magazine for toy guns. E. L. Drumheller. 2,437,728, Mar. 16.
Rotary shaft construction. E. B. Hudson. 2,437,820, Mar. 16.
Rotor for synchronous electric motors. J. Rose. 2,437,922, Mar. 16.
Roughening machine. J. R. Oliver. 2,437,753, Mar. 16.
Rubber extenders, Making. L. Auer. 2,437,925, Mar. 16.
Rule, Slide. O. E. Batori. 2,437,722, Mar. 16.
Sadiron holder. M. M. Holliday. 2,438,054, Mar. 16.
Safety container. N. D. Hernández. 2,438,052, Mar. 16.
Safety shoe and making the same. H. G. McMurray. 2,438,016, Mar. 16.
Sanding device for motor vehicles. J. U. Richard. 2,437,788, Mar. 16.
Sanitary napkin, Unitary. H. S. Croft. 2,438,039, Mar. 16.
Saw, Laterally-cutting rotary cylindrical. R. E. Adams. 2,437,669, Mar. 16.
Saw, Power driven rotary cylindrical. R. E. Adams. 2,437,668, Mar. 16.
Scalping machine control apparatus. E. W. Mason. 2,437,829, Mar. 16.
Seal and terminal for electric furnaces, Gas-tight. J. G. Hoop. 2,438,008, Mar. 16.
Seal, Liquid. T. H. Winkeljohn. 2,437,900, Mar. 16.
Sealing means. R. O. Hallen. 2,437,814, Mar. 16.
Sealing ring. T. H. Winkeljohn. 2,437,901, Mar. 16.
Sediment raking mechanism for a settling tank comprising a central support and a hinged body between the support and the raking mechanism. C. H. Scott. 2,437,761, Mar. 16.
Selector switch. F. Edgarton. 2,438,042, Mar. 16.
Selenium rectifiers. W. E. Blackburn. 2,437,995, Mar. 16.
Separating diacetone and monoacetone sorbose. W. R. Graff and W. S. Harmon. 2,437,852, Mar. 16.
Separator: *See*—
Separator-belt type magnetic separator.
Sewing machine. C. Seaman. 2,437,978, Mar. 16.
Sewing machine and attachment therefor for making cross-stitches. C. Seaman. 2,437,975, Mar. 16.
Shear testing device. J. D. Mann. 2,437,750, Mar. 16.
Shearing machine drive. M. Hänggi. 2,437,738, Mar. 16.
Sheet feeding apparatus. W. E. Schneider. 2,437,792, Mar. 16.
Shingle. J. E. Black. 2,437,874, Mar. 16.
Shock absorber. B. L. Mallory. 2,437,749, Mar. 16.
Shock absorbing strut for aircraft. T. Knox. 2,438,011, Mar. 16.
Shoe welt, Seam-filling. W. E. Phinney. 2,438,095, Mar. 16.
Shoulder pad. J. M. Piccinni. 2,438,072, Mar. 16.
Signal: *See*—
Vehicle turn signal.
Signal receiver and warning device. S. B. Cohn. 2,437,876, Mar. 16.
Signal system, Door open. K. Zajc. 2,437,777, Mar. 16.
Sizes, Stabilization of rosin. E. N. Poor and K. L. Howard. 2,438,096, Mar. 16.
Skiver. G. W. Russell. 2,437,971, Mar. 16.
Sleigh. D. W. Thompson. 2,437,767, Mar. 16.
Slide valve assembly for the fluid pressure power cylinders of duplex reciprocators. G. K. Johnstone. 2,437,854, Mar. 16.
Sliding wall paper base trimmer. M. J. Rutledge. 2,437,896, Mar. 16.
Smoking pipe. E. J. Sonn. 2,437,763, Mar. 16.
Sofa bed hinge structure. M. Fox and G. F. Hassel. 2,437,949, Mar. 16.
Spacer and protector for yarn-holding devices. H. C. Wolfenden. 2,437,987, Mar. 16.
Sphygmomanometers. C. B. Rohr. 2,437,861, Mar. 16.
Sports vehicle. O. Züllig. 2,437,903, Mar. 16.
Spring back rest, Pivoted. R. A. and H. W. Cramer, and R. A. Cramer, Jr. 2,437,940, Mar. 16.
Sprinkler control. J. D. Spence. 2,437,764, Mar. 16.
Stack. C. F. Wait. 2,437,771, Mar. 16.
Steerable vehicle running gear. E. and L. H. Hekman. 2,437,816, Mar. 16.
Stick and nail cleaner, Cuticle. B. B. Peritz. 2,437,834, Mar. 16.
Storage means for liquefied gas. H. C. Cooper. 2,437,909, Mar. 16.
Stove. C. J. Buhman and L. E. Mendel. 2,438,035, Mar. 16.
Stud receptacle. S. W. Hennessey, Jr. 2,438,051, Mar. 16.
Styrene from butadiene, Producing. H. A. Dutcher. 2,438,041, Mar. 16.
Submerged-belt type magnetic separator. R. E. Crockett and P. S. Haselton. 2,437,681, Mar. 16.
Support for electrooptical apparatus. A. G. Cooley. 2,437,848, Mar. 16.
Support for invalids, Portable. B. Ames. 2,437,778, Mar. 16.
Suture. E. St. Pierre. 2,437,841, Mar. 16.
Switch: *See*—
Deformable switch. Reeling device switch.
Elevator switch. Selector switch.
Switchboard. W. R. Taliaferro. 2,438,025, Mar. 16.
Switch operator for lamp tables. H. C. Engelbrecht. 2,437,809, Mar. 16.
Syringe, Vaccination. G. N. Overton. 2,437,920, Mar. 16.
Tape for electric cable, Semiconducting. C. E. Plass and D. J. Sullivan. 2,437,708, Mar. 16.
Tape for slide fasteners. O. Firing and R. M. Gibbons, Jr. 2,437,734, Mar. 16.
Telemetering system. W. A. Derr. 2,438,000, Mar. 16.
Telescope attachment for firearms. J. W. Horvath. 2,437,744, Mar. 16.
Television, Color. P. C. Goldmark. 2,437,690, Mar. 16.
Tenter machine clip. J. C. Nash. 2,437,967, Mar. 16.
Terpene product. D. A. Lister. 2,437,857, Mar. 16.
Tether apparatus. G. S. and T. J. Oberdorf. 2,437,786, Mar. 16.
Thermosetting vinyl chloride-vinylidene chloride copolymer compositions. T. H. Rogers, Jr., and R. D. Vickers. 2,438,097, Mar. 16.
Thermostatic damper control. J. G. Dunville. 2,437,878, Mar. 16.
Thermostatic shutter control and surge protection. R. W. Jensen. 2,437,961, Mar. 16.
Thread case. B. Narki. 2,437,888, Mar. 16.
Thread tension arrangements in textile machines. A. Brügger. 2,438,034, Mar. 16.
Timing apparatus. W. O. Bennett, Jr. 2,437,929, Mar. 16.
Token holder. E. R. Hessel. 2,437,956, Mar. 16.
Toluene sulfonic acid treatment of aromatic hydrocarbons. R. L. Dockendorff. 2,438,001, Mar. 16.
Tool: *See*—
Combined drill and deburring tool. Hook inserting tool.
Electrically heated tool. Precision locating tool.
Hand operated abrading and polishing tool. Press tool.
Toolholder. L. Carpentier. 2,437,779, Mar. 16.
Toothbrush holder. E. J. Hagglund. 2,437,781, Mar. 16.
Tooth, Pontic. J. B. Earman. 2,437,943, Mar. 16.
Toy airplane. J. Hojnowski. 2,437,743, Mar. 16.
Toy gun. E. L. Drumheller. 2,437,727, Mar. 16.
Toy submarine. F. E. Bonner. 2,438,031, Mar. 16.
Transporting and storage crate. D. H. Bitney. 2,438,030, Mar. 16.
Transporting equipment. G. R. Dempster. 2,437,806, Mar. 16.
Treated steel sheet and process. R. R. Tanner. 2,438,013, Mar. 16.
Treating diacetone sorbose and monoacetone sorbose. J. F. Mahoney and H. H. Bassford, Jr. 2,437,858, Mar. 16.
Treating sulfidic tungsten ore concentrates. T. J. Williams. 2,437,870, Mar. 16.
Treating tomatoes. D. Childs, A. E. Braun, and J. Hanson. 2,437,937, Mar. 16.
Trolley conductor device. R. P. Hanna. 2,438,007, Mar. 16.

Trouser and suspender combination. W. A. Thomason, Jr. 2,437,714, Mar. 16.
Truck, Elevating. R. Hastings, Jr. 2,437,953, Mar. 16.
Tube: *See*—
Colostomy tube.
2:4-diamino 1:3:5-triazines, Manufacture of. A. Grün. 2,437,691, Mar. 16.
Two-way plow. H. G. Ferguson. 2,437,879, Mar. 16.
Valve: *See*—
Poppet valve.
Variable-pitch fan blade assembly. S. C. and N. B. Earley, E. J. Sanders, W. C. Skareen, R. L. Davies, and J. A. Hughes. 2,437,810, Mar. 16.
Vehicle driving mechanism. L. R. Buckendale. 2,437,678, Mar. 16.
Vehicle tires, Making. C. L. Beward. 2,437,873, Mar. 16.
Vehicle turn signal. C. E. Edwards. 2,437,944, Mar. 16.
Veneering elastomers. E. E. Leach, Jr. 2,437,855, Mar. 16.
Ventilator, Window. R. H. Hoach. 2,437,741, Mar. 16.
Vibration damping mount. Le R. L. Werner. 2,437,717, Mar. 16.
Vibrator. H. S. Wenander. 2,437,983, Mar. 16.
Voltage control circuit. W. R. Rambo. 2,437,892, Mar. 16.
Voltage regulator. S. Saretzky. 2,437,837, Mar. 16.
Washer for articles or the like. J. J. Palotsee. 2,437,968, Mar. 16.
Wave length modulation. G. L. Usselman. 2,437,923, Mar. 16.
Wheel suspension. N. E. Wahlberg and G. V. Hedstrom. 2,437,844, Mar. 16.
Wig construction. S. J. Goldman. 2,438,005, Mar. 16.
Windshield cover. R. S. Wyeth. 2,437,845, Mar. 16.
Winding device for cinematograph films and other applications. A. M. B. Charlin. 2,437,997, Mar. 16.
Winding machine. E. A. Conner. 2,437,725, Mar. 16.
Window. R. W. Elsinger. 2,437,730, Mar. 16.
Work gauging device for bore grinding machines. P. H. Hutchinson. 2,437,783, Mar. 16.
Wrench: *See*—
Pivotally and slidably mounted outer jaw wrench.
Wringer with pressure rollers and carrying bail, Mop. E. Wurdeman. 2,438,087, Mar. 16.
Yarn smoothing apparatus and method. A. A. Wood. 2,438,084, Mar. 16.
Zipper manufacturing machinery. D. Silberman. 2,437,793, Mar. 16.

CLASSIFICATION OF PATENTS

ISSUED MARCH 16, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

1— 18: 2,437,746
2— 6: 2,437,748
43: 2,437,830
67: 2,438,062
78: 2,437,989

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

In re Camp

No. 5352. Decided January 6, 1948

[— F.2d —; 76 USPQ 309]

1. Invention—New Combination—Traffic Guard.

Where the rejection was based solely on the ground of old combination, and the references singly or in combination, did not disclose or suggest the actual structure recited in the appealed claims, and where it appears that there is a definite coaction between the elements recited, *Held* that appellant has produced a new combination not disclosed by the prior art, involving invention.

2. Same—Same—Same.

Certain claims to a traffic guard involving a new type of action of the spring, clip and impact member *Held* a new combination involving invention.

Appeal from the Patent Office. Serial No. 425,445.

REVERSED.

K. Wilson Corder (*Robert C. Watson* of counsel) for Camp.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

Hatfield, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting claims 1 to 12, inclusive, in appellant's application for a patent for an invention relating to a highway guard rail construction.

Claims 13, 14, and 15 were allowed by the Primary Examiner.

Claim 4 is sufficiently illustrative of the appealed claims. It reads:

In a traffic guard of the character described, a series of supports, curved spring brackets mounted on said supports, a clip pivotally united with the front portions of said brackets, and a flexible resilient impact member carried by said clip in sliding relationship therewith.

The references relied on are: Campbell, 2,007,467, July 9, 1935; Irons et al., 2,056,858, October 6, 1936; Camp, 2,167,635, August 1, 1939.

The device disclosed by appellant's application comprises a guard rail or impact member in the form of a long flat strip of metal which extends horizontally between two end posts, with the flat side of the strip in a vertical plane. The ends of the strip are resiliently connected to the end posts by coil springs. Additional posts are provided between the end posts for supporting the intermediate portions of the impact member. Each of the additional posts carries a spring which is in the form of a flat strip of resilient metal bent into a substantially circular loop, the axis of which is vertical. The ends of the strip are formed to provide eyes through which a pintle may be passed. Associated with each of the springs is a clip member in the form of a flat plate having its upper and lower edges turned over to provide grooves adapted to receive the impact member. The back of the clip is formed to provide two sets of eyes, and these eyes are brought into registering position with the eyes on the ends of the spring, and pintles are passed through them, thus providing a pivotal connection between the clip and each end of the spring. The impact member passes through the clips and is held against vertical displacement by the turned-over edges, but is free to slide horizontally through the clips.

The references relied on all show guard rail structures in which a flat strip is resiliently connected at its ends to end posts and in which intermediate posts are provided, the intermediate posts having springs mounted on them, and the springs carrying clips through which the flat strip slidably passes. None of the references, however, show a pivotal connection between the clip and the spring.

[1] The Primary Examiner and the Board held that the references disclosed appellant's combination of posts, flat metal strip, spring mountings and clips to be old and that appellant's invention resided in his specific spring and clip for attaching the strip to the intermediate posts. Claims to the spring and clip combination were allowed. The rejection was based solely on the ground of old combination and it was not held that the references, singly or in combination, disclosed or suggested the actual structure recited in the appealed claims.

The rejection on the ground of old combination would be proper if appellant's new arrangement of spring and clip did not result in a different operation of the flat strip which forms the impact member. Thus, if the new arrangement were merely stronger or more resilient than the old ones, no new combination would be produced. In the present case, however, as counsel for appellant points out, if the clip was not pivotally mounted, the impact member, when struck by a car, might be sharply bent around the spring, so that when the car, in

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

traveling along the impact member, arrives at the spring, it will encounter a sudden change in the direction of the impact member which would result in damage to the car or guard rail structure or both. On the other hand, with appellant's pivotally mounted clip construction, the clip changes its direction when the impact member is struck by a car, and the portion of the member which is held by the clip undergoes a corresponding change in direction. The result is that instead of a sudden bending about a substantially fixed point there is a more gradual change in direction on the part of a considerable length of the impact member. There being no sharp bends, the car is guided away from the impact member and its change of direction is sufficiently gradual to avoid damage.

[2] It thus appears that there is a definite coaction between the pivotally mounted clip and the impact member and that the action of the member is modified in kind by the pivotal mounting. Since no such pivotally mounted clip is shown in the references relied on, it follows that, so far as the references are concerned, appellant has produced a structure involving a new type of action of the spring, clip, and impact member. Under such circumstances the impact member and supporting posts, which are essential to the production of the new type of action, constitute elements of a new combination, not disclosed by the prior art and, in our opinion, involves invention.

For the reasons stated, the decision of the Board of Appeals is reversed.

REVERSED.

BLAND, J., sat during the argument of this case, but resigned before the opinion was prepared.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

The United Shoe Machinery Corporation, of 140 Federal St., Boston 10, Mass., has placed 186 patents on the Register of Patents as available for license in addition to the 2,092 patents previously registered by this corporation. Of these patents, 138 cover shoe machinery, the remaining 48 being useful in various other fields which include sewing machines, parts, and attachments; sorting machines; and devices such as finishing tools and brush structures. Abstracts of these 186 patents will be published in groups in the OFFICIAL GAZETTE from March 2 to March 16 inclusive.

SHOE MACHINERY (Group 35—59)—Con.

Pat. 2,300,552. NAILING MECHANISM. Patented Nov. 3, 1942. Relates to a machine for driving in inclined directions heel attaching nails having cross-shaped heads. Inclined passages formed by intersecting slots guide the nails which are driven by flat driver bars each of which moves in one of the slots. Reg. No. 9,296.

Pat. 2,301,275. PINKING MACHINE. Patented Nov. 10, 1942. A machine for pinking wing tips having a reentrant point at the center of the throat. The work may be fed in either direction and when a wing tip is being pinked the operation is performed in both directions from the center point. Reg. No. 9,297.

Pat. 2,301,300. MACHINE FOR ROUGHING SHOE PARTS. Patented Nov. 10, 1942. A sole roughing machine having a multipointed scratching tool which is reciprocated across the sole margin and feed mechanism which advances the work at such a rate, relative to the movement of the tool, that a network of scratches is produced. The tool is tiltable to accommodate itself to various angles of bevel of the sole margin. Reg. No. 9,298.

Pat. 2,301,982. PRESS. Patented Nov. 17, 1942. Relates to a clicking machine in which cooperating frusto-conical members on the spindle and frame, respectively, of the machine engage each other upon descent of the spindle in order to brake angular movement of the spindle and beam. Reg. No. 9,299.

Pat. 2,302,019. MACHINE FOR OPERATING UPON SHOES. Patented Nov. 17, 1942. Relates to a machine for cement attaching a sole to a prewelt shoe upper off the last. A pair of driven rolls progressively press the cemented welt and sole together, the welt being guided by a horn supported roll engaging its inner edge and an edge gage acting against its outer edge. The sole is guided by a separate edge gage. Reg. No. 9,300.

Pat. 2,302,738. MACHINE FOR OPERATING UPON SOLES. Patented Nov. 24, 1942. A channel lip cutting and scoring machine having a work table with which are associated various dies for marking size, width and other symbols and indenting lines in the grain face of a sole. Novel gage mechanism positions the sole in proper relation to the operating tools. Reg. No. 9,301.

Pat. 2,302,750. MACHINE FOR USE IN SHAPING SHOE UPPERS. Patented Nov. 24, 1942. A machine for preshaping the forepart of a prewelt upper before the welt is applied. The upper is held in an outer mold while an inner form containing a rubber expander is caused to bulge outward and shape the peripheral portion of the upper against the outer mold. Reg. No. 9,302.

Pat. 2,302,768. MACHINE FOR OPERATING UPON SOLES. Patented Nov. 24, 1942. Relates to a sole conforming machine having relatively movable clamps for the fore and heel parts of a sole and means for moving the clamps to cause a relative movement laterally of the sole between its mid portion and its ends to create a fullness or surplus of sole material in the inner margin of the shank portion of the sole. Reg. No. 9,303.

Pat. 2,303,439. MACHINE FOR ROUGHING SHOE PARTS. Patented Dec. 1, 1942. A machine having a reciprocating chopping tool the edge of which is scalloped and an intermittent feed mechanism which advances a sole between successive penetrations of the sole by the tool. The tool forms in the surface of the sole a multitude of closely adjacent gashes disposed at an oblique angle to the surface of the sole. Reg. No. 9,304.

Pat. 2,304,959. GAUGING MEANS FOR SHOE MACHINES. Patented Dec. 15, 1942. As an aid in positioning right and left shoes in a heel attaching machine, translucent panels below the forepart of the shoe show lines of light projected upon them through slots in adjustable plates covering a chamber in which are electric lights. One line of light locates a right shoe and another line locates a left shoe. Reg. No. 9,305.

Pat. 2,305,682. GRIPPER. Patented Dec. 22, 1942. Relates to a gripper operating mechanism for lasting machines so constructed that the gripper jaws are first closed to grip a shoe upper and are thereafter closed more tightly to increase the force of their grip on the upper during the upper-pulling operation. Reg. No. 9,306.

Pat. 2,305,689. MACHINE FOR USE IN OPERATING UPON SHOE UPPERS. Patented Dec. 22, 1942. A two-station machine for molding the back parts of shoe uppers. At one station an intramarginal portion of a back part is stretched, the back part is premolded and the lasting margin is crimped. At the other station the back part is molded under heavy pressure and the lasting margin is turned in to form an attaching flange. The two stations are operated alternately. Reg. No. 9,307.

Pat. 2,306,441. SPLITTING MACHINE. Patented Dec. 29, 1942. A sole splitting or evening machine designed to produce a finished product which is of uniform thickness throughout. A rotating turn-table on which the soles are placed cooperates with a conical feed roll rotated at the same surface speed to feed the soles to a splitting knife. The feed roll is slotted to accommodate the operative portions of presser fingers which extend into close proximity to the knife. Reg. No. 9,308.

SEWING MACHINES, PARTS AND ATTACHMENTS (Group 35—83)

Pat. 1,950,564. SEWING MACHINE. Patented Mar. 13, 1934. A crank operated lockstitch sewing machine having advantageous needle, awl, needle guide and shuttle actuating mechanisms. Reg. No. 9,309.

Pat. 1,951,369. WELT SEWING MACHINE. Patented Mar. 20, 1934. A welt shoe sewing machine having a welt cutter and a welt gripper in which connections are provided for locking the cutter from operation until the gripper is shifted while gripping the welt by a pull on the welt, whereupon the cutter may be actuated by a manual control. Reg. No. 9,310.

Pat. 2,046,062. WELT TEMPERING MACHINE. Patented June 30, 1936. Welting is drawn around, and rotates, a guide wheel which is geared to and drives a revolving brush the lower part of which is immersed in water and the upper part of which rubs the water into the welt. Reg. No. 9,311.

Pat. 2,085,253. SEWING MACHINE. Patented June 29, 1937. A machine for sewing adhesive tape, having a tape guide in which the tape is freed from adhesion to the confining surfaces of the guide during work feed by a member acting at right angles to the length of the tape. Reg. No. 9,312.

Pat. 2,296,888. SHOE SEWING MACHINE. Patented Sept. 29, 1942. A device for preventing injury to the inseam in a Goodyear welt shoe which comprises a thin horizontal plate pivoted to the work table of an outsole stitcher to provide a crease guide. The plate is connected to the edge gage mechanism and is arranged to be brought into operative position when the edge gage is moved toward an inoperative position, thus moving the inseam out of the path of the needle and awl. Reg. No. 9,313.

Pat. 2,298,268. SEWING MACHINE. Patented Oct. 13, 1942. An outsole stitcher in which each stitch is tightened by a take-up between which and the work a thread clamp acts to stop withdrawal of thread from the work and to limit the stitch setting tension and thereafter causes the take-up to pull thread for the next stitch from the supply. The thread clamp finally is moved bodily a short distance to set the stitch and a fixed thread clamp between the take-up and the supply locks the thread after the supply for the next stitch has been pulled off. Reg. No. 9,314.

Pat. 2,303,461. SHOE SEWING MACHINE. Patented Dec. 1, 1942. A sewing machine attachment for guiding a seam in a circular path surrounding a spike in the sole of an athletic shoe. A perforated lug in the attachment surrounds the spike and is arranged to clamp the shoe adjacent to the sewing point while permitting movement of the attachment to clamp and unclamp the shoe. Reg. No. 9,315.

OTHER MACHINERY

Pat. 1,911,693. TREADLE MECHANISM. Patented May 30, 1933. Control mechanism including two treadles, one located in the usual position for use when the operator is standing and the other at a higher level for use when the operator is seated. Group 35—59. Reg. No. 9,316.

Pat. 1,920,260. MECHANISM FOR SUPPLYING FASTENINGS. Patented Aug. 1, 1933. A mechanism for distributing tacks, having a plurality of raceways and a plurality of separately yieldable members, movable by the operator to apply pressure to tacks in the raceways and thus prevent their delivery. Group 35—59. Reg. No. 9,317.

Pat. 1,927,060. ROLLER CLUTCH. Patented Sept. 19, 1933. Steel inserts which serve as the wedge members of a Horton clutch are made adjustable to take up wear and provide new wearing surfaces after grooves have been formed in them at prior settings. Group 35—66. Reg. No. 9,318.

Pat. 1,930,579. APPARATUS FOR TREATING HEELS. Patented Oct. 17, 1933. An apparatus for conditioning and holding adhesive-coated heels preparatory to the application of cover material. The heels are placed in radial holders of a rotary conveyor which carries them through a concentric, segmental, heating chamber and presents them to a jack in which each heel is held while a cover is applied to it. Group 35—59. Reg. No. 9,319.

Pat. 1,931,611. FASTENER SEPARATING MECHANISM. Patented Oct. 24, 1933. A tack separating mechanism comprising a roll having a rubber periphery for engaging tacks and means for rotating the roll, intermittently, to separate the tacks. Group 35—59. Reg. No. 9,320.

Pat. 1,933,672. PATTERN REPRODUCING MACHINE. Patented Nov. 7, 1933. An improvement on the machine of Pat. 1,953,236 to adapt it for "center grading" irrespective of the actual settings of the grading mechanism. Means is provided for locking the follower and the cutting tool against relative movement and absorbing the movement effected by the grading mechanism when the locking means is effective. Group 35—59. Reg. No. 9,321.

Pat. 1,953,236. PATTERN GRADING MACHINE. Patented Apr. 3, 1934. The machine comprises four primary instrumentalities, namely, model and work holders, a follower, and a cutting tool, interconnected by pantographic mechanism which is adjustable to change the length and width grading factors independently during operation. Means is provided for compensating for relative movement between two of the primary instrumentalities produced by adjustment of the pantographic mechanism, to avoid a jog in the work. Group 35—59. Reg. No. 9,322.

Pat. 1,980,360. APPARATUS FOR DRYING OR CONDITIONING ARTICLES. Patented Nov. 13, 1934. An apparatus for drying the gum on envelope flaps. The envelopes are carried around by a conveyor between two U-shaped air ducts from which warm, moist air is delivered upon the gummed flaps to dry the gum as the envelopes travel. Group 35—64. Reg. No. 9,323.

Pat. 2,001,750. SHOE-CONVEYING SYSTEM. Patented May 21, 1935. One conveyor is arranged above another and positioning devices at the transfer point maintain shoes upright as they descend from the upper conveyor to the lower. These devices are yieldable and actuate a mercury switch to stop the driving motor when clogging occurs. Group 35—62. Reg. No. 9,324.

Pat. 2,003,391. TACK SUPPLYING DEVICE. Patented June 4, 1935. A device for supplying a single tack, including a pair of rolls, one of which receives the tack and presents it in position to be taken by an operator. Group 35—59. Reg. No. 9,325.

Pat. 2,012,350. STARTING AND STOPPING MECHANISM. Patented Aug. 27, 1935. A starting and stopping mechanism including a member movable, by the operator, to start the operation of a power-driven member and arranged, upon further movement in the same direction, to stop the operation of the power-driven member. Group 35—66. Reg. No. 9,326.

Pat. 2,068,725. SORTING MACHINE. Patented Jan. 26, 1937. A machine for sorting such articles as heel lifts for thickness. A turntable carries a series of cam controlled calipering clamps which release the articles suddenly at locations determined by their thickness. Group 35—59. Reg. No. 9,327.

Pat. 2,070,633. CAM OPERATED MACHINE. Patented Feb. 16, 1937. A machine actuated by a slotted cam having a follower engaging the slot in the cam, in which the cam slot is so formed that the follower moves from one side of the slot to the other with a uniform low velocity and engages the other side of the slot without undesirable impact at the maximum speed of operation for which the machine is intended. Group 35—59. Reg. No. 9,328.

Pat. 2,185,939. METHOD OF AND APPARATUS FOR UPSETTING HOLLOW RIVETS. Patented Jan. 2, 1940. Tubular rivets having closed inner ends are set in plates which are accessible on only one side by a gyrating mandrel which is inserted in a rivet and expands both ends of the rivet with a spinning action. Group 35—59. Reg. No. 9,329.

Pat. 2,301,351. APPARATUS FOR DISPOSING OF DUST. Patented Nov. 10, 1942. A dust collecting apparatus for abrading machines. A settling chamber has a row of intake openings separated by a baffle from an exhaust conduit the intake orifice of which is bordered by a flange which prevents dust deposited on the conduit from being swept into the conduit. Group 35—64. Reg. No. 9,330.

SHOES, SHOE PARTS AND SHOEMAKING METHODS (Group 31—41)

Pat. 2,300,540. METHOD FOR USE IN ATTACHING SOLES TO SHOES. Patented Nov. 3, 1942. This method consists in relatively locating a shoe and sole while they are spaced from each other and bulging the shank portion of the sole upward, before applying sole-attaching pressure, to make the length of the shank portion of the sole correspond to that of the shank portion of the shoe so that no stretching of the sole material is necessary in order to lay it properly against the shank portion of the shoe. Reg. No. 9,331.

Pat. 2,407,224. SHOE AND METHOD OF MAKING THE SAME. Patented Sept. 10, 1946. A platform shoe is made by securing a wrapper strip to an upper, securing an outturned margin of the upper to the reduced margin of a rabbeted platform sole, turning the wrapper strip outward, downward and inward around the edge of the platform, and attaching an outsole to the shoe. Reg. No. 9,332.

Pat. 2,407,352. METHOD OF MAKING SHOES. Patented Sept. 10, 1946. A slip-lasted platform shoe is made by securing together off the last an upper, an edge covering strip and an insole, with the upper wrong side out, turning the upper, inserting a last, attaching a platform sole to the insole, wrapping the covering strip around the edge of the platform, and attaching an outsole to the inturned margin of the covering strip. Reg. No. 9,333.

Pat. 2,409,813. REVERSIBLE SHOE. Patented Oct. 22, 1946. Relates to a reversible platform shoe having two platform soles in superimposed relation, a stay piece secured between them, a double faced upper secured to the margin of the stay piece, and wrapper strips covering the margins of the platform soles and having their margins also secured to the margin of the stay piece. Reg. No. 9,334.

DEVICES

Pat. 1,871,880. FINISHING TOOL. Patented Aug. 16, 1932. A heel burnishing tool having an indenting wheel and a rand crease engaging lip. Group 32—91. Reg. No. 9,335.

Pat. 1,894,452. LAST. Patented Jan. 17, 1933. A separable last having a forepart and a heel part separated by a cut and joined to each other by a resiliently supported hook on one part engaging a pin in the other part. Group 35—59. Reg. No. 9,336.

Pat. 1,895,457. FASTENING INSERTING MECHANISM. Patented Jan. 31, 1933. A hand stapling device adapted to drive a staple with its legs deflected laterally of the crossbar and having a novel staple strip magazine. Group 35—59. Reg. No. 9,337.

Pat. 1,969,747. INSERTION OF FASTENINGS. Patented Aug. 14, 1934. A welt type staple having helically clenched legs; article, shoe and method. Group 35—59. Reg. No. 9,338.

Pat. 1,976,016. HEEL FINISHING TOOL. Patented Oct. 9, 1934. A finishing tool having means for applying and distributing a finishing medium to, and for burnishing, the peripheral surface of a heel. Group 32—91. Reg. No. 9,339.

Pat. 2,040,758. SPRAT COLLECTOR. Patented May 12, 1936. Two tubular members placed end to end form a passage through which unused sprayed material is drawn by a fan. Cheesecloth to filter out the material is stretched across the passage and is gripped between the ends of these members. Group 35—64. Reg. No. 9,340.

Pat. 2,042,512. LAST. Patented June 2, 1936. A last for use in attaching a heel to a shoe by the two-step method of Patent 2,030,139. The screw engaging plate in the last is shiftable between screw-engaging and screw-releasing positions under the influence of gravity instead of by a manually operated actuating member. Group 35—59. Reg. No. 9,341.

Pat. 2,058,499. WELT SUPPORTING DEVICE. Patented Oct. 27, 1936. A portable device to be applied to a welt shoe to support the welt against sole attaching pressure. Pivoted plates formed to fit in the welt crease of the shoe carry sole positioning gages, one of which is yielding. Group 35—59. Reg. No. 9,342.

Pat. 2,068,025. FASTENING. Patented Jan. 19, 1937. Relates to a fiber fastening comprising a plurality of strands of paper twine, impregnated with glue, twisted together and secured in twisted relation by an additional coating of glue. Group 22—98. Reg. No. 9,343.

Pat. 2,071,400. LAST. Patented Feb. 23, 1937. An extensible last the heel part of which can be moved rearward by mechanism forming part of a special jack while the last is in a shoe. Means is provided for preserving the continuity of the side faces of the last when the heel part is moved away from the forepart. Group 35—59. Reg. No. 9,344.

Pat. 2,075,916. LAST. Patented Apr. 6, 1937. Relates to a collapsible last having a metal heel part and a wooden forepart to which a metal guard plate forming the joint with the heel part is fastened by the same bonding mechanism that holds the heel part and forepart together. Group 35—59. Reg. No. 9,345.

Pat. 2,085,148. HINGE LAST. Patented June 29, 1937. A hinge last the parts of which are separable and which is so organized that the heel part can be removed from a shoe on the last without disturbing the forepart. Group 35—59. Reg. No. 9,346.

Pat. 2,087,969. METHOD AND TOOL FOR ROLL-CLENCHING EYELETS. Patented July 27, 1937. Relates to a method and tool for upsetting ductile metal eyelets by roll-clenching the end of an eyelet against a work-piece and deforming its rim at one or more points to develop work-indenting projections on its work-engaging edge. Group 32—91. Reg. No. 9,347.

Pat. 2,093,436. LAST. Patented Sept. 21, 1937. A last for use in the machine of Patent No. 2,093,435. Air ducts extend from the thimble hole to various portions of the surface of the last, a valve admitting air to each duct in turn while closing the other ducts. Group 35—59. Reg. No. 9,348.

Pat. 2,094,118. LAST. Patented Sept. 28, 1937. A hinge last the parts of which are connected by an open, resilient, elliptical link having two oppositely facing lugs on its longer, inside, faces which lugs act as abutments to prevent undue stretch of the link and backward bending of the last under pressure. Group 35—59. Reg. No. 9,349.

Pat. 2,107,375. EYELET. Patented Feb. 8, 1938. Relates to a ductile metal eyelet the barrel of which has a blunt clenching end divided into alternate high and low segments by a series of arcuate indentations. When such an eyelet is roll-clenched the high segments are embedded in the eyelet receiving material more deeply than the low segments, increasing the holding power of the eyelet, and the form of the indentations prevents the clenching end of the eyelet from bursting or splitting. Group 35—59. Reg. No. 9,350.

Pat. 2,199,483. LAST. Patented May 7, 1940. Relates to a last having a clinching plate spaced from the bottom of its forepart, to separate the main portion of a split insole from the flap so that lasting tacks may be clinched into the surface of said main portion and later be covered by the flap, to make a "tackless" forepart in the shoe. Group 35—59. Reg. No. 9,351.

Pat. 2,296,922. STRIP BRUSH. Patented Sept. 29, 1942. A strip brush having a metal channel back is made by fastening groups of bristles to the back by means of integral teeth along the edges thereof which are folded over the bristles before the strip of backing metal is folded into a channel. Group 39—22. Reg. No. 9,352.

Pat. 2,296,949. BRUSH STRUCTURE. Patented Sept. 29, 1942. The core of a channel-backed strip brush is made of rubber which holds the bristles yieldably in even spacing.

Pat. 2,046,062. WELT TEMPERING MACHINE. Patented June 30, 1936. Welting is drawn around, and rotates, a guide wheel which is geared to and drives a revolving brush the lower part of which is immersed in water and the upper part of which rubs the water into the welt. Reg. No. 9,311.

Pat. 2,085,253. SEWING MACHINE. Patented June 29, 1937. A machine for sewing adhesive tape, having a tape guide in which the tape is freed from adhesion to the confining surfaces of the guide during work feed by a member acting at right angles to the length of the tape. Reg. No. 9,312.

Pat. 2,296,888. SHOE SEWING MACHINE. Patented Sept. 29, 1942. A device for preventing injury to the inseam in a Goodyear welt shoe which comprises a thin horizontal plate pivoted to the work table of an outsole stitcher to provide a crease guide. The plate is connected to the edge gage mechanism and is arranged to be brought into operative position when the edge gage is moved toward an inoperative position, thus moving the inseam out of the path of the needle and awl. Reg. No. 9,313.

Pat. 2,298,268. SEWING MACHINE. Patented Oct. 13, 1942. An outsole stitcher in which each stitch is tightened by a take-up between which and the work a thread clamp acts to stop withdrawal of thread from the work and to limit the stitch setting tension and thereafter causes the take-up to pull thread for the next stitch from the supply. The thread clamp finally is moved bodily a short distance to set the stitch and a fixed thread clamp between the take-up and the supply locks the thread after the supply for the next stitch has been pulled off. Reg. No. 9,314.

Pat. 2,303,461. SHOE SEWING MACHINE. Patented Dec. 1, 1942. A sewing machine attachment for guiding a seam in a circular path surrounding a spike in the sole of an athletic shoe. A perforated lug in the attachment surrounds the spike and is arranged to clamp the shoe adjacent to the sewing point while permitting movement of the attachment to clamp and unclamp the shoe. Reg. No. 9,315.

OTHER MACHINERY

Pat. 1,911,693. TREADLE MECHANISM. Patented May 30, 1933. Control mechanism including two treadles, one located in the usual position for use when the operator is standing and the other at a higher level for use when the operator is seated. Group 35—59. Reg. No. 9,316.

Pat. 1,920,260. MECHANISM FOR SUPPLYING FASTENINGS. Patented Aug. 1, 1933. A mechanism for distributing tacks, having a plurality of raceways and a plurality of separately yieldable members, movable by the operator to apply pressure to tacks in the raceways and thus prevent their delivery. Group 35—59. Reg. No. 9,317.

Pat. 1,927,060. ROLLER CLUTCH. Patented Sept. 19, 1933. Steel inserts which serve as the wedge members of a Horton clutch are made adjustable to take up wear and provide new wearing surfaces after grooves have been formed in them at prior settings. Group 35—66. Reg. No. 9,318.

Pat. 1,930,579. APPARATUS FOR TREATING HEELS. Patented Oct. 17, 1933. An apparatus for conditioning and holding adhesive-coated heels preparatory to the application of cover material. The heels are placed in radial holders of a rotary conveyor which carries them through a concentric, segmental, heating chamber and presents them to a jack in which each heel is held while a cover is applied to it. Group 35—59. Reg. No. 9,319.

Pat. 1,931,611. FASTENER SEPARATING MECHANISM. Patented Oct. 24, 1933. A tack separating mechanism comprising a roll having a rubber periphery for engaging tacks and means for rotating the roll, intermittently, to separate the tacks. Group 35—59. Reg. No. 9,320.

Pat. 1,933,672. PATTERN REPRODUCING MACHINE. Patented Nov. 7, 1933. An improvement on the machine of Pat. 1,953,236 to adapt it for "center grading" irrespective of the actual settings of the grading mechanism. Means is provided for locking the follower and the cutting tool against relative movement and absorbing the movement effected by the grading mechanism when the locking means is effective. Group 35—59. Reg. No. 9,321.

Pat. 1,953,236. PATTERN GRADING MACHINE. Patented Apr. 3, 1934. The machine comprises four primary instrumentalities, namely, model and work holders, a follower, and a cutting tool, interconnected by pantographic mechanism which is adjustable to change the length and width grading factors independently during operation. Means is provided for compensating for relative movement between two of the primary instrumentalities produced by adjustment of the pantographic mechanism, to avoid a jog in the work. Group 35—59. Reg. No. 9,322.

Pat. 1,980,360. APPARATUS FOR DRYING OR CONDITIONING ARTICLES. Patented Nov. 13, 1934. An apparatus for drying the gum on envelope flaps. The envelopes are carried around by a conveyor between two U-shaped air ducts from which warm, moist air is delivered upon the gummed flaps to dry the gum as the envelopes travel. Group 35—64. Reg. No. 9,323.

Pat. 2,001,750. SHOE-CONVEYING SYSTEM. Patented May 21, 1935. One conveyor is arranged above another and positioning devices at the transfer point maintain shoes upright as they descend from the upper conveyor to the lower. These devices are yieldable and actuate a mercury switch to stop the driving motor when clogging occurs. Group 35—62. Reg. No. 9,324.

Pat. 2,003,391. TACK SUPPLYING DEVICE. Patented June 4, 1935. A device for supplying a single tack, including a pair of rolls, one of which receives the tack and presents it in position to be taken by an operator. Group 35—59. Reg. No. 9,325.

Pat. 2,012,350. STARTING AND STOPPING MECHANISM. Patented Aug. 27, 1935. A starting and stopping mechanism including a member movable, by the operator, to start the operation of a power-driven member and arranged, upon further movement in the same direction, to stop the operation of the power-driven member. Group 35—66. Reg. No. 9,326.

Pat. 2,068,725. SORTING MACHINE. Patented Jan. 26, 1937. A machine for sorting such articles as heel lifts for thickness. A turntable carries a series of cam controlled calipering clamps which release the articles suddenly at locations determined by their thickness. Group 35—59. Reg. No. 9,327.

Pat. 2,070,633. CAM OPERATED MACHINE. Patented Feb. 16, 1937. A machine actuated by a slotted cam having a follower engaging the slot in the cam, in which the cam slot is so formed that the follower moves from one side of the slot to the other with a uniform low velocity and engages the other side of the slot without undesirable impact at the maximum speed of operation for which the machine is intended. Group 35—59. Reg. No. 9,328.

Pat. 2,185,939. METHOD OF AND APPARATUS FOR UPSETTING HOLLOW RIVETS. Patented Jan. 2, 1940. Tubular rivets having closed inner ends are set in plates which are accessible on only one side by a gyrating mandrel which is inserted in a rivet and expands both ends of the rivet with a spinning action. Group 35—59. Reg. No. 9,329.

Pat. 2,301,351. APPARATUS FOR DISPOSING OF DUST. Patented Nov. 10, 1942. A dust collecting apparatus for abrading machines. A settling chamber has a row of intake openings separated by a baffle from an exhaust conduit the intake orifice of which is bordered by a flange which prevents dust deposited on the conduit from being swept into the conduit. Group 35—64. Reg. No. 9,330.

SHOES, SHOE PARTS AND SHOEMAKING METHODS (Group 31—41)

Pat. 2,300,540. METHOD FOR USE IN ATTACHING SOLES TO SHOES. Patented Nov. 3, 1942. This method consists in relatively locating a shoe and sole while they are spaced from each other and bulging the shank portion of the sole upward, before applying sole-attaching pressure, to make the length of the shank portion of the sole correspond to that of the shank portion of the shoe so that no stretching of the sole material is necessary in order to lay it properly against the shank portion of the shoe. Reg. No. 9,331.

Pat. 2,407,224. SHOE AND METHOD OF MAKING THE SAME. Patented Sept. 10, 1946. A platform shoe is made by securing a wrapper strip to an upper, securing an outturned margin of the upper to the reduced margin of a rabbeted platform sole, turning the wrapper strip outward, downward and inward around the edge of the platform, and attaching an outsole to the shoe. Reg. No. 9,332.

Pat. 2,407,352. METHOD OF MAKING SHOES. Patented Sept. 10, 1946. A slip-lasted platform shoe is made by securing together off the last an upper, an edge covering strip and an insole, with the upper wrong side out, turning the upper, inserting a last, attaching a platform sole to the insole, wrapping the covering strip around the edge of the platform, and attaching an outsole to the inturned margin of the covering strip. Reg. No. 9,333.

Pat. 2,409,813. REVERSIBLE SHOE. Patented Oct. 22, 1946. Relates to a reversible platform shoe having two platform soles in superimposed relation, a stay piece secured between them, a double faced upper secured to the margin of the stay piece, and wrapper strips covering the margins of the platform soles and having their margins also secured to the margin of the stay piece. Reg. No. 9,334.

DEVICES

Pat. 1,871,880. FINISHING TOOL. Patented Aug. 16, 1932. A heel burnishing tool having an indenting wheel and a rand crease engaging lip. Group 32—91. Reg. No. 9,335.

Pat. 1,894,452. LAST. Patented Jan. 17, 1933. A separable last having a forepart and a heel part separated by a cut and joined to each other by a resiliently supported hook on one part engaging a pin in the other part. Group 35—59. Reg. No. 9,336.

Pat. 1,895,457. FASTENING INSERTING MECHANISM. Patented Jan. 31, 1933. A hand stapling device adapted to drive a staple with its legs deflected laterally of the crossbar and having a novel staple strip magazine. Group 35—59. Reg. No. 9,337.

Pat. 1,969,747. INSERTION OF FASTENINGS. Patented Aug. 14, 1934. A welt type staple having helically clenched legs; article, shoe and method. Group 35—59. Reg. No. 9,338.

Pat. 1,976,016. HEEL FINISHING TOOL. Patented Oct. 9, 1934. A finishing tool having means for applying and distributing a finishing medium to, and for burnishing, the peripheral surface of a heel. Group 32—91. Reg. No. 9,339.

Pat. 2,040,758. SPRAY COLLECTOR. Patented May 12, 1936. Two tubular members placed end to end form a passage through which unused sprayed material is drawn by a fan. Cheesecloth to filter out the material is stretched across the passage and is gripped between the ends of these members. Group 35—64. Reg. No. 9,340.

Pat. 2,042,512. LAST. Patented June 2, 1936. A last for use in attaching a heel to a shoe by the two-step method of Patent 2,030,139. The screw engaging plate in the last is shiftable between screw-engaging and screw-releasing positions under the influence of gravity instead of by a manually operated actuating member. Group 35—59. Reg. No. 9,341.

Pat. 2,058,499. WELT SUPPORTING DEVICE. Patented Oct. 27, 1936. A portable device to be applied to a welt shoe to support the welt against sole attaching pressure. Pivoted plates formed to fit in the welt crease of the shoe carry sole positioning gages, one of which is yielding. Group 35—59. Reg. No. 9,342.

Pat. 2,068,025. FASTENING. Patented Jan. 19, 1937. Relates to a fiber fastening comprising a plurality of strands of paper twine, impregnated with glue, twisted together and secured in twisted relation by an additional coating of glue. Group 22—98. Reg. No. 9,343.

Pat. 2,071,400. LAST. Patented Feb. 23, 1937. An extensible last the heel part of which can be moved rearward by mechanism forming part of a special jack while the last is in a shoe. Means is provided for preserving the continuity of the side faces of the last when the heel part is moved away from the forepart. Group 35—59. Reg. No. 9,344.

Pat. 2,075,916. LAST. Patented Apr. 6, 1937. Relates to a collapsible last having a metal heel part and a wooden forepart to which a metal guard plate forming the joint with the heel part is fastened by the same bonding mechanism that holds the heel part and forepart together. Group 35—59. Reg. No. 9,345.

Pat. 2,085,148. HINGE LAST. Patented June 29, 1937. A hinge last the parts of which are separable and which is so organized that the heel part can be removed from a shoe on the last without disturbing the forepart. Group 35—59. Reg. No. 9,346.

Pat. 2,087,969. METHOD AND TOOL FOR ROLL-CLENCHING EYELETS. Patented July 27, 1937. Relates to a method and tool for upsetting ductile metal eyelets by roll-clenching the end of an eyelet against a work-piece and deforming its rim at one or more points to develop work-indenting projections on its work-engaging edge. Group 32—91. Reg. No. 9,347.

Pat. 2,093,436. LAST. Patented Sept. 21, 1937. A last for use in the machine of Patent No. 2,093,435. Air ducts extend from the thimble hole to various portions of the surface of the last, a valve admitting air to each duct in turn while closing the other ducts. Group 35—59. Reg. No. 9,348.

Pat. 2,094,118. LAST. Patented Sept. 28, 1937. A hinge last the parts of which are connected by an open, resilient, elliptical link having two oppositely facing lugs on its longer, inside, faces which lugs act as abutments to prevent undue stretch of the link and backward bending of the last under pressure. Group 35—59. Reg. No. 9,349.

Pat. 2,107,375. EYELET. Patented Feb. 8, 1938. Relates to a ductile metal eyelet the barrel of which has a blunt clenching end divided into alternate high and low segments by a series of arcuate indentations. When such an eyelet is roll-clenched the high segments are embedded in the eyelet receiving material more deeply than the low segments, increasing the holding power of the eyelet, and the form of the indentations prevents the clenching end of the eyelet from bursting or splitting. Group 35—59. Reg. No. 9,350.

Pat. 2,199,483. LAST. Patented May 7, 1940. Relates to a last having a clinching plate spaced from the bottom of its forepart, to separate the main portion of a split insole from the flap so that lasting tacks may be clinched into the surface of said main portion and later be covered by the flap, to make a "tackless" forepart in the shoe. Group 35—59. Reg. No. 9,351.

Pat. 2,296,922. STRIP BRUSH. Patented Sept. 29, 1942. A strip brush having a metal channel back is made by fastening groups of bristles to the back by means of integral teeth along the edges thereof which are folded over the bristles before the strip of backing metal is folded into a channel. Group 39—22. Reg. No. 9,352.

Pat. 2,296,949. BRUSH STRUCTURE. Patented Sept. 29, 1942. The core of a channel-backed strip brush is made of rubber which holds the bristles yieldably in even spacing.

To permit the bristles to breathe without being cut by the edges of the backing strip a resilient layer is interposed between the bristles and the strip. Group 39—22. Reg. No. 9,353.

Pat. 2,302,761. BRUSH STRIP. Patented Nov. 24, 1942. A self-sustaining backing strip has its margins inturned to grip against adjacent portions of the strip the inner ends of two rows of bristles. The strip is channel shaped and portions of the bristles extending outward from the channel are gripped between the opposed faces of the inturned margins and are capable of flexing across the rounded edges of the channel provided thereby. Group 39—22. Reg. No. 9,354.

MISCELLANEOUS (Group 35—59)

Pat. 2,296,942. METHOD OF PROVIDING FASTENING MATERIAL. Patented Sept. 29, 1942. The method comprises arranging a plurality of glue coated strands of fiber fastening material side by side in contact with each other, softening the glue to form the assembled strands into a flat ribbon, winding the ribbon into a coil, unwinding the ribbon as needed, and separating the strands for simultaneous use at different operating positions. Reg. No. 9,355.

Pat. 2,296,964. MACHINE FOR INSERTING BLOCKS IN HOLLOW ARTICLES. Patented Sept. 29, 1942. A machine having a hollow, expansible, frusto-conical guiding member through which a fluid operated plunger forces blocks, delivered from a stack into the path of movement of the plunger, into the mouths of hollow articles placed upon the guiding member. Reg. No. 9,356.

Correction

Pat. 2,431,847. MAP PROJECTION DEVICE. Patented Dec. 2, 1947. By means of this device a portion of the surface of a curved map may be projected in exact scale and proportion so that a navigation course, such as a great-circle course, may be determined or followed. The device is a transparent globe (upon which a map is reproduced) mounted for rotation within a box having an upper ground glass surface. A source of light adjacent one side of the globe is directed diametrically through the globe and projected by means of a magnifying lens to the ground glass which serves as a viewing screen for a sharp enlarged image of a selected small portion of the globe. (Owner) Van Dusen Engineering Company, 2706 Lytton St., San Diego 10, Calif. Group 39—13. Reg. No. 9,160.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 16, 1948

[VOL. 608. No. 3]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 508,072. SERVICISED PRODUCTS CORPORATION, Chicago, Ill. Filed Aug. 26, 1946.

Para-Plastic

Registrant disclaims any attempt to cover in this registration the word "Plastic" apart from the mark.

FOR THERMOPLASTIC RUBBERIZED BITUMINOUS COMPOSITIONS IN BULK AND ALSO IN SHEETS, AND SLABS OR STRIPS FOR USE IN OTHER CONSTRUCTIONS.

Claims use since Mar. 5, 1941.

Ser. No. 512,237. C. I. D. E. C. COMPAÑIA INDUSTRIAL DEL CUERO S. A., Buenos Aires, Argentina. Filed Nov. 8, 1946.

CROMANTIL

FOR TANNED GOAT, SHEEP AND COW HIDES, OF THE ANTELOPE FINISH TYPE, WHICH IS A HIGH-LUSTRE SUEDE USED FOR MAKING HANDBAGS, WALLETS AND THE LIKE.

Claims use since December 1944.

Ser. No. 524,019. SAPT, INC., Dover, Del., and New York, N. Y. Filed June 11, 1947.

No claim is made to the cut-out portion of the burlap bag.

FOR COTTON, WOOL AND RAYON WASTE, FIBERS AND RAGS, COTTON LINTERS AND OTHER TEXTILE WASTE AND RAGS, FOR USE IN THE TEXTILE, PAPER AND CHEMICAL INDUSTRIES, AND FOR OTHER INDUSTRIAL PURPOSES.

Claims use since 1917.

Ser. No. 525,028. OREGON BULB FARMS, Sandy, Oreg. Filed June 27, 1947.

GOLDEN CHALICE HYBRIDS

The applicant hereby disclaims the words "Golden" and "Hybrids" apart from the mark as a whole.

FOR FLOWER BULBS.

Claims use since June 1, 1946.

Ser. No. 525,029. OREGON BULB FARMS, Sandy, Oreg. Filed June 27, 1947.

ORBULB

FOR FLOWER BULBS.

Claims use since June 1, 1946.

CLASS 2

RECEPTACLES

Ser. No. 489,323. FULTON BAG & COTTON MILLS, Atlanta, Ga. Filed Oct. 3, 1945.

FOR INSULATED BAGS USED AS TEMPORARY CONTAINERS FOR BOTTLED OR PACKAGED BEVERAGES AND FOODS.

Claims use since Mar. 31, 1936.

Ser. No. 495,150. JAMES B. OTIS, Long Beach, Calif. Filed Jan. 21, 1946.

Aside from the word "Whisk-A-Way" the representation of the sanitary garbage can liners is disclaimed.

FOR PREFORMED SANITARY GARBAGE CAN LINERS CONSTRUCTED FROM WATER-PROOF PAPER.

Claims use since Feb. 6, 1945.

Ser. No. 500,707. SHEARER-NEUMANN CO., Cincinnati, Ohio, assignor to Beau Brummell Ties, Inc., Toiletries Division, Cincinnati, Ohio. Filed Apr. 22, 1946.

"Beauswade"

FOR UNFILLED ART BOXES TO BE USED FOR PACKAGING TOILET ARTICLES.

Claims use since Mar. 18, 1946.

Ser. No. 511,036. PENN METAL CORPORATION OF PENNA., Philadelphia, Pa. Filed Oct. 17, 1946.

1869 Penco

FOR STEEL LOCKERS, STEEL CABINETS, TOOL CABINETS, STEEL COUNTERS, STEEL TABLES, AND SHELVING INSERTS, BEING FORMATIONS WITH NUMEROUS COMPARTMENTS FOR STORAGE OF SMALL ARTICLES.

Claims use since 1927.

Ser. No. 522,991. JOSEPH B. STIER, doing business as Styson Art Products Company, New York, N. Y. Filed May 24, 1947.

Jewelier

FOR TRAYS, COASTERS, BON-BON AND CANDY DISHES, SALT SHAKERS AND SALT-BOWLS, PLATES, BOWLS AND ORNAMENTAL BOXES, ALL OF SAID GOODS BEING MADE IN WHOLE OR IN PART OF PLASTIC MATERIAL.

Claims use since May 1, 1947.

Ser. No. 524,160. SPIR-IT, INC., Malden, Mass. Filed June 13, 1947.

ICINGLES

FOR EMPTY PLASTIC CUPS FOR HOLDING LIQUID OR SOLID FOOD.

Claims use since Feb. 3, 1947.

Ser. No. 524,886. THE NUSTONE SEPTIC TANK COMPANY, New Haven, Conn. Filed June 26, 1947.

"GARBINATOR"

FOR UNDERGROUND TANKS OR CANS MADE FROM METAL, CONCRETE AND COMBINATIONS THEREOF.

Claims use since June 12, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 526,270. F. O. MERZ & Co., Philadelphia, Pa. Filed July 4, 1947.

FOMERZ

FOR POCKETBOOKS, BILLFOLDS, WALLETS, PURSES, KEY CASES, LEATHER CARD CASES, PASS CASES, COIN CASES, PORTFOLIOS, LEATHER COMPACT CASES, TOILET CASES AND LEATHER CASES FOR CARRYING A MANICURE SET.

Claims use since June 1932.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 473,782. J. E. JOHNSON & Co., Chicago, Ill., assignor to J. E. Johnson & Co., Cleveland, Ohio, a corporation of Ohio. Filed Aug. 31, 1944.

WATAWAX

THE KIND YOU USE IN WATER

No claim is made to the words "The Kind You Use in Water" apart from the mark, but applicant waives none of its common-law rights. Applicant is the owner of registration No. 406,667.

FOR CLEANING AND POLISHING COMPOUND FOR USE ON WOODWORK, PAINTED WALLS, FLOORS, GLASS AND PORCELAIN.

Claims use since about Dec. 1, 1936.

Ser. No. 490,969. JAMES H. RHODES & COMPANY, Chicago, Ill. Filed Nov. 2, 1945.

COLOSSUS

FOR STEEL WOOL, PUMICE AND OTHER POLISHING STONES, AND CHEMICALLY TREATED POLISHING CLOTHS.

Claims use since 1905.

Ser. No. 516,001. BEST & CO. INC., New York, N. Y. Filed Jan. 20, 1947. Under section 5b of the act of 1905, as amended in 1920.

Best & Co.

FOR SOAP IN LIQUID, CAKE, STICK, CREAM, OR POWDER FORM.

Claims use since Apr. 2, 1925.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 472,047. HANS EMANUEL NEUMANN ENOCH, London, England. Filed July 10, 1944.

PENNOTIN

FOR ANTI-BACTERIAL PREPARATIONS.

Claims use since December 1943.

Ser. No. 488,827. MCLESTER MCKEE, doing business as W. & M. Products Co., Jersey City, N. J. Filed Sept. 21, 1945.

Lester's

FOR PREPARATION CONSISTING OF A SALVE OR OINTMENT FOR THE TREATMENT OF THE SCALP; ALSO FACE CREAMS, LIQUID BRILLIANTINES, FACE POWDERS, LIP STICKS, AND PERFUMES.

Claims use since Jan. 2, 1938.

Ser. No. 496,746. ALLEN B. WRISLEY COMPANY, Chicago, Ill. Filed Feb. 16, 1946.

GOLD TASSELS

FOR PERFUME.

Claims use since May 1942.

Ser. No. 498,851. MAL LABORATORIES, New York, N. Y. Filed Mar. 23, 1946.

FOR SCALP TREATMENT CONSISTING OF MEDICATED OINTMENT CONTAINING LANOLIN, SULPHUR, AND EUROSOL IN A CREAM FORM, LIQUID SHAMPOO CONTAINING COCOANUT OIL, ANTISEPTIC CONTAINING ISOPROPONAL AND SALICYLIC ACID AND AN AFTER CREAM CONTAINING LANOLIN IN A CREAM FORM, SAID ANTISEPTIC AND AFTER CREAM BEING USED FOR TREATING HUMAN SKIN.

Claims use since Jan. 14, 1945.

Ser. No. 502,810. EAGLE PRODUCTS CO., INC., Chattanooga, Tenn. Filed May 27, 1946.

FLIPO

FOR INSECTICIDES AND INSECT SPRAYS.
Claims use since May 6, 1946.

Ser. No. 504,101. ELK MANUFACTURING COMPANY, Jellico, Tenn. Filed June 18, 1946.

ELK

FOR GLYCERIN, LUMP ALUM, POWDERED ALUM, BLUESTONE, LUMP BORAX, POWDER BORAX, LIQUID CARBOLIC ACID, COPPERAS, QUININ SULPHATE, SULPHUR, SWEET SPIRITS OF NITER, TINCTURE OF IODIN, MURIATE TINCTURE IRON, ASPIRIN, CASTOR OIL, COMPOUND CATHARTIC PILLS, CALOMEL, EPSOM SALTS, LAXATIVE TABLETS FOR RELIEF OF LA GRIPPE AND COLDS, PAREGORIC, SWEET OIL, WORM-SYRUP, PETROLEUM JELLY, MOUTH WASH, AROMATIC SPIRITS AMMONIA, CHEST RUB, ALCOHOL RUBBING COMPOUND, MINERAL OIL FOR INTERNAL USE, COUGH SYRUP, RUBEFACIENT, PINK CAKE COLORING, OIL OF CASSIA, ANTI-PAIN LINIMENT.
Claims use since Sept. 1, 1919.

Ser. No. 504,930. BILLIE ROUNTREE, doing business as Rountree Laboratories, Fort Worth, Tex. Filed July 1, 1946.

The photograph and the signature are those of W. C. Rountree, M. D., deceased.
FOR MEDICAL COMPOUNDS PRODUCED IN THE FORM OF CRYSTALS, CAPSULES AND SALINE LIQUIDS, FOR THE TREATMENT OF PELLAGRA.
Claims use since Jan. 1, 1926.

Ser. No. 505,156. GEIGY COMPANY, INC., New York, N. Y. Filed July 6, 1946.

DDT Geigy DDT

Applicant disclaims sole use of the letters "DDT" apart from the mark.
FOR INSECTICIDES.
Claims use since Nov. 29, 1945.

Ser. No. 505,157. GEIGY COMPANY INC., New York, N. Y. Filed July 6, 1946.

Geigy DDT

Applicant disclaims sole use of the letters "DDT" apart from the mark.
FOR INSECTICIDES.
Claims use since Nov. 29, 1945.

Ser. No. 505,234. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed July 8, 1946.

Minute Man

FOR SHAMPOO.
Claims use since May 13, 1946.

Ser. No. 505,547. ASSOCIATED PRODUCTS, INC., Chicago, Ill. Filed July 13, 1946.

PAPAYA

FOR FACE LOTIONS, SKIN BLEACHES, VANISHING, CLEANSING AND COLD CREAMS, PADS CHEMICALLY IMPREGNATED WITH A CREAM OR LOTION FOR USE IN CLEANSING THE FACE, FACE POWDER, FACE MAKE-UP IN LIQUID FORM, CAKE MAKE-UP, LIPSTICKS, CAKE, LIQUID AND CREAM ROUGES, TALCUM POWDER, LIQUID NAIL POLISH REMOVER, PADS IMPREGNATED WITH NAIL POLISH REMOVER, CUTICLE SOFTENER, CUTICLE REMOVER, HAND LOTIONS, NAIL POLISHES, HAND CREAMS, HAIR WAX, PADS IMPREGNATED WITH LACQUER FOR USE IN DRESSING THE HAIR, HAIR TONICS, HAIR OIL, BRILLIANTINE (SOLID AND LIQUID), SHAMPOOS, HAIR WAVE LOTIONS, HAIR BLEACHES, POMADES (IN POTS, STICKS AND CAKES), EYEBROW PENCIL, MASCARA, EYE SHADOW, TOILET WATER, PERFUME, CREAM COLOGNE, EAU DE COLOGNE, BATH SALTS, SMELLING SALTS, SACHET POWDERS, DUSTING POWDER, DEODORANTS (LIQUID AND CREAM FORM), PADS IMPREGNATED WITH LIQUID AND CREAM DEODORANTS AND DEPILATORIES IN SOLID, CAKE AND LIQUID FORM.
Claims use since June 12, 1946.

Ser. No. 505,784. WELDUM PRODUCTS COMPANY, Madison, Ind. Filed July 17, 1946.

CARBONOID

FOR SOOT DESTROYING COMPOUND.
Claims use since Mar. 1, 1915.

Ser. No. 507,595. POLO & SALOMONE, New York, N. Y. Filed Aug. 17, 1946.

Insulabeten

FOR PREPARATION FOR THE TREATMENT OF DIABETES.
Claims use since May 23, 1946.

Ser. No. 507,706. ANSUL CHEMICAL COMPANY, Marinette, Wis. Filed Aug. 21, 1946.

THE MASTER OF FLAME

The word "Flame" is disclaimed apart from the mark shown on the drawing.
FOR COMMINUTED, FREE-FLOWING FIRE EXTINGUISHING DRY CHEMICAL.
Claims use since May 17, 1946.

Ser. No. 514,374. PARKE, DAVIS & COMPANY, Detroit, Mich. Filed Dec. 16, 1946.

THEOGLYTOL

FOR PREPARATION FOR THE TREATMENT OF CARDIO VASCULAR DISEASES.
Claims use since Oct. 31, 1946.

Ser. No. 516,582. SCHENLEY LABORATORIES, INC., New York, N. Y. Filed Jan. 29, 1947.

POULTRYCILLIN

FOR PENICILLIN FOR USE IN THE TREATMENT OF POULTRY.
Claims use since Oct. 21, 1946.

Ser. No. 518,171. PUREPAC CORPORATION, New York, N. Y., assignor to De Vore Manufacturing Co. Inc., New York, N. Y., a corporation of New York. Filed Feb. 26, 1947.

Gold Seal

FOR VITAMIN TABLETS, AMMONIATED MERCURY OINTMENT, ANALGESIC BALM, ATHLETIC LINIMENT, ASPIRIN TABLETS, COUGH SYRUP, BABY POWDER, ELIXIR OF BEEF AND IRON, BLUE OINTMENT, BORIC ACID, CALOMEL POWDER, CASCARA TABLETS, CASTORIA, LIQUID CORN REMOVER, NASAL DROPS, FOOT POWDER, GLYCERIN SUPPOSITORIES, LANOLIN, LARKSPUR AND SABADILLA COMPOUND, MILK OF MAGNESIA, MOUTH WASH, OIL OF CLOVES, PEROXIDE, RHINITIS TABLETS, RUBBING ALCOHOL, SODA MINT TABLETS, SULFATHIAZOLE OINTMENT, SULPHUR OINTMENT, THROAT GARGLE, IODINE, TOOTHACHE DROPS, TOOTHACHE GUM, WITCH HAZEL, ZINC OXIDE OINTMENT, ZINC STEARATE, ALUM POWDER, BICARBONATE OF SODA, SEIDLITZ POWDERS, BORAX, THROAT LOZENGES, SYRUP OF WHITE PINE, COPPER SULPHATE, CHAMOMILE, CREAM OF TARTAR, EPSOM SALTS, FLAXSEED, HENNA POWDER, NUX VOMICA, OXALIC ACID CRYSTALS, PERMANGANATE OF POTASH, ROCHELLE SALT, SALICYLIC ACID, SALTPETRE, SENNA LEAVES, SUGAR OF LEAD, TURMERIC, ACETONE, BAY LOTION, CALAMINE LOTION, CAMPHORATED OIL, CASTOR OIL, CHLOROFORM LINIMENT, GLYCERIN, GLYCERINATED ROSE WATER, METHYL SALICYLATE, OIL OF CITRONELLA, OIL OF EUCALYPTUS, PAREGORIC, RHUBARB AND SODA MIXTURE, AROMATIC SPIRITS OF AMMONIA, SPIRITS OF CAMPHOR, SPIRITS OF NITROUS ETHER, SPIRITS OF PEPPERMINT, TINCTURE OF GREEN SOAP, BRILLIANTINE AND HAIR OIL, FISH LIVER OIL CAPSULES, YEAST TABLETS, LAXATIVES, TOOTH POWDER, POTASSIUM PERMANGANATE, EXPECTORANTS, LILAC VEGETAL, BURROW'S SOLUTION, DOBBELL'S SOLUTION, CARMINATIVES, PSYLLIUM SEEDS, ANTISEPTICS, BORIC ACID OINTMENT, FERROUS SULFATE.
Claims use since Apr. 1, 1922.

Ser. No. 518,238. CROSBY W. MAGNUSSON, doing business as King Kelly Marmalade Co., and The Magnusson Company, Bellflower, Calif. Filed Feb. 27, 1947.

DENTA-FLUR

FOR PRESSED TABLETS MADE UP OF POWDERED BEEF BONE MEAL, WITH VITAMIN D, TO CORRECT DEFICIENCIES IN THE DIET.
Claims use since Feb. 4, 1947.

Ser. No. 519,118. MARION B. CARSON, doing business as Carson Chemicals, Brownsville, Tex. Filed Mar. 17, 1947.

The words "Tick Powder" are disclaimed apart from the mark as shown.
FOR TICK, FLEA, AND LICE POWDER.
Claims use since Dec. 17, 1946.

Ser. No. 520,483. R. T. VANDERBILT COMPANY, INC., New York, N. Y. Filed Apr. 10, 1947.

Vanlube

FOR STABILIZING AND RELEASING AGENT FOR VINYL RESINS.
Claims use since Mar. 24, 1947.

Ser. No. 521,341. LEHN & FINK PRODUCTS CORPORATION, Bloomfield, N. J. Filed Apr. 25, 1947.

SAVOIR FAIRE

FOR CLEANSING CREAM AND TOILET WATER.
Claims use since Mar. 12, 1947.

Ser. No. 522,667. FELLOWS MEDICAL MANUFACTURING COMPANY, INC., New York, N. Y. Filed May 19, 1947.

ARBEC

FOR PREPARATION FOR THE SYMPTOMATIC TREATMENT OF ASTHMA.
Claims use since May 8, 1947.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 520,555. PHILIP J. DESJARDINS, doing business as P. Desjardins & Son, Fall River, Mass. Filed Apr. 12, 1947.

JET

FOR SMOKING PIPES.
Claims use since June 1, 1946.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 493,776. INTERNATIONAL BUSINESS MACHINES CORPORATION, New York, N. Y. Filed Dec. 22, 1945.

FOR TYPEWRITER RIBBONS AND CARBON PAPER.
Claims use since prior to Mar. 29, 1943, on typewriter ribbons, and since Oct. 27, 1944, on carbon paper.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 509,223. LATISTEEL, INC., Pasadena, Calif. Filed Sept. 17, 1946.

LATISLAB

FOR PREFABRICATED CONSTRUCTION ELEMENT CONSISTING OF A FABRICATED UNIT OF STEEL OR OTHER STRUCTURAL MATERIALS AND INCLUDING AN EXPANDED WEB OR FABRICATION OF STEEL OR THE LIKE AND USED IN THE CONSTRUCTION OF BUILDINGS OR OTHER STRUCTURES.
Claims use since May 2, 1946.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 496,489. TUBE TURNS, Louisville, Ky. Filed Feb. 12, 1946.

TUBE-TURN

Applicant is the owner of Reg. No. 279,239. No claim is made to the word "Tube" apart from the mark.
FOR METAL PIPE FITTINGS—NAMELY, T'S, REDUCERS, CAPS, LATERALS, FLANGES, CROSSES, SADDLES, SLEEVES, NIPPLES, AND LAP JOINT STUB ENDS.
Claims use since July 1938, on T's, reducers, caps, laterals, crosses, saddles, sleeves, nipples, and lap joint stub ends, and since July 1943, on flanges.

Ser. No. 501,584. THE NYLOK CORPORATION, New York, N. Y. Filed May 7, 1946.

NYLOK

FOR LOCK NUTS.
Claims use since Mar. 18, 1946.

Ser. No. 504,109. HARRY JOLKOWER, doing business as American Pipe and Tank Lining Co., New York, N. Y. Filed June 18, 1946.

AMPLICO

FOR CEMENT LINED IRON AND STEEL PIPES.
Claims use since Apr. 15, 1946.

Ser. No. 505,562. DETROIT LUBRICATOR COMPANY, Detroit, Mich. Filed July 13, 1946.

"DETROIT"

Applicant disclaims the word "Detroit" except as it forms a part of the mark as shown.
FOR FLOAT OPERATED VALVES.
Claims use since June 1946.

Ser. No. 506,159. CRESCENT STEEL COMPANY, Detroit, Mich. Filed July 24, 1946.

HOsnap

The word "Snap" and the representation of a piece of hose are disclaimed.
FOR AUTOMATIC HOSE COUPLING.
Claims use since Oct. 12, 1945.

Ser. No. 507,067. NAAMLOOZE VERMOOTSCHAP DICTATOR DEURSLUITER MAATSCHAPPIJ, Bussum, Kingdom of the Netherlands. Filed Aug. 8, 1946.

DICTATOR

FOR DOOR-CLOSERS.
Claims use since Oct. 21, 1933.

Ser. No. 511,659. A & A SALES CO., Glendale, Calif. Filed Oct. 29, 1946.

GARDENER'S THUMB

The word "Gardener's" is disclaimed.
FOR HOSE NOZZLES.
Claims use since Sept. 18, 1946.

Ser. No. 515,550. GENERAL CONSUMER PRODUCTS, INC., Chicago, Ill. Filed Jan. 10, 1947.

Heritage

FOR ALUMINUM COOKING UTENSILS—NAMELY, ALUMINUM DUTCH OVENS, SAUCE PANS, ROASTERS AND FRYING PANS.
Claims use since September 1946.

Ser. No. 515,999. BEST & CO. INC., New York, N. Y. Filed Jan. 20, 1947. Under 10-year proviso.

Best & Co.

FOR IRON, PORCELAIN OR ENAMELED BATH TUBS.
Claims use since 1882.

Ser. No. 525,384. OAKES & COMPANY, Chicago, Ill. Filed July 1, 1947.

FOR PRESSURE CANNERS, MILK STRAINERS, BARBED WIRE, BATH TUBS, CASTERS, ANTI-SKID CHAINS, PRESSURE COOKERS, HINGES, DOOR CHECKS, FUNNELS, METAL GATES, STEEL BELT LACING, NAILS, SPRAY NOZZLES FOR LAWN SPRINKLERS, NUTS, BOLTS, SCREEN WIRE CLOTH, TOILET SEATS, WATER BASINS, METAL WASHERS, WATER CLOSETS, WIRE FENCING, SASH LIFTS, WARE OF BASE METAL—NAMELY, BREAD PANS, MUFFIN PANS, COOKIE TRAYS, AND ENAMELED WARE—NAMELY, PITCHERS, DISHPANS, SAUCEPANS, TEA KETTLES, AND PUDDING PANS.
Claims use since May 22, 1947.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 493,951. THE DURALOY COMPANY, Scottdale, Pa. Filed Dec. 28, 1945.

The four quadrants containing the cross-hatching do not denote color, but instead are included as a part of the design. Applicant disclaims the words "Permanence, Resistance and Durability."
FOR METAL ALLOYS, AND PARTICULARLY FOR CHROMIUM IRON ALLOYS IN THE FORM OF CASTINGS, BARS, PLATES, SHEETS AND THE LIKE.
Claims use since July 7, 1922.

Ser. No. 511,882. LA SALLE STEEL COMPANY, Hammond, Ind. Filed Nov. 1, 1946.

LA-SULPHITE

The word "Sulphite" is disclaimed apart from the prefix "La."
FOR COLD FINISHED ALLOY STEEL BARS.
Claims use since June 25, 1946.

CLASS 15

OILS AND GREASES

Ser. No. 504,494. J. JONES & BROTHER, Philadelphia, Pa. Filed June 24, 1946. Under 10-year proviso.

Balkan

FOR MOTOR LUBRICATING OIL AND GREASES.
Claims use since Jan. 1, 1873.

Ser. No. 519,244. WELDWAX CORPORATION, New Paltz, N. Y. Filed Mar. 18, 1947.

Candelier

Applicant disclaims the representation of a candle.
FOR WAX CANDLES.
Claims use since Aug. 16, 1946.

Ser. No. 524,543. THE "M. C. D. C." OIL PRODUCTS COMPANY, INC., New York, N. Y. Filed June 20, 1947.

The words "Scientifically Controlled," "Lubricants" and "Processes" are disclaimed apart from the mark.
FOR LUBRICATING OILS FOR INTERNAL COMBUSTION ENGINES AND AUTOMOTIVE LUBRICATING GREASES.
Claims use since June 1, 1937.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 514,262. FLEMING-HALL TOBACCO CO., INC., New York, N. Y. Filed Dec. 14, 1946.

SKIS

FOR CIGARETTES.
Claims use since Dec. 10, 1946.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 494,134. SAMUEL M. SIEGEL, doing business as Gadgets, Jackson Heights, N. Y. Filed Dec. 29, 1945.

HANDIE-WALKIE

No claim is made to the exclusive use of the word "Handie" apart from the mark.
FOR RADIO RECEIVING SETS.
Claims use since December 1944.

Ser. No. 495,645. WILLIAM G. H. FINCH, New York, N. Y. Filed Jan. 29, 1946.

ROCKET

FOR RADIO ANTENNAE.
Claims use since Jan. 22, 1946.

Ser. No. 498,071. NATIONAL CARBON COMPANY, INC., New York, N. Y. Filed Mar. 12, 1946.

Applicant disclaims the word "Carbon" apart from the mark as shown.
FOR ELECTRODES FOR USE IN ELECTROTHERMIC APPARATUS, NIPPLES, PLASTIC JOINT COMPOUND AND CEMENT FOR JOINING SUCH ELECTRODES, AND CARBONACEOUS CEMENT AND CARBONACEOUS PASTE FOR USE IN ELECTROTHERMIC AND ELECTROLYTIC APPARATUS.
Claims use since about Mar. 5, 1945, on electrodes for use in electrothermic apparatus; since about Mar. 14, 1945, on plastic joint compound for such electrodes; since about Mar. 17, 1945, on cement for joining such electrodes; since about July 26, 1945, on nipples for joining such electrodes; since about Mar. 17, 1945, on carbonaceous cement for use in electrothermic and electrolytic apparatus, and since about Jan. 7, 1946, on carbonaceous paste for use in electrothermic and electrolytic apparatus.

Ser. No. 501,113. THE BUTLER COMPANY, Butler, Ind. Filed Apr. 29, 1946.

The word "Butler" is disclaimed apart from the mark.
FOR MOTOR DRIVEN UNITS FOR OPERATING WATER PUMPS.
Claims use since April 1938.

Ser. No. 501,114. THE BUTLER COMPANY, Butler, Ind. Filed Apr. 29, 1946.

The word "Butler" is disclaimed apart from the mark.
FOR MOTOR DRIVEN UNITS FOR OPERATING WATER PUMPS.
Claims use since March 1939.

Ser. No. 503,869. COMMUNICATIONS COMPANY, INC., Coral Gables, Fla. Filed June 14, 1946.

COMCO

FOR RADIO APPARATUS—NAMELY, SPEAKER AMPLIFIERS, DUAL SPEAKER PANELS, SINGLE SPEAKER PANELS, MOTORCYCLE TRANSMITTERS AND RECEIVERS, TRANSMITTERS, SPEAKER CONTROLS, TAXI SPEAKERS, AUTOMOBILE TRANSMITTERS AND RECEIVERS, ALL FREQUENCY TRANSMITTERS, AIRCRAFT TRANSMITTERS AND RECEIVERS, MARINE TRANSMITTERS AND INTERPHONES, LOCAL AND REMOTE CONTROL TRANSMITTERS, DISPATCH CONSOLES, MEANING REMOTE CONTROL UNITS CONTAINING LOUD SPEAKERS, MICROPHONES AND AMPLIFIERS, WALL SPEAKERS, AND PARTS THEREOF.

Claims use since September 1944.

Ser. No. 504,758. FULLER-GREENE, INC., Milwaukee, Wis. Filed June 28, 1946.

NOVELAIRE RADIOS

The word "Radios" is disclaimed apart from the mark as shown. The representations of human figures illustrated as a part of the mark are fanciful.

FOR RADIO RECEIVING SETS.

Claims use since May 18, 1946.

Ser. No. 507,646. DAVID MADER, Neuchatel, Switzerland. Filed Aug. 19, 1946.

SoniDeal

FOR RADIO RECEIVING SETS, ELECTRIC PHONOGRAPHS, ELECTRIC AUTOMATIC DISC RECORD CHANGERS, AND PARTS OF ANY OF THE FOREGOING.

Claims use since Apr. 6, 1945.

Ser. No. 507,670. BROOK ELECTRONICS, INC., Newark, N. J. Filed Aug. 20, 1946.

BROOK

FOR RADIO RECEIVERS AND AMPLIFIERS.

Claims use since July 1, 1946.

Ser. No. 513,064. MAGNECON, Chicago, Ill. Filed Nov. 22, 1946.

MAGNECON

FOR ELECTRICAL APPARATUS—NAMELY, RELAYS, SOLENOID OPERATED CONTACTORS, AND WOUND COILS.

Claims use since March 1945.

Ser. No. 516,253. THE BRUSH DEVELOPMENT COMPANY, Cleveland, Ohio. Filed Jan. 24, 1947.

ACOUSTICEL

FOR MICROPHONES.

Claims use since Oct. 31, 1946.

Ser. No. 516,357. GROSS COMMUNICATIONS, INC., Cleveland, Ohio, assignor, by mesne assignments, to I. A. Gross Electronics Inc., Cleveland, Ohio, a corporation of Ohio. Filed Jan. 25, 1947.

ULTRAPHONE

FOR RADIO TRANSMITTING AND RECEIVING EQUIPMENT—NAMELY, COMPLETE RADIO RECEIVERS, TRANSMITTERS AND PARTS THEREOF AND ANTENNAS.

Claims use since June 20, 1946.

Ser. No. 516,488. THE LLOYD PRODUCTS COMPANY, Providence, R. I. Filed Jan. 28, 1947.

L P

FOR HOLDERS FOR FLUORESCENT LAMPS, FLUORESCENT LAMP STARTERS AND FIXTURES FOR FLUORESCENT LAMPS.

Claims use since Nov. 8, 1946.

Ser. No. 524,126. GLAZIERS' TOOL MFG. CORP., Chicago, Ill. Filed June 13, 1947.

TROJAN

FOR ELECTRICALLY HEATED TOOL IN THE NATURE OF A FRAME CONTAINING A HEATING EDGE FOR SOFTENING PUTTY IN WINDOWS AND DOORS PRIOR TO REMOVAL.

Claims use since June 1939.

Ser. No. 524,278. AIRTRON, INC., Pleasant Plains, Staten Island, N. Y. Filed June 17, 1947.

FLEXAGUIDE

FOR FLEXIBLE WAVEGUIDE USED IN MICROWAVE PLUMBING SYSTEMS TO CHANNEL ELECTRICAL ENERGY FROM ONE POINT TO ANOTHER.

Claims use since May 29, 1947.

Ser. No. 524,838. UNION CARBIDE AND CARBON CORPORATION, New York, N. Y. Filed June 25, 1947.

HALOWAX

FOR ELECTRICAL INSULATING AND FIRE-RESISTING SATURANTS, IMPREGNANTS, AND SEALING COMPOUNDS FOR ELECTRICAL CONDENSERS AND COILS; ELECTRICAL INSULATING AND FIRE-RESISTING SATURANTS AND IMPREGNANTS FOR ELECTRIC WIRE INSULATION.

Claims use since about 1913 in respect of electrical insulating and fire-resisting saturants, impregnants, and sealing compounds for electrical condensers and coils and since about 1919 in respect of electrical insulating and fire-resisting saturants and impregnants for electric wire insulation.

Ser. No. 524,991. INDUCTION HEATING CORP., New York, N. Y. Filed June 27, 1947.

THER-MONIC

FOR HIGH FREQUENCY INDUCTION HEATING APPARATUS AND PARTS THEREOF AND HIGH FREQUENCY DIELECTRIC HEATING APPARATUS AND PARTS THEREOF—NAMELY, HIGH FREQUENCY GENERATORS, ELECTRICALLY DRIVEN COOLING SYSTEMS, INDUCTORS, ELECTRODES AND MECHANISMS FOR SUPPORTING AND CONVEYING ARTICLES TO BE HEATED BY HIGH FREQUENCY FIELDS.

Claims use since Apr. 1, 1946.

Ser. No. 525,388. OAKES & COMPANY, Chicago, Ill. Filed July 1, 1947.

FARMITT

FOR ELECTRICAL APPARATUS—NAMELY, ELECTRIC FENCE CONTROLS, WELDERS, WATER HEATERS, AERIALS, AUTOMOBILE HORNS, DRY AND STORAGE BATTERY CELLS, BATTERY CONNECTORS, BATTERY CABLES, DRY AND STORAGE BATTERIES, FLASHLIGHT CASES, HAND DRILLS, SOLDERING IRONS, WAFFLE IRONS, LAMPS, FOOD AND BEVERAGE MIXERS, MOTORS, PERCOLATORS, HOT PLATES, FLASH LIGHTS, RANGES, VACUUM CLEANERS, FRICTION TAPE, RUBBER TAPE, SPARK PLUGS, INSULATED WIRE, FLOOR AND WALL RECEPTACLES, AND RADIO RECEIVING SETS.

Claims use since May 22, 1947.

Ser. No. 526,327. LOUIS E. MCGLAUGHLIN, doing business as Chicago Combustion Company, New York, N. Y. Filed June 19, 1947.

Broilburger

FOR ELECTRICALLY OPERATED MACHINES FOR TURNING AND BROILING EDIBLE PRODUCTS.

Claims use since July 1, 1940.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 470,594. AKTIEBOLAGET MALCUS HOLMQUIST, Halmstad, Sweden. Filed May 25, 1944.

MALCUS

FOR TRAVELLING CRANES AND SLEWING CRANES OF ALL KINDS FOR HAND, ELECTRIC AND PNEUMATIC POWER; WORM GEARED PULLEY BLOCKS; TRIPLEX PULLEY BLOCKS; TRAVELLING CRABS; TRAVELLING PLATFORMS FOR REMOVING RAILWAY CARS AND LOCOMOTIVES FROM ONE TRACK TO A PARALLEL TRACK; PNEUMATIC LIFTING CYLINDERS; ELECTRIC LIFTING BEAMS FOR LOCOMOTIVES; CEILING CONVEYORS AND LIFTING JACKS OF ALL KINDS; METAL FOUNDING MACHINES AND PARTS THEREOF; LADLES; MACHINES FOR DRESSING OF MOULDING SAND; MOULDING MACHINES; CASTING CLEANING MACHINES; TWIST DRILLS; TAPS; REAMERS; MILLING TOOLS; SLOT CUTTERS; TURNING TOOLS; CHUCKS; JAW CHUCKS; TOOL HOLDERS AND GRINDING SPINDLES; METAL GRINDING MACHINES OF ALL KINDS AND PARTS THEREOF; CENTERLESS GRINDING MACHINES; SURFACE GRINDING MACHINES AND PARTS THEREOF FOR DRY AND WET GRINDING; DRILL GRINDING MACHINES; BURNISHING WHEELS OF FELT; PUMPS; VISES; CRAMPS; OIL FILTERS FOR ACCESSORIAL USE ON MACHINES AND ENGINES; AND CENTRIFUGES FOR COTTON-WASTE.

Claims use since 1889.

Ser. No. 471,396. GENERAL CUTLERY CO., INC., New York, N. Y. Filed June 19, 1944.

GENERAL CUTLERY Co.

The words "Cutlery Co." are disclaimed apart from the mark shown on the drawing.

FOR HOUSEHOLD, KITCHEN, AND INDUSTRIAL CUTLERY, AND TABLEWARE—NAMELY, POCKET KNIVES, BUTCHER KNIVES, CARVING KNIVES, KITCHEN KNIVES, PARING KNIVES, BREAD KNIVES, FRUIT KNIVES, HUNTING KNIVES, PUTTY KNIVES, SHARPENING STEELS, FLATWARE CONSISTING OF KNIVES, FORKS, AND SPOONS, SPATULAS, CARVING SETS CONSISTING OF KNIVES, FORKS, AND SHARPENING SPEARS, SCISSORS, POT FORKS, KITCHEN FORKS, CAKE FORKS, PASTRY FORKS, BASTING SPOONS, SERVING SPOONS, PAINT SCRAPERS, AND POULTRY SHEARS, ALL OF NON-PRECIOUS METAL.

Claims use since January 1940.

Ser. No. 502,298. INDUSTRIAL HYDRAULICS CORPORATION, Painesville, Ohio. Filed May 17, 1946.

INDUSTRIAL HYDRAULICS

In the mark the words "Industrial Hydraulics" are disclaimed.

FOR HYDRAULIC PUMPS, VALVES, AND HYDRAULIC OPERATED MECHANISMS AND FITTINGS, ADAPTED AS ACCESSORIES FOR SOME COMPREHENSIVE MACHINES SUCH AS TRACTOR HOISTS, HYDRAULICALLY OPERATED LIFTING AND PULLING JACKS, TRACTOR DRAWN OR CARRIED IMPLEMENT OPERATING MACHINERY SUCH AS AGRICULTURAL IMPLEMENT LIFTS, ETC. AND THE LIKE.

Claims use since Sept. 1, 1945.

Ser. No. 505,131. CLARK C. RANDALL, doing business as Pre-Vent Engineering Company, Oak Park, Ill., assignor to Pre-Vent Corporation, Chicago, Ill., a corporation of Illinois. Filed July 5, 1946.

"PRE-VENT"

Applicant disclaims the term "Vent" apart from the mark as shown.

FOR CRANK CASE SCAVENGERS FOR INTERNAL COMBUSTION ENGINES.

Claims use since Oct. 22, 1945.

Ser. No. 506,016. DELAVAN MANUFACTURING COMPANY, Des Moines, Iowa. Filed July 22, 1946.

Pumpall

The word "Pump" is disclaimed apart from the mark.

FOR VACUUM POWER PUMPS.

Claims use since July 8, 1946.

Ser. No. 506,342. RED DEVIL TOOLS, Irvington, N. J. Filed July 26, 1946.

GOLD

FOR RESILIENT HAND-ABRADING TOOLS OF VARIOUS SHAPES AND SIZES DISTINGUISHED BY INTERMINGLED METALLIC ELEMENTS AS THE FUNCTIONING PART THEREOF FOR WORKING ON METALLIC SURFACES AND THE LIKE.

Claims use since June 1939.

Ser. No. 509,305. STEPHEN H. ROLLER, New York, N. Y. Filed Sept. 18, 1946.

No claim is made to the word "Sense" and the representation of the scythe or sickle blade depicted in the mark.

FOR SCYTHES AND SICKLES.

Claims use since 1939.

Ser. No. 510,142. WURZBURG BROTHERS, Memphis, Tenn. Filed Oct. 2, 1946.

WURCO

FOR BALE TIE TWISTERS, TAG DISPENSERS, BALING PRESSES, BARREL CRADLES, BARREL GRABS, BARREL SLINGS, BOX OPENERS, BOX SCRAPERS, BOX SEALERS, TYING MACHINES, TAPE MACHINES—LARGE SIZE, PAPER CUTTERS, PAPER SHREDDERS, CARTON CUTTERS, CARTON SEALING MACHINES, LABELLING MACHINES, CARBOY TILTERS, DRUM ROCKERS, TACKERS, SNUB LIFTS, MOP WRINGERS, NAIL PULLERS, PACKING NEEDLES, PRY POLES, SILICATE PUMPS, STRAPPING REELS USED AS A TOOL, STAPLING MACHINES, STITCHING MACHINES, STRAPPING TOOLS, CONVEYORS, HATCHETS, HAMMERS, CROWBARS, CRANES, LIFT TRUCKS, LIFT JACKS AND STACKERS, AND DRUM ROCKERS WITH WHEELS.

Claims use since Jan. 18, 1946.

Ser. No. 510,222. G. H. WOOD & COMPANY, LIMITED, Toronto, Ontario, Canada. Filed Oct. 3, 1946.

WOODLETS

FOR A SMALL SUBSTANTIALLY CYLINDRICAL ATOMIZING OR SPRAYING DEVICE HAVING AN OPENING THEREIN TO RECEIVE A CARTRIDGE CONTAINING A LIQUID UNDER PRESSURE, SAID ATOMIZER BEING PROVIDED WITH A PIERCING DEVICE AND A HANDLE OR LEVER FOR ACTUATING SAME TO RELEASE THE FLUID IN THE CARTRIDGE AND PERMIT IT TO BE SPRAYED THROUGH AN APERTURE IN THE SPRAYING DEVICE PROVIDED FOR THAT PURPOSE.

Claims use since Dec. 17, 1945.

Ser. No. 510,718. THE OILGEAR COMPANY, Milwaukee, Wis. Filed Oct. 11, 1946.

CYCLEMATIC

FOR VERTICAL BROACHING MACHINES.

Claims use since Sept. 17, 1946.

Ser. No. 514,952. THE GENERAL DETROIT CORP., Detroit, Mich. Filed Dec. 28, 1946.

GENERAL QUICKAID FIRE GUARD

The words "Quick," "Aid" and "Fire" are disclaimed apart from the mark.

FOR FIRE EXTINGUISHERS AND PARTS THEREOF, PARTICULARLY OF THE VAPORIZING LIQUID; WET CHEMICAL OR SODA-ACID; FOAM; WATER PUMP AND NON-FREEZE TYPES.

Claims use since Dec. 2, 1946.

Ser. No. 515,344. THE TORONTO STAR LIMITED, Toronto, Ontario, Canada. Filed Jan. 6, 1947.

WALLASTAR

FOR PAPER AND WIRE BOUND BUNDLING MACHINES.

Claims use since July 1, 1946.

Ser. No. 516,288. B. JADOW, INC., New York, N. Y. Filed Jan. 24, 1947.

Vigor

FOR JEWELERS' AND WATCHMAKER'S TWEEZERS, PLIERS, SCREWDRIVERS, SAWS AND HAND CONSTRUCTING AND DISASSEMBLING TOOLS AND INSTRUMENTS—NAMELY, FRICTION PRESSING TOOLS, GLASS CUTTING TOOL, GRAVERS FOR WATCHMAKERS AND JEWELLERS, HAIR SPRINGS COLLET REMOVING TOOL, JEWEL SETTING TOOL, PIVOTING TOOL, POISING TOOL, WINDING TOOL FOR MOVEMENT AND FOR WATCHES AND WATCH PARTS.

Claims use since March 1928.

Ser. No. 521,254. GREEN CONTRACTING AND ENGINEERING COMPANY, INC., Wichita, Kans. Filed Apr. 24, 1947.

PRESSURE-PLASTIC

The word "Pressure" is disclaimed apart from the mark as shown.

FOR COATING APPLICATORS COMPRISING SPRAYERS AND SPRAY GUNS.

Claims use since Apr. 1, 1946.

Ser. No. 525,702. ST. REGIS PAPER COMPANY, New York, N. Y. Filed July 2, 1947.

SR

FOR MACHINERY AND PARTS THEREOF—NAMELY, MACHINERY FOR MANUFACTURING PAPER BAGS, MACHINES FOR FILLING VALVE BAGS AND MACHINES FOR FILLING AND CLOSING OPEN MOUTH BAGS.

Claims use since June 24, 1947.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 517,916. CLARENCE F. MCCAULEY, Pacific Grove, Calif. Filed Feb. 21, 1947.

CFM

The mark comprises the letters "CFM."

FOR GARMENT STRETCHER FOR LAUNDRY OR DRY-CLEANING USE.

Claims use since Aug. 22, 1946.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 497,417. ROBERT L. SALOSCHIN, Inwood, N. Y. Filed Feb. 28, 1946.

MAPIGATOR

FOR NAVIGATOR APPARATUSES USED FOR COMPUTING DISTANCES BETWEEN POINTS REPRESENTED ON CHARTS USED FOR FLYING; COMPUTING TRUE OR MAGNETIC DIRECTIONS, COURSES, AND BEARINGS IN DEGREES BETWEEN OR FROM POINTS; ANY OF THE FOLLOWING VALUES OR QUANTITIES, WHEN THE REMAINING VALUES OR QUANTITIES TO THE EXTENT MATHEMATICALLY REQUIRED ARE KNOWN OR ASSUMED: TRACK, INTENDED TRACK, COURSE, HEADING, WIND DIRECTION, DIRECTION OF RELATIVE MOTION (THE FOREGOING EXPRESSED AS EITHER TRUE OR MAGNETIC OR BY ANY OTHER CONSTANT DIRECTIONAL REFERENCE), GROUND SPEED, TRUE AIR SPEED, WIND FORCE, SPEEDS OF RELATIVE MOTION (THE FOREGOING EXPRESSED IN KNOTS, MILES PER HOUR, OR ANY OTHER UNIT OF SPEED), DRIFT, DRIFT CORRECTION ANGLE, OR ANY ANGULAR VALUE OF ANY VECTOR TRIANGLE; TIME SPEED, OR DISTANCE, WHEN TWO OF THESE THREE ARE KNOWN; TIME, RATE OF FUEL CONSUMPTION, OR QUANTITY OF FUEL, WHEN TWO OF THESE THREE ARE KNOWN; CONVERSIONS AMONG METRIC, IMPERIAL AND U. S. FLUID MEASURES; WEIGHTS OR GIVEN VOLUMES OF GASOLINE AND OIL; CONVERSIONS OF NAUTICAL MILES, STATUTE MILES, AND KILOMETERS; COMMON MULTIPLICATION, DIVISION, AND PROPORTION (RATIO); TRUE AIR SPEED AND TRUE ALTITUDE, WHEN VALUES MATHEMATICALLY AND PHYSICALLY REQUIRED TO COMPUTE THEM ARE KNOWN OR ASSUMED; AND FOR RECORDING PLACE NAMES (DEPARTURES, DESTINATIONS, AND INTERMEDIATE CHECK POINTS USED AS LANDMARKS IN FLIGHT); ESTIMATED AND ACTUAL TIMES OF ARRIVAL AND DEPARTURE AT OR OVER PLACES, OR ALONGSIDE (ABEAM) SAME; THE MILEAGES AND TIME INTERVALS TO COVER ROUTES OR PARTS OF ROUTES BETWEEN PLACES; ALTITUDES CONSIDERED AND SELECTED FOR FLIGHTS; MAGNETIC VARIATION OF FLIGHT AREA, FUEL RANGE AND RESERVE FACTORS, TIME OF STARTING ENGINES, OF TAKING-OFF, AND OF SUNSET, WEATHER INFORMATION IMPORTANT TO PILOTS, INCLUDING WINDS AND TEMPERATURES AT VARIOUS ALTITUDES, ICING, ALTIMETER SETTING, CEILING, ETC., ALL INFORMATION WHICH APPARATUS CAN COMPUTE, AND ALL INFORMATION USED IN MAKING SUCH COMPUTATIONS; ANY OTHER INFORMATION, BY WORD, DIGIT, SYMBOL, OR DIAGRAM WHICH THE USER MAY RECORD, SO FAR AS CONSISTENT WITH AVAILABLE SPACE.

Claims use since Jan. 23, 1946.

Ser. No. 505,901. THE M B MANUFACTURING COMPANY INCORPORATED, New Haven, Conn. Filed July 19, 1946.

FOR ELECTRICAL VIBRATION EXCITERS, CALIBRATORS AND PICKUPS, ALL FOR USE IN DETERMINING RESONANCES IN MACHINERY EXCITED BY VIBRATION FORCES DURING OPERATION.

Claims use since Dec. 10, 1945 on electrical vibration pickups, and since May 15, 1946, on electrical vibration exciters and calibrators.

Ser. No. 512,089. PRICE INDUSTRIES CORPORATION, New York, N. Y. Filed Nov. 5, 1946.

PRICE MONOTANK

FOR PORTABLE PHOTOGRAPHIC DEVELOPING TANKS.

Claims use since Oct. 7, 1946.

PERMA-GRIP

FOR DENTAL PLATE POWDER.
Claims use since May 25, 1937.

Ser. No. 526,806. NORMAN C. HAYNER CO., Rochester, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

DEAD·SURE

Applicant claims ownership of registration No. 404,645.
FOR INSECTICIDES.
Claims use since Jan. 1, 1910.

Ser. No. 527,825. NATIONAL LEAD COMPANY, New York, N. Y. Filed July 5, 1947.

NALCO

FOR SOLDERING FLUX.
Claims use since Oct. 31, 1945.

Ser. No. 534,858. ABBOTT LABORATORIES, North Chicago, Ill. Filed Sept. 18, 1947.

Sulfedexan

Applicant claims ownership of registration No. 402,289.
FOR ANTISEPTIC PREPARATION CONTAINING A SULFONAMIDE INTENDED FOR USE AS AN INHALANT.
Claims use since Aug. 29, 1947.

Ser. No. 535,085. SCHERING CORPORATION, Bloomfield, N. J. Filed Sept. 19, 1947.

ESMARAL

FOR PREPARATION FOR THE PREVENTION OF TRAVEL SICKNESS.
Claims use since Sept. 3, 1947.

Ser. No. 535,117. BARBARA HEBBARD, New York, N. Y. Filed Sept. 20, 1947.

Slander

FOR PERFUME.
Claims use since Sept. 19, 1947.

Ser. No. 535,207. WYETH INCORPORATED, Philadelphia, Pa. Filed Sept. 20, 1947.

CRISCORA

FOR DIGITOXIN.
Claims use since Sept. 21, 1945.

Ser. No. 535,366. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Sept. 23, 1947.

THIOPHOS 3422

FOR PARATHION IN WETTABLE POWDER, DUST, AEROSOL, EMULSION OR SOLUTION FORM, FOR USE AS AN INSECTICIDE, RODENTICIDE, FUNGICIDE, FUMIGANT, ACARICIDE, HERBICIDE, ARTHROPODICIDE AND BACTERIOCIDE.
Claims use since Sept. 15, 1947.

Ser. No. 536,005. E. R. SQUIBB & SONS, New York, N. Y. Filed Sept. 27, 1947.

LIAFON

FOR ANTIANEMIC PREPARATIONS.
Claims use since Sept. 23, 1947.

Ser. No. 536,894. MAURICE HANDMAN, doing business as Maurella Products Co., New York, N. Y. Filed Oct. 6, 1947.

Flower Petals

FOR PADS SATURATED WITH COLOGNE OR PERFUME.
Claims use since Jan. 30, 1945.

Ser. No. 537,271. YOUNG-JONES LABORATORY, Tampa, Fla. Filed Oct. 8, 1947.

8 Ball

FOR CHEMICAL POWDER AND LIQUIDS USED FOR COMBATING INSECTS AND RODENTS.
Claims use since Mar. 15, 1947.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 512,929. RONSON ART METAL WORKS, INC., Newark, N. J. Filed July 9, 1947.

RONSON

Applicant claims ownership of registrations Nos. 160,372 (renewed), 261,178, 274,164, and 275,170.

Applicant claims ownership of registrations Nos. 198,412, 263,869, 270,509, 271,680, 272,191, and 274,250.
FOR TOBACCO POUCHES, CIGARETTE CASES, CIGAR CASES, AND PIPE CASES, MADE OF MATERIAL OTHER THAN PRECIOUS METAL.
Claims use since Sept. 28, 1929.

Ser. No. 527,882. TALON, INC., Meadville, Pa. Filed July 5, 1947.

TALON

Applicant claims ownership of registrations Nos. 243,746, 250,113, 270,090, 270,773, 271,179, 271,679, 273,995, 319,009 and 415,418.
FOR TOBACCO POUCHES, CIGARETTE CASES, CIGAR CASES, AND PIPE CASES, MADE OF MATERIAL OTHER THAN PRECIOUS METAL.
Claims use since Sept. 28 1929.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 534,835. TAMKO ASPHALT PRODUCTS, INCORPORATED, Joplin, Mo. Filed Sept. 17, 1947.

FOR ASPHALT ROOFING.
Claims use since Aug. 14, 1947.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 511,587. AMERICAN BRAKE SHOE COMPANY, New York, N. Y. Filed July 31, 1947.

A B K

Applicant claims ownership of registrations Nos. 362,527, 351,296, 368,737, 399,877, and 411,946.
FOR METAL CASTINGS.
Claims use since Aug. 14, 1946.

Ser. No. 527,851. NATIONAL LEAD COMPANY, New York, N. Y. Filed July 5, 1947.

RMM

FOR ANTIMONY METAL AND ALLOYS THEREOF.
Claims use since January 1931.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 528,447. THE GOODYEAR TIRE & RUBBER COMPANY, Akron, Ohio. Filed July 12, 1947.

WINGFOOT

Applicant claims ownership of registration No. 270,412.
FOR STORAGE BATTERIES AND SPARK PLUGS.
Claims use since June 27, 1929, on storage batteries; and since Jan. 15, 1947, on spark plugs.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 527,893. TALON, INC., Meadville, Pa. Filed July 5, 1947.

TALON

Applicant claims ownership of registrations Nos. 243,746, 250,113, 270,090, 270,773, 271,179, 271,679, 273,995, 319,009, and 415418.
FOR PADS AND COVERS FOR IRONING BOARDS.
Claims use since June 17 1947.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 527,433. DYNAMATIC CORPORATION, Kenosha, Wis. Filed July 5, 1947.

DYNAMATIC

Applicant claims ownership of registrations Nos. 316,735, 419,309, 419,310, and 425,108.
FOR DYNAMOMETERS.
Claims use since Apr. 4, 1936.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 530,923. THE EASTERLING COMPANY, Chicago, Ill. Filed Aug. 9, 1947.

FOR STERLING SILVER FLATWARE AND HOLLOW WARE.
Claims use since August 1944.

CLASS 33

GLASSWARE

Ser. No. 528,639. OWENS-ILLINOIS GLASS COMPANY, Toledo, Ohio. Filed July 15, 1947.

AMERICANA

FOR GLASS TUMBLERS AND DRINKING GLASSES.
Claims use since May 1, 1947.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 472,816. MAGNO TRONIC CORPORATION, Newark, N. J. Filed Dec. 2, 1947.

MAGNO TRONIC

FOR LIGHTING APPARATUS—NAMELY, PORTABLE BRACKETS AND STANDARDS FOR MOUNTING VARIOUS TYPES OF LAMPS.
Claims use since Jan. 4, 1943.

Ser. No. 529,258. FLORENCE STOVE COMPANY, Gardner, Mass. Filed July 23, 1947.

Reg. No. 279,221. Registered Jan. 13, 1931. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

"GLUV-NU"

FOR LIQUID GLOVE-CLEANING SOAP.
Claims use since July 20, 1929.

Reg. No. 279,289. Registered Jan. 13, 1931. AMERICAN DISINFECTING COMPANY, Sedalia, Mo. Republished by Adco, Inc., Sedalia, Mo., a corporation of Missouri

The word "Spots" is disclaimed.
FOR LIQUID SOAP SOLUBLE IN GASOLINE.
Claims use since July 1, 1930.

Reg. No. 295,142. Registered June 21, 1932. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

PENNANT

FOR DRY CLEANING SOAP.
Claims use since Dec. 1, 1931.

Reg. No. 295,143. Registered June 21, 1932. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

TRI-KLOR-SOL

FOR LIQUID DRY CLEANING SOAP.
Claims use since Dec. 1, 1931.

Reg. No. 295,144. Registered June 21, 1932. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

ZOR-O-SOL

FOR LIQUID DRY CLEANING SOAP.
Claims use since Dec. 1, 1931.

Reg. No. 301,520. Registered Mar. 7, 1933. AMERICAN DISINFECTING COMPANY, Sedalia, Mo. Republished by Adco, Inc., Sedalia, Mo., a corporation of Missouri.

DRI-SHEEN

FOR DETERGENTS FOR USE IN DRY-CLEANING.
Claims use since Oct. 10, 1932.

Reg. No. 326,653. Registered July 30, 1935. CARMAN & CO. INC., New York, N. Y. Republished by The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio.

THREADS

FOR SOAP.
Claims use since Feb. 17, 1933.

Reg. No. 333,553. Registered Mar. 24, 1936. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

KLOR-LENE

FOR LIQUID SPOTTING SOLUTION FOR USE IN DRY CLEANING.
Claims use since July 15, 1935.

Reg. No. 338,614. Registered Sept. 8, 1936. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

FOR TOILET AND BATH SOAP.
Claims use since Apr. 5, 1932.

Reg. No. 340,703. Registered Nov. 17, 1936. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

CALICO

FOR SOAP.
Claims use since May 12, 1936.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 277,935. Registered Dec. 2, 1930. WATSON-PARK COMPANY, Boston, Mass.,.a corporation of Maine. Republished by registrant.

WAPACO

FOR VARIOUS CHEMICAL PREPARATIONS FOR USE IN DYEING AND FINISHING AND PREPARING FOR DYEING AND FINISHING TEXTILE MATERIALS AND TEXTILE FABRICS.
Claims use since on or about Sept. 1, 1928.

Reg. No. 278,708. Registered Dec. 30, 1930. ARIZONA MINERALS CORPORATION, Yuma, Ariz., a corporation of Minnesota. Republished by registrant.

ARIDZONE

FOR WATER-SOFTENING MATERIAL, BEING EITHER ARTIFICIAL OR NATURAL ZEOLITES.
Claims use since Dec. 27, 1929.

Reg. No. 291,387. Registered Feb. 9, 1932. SATISH C. GHOSE, Chicago, Ill. Republished by registrant.

The word "Incense" is disclaimed.
FOR INCENSE.
Claims use since Apr. 2, 1931.

Reg. No. 296,945. Registered Aug. 30, 1932. RESINOX CORPORATION, New York, N. Y. Republished by Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware.

RESINOX

FOR SOLUTIONS OF SYNTHETIC RESINS, MOLDING COMPOUNDS CONTAINING SYNTHETIC RESINS, MIXTURES OBTAINED BY MELTING SYNTHETIC RESINS WITH OTHER CHEMICAL COMPOUNDS, ALL BEING USED AS A RAW MATERIAL FOR MAKING SUCH PRODUCTS AS RADIO PARTS, ELECTRICAL APPLIANCES, ASH TRAYS, AUTOMOBILE DISTRIBUTOR HEADS, CLOSURES FOR BOTTLES AND TUBES, AND SIMILAR ARTICLES.
Claims use since Oct. 15, 1931.

Reg. No. 304,996. Registered July 25, 1933. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

The word "Brand" is disclaimed. The drawing is lined for the colors brown and yellow.
FOR RED OIL.
Claims use since Feb. 23, 1932.

Reg. No. 311,244. Registered Mar. 20, 1934. CAMPANA CORPORATION, Batavia, Ill., a corporation of Delaware. Republished by registrant.

CAMPANA

FOR ASTRINGENTS, SKIN LOTIONS, AFTER SHAVING LOTIONS, FACE POWDERS, LIPSTICKS, BEAUTY CREAMS, AND REFRESHING CREAMS.
Claims use since Oct. 7, 1933.

SANTOSITE

FOR SULPHITES, SPECIFICALLY SODIUM SULPHITE, AND BOILER WATER TREATING CHEMICALS.
Claims use since about June 1934.

Reg. No. 320,644. Registered Jan. 1, 1935. E. DALTROFF & CIE., doing business as Parfumerie Caron, Paris, France. Republished by Caron Corporation, New York, N. Y., a corporation of New York.

POUR UN HOMME
LES PLUS BELLES LAVANDES

The words "Les Plus Belles Lavandes" are disclaimed.
FOR PERFUME, TOILET WATER.
Claims use since Apr. 20, 1934.

Reg. No. 322,065. Registered Feb. 26, 1935. CAMPANA CORPORATION, Batavia, Ill., a corporation of Delaware. Republished by registrant.

Campana

Dreskin

FOR TOILET PREPARATION—NAMELY, A LIQUID PREPARATION FOR USE AFTER SHAVING, AFTER THE BATH, AND AT OTHER TIMES TO PRESERVE AND BEAUTIFY THE SKIN AND COMPLEXION.
Claims use since Dec. 28, 1933.

Reg. No. 322,889. Registered Mar. 26, 1935. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

RUSTOSCALE

FOR PREPARATION FOR THE TREATMENT OF WATER USED IN BOILERS FOR POWER PLANTS, HEATING SYSTEMS, AND HOT WATER SUPPLY BOILERS AND HEATING UNITS AND DESIGNED TO ELIMINATE SCALE, RUST, CONGESTION, CORROSION AND PITTING IN BOILERS, TANKS AND SYSTEMS.
Claims use since Sept. 29, 1928.

Reg. No. 325,518. Registered June 25, 1935. JAMES L. YOUNGHUSBAND, Chicago, Ill. Republished by registrant.

ETERNO

FOR LIPSTICKS, ROUGE, FACE POWDER, PERFUMES, AND TOILET WATERS.
Claims use on lipstick since June 11, 1933; and on perfumes, face powder, toilet water since June 29, 1914.

Reg. No. 326,467. Registered July 23, 1935. THE JOHN PUHL PRODUCTS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

OEHME

FOR AMMONIA.
Claims use since Feb. 18, 1935.

Reg. No. 326,946. Registered Aug. 13, 1935. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

SANTOPHEN

FOR INSECTICIDES, GERMICIDES, BACTERICIDES, FUNGICIDES, AND DISINFECTANTS.
Claims use since Apr. 4, 1935.

Reg. No. 329,471. Registered Oct. 29, 1935. GEORGE MARTIN BROEMMEL, doing business as Broemmel Pharmaceuticals, San Francisco, Calif. Republished by registrant.

No'squito

FOR MOSQUITO IMMUNIZING AGENT.
Claims use since on or about June 10, 1935.

Reg. No. 332,624. Registered Feb. 18, 1936. THE RUBBER SERVICE LABORATORIES COMPANY, Akron, Ohio. Republished by Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware.

PERFLECTOL

FOR CHEMICAL COMPOUNDS EMPLOYED AS ANTI-OXIDANTS IN THE MANUFACTURE OF VULCANIZED RUBBER ARTICLES.
Claims use since Aug. 8, 1935.

Reg. No. 337,066. Registered July 28, 1936. INTERNATIONAL CELLUCOTTON PRODUCTS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

KURB

FOR ANALGESIC TABLETS.
Claims use since Feb. 7, 1936.

Reg. No. 339,666. Registered Oct. 13, 1936. E. DALTROFF & CIE., doing business as Parfumerie Caron, Paris, France. Republished by Caron Corporation, New York, N. Y., a corporation of New York.

REFLET DE BEAUTÉ

FOR ROUGE.
Claims use since Dec. 24, 1935.

Reg. No. 340,702. Registered Nov. 17, 1936. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

AGATE

FOR STEARIC ACID.
Claims use since June 9, 1936.

Reg. No. 341,517. Registered Dec. 8, 1936. RUDOLPH MOOSBRUGGER, Glenside, Pa. Republished by The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio.

GLEEM-O

FOR TOOTH POWDER.
Claims use since Jan. 11, 1934.

Reg. No. 343,822. Registered Mar. 9, 1937. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

SANTOLUBE

FOR CHEMICAL ADJUVANTS FOR PETROLEUM OILS ADAPTED TO IMPROVE THE LUBRICATING CHARACTERISTICS OF SUCH PETROLEUM OILS.
Claims use since about Mar. 12, 1936.

Reg. No. 343,823. Registered Mar. 9, 1937. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

SANTOPOUR

FOR CHEMICAL ADJUVANTS FOR PETROLEUM OILS ADAPTED TO REDUCE THE POUR POINT AND OTHERWISE IMPROVE THE LUBRICANT VALUE OF SAID PETROLEUM OILS.
Claims use since November 1935.

Reg. No. 343,827. Registered Mar. 9, 1937. E. DALTROFF & CIE., doing business as Parfumerie Caron, Paris, France. Republished by Caron Corporation, New York, N. Y., a corporation of New York.

LES CENT FARDS

The word "Fards" is disclaimed.
FOR ROUGE.
Claims use since Dec. 24, 1935.

Reg. No. 343,897. Registered Mar. 9, 1937. ASSOCIATED DISTRIBUTORS, INC., Chicago, Ill. Republished by Consolidated Cosmetics, Chicago, Ill., a firm.

TABOO

FOR ANTI-PERSPIRANT, LIPSTICK, ROUGE, FACE POWDER, EYELASH AND EYEBROW MASCARA, CREAMS FOR THE HANDS AND FACE, PREPARATIONS FOR SKIN, HAIR AND FINGER NAILS AND PERFUMES.
Claims use since Dec. 10, 1932.

Reg. No. 345,036. Registered Apr. 13, 1937. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

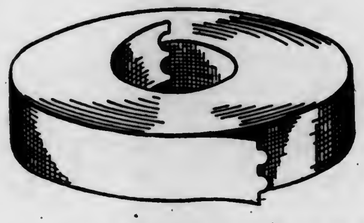
SANTOFLEX

FOR CHEMICAL COMPOUNDS EMPLOYED AS ANTI-OXIDANTS IN THE MANUFACTURE OF VULCANIZED RUBBER ARTICLES.
Claims use since Oct. 17, 1936.

CLASS 7

CORDAGE

Reg. No. 252,779. Registered Feb. 12, 1929. INTERNATIONAL HARVESTER COMPANY, Chicago, Ill., a corporation of New Jersey. Republished by registrant.



McCORMICK-DEERING

FOR TWINE.
Claims use since Sept. 13, 1927.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 333,341. Registered Mar. 17, 1936. BURROUGHS ADDING MACHINE COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

The representation of a roll of ribbon per se is disclaimed.
FOR INKING RIBBONS.
Claims use since Aug. 1, 1927.

Reg. No. 335,607. Registered June 9, 1936. BURROUGHS ADDING MACHINE COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

Burroughs

FOR INKING RIBBONS USED WITH BUSINESS MACHINES—NAMELY, CALCULATING MACHINES, CASH REGISTERS, TYPEWRITERS, AND THE LIKE, AND CARBON PAPER.
Claims use since March 1910.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 296,768. Registered Aug. 23, 1932. KIMBERLY-CLARK CORPORATION, Neenah, Wis., a corporation of Delaware. Republished by registrant.

Kimsul

FOR WOOD PULP INSULATING MATERIAL IN PANELS FOR THERMAL INSULATING PURPOSES.
Claims use since on or about Oct. 26, 1931.

Reg. No. 303,096. Registered May 9, 1933. KEASBEY & MATTISON COMPANY, Ambler, Pa. Republished by Keasbey & Mattison Company (1934), Ambler, Pa., a corporation of Pennsylvania.

DUPLEX

FOR INSULATION PRODUCTS ESPECIALLY ADAPTED AS A PIPE COVERING.
Claims use since about September 1932.

Reg. No. 303,097. Registered May 9, 1933. KEASBEY & MATTISON COMPANY, Ambler, Pa. Republished by Keasbey & Mattison Company (1934), Ambler, Pa., a corporation of Pennsylvania.

SIMPLEX

FOR INSULATION PRODUCTS, ESPECIALLY ADAPTED AS A PIPE COVERING.
Claims use since about September 1932.

Reg. No. 322,560. Registered Mar. 12, 1935. THE S. OBERMAYER COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

FRACTO-CRETE

FOR REFRACTORY CONCRETE OR PLASTIC MONOLITHIC REFRACTORY.
Claims use since Oct. 16, 1934.

Reg. No. 328,934. Registered Oct. 8, 1935. SEAMAN PAPER COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

SEAPAK

FOR THERMAL AND SOUND INSULATING PAPER AND BOARD.
Claims use since Sept. 8, 1932.

Reg. No. 332,256. Registered Feb. 4, 1936. W. M. RITTER LUMBER COMPANY, Columbus, Ohio, a corporation of West Virginia. Republished by registrant.

UTILITY

FOR OAK FLOORING.
Claims use since Sept. 1, 1935.

Reg. No. 338,094. Registered Aug. 25, 1936. OWENS-ILLINOIS GLASS COMPANY, Toledo, Ohio, a corporation of Ohio. Republished by registrant.

INSULUX GLASS BLOCK

The words "Glass Block" are disclaimed.
FOR GLASS BUILDING BLOCKS.
Claims use since Oct. 12, 1935.

Reg. No. 346,136. Registered May 18, 1937. KEASBEY & MATTISON COMPANY, Ambler, Pa. Republished by Keasbey & Mattison Company (1934), Ambler, Pa., a corporation of Pennsylvania.

MONOBESTOS

FOR ASBESTOS BOARDS, ASBESTOS SHEETS, ASBESTOS LUMBER, AND ASBESTOS BUILDING MATERIALS IN FLAT AND SHEET FORM.
Claims use since about Oct. 31, 1936.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 111,995. Registered Aug. 15, 1916. CALIFORNIA CORRUGATED CULVERT CO., Oakland and Berkeley, Calif. Republished by Armco Drainage & Metal Products, Inc., Middletown, Ohio, a corporation of Delaware.

CALCO

FOR IRON FLUMES, INVERTED SIPHONS, STORM DRAINS AND WELL CURBING; LATERAL HEADGATES, IRRIGATION GATES, CHECKS OR TAPPOONS, SLIDE HEADGATES, HINGE HEADGATES, AUTOMATIC DRAINAGE GATES, AND RESERVOIR OUTLETS.
Claims use since Feb. 1, 1916.

TALON

FOR CHAINS OF ALL DESCRIPTIONS USED IN CONNECTION WITH SLIDE FASTENERS.
Claims use since Oct. 28, 1933.

Reg. No. 321,744. Registered Feb. 12, 1935. PARKER-KALON CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

PARKER-KALON

FOR DRIVE PINS, SCREWS, DRIVE SCREWS, SCREWNAILS, NAILS, RIVETS, SET SCREWS, STUDS, WING-NUTS, CAP-NUTS, EXPANSION BOLTS, AND EXPANSION SLEEVES.
Claims use since on or about Dec. 20, 1922.

Reg. No. 326,458. Registered July 23, 1935. HOOKLESS FASTENER COMPANY, Meadville, Pa. Republished by Talon, Inc., Meadville, Pa., a corporation of Pennsylvania.

DRESS ALONE

FOR SLIDE FASTENERS.
Claims use since Feb. 27, 1935.

Reg. No. 338,535. Registered Sept. 8, 1936. DIAMOND CHAIN AND MANUFACTURING COMPANY, Indianapolis, Ind. Republished by The Diamond Chain Company, Inc., Indianapolis, Ind., a corporation of Indiana.

The representation of the chain is disclaimed, except those portions which are combined in mannikin form.
FOR CHAINS FOR THE TRANSMISSION OF POWER.
Claims use since Aug. 10, 1927.

Reg. No. 340,196. Registered Nov. 3, 1936. CHICAGO SPECIALTY MFG. CO., Chicago, Ill. Republished by Chicago Specialty Manufacturing Co., Inc., Chicago, Ill., a corporation of Illinois.

"5 in 1"

FOR RADIATOR HANDLE.
Claims use since Sept. 15, 1933.

Reg. No. 346,202. Registered May 18, 1937. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

FOR FURNITURE CASTERS.
Claims use since about Nov. 1, 1931.

Reg. No. 346,203. Registered May 18, 1937. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

FOR FURNITURE CASTERS AND SLIDES, METAL DRAWER PULLS, AND KNOBS, KEYHOLE ESCUTCHEONS, TOILET SCREWS, COAT AND HAT HOOKS, SOCKETS FOR END OF TABLE AND CHAIR LEGS, NAME PLATES FOR FILES, METAL FURNITURE TRIMMINGS, HOOD CATCHES, HOOD-CATCH BRACKETS, HOOD HANDLES, AND FLOOR HANDLES; CHAIR HARDWARE—NAMELY, TILTING CHAIR IRONS, SWIVEL SEAT SUPPORTS, AND BACK SUPPORTS.
Claims use since about Oct. 19, 1932.

Reg. No. 346,206. Registered May 18, 1937. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

FOR FURNITURE CASTERS.
Claims use since about Nov. 1, 1931.

Reg. No. 346,207. Registered May 18, 1937. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

DIAMOND-DART

FOR FURNITURE CASTERS.
Claims use since about Sept. 27, 1934.

Reg. No. 346,208. Registered May 18, 1937. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

DIAMOND VELVET

FOR FURNITURE CASTERS.
Claims use since about Sept. 1, 1909.

Reg. No. 346,209. Registered May 18, 1937. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

FOR FURNITURE CASTERS.
Claims use since about Sept. 1, 1909.

Reg. No. 346,210. Registered May 18, 1937. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

"Flotilt"

FOR CHAIR HARDWARE—NAMELY, TILTING CHAIR IRONS.
Claims use since about Oct. 9, 1935.

Reg. No. 346,392. Registered May 25, 1937. THE BASSICK COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

Baco

FOR FURNITURE CASTER WHEELS.
Claims use since about Apr. 1, 1931.

Reg. No. 346,854. Registered June 8, 1937. G. E. PRENTICE MANUFACTURING COMPANY, Berlin, Conn. Republished by registrant, present location Kensington, Conn.

Streamline

FOR SLIDE OPERATED FASTENERS.
Claims use since Dec. 8, 1936.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 340,335. Registered Nov. 3, 1936. HARNISCHFEGER CORPORATION, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

SMOOTHARC

FOR WELDING RODS (ELECTRODES).
Claims use since Feb. 1, 1936.

Reg. No. 340,894. Registered Nov. 24, 1936. MAGNOLIA METAL COMPANY, Elizabeth, N. J., a corporation of West Virginia. Republished by registrant.

DUX

FOR ANTI-FRICTION METAL.
Claims use since May 16, 1935.

CLASS 15

OILS AND GREASES

Reg. No. 296,258. Registered Aug. 2, 1932. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

PUROPALE

FOR LUBRICATING OILS.
Claims use since Feb. 4, 1932.

Reg. No. 296,931. Registered Aug. 23, 1932. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

THE PURE OIL COMPANY, U.S.A. PURE

The letters "U. S. A." and the word "Pure" are disclaimed.
FOR ILLUMINATING OILS, MOTOR FUEL OILS, LUBRICATING OILS, LUBRICATING GREASES, AND FUEL OILS.
Claims use since Apr. 1, 1930.

Reg. No. 305,057. Registered July 25, 1933. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

GUARDIAN

FOR LUBRICATING OILS.
Claims use since May 1910.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 278,149. Registered Dec. 9, 1930. AMERICAN DISINFECTING COMPANY, Sedalia, Mo. Republished by Adco, Inc., Sedalia, Mo., a corporation of Missouri.

NOX-DUS

FOR FLOOR DRESSING—NAMELY, A PREPARATION FOR THE TREATMENT OF AND FOR CLEANSING FLOORS AND CERTAIN FLOOR COVERINGS SUCH AS LINOLEUM.
Claims use since 1909.

Reg. No. 293,103. Registered Apr. 12, 1932. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

BEAMAX

FOR PREPARED LIQUID WAX FOR USE ON FLOORS.
Claims use since Nov. 13, 1931.

Reg. No. 302,385. Registered Apr. 18, 1933. AMERICAN DISINFECTING COMPANY, Sedalia, Mo. Republished by Adco, Inc., Sedalia, Mo., a corporation of Missouri.

VANBRITE

FOR LIQUID WAX PREPARATION FOR POLISHING PURPOSES.
Claims use since Oct. 25, 1932.

Reg. No. 326,753. Registered July 30, 1935. I. F. LAUCKS, INC., Seattle, Wash. Republished by Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware.

LAUX
Ex-Te-Ro

FOR CASEIN PAINTS.
Claims use since Apr. 2, 1935.

CLASS 19

VEHICLES

Reg. No. 296,592. Registered Aug. 16, 1932. BENDIX AVIATION CORPORATION, Chicago, Ill., and South Bend, Ind., a corporation of Delaware. Republished by registrant, present location South Bend, Ind.

PNEUDRAULIC SHOCK STRUT

The words "Shock Strut" are disclaimed.
FOR SHOCK STRUTS.
Claims use since May 29, 1931.

Reg. No. 319,956. Registered Dec. 11, 1934. LOCKHEED AIRCRAFT CORPORATION, Burbank, Calif., a corporation of California. Republished by registrant.

FOR AEROPLANES AND PARTS THEREFOR NOT IN OTHER CLASSES.
Claims use since July 1927.

Reg. No. 320,151. Registered Dec. 18, 1934. LOCKHEED AIRCRAFT CORPORATION, Burbank, Calif., a corporation of California. Republished by registrant.

LOCKHEED

FOR AEROPLANES AND PARTS THEREOF, EXCLUSIVE OF HYDRAULIC BRAKES OR BRAKING EQUIPMENT NOT IN OTHER CLASSES.
Claims use since July 1927.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 231,891. Registered Aug. 30, 1927. MINNEAPOLIS HEAT REGULATOR CO., Minneapolis 8, Minn. Republished by Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware.

PYROSTAT

FOR TEMPERATURE-OPERATED ELECTRIC STACK SWITCHES FOR THE AUTOMATIC SAFETY CONTROL OF OIL HEATING PLANTS.
Claims use since Nov. 15, 1926.

Reg. No. 320,629. Registered Jan. 1, 1935. BELDEN MANUFACTURING COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CELENAMEL

FOR MAGNET-WIRES.
Claims use since Aug. 6, 1934.

Reg. No. 333,110. Registered Mar. 10, 1936. BURROUGHS ADDING MACHINE COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

Burroughs

FOR ELECTRICAL APPLIANCES—NAMELY, ELECTRIC MOTORS, INTERFERENCE ELIMINATORS, RADIO FILTERS, CONDENSERS, CIRCUIT PROTECTORS, AND THE PARTS THEREOF.
Claims use since about 1906.

Reg. No. 339,776. Registered Oct. 20, 1936. HENRY L. CROWLEY & CO., INC., West Orange, N. J., a corporation of New Jersey. Republished by registrant.

CROLITE
MAGICORE

FOR CORES FOR TRANSFORMER AND COIL WINDINGS.
Claims use since Aug. 6, 1935.

Reg. No. 346,828. Registered June 8, 1937. ERIE RESISTOR CORPORATION, Erie, Pa., a corporation of Pennsylvania. Republished by registrant.

CERAMICONS

FOR ELECTRICAL CURRENT CONTROLLING DEVICES—NAMELY, RESISTORS AND CONDENSERS.
Claims use since Dec. 28, 1936.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 319,002. Registered Nov. 13, 1934. GLOBE-UNION MFG. CO., Milwaukee, Wis. Republished by Globe-Union Inc., Milwaukee, Wis., a corporation of Delaware.

JACK·N·JILL

FOR ICE SKATES.
Claims use since July 17, 1934.

Reg. No. 324,717. Registered May 28, 1935. MARSHALL FIELD & COMPANY, Chicago, Ill. Republished by Globe-Union Inc., Milwaukee, Wis., a corporation of Delaware.

BLUE WHIZ

FOR ROLLER SKATES.
Claims use since Dec. 15, 1934.

FOR CORSETS, GIRDLES, BRASSIÈRES, AND FOUNDATION GARMENTS.
Claims use since Nov. 1, 1887.

Reg. No. 342,678. Registered Jan. 26, 1937. MARSHALL FIELD & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FIELDCREST

FOR WOMEN'S HOSIERY AND FABRIC GLOVES.
Claims use since June 30, 1936.

Reg. No. 345,443. Registered Apr. 27, 1937. MARSHALL FIELD & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

HOUSE & TOWN

The word "House" is disclaimed.
FOR WOMEN'S AND CHILDREN'S DRESSES.
Claims use since Sept. 15, 1936.

CLASS 40

FANCY GOODS, FURNISHINGS, AND NOTIONS

Reg. No. 31,769. Registered July 5, 1898. THE MORLEY BUTTON MANUFACTURING COMPANY, Boston, Mass. Republished by The Morley Company, Portsmouth, N. H., a corporation of Maine.

MILONITE

FOR BUTTONS.
Claims use since Feb. 1, 1898.

CLASS 42

KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR

Reg. No. 294,706. Registered June 7, 1932. AMERICAN WOOLEN COMPANY, Boston, Mass., and New York, N. Y., a corporation of Massachusetts. Republished by registrant, present location New York, N. Y.

Tambo

FOR WOOLEN PIECE GOODS.
Claims use since Nov. 3, 1931.

Reg. No. 330,038. Registered Nov. 19, 1935. AMERICAN WOOLEN COMPANY, New York, N. Y., a corporation of Massachusetts. Republished by registrant.

GLOBE

FOR WORSTED PIECE GOODS.
Claims use since 1911.

Reg. No. 333,506. Registered Mar. 24, 1936. AMERICAN WOOLEN COMPANY, New York, N. Y., a corporation of Massachusetts. Republished by registrant.

BEAVERBROOK

FOR BLANKETS COMPOSED WHOLLY OR IN PART OF WOOL.
Claims use since Nov. 9, 1931.

Reg. No. 335,673. Registered June 9, 1936. AMERICAN WOOLEN COMPANY, New York, N. Y., a corporation of Massachusetts. Republished by registrant.

The words "Ski" and "Wet-N-Wind Proofed" are disclaimed.
FOR PIECE GOODS COMPRISED WHOLLY OR IN PART OF WOOL OR WORSTED.
Claims use since Dec. 19, 1935.

Reg. No. 343,526. Registered Feb. 23, 1937. AMERICAN WOOLEN COMPANY, New York, N. Y., a corporation of Massachusetts. Republished by registrant.

AMERICAN·WOOLEN·COMPANY

FOR WOOLEN GOODS—NAMELY, PIECE GOODS AND BLANKETS.
Claims use since June 7, 1904.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Reg. No. 302,079. Registered Mar. 28, 1933. BERKELEY COMPANY, Chicago, Ill. Republished by International Cellucotton Products Company, Chicago, Ill., a corporation of Delaware.

Bon-Ton

FOR SANITARY NAPKINS.
Claims use since Jan. 3, 1931.

Reg. No. 315,710. Registered Aug. 7, 1934. VELDOWN COMPANY, INC., New York, N. Y. Republished by International Cellucotton Products Company, Chicago, Ill., a corporation of Delaware.

A wide stripe colored blue. The representation of the goods is disclaimed.
FOR CATAMENIAL NAPKINS.
Claims use since Feb. 19, 1929.

Reg. No. 322,949. Registered Mar. 26, 1935. BERKELEY COMPANY, Chicago, Ill. Republished by International Cellucotton Products Company, Chicago, Ill., a corporation of Delaware.

Laray

FOR SANITARY NAPKINS.
Claims use since June 1931.

Reg. No. 322,950. Registered Mar. 26, 1935. BERKELEY COMPANY, Chicago, Ill. Republished by International Cellucotton Products Company, Chicago, Ill., a corporation of Delaware.

JERZETS

FOR SANITARY NAPKINS.
Claims use since March 1929.

Reg. No. 322,951. Registered Mar. 26, 1935. BERKELEY COMPANY, Chicago, Ill. Republished by International Cellucotton Products Company, Chicago, Ill., a corporation of Delaware.

Cena-Naps

FOR SANITARY NAPKINS.
Claims use since April 1931.

Reg. No. 329,193. Registered Oct. 22, 1935. INTERNATIONAL CELLUCOTTON PRODUCTS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

FIBS

FOR TAMPONS.
Claims use since Apr. 29, 1935.

Reg. No. 331,770. Registered Jan. 21, 1936. KOTEX COMPANY, assignor to International Cellucotton Products Company, Chicago, Ill., a corporation of Delaware. Republished by International Cellucotton Products Company, Chicago, Ill., a corporation of Delaware.

WONDERSOFT

The word "Soft" is disclaimed.
FOR SANITARY NAPKINS.
Claims use since Sept. 1, 1933.

Reg. No. 331,904. Registered Jan. 21, 1936. KOTEX COMPANY, assignor to International Cellucotton Products Company, Chicago, Ill., a corporation of Delaware. Republished by International Cellucotton Products Company, Chicago, Ill., a corporation of Delaware.

WONDER FORM

The word "Form" is disclaimed.
FOR SANITARY NAPKINS.
Claims use since 1928.

Reg. No. 340,113. Registered Nov. 3, 1936. ROBERT JEROME LINDQUIST, Los Angeles, Calif. Republished by registrant.

DESERT-SUN

The drawing is lined for gold and red.
FOR THERAPEUTIC LAMPS.
Claims use since Feb. 1, 1934.

Reg. No. 341,480. Registered Dec. 8, 1936. INTERNATIONAL CELLUCOTTON PRODUCTS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

MODERN MISS

FOR SANITARY NAPKINS.
Claims use since Oct. 24, 1931.

Reg. No. 345,287. Registered Apr. 20, 1937. INTERNATIONAL CELLUCOTTON PRODUCTS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

LADYSHIP

FOR SANITARY NAPKINS.
Claims use since Nov. 30, 1936.

Reg. No. 345,288. Registered Apr. 20, 1937. INTERNATIONAL CELLUCOTTON PRODUCTS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

ESTELLE

FOR SANITARY NAPKINS.
Claims use since Nov. 30, 1936.

CLASS 45

SOFT DRINKS AND CARBONATED WATERS

Reg. No. 278,030. Registered Dec. 2, 1930. BOOTH BOTTLING COMPANY, INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Booth's

FOR NONALCOHOLIC, MALTLESS BEVERAGES SOLD AS SOFT DRINKS.
Claims use since January 1890.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Reg. No. 78,227. Registered May 31, 1910. CANNON VALLEY MILLING COMPANY, Minneapolis, Minn. Republished by Cannon Valley Milling Co. (1938), Minneapolis, Minn., a corporation of Minnesota.

FOR WHEAT-FLOUR.
Claims use since Jan. 1, 1907.

Reg. No. 136,353. Registered Nov. 2, 1920. CANNON VALLEY MILLING COMPANY, Minneapolis, Minn. Republished by Cannon Valley Milling Co. (1938), Minneapolis, Minn., a corporation of Minnesota.

WINSOME

FOR WHEAT-FLOUR.
Claims use since June 2, 1913.

Reg. No. 136,354. Registered Nov. 2, 1920. CANNON VALLEY MILLING COMPANY, Minneapolis, Minn. Republished by Cannon Valley Milling Co. (1938), Minneapolis, Minn., a corporation of Minnesota.

SKY PILOT

FOR WHEAT-FLOUR.
Claims use since Oct. 26, 1908.

Reg. No. 232,724. Registered Sept. 13, 1927. THE SOUTHWESTERN MILLING CO., INC., New York, N. Y. Republished by Standard Milling Company, Chicago, Ill., a corporation of Illinois.

FOR WHEAT FLOUR.
Claims use since 1907.

Reg. No. 276,944. Registered Nov. 4, 1930. THE BUCKEYE COTTON OIL CO., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

The drawing is lined for red and blue. No claim is made for the representation of the bag or sack.
FOR COTTONSEED MEAL.
Claims use since Oct. 12, 1929.

Reg. No. 283,000. Registered May 12, 1931. THE PIONEER HATCHERY, INC., Petaluma, Calif., a corporation of California. Republished by registrant.

The words "Brand" and "Chicks" are disclaimed.
FOR LIVE BABY CHICKENS.
Claims use since Jan. 1, 1926.

Reg. No. 296,115. Registered July 26, 1932. PILLSBURY FLOUR MILLS COMPANY, Minneapolis, Minn. Republished by Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware.

XXXX
PATENT

FOR FLOUR MADE FROM WHEAT.
Claims use since Jan. 1, 1870.

Reg. No. 304,824. Registered July 18, 1933. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

FOR SHORTENINGS—NAMELY, COTTONSEED OIL FOR COOKING, SALAD OILS, COOKING OILS, EDIBLE PEANUT OIL, EDIBLE COCOANUT OIL, SPECIAL HARDENED COCOANUT OIL AND COOKING FATS.
Claims use since July 15, 1931.

Reg. No. 319,548. Registered Nov. 27, 1934. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

OLIVBOTLES

FOR OLIVE OIL.
Claims use since August 1932.

Reg. No. 320,544. Registered Jan. 1, 1935. THE BUCKEYE COTTON OIL CO., Cincinnati, Ohio., a corporation of Ohio. Republished by registrant.

BUCKEYE

FOR COTTONSEED MEAL.
Claims use since 1902.

Reg. No. 322,991. Registered Mar. 26, 1935. STANDARD MILLING COMPANY, New York, N. Y. Republished by Standard Milling Company, Chicago, Ill., a corporation of Illinois.

FOR WHEAT FLOUR.
Claims use since Oct. 5, 1934.

Reg. No. 324,562. Registered May 21, 1935. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

VELDO

FOR SHORTENING.
Claims use since Jan. 9, 1935.

Reg. No. 326,833. Registered Aug. 6, 1935. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

PEER-AMID
BOTTLES

The word "Bottles" is disclaimed.
FOR OLIVE OIL.
Claims use since Feb. 6, 1935.

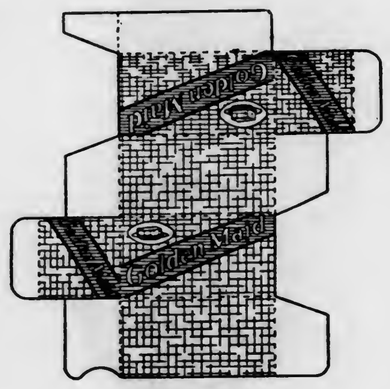
Reg. No. 329,941. Registered Nov. 19, 1935. BLANKE-BAER EXTRACT & PRESERVING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

WISHMORE

FOR JELLIES, FRUIT BUTTERS, FRUIT PRESERVES, PRESERVED FRUITS, OLIVES, SALAD DRESSING, RELISH SPREAD, MAYONNAISE AND PEANUT BUTTER.
Claims use since Nov. 18, 1924, on jellies, jams, fruit butters, fruit preserves, and preserved fruits; and since Apr. 1, 1933, on olives, salad dressing, sandwich spread, mayonnaise, and peanut butter.

Reg. No. 330,694. Registered Dec. 10, 1935. MARSHALL FIELD & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Frango



FOR CANDIES.
Claims use since June 1, 1918.

Reg. No. 336,050. Registered June 23, 1936. MARSHALL FIELD & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Filbert's

FOR CANDIES.
Claims use since September 1935.

Reg. No. 338,124. Registered Sept. 1, 1936. THE MIAMI BUTTERINE CO., Cincinnati, Ohio. Republished by The Miami Margarine Company, Cincinnati, Ohio, a corporation of Ohio.

The representation of the carton is disclaimed. The drawing is lined for yellow, gold, and blue.
FOR MARGARINE.
Claims use since on or about Sept. 1, 1927.

Reg. No. 341,810. Registered Dec. 22, 1936. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

FOR COPRA VEGETABLE CONCENTRATE FOR LIVESTOCK FEED.
Claims use since about 1917.

CLASS 47
WINES

Reg. No. 320,290. Registered Dec. 25, 1934. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

The word "Bouquet" is disclaimed.
FOR WINE.
Claims use since February 1913.

CLASS 48
MALT BEVERAGES AND LIQUORS

Reg. No. 332,889. Registered Mar. 3, 1936. P. BALLANTINE & SONS, Newark, N. J., a corporation of New Jersey. Republished by registrant.

The words on the drawing are disclaimed.
FOR BEER, ALE, AND PORTER.
Claims use since Sept. 25, 1935.

Reg. No. 336,563. Registered July 7, 1936. P. BALLANTINE & SONS, Newark, N. J., a corporation of New Jersey. Republished by registrant.

BALLANTINE'S

FOR BEER, ALE, PORTER, AND STOUT.
Claims use since 1840.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 320,197. Registered Dec. 18, 1934. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

BOUQUET

The word "Bouquet" is disclaimed.
FOR COGNAC AND CREME DE MENTHE.
Claims use since February 1913.

Reg. No. 324,878. Registered June 4, 1935. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

CARLSHAMNS

FOR BLENDED WHISKEY, AMERICAN WHISKEY, DANISH WHISKEY, SCOTCH WHISKEY, IRISH WHISKEY, CANADIAN WHISKEY, PREPARED COCKTAILS, LIQUEUR, APRICOT LIQUEUR, CASSIS LIQUEUR, BRANVIN, BRANDY, CHERRY BRANDY, BLACKBERRY BRANDY, APPLE BRANDY, COGNAC, AQUAVIT, CREME DE MENTHE, DISTILLED GIN, SLOE GIN, AKVAVIT, KIRSCHWASSER, APPLE JACK, RUM, VODKA, MARASCHINO.
Claims use since 1882.

Reg. No. 331,301. Registered Dec. 31, 1935. FELTON & SON, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

PILGRIM

FOR RUM.
Claims use since Nov. 14, 1933.

Reg. No. 331,782. Registered Jan. 21, 1936. ALEXANDER YOUNG DISTILLING CO., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Y.P.M.

FOR WHISKEY.
Claims use since 1856.

Reg. No. 333,462. Registered Mar. 24, 1936. BUSHMILL WINE PRODUCTS COMPANY, INC., Scranton, Pa. Republished by Brookside Distilling Products Corporation, Scranton, Pa., a corporation of Delaware.

Overbrook

FOR WHISKEY.
Claims use since Dec. 5, 1933.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

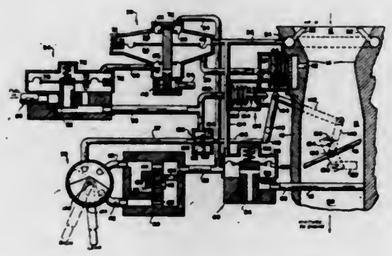
Reg. No. 329,389. Registered Oct. 29, 1935. ARMSTRONG CORK & INSULATION COMPANY, Lancaster, Pa. Republished by Armstrong Cork Company, Manheim Township, Lancaster County, Pa., a corporation of Pennsylvania.

A

FOR CLOSURES FOR BOTTLES AND CONTAINERS.
Claims use since about Nov. 8, 1934.

REISSUES

MARCH 16, 1948



22,984

CONTROL APPARATUS

Milton E. Chandler, New Britain, Conn., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey

Original No. 2,394,664, dated February 12, 1946, Serial No. 519,611, January 25, 1944. Application for reissue October 1, 1946, Serial No. 700,359

14 Claims. (Cl. 261—50)

8. Control apparatus for an internal combustion engine in an aircraft, comprising throttle means for controlling the flow of air to said engine for combustion purposes, a manually movable control member remote from said throttle means, linkage connecting said member and said throttle means, a conduit for fuel flowing to said engine, valve means in said conduit for controlling the fuel flow therethru, means for applying an opening force to said valve means including a diaphragm subject to fuel pressure in said fuel conduit, and a member connected to said throttle means for movement therewith, said member being positioned adjacent said valve means and adapted to engage said valve means to cause a following movement thereof whenever said throttle means is in a position adjacent its closed position, said force applying means being effective upon failure of said linkage to move said throttle means to a partially open position.

22,985

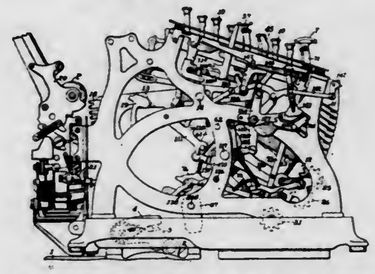
LUBRICANT COMPOSITION

Austin T. Collins, deceased, late of Detroit, Mich., by Miracle Lubricating Corporation, assignee, Detroit, Mich.

No Drawing. Original No. 2,426,983, dated September 9, 1947, Serial No. 576,509, February 6, 1945. Application for reissue January 23, 1948, Serial No. 3,883

3 Claims. (Cl. 252—29)

1. A dispersion of synthetic graphite in a volatile liquid for coating surfaces by drying through volatilization consisting essentially of a mixture of about one part by weight of synthetic graphite to about four parts by weight of methyl alcohol, one part of said graphite-alcohol mixture being mixed with about nine to twelve parts by volume of a volatile chlorinated hydrocarbon of the class consisting of carbon tetrachloride and trichlorethylene.



22,986

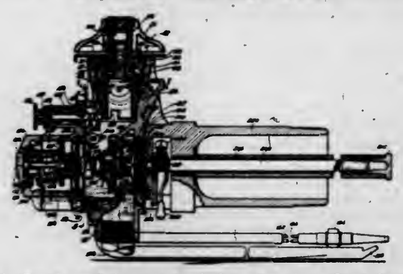
CALCULATING MACHINE

Arthur J. Fettig, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a corporation of Michigan

Original No. 2,261,242, dated November 4, 1941, Serial No. 97,091, August 21, 1936. Application for reissue June 1, 1942, Serial No. 445,355

17 Claims. (Cl. 235—60)

1. A calculating machine of the class described having a plurality of actuators, an add subtract register, mechanism for movably supporting said register for engagement with the actuators in different relations for addition and positive total taking, and subtraction and true negative total taking, respectively, means for shifting said register to condition it for either type of engagement, and means operating to enter a fugitive one in said register during said shifting movement.



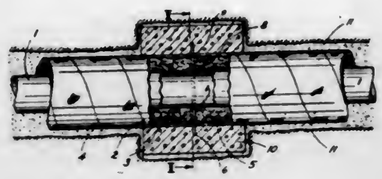
22,987

SAFETY CONTROL FOR GASEOUS FUEL BURNERS

Wilbur F. Jackson, Compton, and Thomas H. Jeffers, Inglewood, Calif., assignors to Robertshaw-Fulton Controls Company, a corporation of Delaware

Original No. 2,361,944, dated November 7, 1944, Serial No. 393,396, May 14, 1941. Application for reissue August 3, 1945, Serial No. 608,839½

27 Claims. (Cl. 158—117.1)



1. In a safety control for gaseous fuel burners, the combination of a main fuel valve movable between positions for controlling supply of fuel to the burner, a control valve positioned normal to said main valve for intercepting the supply of fuel to the burner, electromagnetic means in axial alignment with said control valve and adapted to govern the operation thereof, manually actuable means extending substantially

parallel with the axis of said control valve and into the path of movement of said main valve to set said electromagnetic means for governing operation, said manually actuable means being operable in only one position of said main valve, and a pivoted member extending between said electromagnetic and manually actuable means for transmitting movements of one to the other.

22,988
ANCHOR
William S. McLeish, Barberton, Ohio, assignor to The Ric-wiL Company, Cleveland, Ohio, a corporation of Ohio
Original No. 2,360,067, dated October 10, 1944, Serial No. 441,991, May 6, 1942. Application for reissue January 19, 1948, Serial No. 2,984
6 Claims. (Cl. 138—48)

1. An underground conduit securing means comprising a perforated plate through the perforation of which a pipe extends, the plate being permanently and unitarily fixed to the exterior of the pipe, a casing consisting of two parts surrounding the pipe, and abutting opposite sides of

the plate, sealing means connecting the parts of the casing to the sides of the plate, the plate extending substantially beyond the periphery of the casing to transmit pressure to the ground.

PLANT PATENTS

GRANTED MARCH 16, 1948

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

789
ROSE PLANT
Eugene S. Boerner, Newark, N. Y., assignor to Jackson & Perkins Company, Newark, N. Y., a corporation of New York
Application January 27, 1947, Serial No. 724,624
1 Claim. (Cl. 47—61)

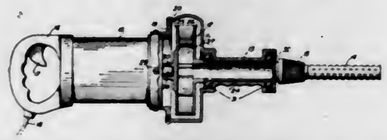
A new and distinct variety of rose plant characterized as to novelty by the color of the bud and flower; the distinctive fragrance of the cut flowers; the perfect high-centered shape in miniature and opening up into graceful flat flowers; the habit and unique effect of blooming both in large clusters and in individual flowers; and the staunch nature of the foliage, substantially as shown and described.

790
CHRYSANTHEMUM PLANT
Emil Prushek, Niles, Mich., assignor to Jackson & Perkins Company, Newark, N. Y., a corporation of New York
Application December 16, 1946, Serial No. 716,483
1 Claim. (Cl. 47—60)

A new and distinct variety of chrysanthemum plant characterized as to novelty by its hardiness and permanence, freedom of growth, its habit of producing many underground stems and great numbers of wiry flower-producing stems, its habit in mature plants of sending up many stems with clusters of blooms at the top and formation of later blooms in axils of the leaves along the stems, thereby creating a long blooming period, the flat shape of the blossoms and the distinctive color of such blossoms, substantially as shown and described.

791
ROSE PLANT
Herbert C. Swim, Ontario, Calif., assignor, by mesne assignments, to Mount Arbor Nurseries, Shenandoah, Iowa, a corporation of Iowa
Application February 13, 1947, Serial No. 728,339
1 Claim. (Cl. 47—61)

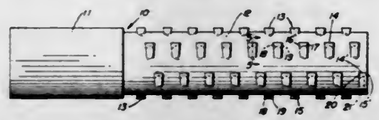
A new and distinct variety of Hybrid Tea rose plant, characterized as to novelty by the color of the flowers; by the greater length and the form, of the bud as compared with other varieties in the same petalage and color class; by the upright-growing habit of the plant, of greater vigor and floriferousness than found in other very double roses in the same color class; by the abundance of large, flat, leathery leaves; the above-average resistance of the leaves to mildew for roses of the color range of this variety; and the scarcity of large and small prickles on the main stems but relatively greater number of small prickles on the branches, substantially as shown and described.



792
ROSE PLANT
Herbert C. Swim, Ontario, Calif., assignor to Armstrong Nurseries, Inc., Ontario, Calif., a corporation of California
Application February 19, 1947, Serial No. 729,599
1 Claim. (Cl. 47—61)

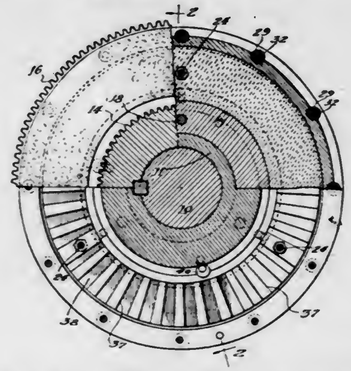
A new and distinct variety of rose plant, characterized as to novelty by the vigorous upright-growing habit; the production of flat, glossy dark-green medium size foliage during spring growing with increase in size until attainment of large proportions during late summer and fall; high resistance to mildew and anthracnose; by its long moderately heavy stems having a fairly large number of medium to large thorns in the spring which diminish in late season until relative freedom of thorns is reached; by the shape of bud and open bloom combined with wide contrast between outer surface petal color and inner surface petal color and extreme brilliance of the latter in the opening bud and newly opening flower, substantially as shown and described.

PATENTS



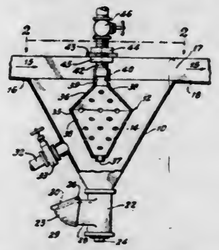
GRANTED MARCH 16, 1948

2,437,668
POWER-DRIVEN ROTARY CYLINDRICAL SAW
Robert E. Adams, McDonough, Ga., assignor of one-half to Richard P. Bernhardt, McDonough, Ga.
Application April 29, 1946, Serial No. 665,785
2 Claims. (Cl. 143—43)



1. In a portable power-operated rotary cutting tool, a casing having a motor housing at its rear provided with a hand grip and a hollow portion at its front provided with an exit opening and an elongated tubular extension forming a second hand grip, a motor in said housing, a suction fan connected to said motor mounted in said hollow portion and having a tubular shaft projecting through said tubular extension, a tubular cutting member detachably connected to said tubular shaft and having its hollow interior communicating with the hollow interior of said shaft, said tubular cutting member having a plurality of cutting teeth formed on its outer surface and having an opening located beneath each tooth leading into its hollow interior, whereby, when said tool is operated, the saw dust will be sucked through said openings in the tubular cutting member, pass through the tubular shaft and be expelled through the exit opening in the casing.

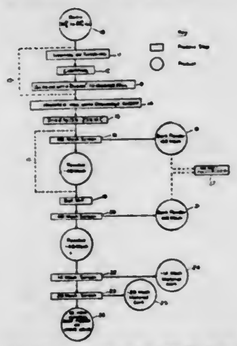
2,437,669
LATERALLY-CUTTING ROTARY CYLINDRICAL SAW
Robert E. Adams, McDonough, Ga., assignor of one-half to Richard P. Bernhardt, McDonough, Ga.
Application May 20, 1946, Serial No. 670,978
2 Claims. (Cl. 143—133)



1. A rotary saw comprising a substantially cylindrical member having a plurality of cutting teeth formed on its outer surface, each of said teeth being formed with its outer surface projecting tangentially from the outer surface of said cylindrical member and having its lower forward base portion cut away to define a substantially radial V-shaped cutting edge, and having its upper forward base portion projecting forwardly over the V-shaped edge and the cut away portions to form a pair of diverging side pockets and having its outer edge formed as a horizontal cutting edge spaced angularly forward of and radially above said substantially radial cutting edge.

2,437,670
FLUID OPERATED CLUTCH
Nicholas F. Adamson, Racine, Wis., assignor to Twin Disc Clutch Company, Racine, Wis., a corporation of Wisconsin
Application November 6, 1943, Serial No. 509,332
13 Claims. (Cl. 192—85)

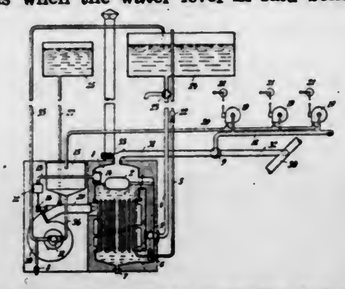
2. In a fluid operated clutch, the combination of an annular cylinder for receiving the fluid medium, a piston movable in the cylinder, a clutch pressure plate operably related to and shiftable by the piston in one direction, grooves formed in the outer wall of the cylinder for increasing the surface area thereof to facilitate cooling, and spring means mounted in the cylinder wall for moving the plate in the opposite direction, portions of the means being exposed through the grooves for cooling.



2,437,671
VERTICAL CURRENT MINERAL CONCENTRATOR
John Carter Anderson, Los Angeles, Calif.
Application February 11, 1944, Serial No. 521,921
3 Claims. (Cl. 209—160)

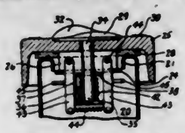
1. Apparatus for concentrating ores comprising: a concentrator receptacle; a water distributing header disposed within said receptacle and establishing a concentrating chamber around the header, said receptacle and header having sloping downwardly converging walls, the receptacle walls being respectively substantially par-

allel to corresponding header walls, said header having a plurality of water discharge ports for distributing water through a mineral bed accumulated in said concentrating chamber; means to supply water to said header; means to supply ore to said receptacle; means adapted to adjust the header and vary the width of the concentrating chamber between said walls to regulate the effects of water distribution into ore in said chamber; means to receive tailings from the top to said receptacle; and means to withdraw concentrate from the lower portion of said receptacle.



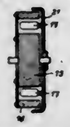
2,437,672
METHOD OF TREATING BARK
Herman W. Anway, Cloquet, Minn., assignor to Weyerhaeuser Timber Company, Longview, Wash., a corporation of Washington
Application September 27, 1944, Serial No. 556,097
6 Claims. (Cl. 241—14)

3. The method of treating bark for the production of cork, fiber and bark powder, which comprises selecting bark having a moisture content of a value to promote comminution to an aggregate of bark matrices of not to exceed a predetermined size and consisting essentially of the several constituents of the whole bark, grinding said bark to provide an aggregate of bark matrices of not to exceed said predetermined size, adjusting the moisture content of the bark matrices to a value at which, in a subsequent comminuting step, a cleavage is effected between the several constituents of the bark, disuniting fiber bundles, cork and the non-fibrous portion of the phloem, finely comminuting the non-fibrous portion of the phloem, and reducing the fibrous portion of the phloem to ultimate fibers without substantial comminution of the cork and individual fibers, for promoting selective segregation of the cork, ultimate fibers and finely comminuted portion of the phloem.



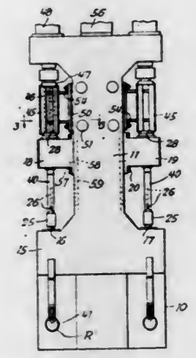
2,437,673
LOW-PRESSURE STEAM HEATING SYSTEM FOR VEHICLES
Hans Appel, Prague, Germany; vested in the Attorney General of the United States
Application January 16, 1941, Serial No. 374,611
In Czechoslovakia December 24, 1938
2 Claims. (Cl. 237—6)

1. A low pressure steam heating system for vehicles, comprising, in combination, a small water capacity steam boiler disposed on the vehicle, radiators, a steam main interconnecting said boiler and said radiators, an automatic heat supply mechanism connected with said boiler for supplying heat thereto and including boiler pressure responsive means controlling the heat supply in accordance with the boiler pressure, a feed water storage tank located in the vehicle above the elevation of said boiler, a conduit connecting the water space of said tank with the water space of said boiler, valve means in said conduit, water level responsive means connected with said boiler and with said valve means and opening said valve means when the water level in said boiler has



reached a predetermined minimum and closing said valve means when the water level in said boiler has reached a predetermined maximum, and a U-shaped stand pipe having a shorter branch extending from the bottom of the boiler upwardly in the water space of the boiler to the minimum permissible water level, and a longer branch extending from the bottom of the boiler to a level in the storage tank above the water level in said tank.

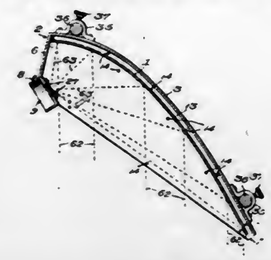
2,437,674
CONTAINER SAFETY LOCK
John W. Armbruster, East Rockaway, N. Y.
Application August 8, 1942, Serial No. 454,118
6 Claims. (Cl. 70—173)



2. In a device of the class described, a cover for a container with an opening having a latching flange, a catch plate on said cover to engage said flange, a pressure relief opening in the cover, a manipulative lock on said cover with lock parts for engaging said flange, a part of said lock being movable relative to the cover and other lock parts, a valve head on said lock part, and resilient means for normally holding said head closed over said pressure relief opening.

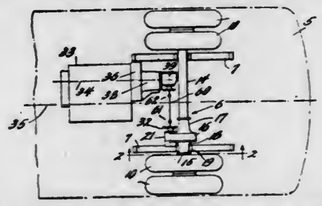
2,437,675
CURRENT-GENERATING GEAR FOR POCKET ELECTRIC LAMPS
Georges Bardin, Tournus, France; vested in the Attorney General of the United States
Application April 16, 1941, Serial No. 388,811
In France May 11, 1940
6 Claims. (Cl. 171—209)

1. A current-generating gear for pocket electric lamps comprising an actuator, a unidirectional impeller, a link interconnecting the actuator and impeller and having its pivotal connection with said impeller offset from the impeller axis, a magnetic rotor driven directly by the impeller and fitted with an annular nonmagnetic flywheel, and a stator having oppositely disposed windings and encompassing the rotor, said rotor and stator being circumscribed and peripherally enclosed by the flywheel.



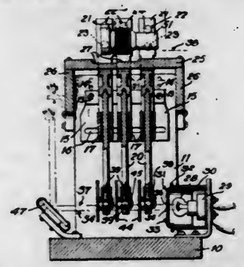
2,437,676
PISTON RING BORING MACHINE
Albert H. Bates, Rockford, Ill.
Application January 1, 1945, Serial No. 570,998
6 Claims. (Cl. 77—1)

1. A ring boring machine, comprising in combination a hollow frame, a housing mounted thereon and supporting a sizing ring for centering rings to be bored by engagement therewith about their peripheries, means for supporting a stack of rings in coaxial face to face relationship and substantially concentric to said sizing ring preliminary to their movement through said sizing ring, means for moving said rings through said sizing ring, a boring head mounted in said housing concentric with said sizing ring for boring the rings as they are moved through said sizing ring past said head, said housing having an exhaust opening therein communicating with the inside of said frame, and an exhaust conduit adapted to be connected with suitable exhaust means and connected to said frame and communicating with the inside thereof.



2,437,677
GUN AIMING POST HAVING PARABOLIC REFLECTING SURFACE
Leo H. Brown, Glenville, Conn.
Application June 23, 1944, Serial No. 541,806
8 Claims. (Cl. 88—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an aiming post for laying guns in azimuth, a housing having one side open, a portion of a concave parabolic cylindrical reflector surface mounted in said housing opposite said open side and fully observable through said side from a remote position, illuminable means carried by said housing at the focus of said surface and forming a narrow elongated reticle parallel to the generatrix of said surface, the image of said reticle being observable as a narrow line for all



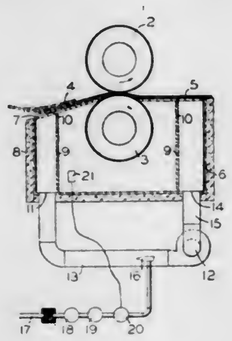
positions of the eye laterally between the boundary reflected rays.

2,437,678
VEHICLE DRIVING MECHANISM
Lawrence R. Buckendale, Detroit, Mich.
Application April 7, 1944, Serial No. 530,023
13 Claims. (Cl. 180—54)

1. In combination with a vehicle drive axle, a gear driven differential unit at one side of the vehicle center line for driving said axle, said unit including a driving shaft therefor in laterally offset substantially parallel relation to the vehicle axle, an engine mounted with its crankshaft at the opposite side of the vehicle center line, transmission and power-take-off units in successive connected relation with the engine, said power-take-off unit having an output shaft substantially parallel with the vehicle axle, and a propeller shaft operatively connecting said output shaft with the differential driving shaft.

2,437,679
MULTIPLE SNAP GAGE
Archie R. Burgess, St. Louis, Mo.
Application November 21, 1945, Serial No. 630,103
9 Claims. (Cl. 33—168)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A gage device comprising a plurality of combined maximum and minimum snap gages for



a given work piece of required external cross sectional measurements at longitudinally spaced parts, means to support the gages for independent sliding movement with an engaged work piece translatively in a direction normal to a predetermined axis of the piece, a light source spaced laterally from said axis and control means operatively connected with said gages constructed and cooperative with said light source to pass a beam therefrom in response to engagement of the gages with a standard size work piece at a given position in said sliding movement, and to interrupt at least a part of the beam at other positions of the control means.

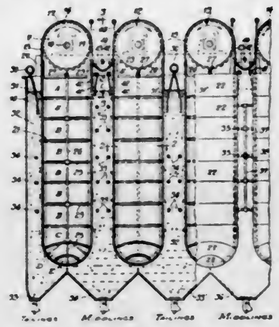
2,437,680

MOISTURE CONTROL DEVICE

Frank H. Cornelius, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania

Application January 11, 1945, Serial No. 572,409
15 Claims. (Cl. 91—48)

1. In a device for controlling the amount of condensate on the exterior surface of a calender roll, the combination of a housing enclosing the calender roll, means for injecting vapor into said housing, and controlling means responsive to the amount of vapor in said housing for controlling the injecting means.



2,437,681

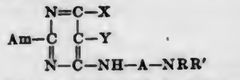
SUBMERGED-BELT TYPE MAGNETIC SEPARATOR

Robert E. Crockett and Page S. Haselton, Montclair, N. J.

Application May 27, 1943, Serial No. 488,668
21 Claims. (Cl. 209—232)

1. A magnetic separator comprising a tank for receiving a liquid mixture of magnetic particles and other material to be separated therefrom, a belt extending in the tank, means for supporting and driving said belt with a stretch thereof running upward substantially vertically from out of the liquid, and whereby an extended portion of such stretch is suspended in a position below the liquid level without substantial sagging or deviation from a vertical plane, means for feeding the mixture into the tank at a position spaced substantially from the region where said stretch portion passes up out of the liquid, and a plurality of magnets with pole pieces in alignment along one surface of said upwardly running stretch of the belt, whereby magnetic particles are caused to adhere to the opposite surface of said upwardly

running stretch and be carried up out of the liquid.



2,437,682

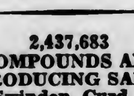
PYRIMIDINE COMPOUNDS AND PROCESSES FOR MAKING THE SAME

Francis Henry Swinden Curd, Clifford Gordon Raison, and Francis Leslie Rose, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application May 26, 1944, Serial No. 537,536. In Great Britain June 11, 1943
13 Claims. (Cl. 260—251)

1. As new compounds, the pyrimidine derivatives of the formula—

wherein Am stands for an arylamino group which is free of acidic substituents, A is a linking radical selected from the group consisting of aliphatic, alicyclic and aliphatic-carbocyclic bivalent radicals, NRR' is a strongly basic radical selected from the group consisting of primary, secondary and tertiary amine radicals and heterocyclic nitrogenous base radicals, X is a member of the group consisting of hydrogen and hydrocarbon radicals, Y is a member of the group consisting of hydrogen, halogen, lower alkyl, phenyl, benzyl and phenoxy.



2,437,683

PYRIMIDINE COMPOUNDS AND METHOD OF PRODUCING SAME

Francis Henry Swinden Curd, Clifford Gordon Raison, and Francis Leslie Rose, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application April 5, 1945, Serial No. 586,820. In Great Britain June 11, 1943
16 Claims. (Cl. 260—251)

1. A compound selected from the group consisting of the free base form, salts and tautomers of the pyrimidine derivatives which in form of free base correspond to the following formula

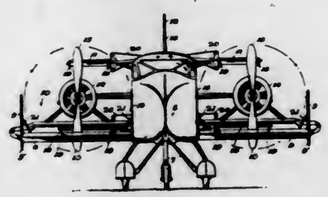
where X stands for a member of the group consisting of hydrogen, lower alkyl and phenyl; Y is

a member selected from the group consisting of hydrogen, lower alkyl, phenyl, benzyl, phenoxy, halogen and nitro; one of the members G and G' is the N-radical of an aromatic amine which contains not more than 10 C-atoms in its cyclic skeleton and whose cyclic carbon atoms have their extranuclear valencies satisfied by attachment to members selected from the group consisting of hydrogen, halogen, lower alkyl, alkoxy, alkyl-thio, alkylamino, carbomethoxy, phenyl, nitro and cyano; while the other of said members G and G' represents a strongly basic radical of the form

wherein R'' stands for a member of the group consisting of hydrogen and methyl, Q is the N-radical of a nitrogenous base selected from the group consisting of lower monoalkyl-amines, lower dialkyl amines, piperidine and pyrrolidine, while A is a divalent, saturated, aliphatic radical which interposes between Q and N not less than 2 and not more than 5 carbon atoms and which has one of the forms: alk, alk—O—alk,

and

"alk" being a lower alkyl radical.



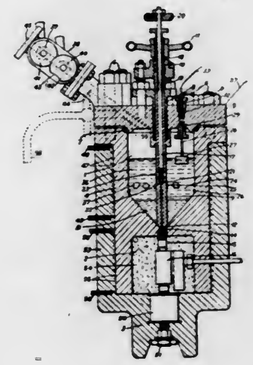
14. A process for producing the organic compounds defined in claim 1, which comprises reacting a diamine of formula Q—A—NHR'', wherein Q, R'' and A have the same significance as in claim 1, with a pyrimidine derivative as therein defined except that it carries a labile group in lieu of the substituent G.

2,437,684

AIRCRAFT HAVING HIGH-LIFT WING CHANNELS

Willard R. Custer, Hagerstown, Md.

Application August 31, 1940, Serial No. 355,055
5 Claims. (Cl. 244—12)



2. An airplane having a lifting surface, said lifting surface provided with an upwardly opening fore-and-aft channel, a propeller mounted adjacent the rear of said channel, with the propeller disc in a plane transverse to the channel axis, the distance of the propeller axis above the bottom of the channel being at least one third the diameter of the propeller, the side walls of said channel extending upwardly from the bottom of the channel a distance of at least one third of the propeller diameter, the center of said propeller being substantially mid-way of the channel side walls, and the width of the channel being substantially equal to the diameter of the propeller whereby material leakage of air between the propeller disc and channel is prevented, the region above the propeller disc being completely unobstructed.

2,437,685

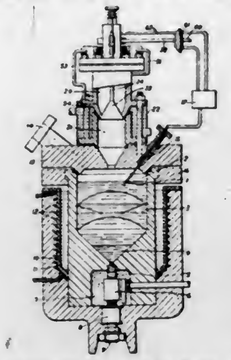
PROCESS AND APPARATUS FOR THE MELT EXTRUSION OF ARTIFICIAL MATERIALS

Henry Dreyfus, London, England; Claude Bonard, administrator of said Henry Dreyfus, deceased, assignor to Celanese Corporation of America, a corporation of Delaware

Application February 15, 1944, Serial No. 522,458
In Great Britain January 4, 1943
Section 1, Public Law 690, August 8, 1946,
Patent expires January 4, 1963
12 Claims. (Cl. 18—8)

1. Process for the extrusion of a fusible organic filament-forming composition, said process comprising supplying fused composition to a point from which it is to be extruded by supplying solid composition to a body of heating liquid that is immiscible with and chemically inert to said composition, passing said composition through said body of heating liquid to said point and maintaining said heating liquid at a temperature sufficiently high to melt the composition in its passage through said heating liquid, and continuously extruding the molten composition, without interruption for the supplying of said solid composition.

2,437,686



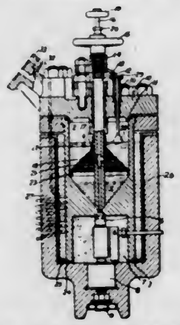
PROCESS FOR THE EXTRUSION OF FUSED ARTIFICIAL MATERIALS

Henry Dreyfus, London, England; Claude Bonard, administrator of said Henry Dreyfus, deceased, assignor to Celanese Corporation of America, a corporation of Delaware

Application November 29, 1944, Serial No. 565,711
In Great Britain November 24, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires November 24, 1963
4 Claims. (Cl. 18—54)

1. Process for the production of artificial materials by the extrusion of fused thermoplastic compositions, said process comprising melting the composition in a vessel containing an atmosphere other than air and inert to the composition by contact in said vessel with a liquid heating medium inert to and of lower density than the composition and withdrawing the molten composition from below the surface of said medium in said vessel for extrusion, and maintaining the supply of composition in said vessel by charging solid composition at intervals into a lock chamber that is closed to said vessel, closing said lock chamber and bringing its atmosphere substan-

tially to the composition of that within said vessel, and then opening said lock chamber to said



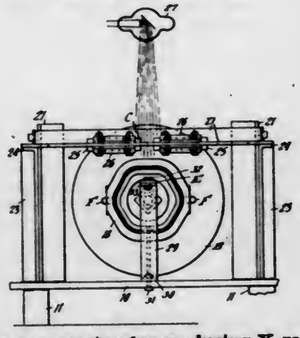
vessel and transferring the charge of solid composition from said lock chamber to the vessel.

2,437,687

MELT EXTRUSION OF ARTIFICIAL FILAMENTS, FILMS AND THE LIKE AND APPARATUS THEREFOR

Henry Dreyfus, London, and William Pool, Spondon, near Derby, England; Claude Bonard, administrator of said Henry Dreyfus, deceased, assignors to Celanese Corporation of America, a corporation of Delaware

Application December 7, 1944, Serial No. 567,062
In Great Britain November 24, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires November 24, 1963
15 Claims. (Cl. 18—8)



8. Apparatus for the production of artificial materials by the extrusion of fused thermoplastic compositions, said apparatus comprising a melting vessel, a heating medium in said vessel that is liquid at the melting temperature of the composition to be extruded and is adapted to melt solid composition in said vessel by contact therewith, heating means for suppling heat to said heating medium at a locality of said vessel, means for withdrawing fused composition from said vessel and extruding it as it is so withdrawn, and stationary baffle means within said vessel and below the level of said medium, said baffle means extending over substantially the whole area of cross-section of said vessel so as to positively constrain the composition, as it passes through said heating medium to said withdrawing means, into the immediate locality at which heat is supplied by said heating means.

2,437,688

APPARATUS FOR X-RAY PHOTOGRAPHING TUBULAR STEEL CASTINGS

Eric G. Forssell, Kenmore, N. Y., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware

Application January 12, 1945, Serial No. 572,562
4 Claims. (Cl. 250—65)

1. In an apparatus for producing X-ray photographs of tubular steel castings, the combination with a rotary supporting table; of means for transmitting slow rotary motion to said table; means on said table for clamping a tubular steel castings thereon with its central longitudinal axis in alignment with the axis of rotation of the table; a hollow tubular photographic film holder mounted within said casting for rotation in unison therewith, said holder fitting within the tubular casting and having a photographic film arranged annularly therein; a screen of material impervious to X-rays parallel to the axis of rotation of said table at one side of the latter, said screen having an elongated aperture therethrough, the length of said aperture being parallel to said axis of rotation; a screen impervious to X-rays within said film holder, said second named screen being mounted on a fixed support and being of greater width than said aperture; and an X-ray tube remote from said table, said first named screen being introduced between the X-ray tube and the tubular casting on said table.

2,437,689

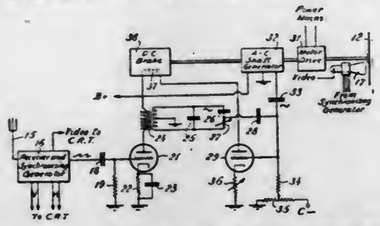
PROCESS FOR MAKING NEEDLE FELTS

Carleton S. Francis, Jr., West Harwich, Mass., assignor, by mesne assignments, to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

No Drawing. Original application October 23, 1939, Serial No. 300,876. Divided and this application April 11, 1944, Serial No. 530,553
5 Claims. (Cl. 154—101)

1. The process of making self-binding fabric having a woven textile base, which consists in mixing non-fusible and fusible fibres into a bat, needle punching the bat upon a textile base, and then subjecting the two plies thus formed to heat and pressure to fuse the latter fibres into an anchoring web on both sides of the textile base.

2,437,690



COLOR TELEVISION

Peter C. Goldmark, New Canaan, Conn., assignor to Columbia Broadcasting System, Inc., New York, N. Y., a corporation of New York

Application December 12, 1945, Serial No. 634,464
9 Claims. (Cl. 178—5.2)

1. In a color television system of the sequential type having a synchronizing signal in fixed time

relationship with the video signal, apparatus comprising a scanning device substantially in synchronism with said synchronizing signal, a movable color filter element cooperating with said scanning device, a nonsynchronous motor coupled to drive said color filter element, a generator coupled to said color filter element and adapted to produce a control signal, control means responsive to a change in phase of two

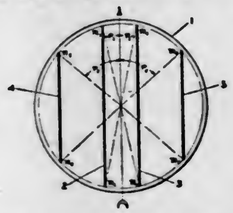
signals supplied thereto to change the speed of movement of said color filter element, an adjustable phase-shifting circuit, and means for supplying one of said synchronizing and control signals to said control means and the other through said adjustable phase-shifting circuit to said control means, whereby the color filter element may be synchronized with said scanning device and the relative phase therebetween electrically adjusted.

2,437,691

MANUFACTURE OF 2:4-DIAMINO-1:3:5-TRIAZINES

Adolf Grün, Basel, Switzerland, assignor to J. R. Geigy A. G., Basel, Switzerland

No Drawing. Application March 13, 1942, Serial No. 434,624. In Switzerland April 25, 1939
10 Claims. (Cl. 260—249.5)



1. A process for the manufacture of derivatives of 2:4-diamino-1:3:5-triazines, comprising causing a diguanide selected from the group consisting of diguanide, a monoalkyl substituted diguanide, a monoaryl substituted diguanide of the benzene series, an alkylaryldiguanide of the benzene series and an alkylbenzyldiguanide to react with a carboxylic acid halide in presence of a hydrohalogen-binding agent selected from the group consisting of the alkali metal carbonates, alkaline earth metal carbonates, alkali metal bicarbonates and alkaline earth metal bicarbonates.

2,437,692

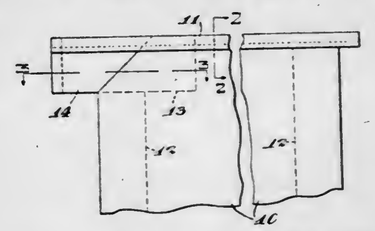
MAGNETIC COMPASS

Edward W. Hart, San Diego, Calif.

Application May 3, 1945, Serial No. 591,770
4 Claims. (Cl. 33—225)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a magnetic compass, a pair of substantially identical inner magnetic needles, a pair of substantially identical outer magnetic needles, said needles being substantially parallel and having their like poles oriented in the same directions and all of their poles lying substantially on the same circle, and having pole strengths and being positioned laterally substantially in accordance with the formula

$$\frac{m_1}{m_2} = -\frac{\cos 3p_2}{\cos 3p_1} = -\frac{\cos 5p_2}{\cos 5p_1}$$



wherein m_1 and m_2 represent the pole strengths of the inner and outer needles respectively, and p_1 and p_2 represent the pole angles of the inner and outer needles respectively, and means to support said needles in the foregoing relationship.

2,437,693

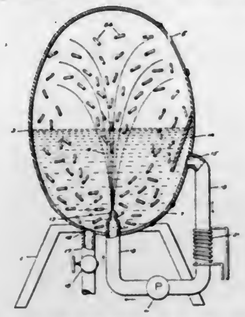
HEAT-SEALED VALVE BAG

Carl Henry Hartman, New Rochelle, N. Y., assignor to St. Regis Paper Company, New York, N. Y., a corporation of New York

Application August 7, 1944, Serial No. 548,393
4 Claims. (Cl. 229—62.5)

1. A multi-ply valve bag comprising a plurality of plies of paper, the inner ply of paper being lined with thermoplastic material, an end-closing sewed seam, a corner of the bag being turned in at one end of the seam to form a valve, a sleeve in the valve formed of a sheet of paper having its outer side covered with thermoplastic material, its inner end folded outward and the thermoplastic material thereon being heat-sealed to the bag lining material on the inner end of the valve, the longitudinal edges of the sheet being folded inward and their thermoplastic coatings being heat-sealed together along the line of said seam and the lining of said bag being heat-sealed the rest of the way along said seam, and the outer end of the sleeve being inturned whereby it may be heat-sealed after the bag has been filled.

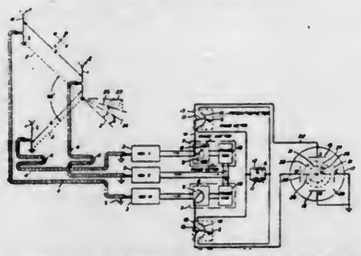
2,437,694



METHOD FOR BLENDING POWDER GRAINS

Clarence N. Hickman, Jackson Heights, N. Y., assignor to United States of America, as represented by the Secretary of War

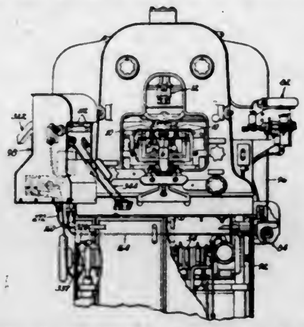
Application May 15, 1946, Serial No. 669,765
4 Claims. (Cl. 52—20)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. A method of blending smokeless powder grains including the steps of placing the powder grains to be blended in a vat, adding water saturated with nitroglycerine, said water being added in quantity sufficient to rise to a substantial height above the grains, and circulating said water by withdrawing it from the vat and projecting it upwardly through the bottom of the vat with sufficient velocity to break through the surface and fan out in a fountain-like manner,

whereby the grains in the path of the jet are propelled upwardly above the surface of the liquid

to fall back in a haphazard manner on top of the other grains therein.

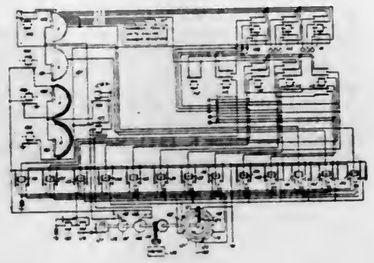


2,437,695
THREE-DIMENSION RADIO DIRECTION FINDER
Karl G. Jansky, Little Silver, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 30, 1943, Serial No. 500,541
8 Claims. (Cl. 250—11)

1. A method of determining the absolute direction in space of a radio wave which comprises simultaneously receiving three electric components of said wave, simultaneously obtaining a voltage representing the phase relation of one pair of components and another voltage representing the phase relation of another pair of components, and obtaining from said voltages two simultaneous indications representing the wave arrival angles in two perpendicularly related planes.

2,437,696
MACHINE FOR OPERATING ON SHOES
Bernhardt Jorgensen, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application December 21, 1945, Serial No. 636,289
52 Claims. (Cl. 12—1)

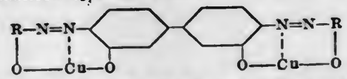
1. In a machine for operating on shoes, a presser constructed and arranged to engage the upper on the bottom of the toe-end portion of a shoe presented thereto after the toe-lasting operation, said presser being formed to extend inwardly over the marginal portion only of the shoe bottom about the end and along the sides of the toe and being flexible to permit it to conform to the contour of the shoe bottom, means for positioning the shoe relatively to the presser, a shoe rest arranged to engage the top the forepart of the shoe, means supporting said presser and shoe rest in predetermined relation to each other to receive the shoe supported by the operator with the upper on the margin of the shoe bottom facing the presser, and means for effecting relative movement of said presser and shoe rest while the operator thus supports the shoe to cause the presser to press the upper on the shoe bottom.



2,437,697
ELECTRICAL PROBE
Lawrence Kalom, Chicago, Ill.
Application April 1, 1946, Serial No. 658,725
4 Claims. (Cl. 128—2.1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

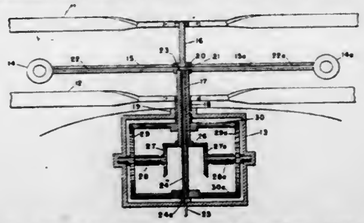
1. A surgical probe comprising an electrically-conductive hollow probing needle having a convexly beveled operative probing extremity, said hollow probing needle having an aperture in the convexly beveled portion thereof, a single electrode disposed within and electrically insulated from said hollow needle, a portion of said electrode being disposed at the aperture aforesaid and providing a convexly beveled contact surface which is a continuation of the convexly beveled portion of said hollow probing needle and which converges to a point eccentric to the central axis of said needle, said hollow needle and said electrode being constructed and arranged for electrical connection upon being bridged at their outer extremities by contact with a metallic object, and means disposed exteriorly of the operative probing portion of said hollow needle for indicating the completion of an electric circuit through said hollow needle and said electrode.

2,437,698
PRINTER AND CONTROL SYSTEM THEREFOR
Wilmarth Y. Lang, Towaco, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 12, 1942, Serial No. 468,789
9 Claims. (Cl. 179—7.1)



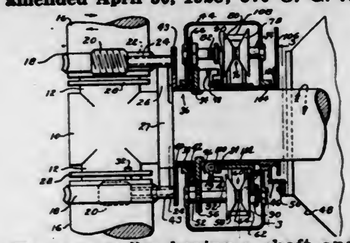
1. In a printer control system, a line, a plurality of character conductors, a distributor, means controllable over said conductors for causing said distributor to selectively transmit codes of impulses over said line in accordance with the characters represented by said conductors, a printer having a type bar for each of said characters, a release magnet for each said type bars, a plurality of relays selectively operable to cause the selective operation of said type bar release magnets, and a receiver having a single magnet operable by code impulses transmitted over said line for selectively operating said relays.

4. In a printer control system, a line, a plurality of character conductors, a distributor, means controllable over said conductors for causing said distributor to selectively transmit codes of impulses over said line in accordance with the characters represented by said conductors, a printer having a type bar for each of said characters, said type bars being positioned parallel to each other with their type faces aligned transversely with respect to the direction of movement of the paper through the printer, each of said type faces carrying a type symbol and a scanning mark, a release magnet for each of said type bars, a plurality of relays selectively operable to cause the selective operation of said type bar release magnets, and a receiver having a single magnet operable by code impulses transmitted over said line for selectively operating said relays.



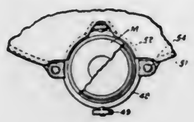
2,437,699
COPPER COMPLEXES OF DIANISIDINE DISAZO DYES
Joseph Francis Laucius, Wilmington, Del., and William W. Williams, Albany, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 11, 1944, Serial No. 517,894
6 Claims. (Cl. 260—148)

1. A symmetrical water-soluble copper complex represented by the formula

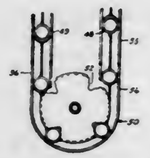


wherein R is the radical of one of the group consisting of 2-naphthol-6-sulfonic acid, 1-naphthol-3-sulfonic acid and 1-naphthol-5-sulfonic acid.

2,437,700
AIRCRAFT
Jay William MacFarland, Jr., United States Navy
Application May 21, 1945, Serial No. 594,883
2 Claims. (Cl. 170—135.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

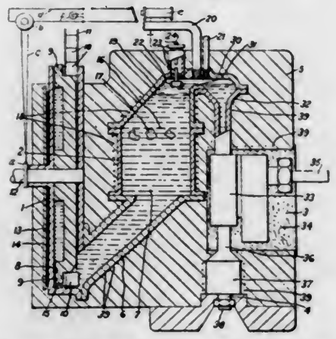


1. In aircraft having a rotary wing, the combination of at least one reaction motor unit mounted on an arm, a hollow arbor supporting said arm, means for supplying fuel to said motor through the said arm and arbor, a gear box, means within the gear box for rotatably supporting said arbor, a beveled driving gear attached to said arbor, two diametrically opposed intermediate beveled gears engaged with said driving gear, two shafts rotatably supported within the gear box attached one to each of said intermediate gears, two other intermediate beveled gears attached one to each of the shafts, two diametrically opposed driven gears engaged with the second intermediate gears, two axially concentric driven shafts attached one to each of the driven gears, means for mounting said concentric shafts in the gear box concentrically on said arbor, and rotary wings radially supported on said shafts whereby rotation of the arm supporting the reaction motor unit causes the wings to rotate in opposite directions with equal strains and torsions on the gears and shafts.

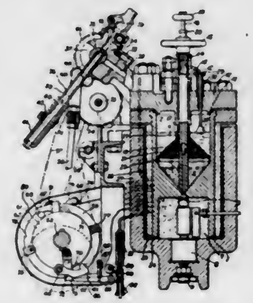


2,437,701
AIRCRAFT PROPELLER
Howard M. McCoy, Fairfield, Ohio
Application June 7, 1943, Serial No. 489,947
18 Claims. (Cl. 170—163)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

9. For a propeller having a shaft and a hub with laterally extending bearing means, and blades rotatable about their radial axes on said bearing means, an improved pitch change mechanism which comprises, in combination, two countershafts with rotational axes parallelly spaced apart from each other and from the hub rotational axis, means drivably connecting one countershaft to the propeller shaft, means drivably connecting the other countershaft to the propeller blades for rotating said blades about their radial axes, a pulley on each countershaft, a belt drivably encircling said pulleys, and means to vary the belt track diameter of at least one of said pulleys.



2,437,702
CONVEYER FOR TRANSPORTING POTTERY MOLDS
William J. Miller, Swissvale, and Ashley J. Reek, Carrick, Pa., assignors to Miller Pottery Engineering Company, Swissvale, Pa., a corporation of Pennsylvania
Application May 7, 1943, Serial No. 486,074
7 Claims. (Cl. 198—131)



3. A mold conveyor comprising, a plurality of rings each having a pair of oppositely disposed rollable elements and formed with an open seat for supporting a pottery mold so that it is accessible from below, flexible connections between said rings arranged to transmit the pull directly through said rings, a track for rollably supporting said rings and a sprocket having peripheral recesses therein formed for meshing with a ring and one of the rollable elements thereof and establishing a drive connection therewith.

2,437,703
PROCESS AND APPARATUS FOR THE EXTRUSION OF FUSED ARTIFICIAL MATERIALS
Robert Wighton Moncrieff, Spondon, near Derby, England, assignor, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
Application January 25, 1944, Serial No. 519,613
In Great Britain January 4, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires January 4, 1963
13 Claims. (Cl. 18—8)

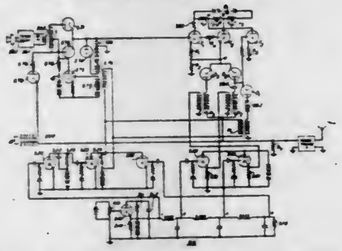
1. Process for the extrusion of a fusible organic filament-forming composition comprising feeding the composition upwards through a liquid that is inert to and of greater density than the composition, maintaining said inert liquid at a temperature sufficiently high to melt the composition during its passage through said inert liquid, withdrawing the molten composition from the surface of said inert liquid and extruding said molten composition.

2,437,704
METHOD AND APPARATUS FOR THE MELT EXTRUSION OF ARTIFICIAL MATERIALS
Robert Wighton Moncrieff and William Pool, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
Application December 6, 1944, Serial No. 566,901
In Great Britain November 24, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires November 24, 1963
16 Claims. (Cl. 18—8)

1. Method of extruding fusible filament-forming materials, said method comprising melting the material in a confined space containing a gaseous atmosphere at superatmospheric pressure by contact in said space with a liquid heating medium inert to and of lower density than the material, maintaining a supply of solid material in a cavity within a body whose surface forms one boundary of said confined space, withdrawing fused material from below the surface of said heating medium within said space and extruding the material withdrawn, detecting the temperature at a fixed level within said space and, whenever a sharp temperature change indicates that the surface of said heating medium has fallen below said level, moving said body so as to bring said cavity into communication with said space so as to feed the solid material in said cavity into said space and temporarily to raise said surface and reverse said temperature change.

2,437,705
HYDROBLEACHING AND HARDENING GLYCERIDE OILS
William J. Paterson, Newton Highlands, Mass., assignor to Lever Brothers Company, a corporation of Maine
No Drawing. Application February 19, 1943, Serial No. 476,498
12 Claims. (Cl. 260—409)

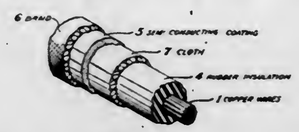
1. A process for simultaneously hydrobleaching and hardening glyceride oils which comprises treating the oil with hydrogen at a pressure of the order of atmospheric to 200 atmospheres in the presence of a small amount of a coprecipitated catalyst having the general formula



Y-Fe-X-O

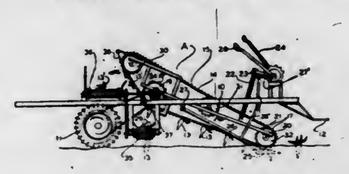
in which X represents at least one metal selected from the group consisting of copper, silver and gold and Y represents at least one hydrogenating metal selected from the group consisting of nickel, cobalt, paladium and platinum, at a temperature of at least 170° C. but below the temperature at which the said oils are thermolytically destroyed.

2,437,706
HYDROBLEACHING GLYCERIDE OILS
William J. Paterson, Newton Highlands, Mass., assignor to Lever Brothers Company, Cambridge, Mass., a corporation of Maine
No Drawing. Original application February 19, 1943, Serial No. 476,498. Divided and this application May 18, 1944, Serial No. 536,199
10 Claims. (Cl. 260—409)



1. A process for hydrobleaching glyceride oils comprising treating the oil at a temperature of the order of about 170 to 250° C. with hydrogen under superatmospheric pressure for not more than about 60 minutes in the presence of not more than about 0.5% of a coprecipitated catalyst having the general formula Fe-X-O in which X represents at least one metal selected from the group consisting of copper, silver and gold.

2,437,707
COMMUNICATION SYSTEM EMPLOYING PULSE CODE MODULATION
John R. Pierce, Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 27, 1945, Serial No. 637,386
13 Claims. (Cl. 179—1.5)



2. In a signaling system for transmitting information relating to a complex wave, a transmitting station comprising a circuit for periodically sampling the wave to charge a storage condenser to the instantaneous voltage V_s, which is a function of the instantaneous amplitude of said wave, an amplifier tube subject to said condenser, said tube including a cathode resistor giving a sample voltage drop aV_s over one portion of the cathode resistor, a gain means for changing the sample drop over the said cathode resistor to bV_s, where b is in excess of a, a source of pulses of predetermined value, a first pulse rendering the said means inactive, a second pulse testing whether aV_s is greater or less than the said second pulse amplitude plus a constant and if larger then leaving the said means inactive but if smaller then rendering the said means active to raise the sample voltage over the cathode resistor to bV_s, a third pulse to test whether the aV_s or the bV_s, whichever is present, is greater or less than the amplitude of the third pulse.

2,437,708
SEMICONDUCTING TAPE FOR ELECTRIC CABLE
Curtis Edward Plass, Worcester, Mass., and David Joseph Sullivan, Fairfield, Conn.; said Sullivan assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware; said Plass assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application February 18, 1944, Serial No. 522,980
7 Claims. (Cl. 174—102)

6. A high tension insulated electric cable comprising a high tension electric conductor, a layer of oil-impregnated insulation therearound, and an oil-impervious organic electric shielding layer over and in contact with the insulation, the shielding layer containing approximately .25 part to 4 parts of an alcohol-soluble synthetic linear polyamide having an intrinsic viscosity of 0.4, a unit length of at least 7, and an average of at least 2 carbon atoms separating the amide groups, said synthetic linear polyamide being selected from the group which consists of (*a*) linear polyamides formed by reacting 30–45% of caprolactum, 10–50% of hexamethylenediammonium adipate, and 10–45% of hexamethylenediammonium sebacate, (*b*) linear polyamides formed by reacting 20–60% of 6-aminocaproic acid and not less than 10% each of at least two of the following polyamide-forming compositions: hexamethylenediammonium sebacate, hexamethylenediammonium adipate, and a mixture of hexamethylenediammonium suberate and hexamethylenediammonium azelate in approximately 15:85–30:70 proportions, and (c) linear polyamides formed by reacting synthetic fiber-forming linear polyamides having hydrogen-bearing amide groups separated by an average of at least 2 carbon atoms with a mixture of formaldehyde and an alcohol in the presence of an oxygen-containing acid catalyst. to 1 part of a carbon black which has a resistance of less than about 1 ohm per 1-inch cube.

2,437,709
SUGAR-BEET HARVESTER
Hugo C. Rassmann, Minneapolis, Minn.
Application August 14, 1944, Serial No. 549,355
5 Claims. (Cl. 55—108)

1. A beet harvester, including a main rigid frame adapted to be supported by carrier wheels, a floating frame hingedly supported on one end in said main rigid frame and freely disposed on the other end to be operated in a manner to raise and lower the same, resilient means con-

nected with the front end of the floating frame to resiliently support the same, lever and quadrant means for setting the free end of said frame in relation to the ground, an endless pick-up belt formed by a series of endless chains traveling over a series of sprocket wheels on the floating frame, a series of bars extending between said chains, each bar carrying a series of pick-up hooks, which endless belt is adapted to roll over the tops of the beets to pick them up as they are plowed loose, a topping knife mounted adjacent said belt, a transversely extending carrier belt extending below said topping knife for carrying the topped beets to one side of the harvester, a stripping device for removing the tops and foliage of the beets from said endless pick-up belt, and a transversely extending conveyor for carrying the tops and foliage of the beet to one side of the harvester.

2,437,710

PRODUCTION OF RESINS FROM A METHYLOL MONOHYDRIC PHENOL AND A POLYHYDRIC PHENOL

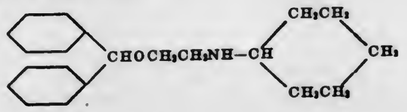
Philip Hamilton Rhodes, Portland, Maine, assignor, by mesne assignments, to Koppers Company, Inc., a corporation of Delaware

No Drawing. Application December 3, 1942, Serial No. 467,790

12 Claims. (Cl. 260—54)

1. The method comprising producing a homogeneous resinous mass substantially free of undesirable end products comprising heat-reacting at reflux temperature a molten mass the reactants of which consist of a methylol monohydric phenol and a polyhydric phenol until a viscous resin is formed.

2,437,711



BETA-CYCLOHEXYLAMINOETHYL BENZHYDRYL ETHER AND SALTS THEREOF

George Rieveschl, Jr., Grosse Pointe Woods, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan

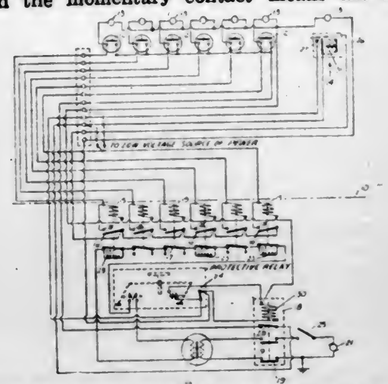
No Drawing. Application August 5, 1946, Serial No. 688,426

5 Claims. (Cl. 260—570)

1. A compound of the class consisting of a free base and its acid addition salts, said free base having the formula,

2,437,712

ELECTRICAL CONTROL SYSTEM



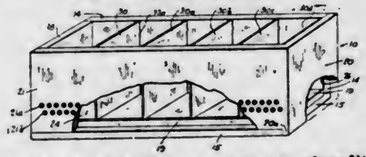
Malcolm H. Sheldon, New York, N. Y.

Application February 15, 1946, Serial No. 647,982

7 Claims. (Cl. 315—320)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a control circuit for lighting a plurality of airfield taxiways, a bank of lamps for each taxiway, a source of high voltage current for the lamps, shunt means to direct current from each bank of lamps, circuit breaking means for said high-voltage current, a plurality of solenoids associated with said shunt means, a low-voltage power source for said solenoids, momentary contact means for activating said solenoids so as to remove the shunts from said lamps, means for holding said shunts removed from the lamps, when the momentary contact means are released, and switch means for closing the primary circuit so that the selected lamps are lighted.



2,437,713

APPARATUS FOR EMBEDDING SIMULTANEOUSLY A PLURALITY OF TISSUES FOR HISTOLOGICAL PURPOSES

Joseph Tannenberg, Batavia, N. Y.

Application February 20, 1945, Serial No. 578,903

5 Claims. (Cl. 18—39)

1. An apparatus for preparing a plurality of tissue blocks for microscopic and similar examinations comprising a container provided with parts relatively removable from each other, a plurality of carrier elements having upright plates and base plates, said base plates being adapted to rest on the bottom of said container, first means provided on said carrier elements, second means provided in predetermined container parts, said second means being complementary to and engageable with said first means provided on said carrier elements to thereby hold the latter in position in said container, said base plates of said carrier elements being adapted to carry tissue samples for preparing tissue blocks between adjacent upright plates of said carrier elements, said container being provided with perforations forming passageways for the introduction of block forming matter for contact with said tissue samples, and slide means embracing said container and maintaining the same in assembled condition, said slide means being adapted to slide over said perforations to obstruct the same upon introduction of said block forming matter.

2,437,714

TROUSER AND SUSPENDER COMBINATION

Walter A. Thomason, Jr., United States Army, Charlotte, N. C.

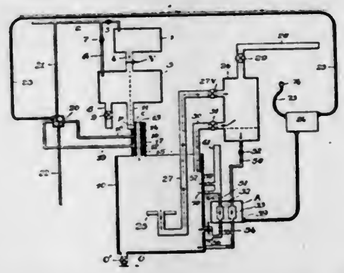
Application December 22, 1944, Serial No. 569,385

3 Claims. (Cl. 2—310)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination: suspenders having at least one front strap and at least one back strap, a belt carried by said suspenders, means for permitting free sliding movement of said front and said back strap relative to said belt, trousers carried by said belt, and at least three spaced means permanently secured to the waistline of said trousers, each of said last-named means having

a free end and releasable fastening means on said free end for selectively engaging and releasing said belt; whereby said trousers are securely supported in operable position by said belt and suspenders, and are readily detachable from and attachable to said belt and suspenders without disarranging upper garments of the wearer.



2,437,715

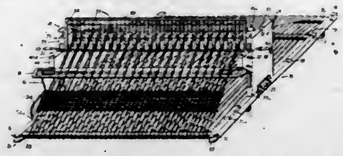
CONSISTENCY CONTROL

Clark E. Thorp, Chicago, and Louis E. Anderson, Chicago Heights, Ill., assignors to Jesse B. Hawley, Babson Park, Fla.; Don M. Hawley and Emmett Donnelly, administrators of Jesse B. Hawley, deceased, assignors to Hawley Products Company, a corporation of Delaware

Application November 29, 1943, Serial No. 512,122

9 Claims. (Cl. 92—46)

1. In consistency control apparatus, a vessel for containing a pulp-liquid mixture, a light absorption cell for continuously receiving liquid from which pulp has been removed, a light absorption cell for continuously receiving pulp-liquid mixture, a separate light source for each cell, a separate light sensitive device for each absorption cell for receiving light emerging from its respective absorption cell, a consistency control unit controlled by the light sensitive devices and having electronic means and a relay, and electrically operated means controlled by said relay for governing the admission of pulp-liquid mixture to the vessel to automatically control the consistency of the pulp-liquid mixture in the vessel.



2,437,716

HAND-OPERATED LOOM

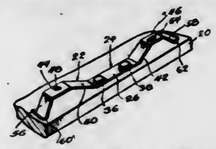
Joseph Tiefenthal, West Babylon, N. Y.

Application May 2, 1945, Serial No. 591,451

6 Claims. (Cl. 139—29)

1. In a hand-operated loom having a frame including parallel side bars; a pair of standards, each standard being hinged to a respective side bar, a front beam, a yarn beam, one or more guide rollers extending transversely to said side bars, respective pairs of grooves provided in said side bars to accommodate therein the ends of said front beam, of said yarn beam and of said guide rollers, thereby enhancing stabilization of said frame, said side bars being each provided with an abutment member secured on the respective side bar and forwardly of said standards, and a platform displaceably accommodated in each standard, said platforms and said abutment members forming respective supports for the warp threads carrying reed which may be freely moved by the hands of an operator and independently of and relatively to said frame of the loom.

2,437,717



VIBRATION DAMPING MOUNT

Le Roy L. Werner, Washington, D. C.

Application October 27, 1944, Serial No. 560,583

5 Claims. (Cl. 248—20)

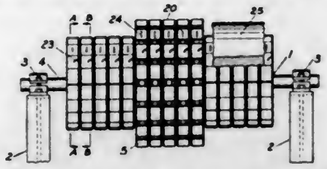
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A mount for securing a machine subject to vibration to a stationary support comprising a body formed from a single strip of spring-tempered metallic bar, said body having a base section for securement to a support, elevated machine supporting sections, inclined sections connecting said base section and said elevated sections, and extensions from the elevated sections supplementing the inclined sections to provide resilient support for said elevated sections for damping the vibrations of said machine.

2,437,718

EXPANDING MANDREL

Mercer L. Whitson, Norfolk, and Hiawatha F. Collette, Portsmouth, Va.

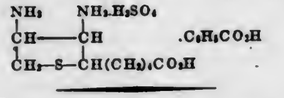


Application March 26, 1945, Serial No. 584,990

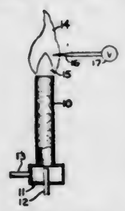
6 Claims. (Cl. 18—45)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An expansible work support, upon which may be formed heat insulators for use on valves, pipe flanges, couplings and the like of a substantially cylindrical hollow shape, mounted for rotation about an axis which is composed of a series of cylindrical sections mounted closely adjacent each other along a common axis, each section including means for varying the diameter of



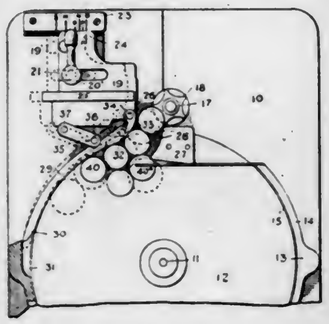
that section independently of all other sections whereby the work support may assume the configuration of a stepped cylinder, and means in



cooperation with each section for locking that section in position independently of all other sections.

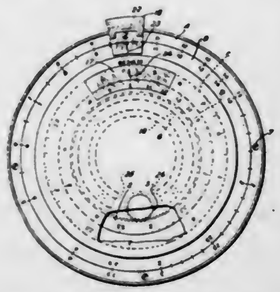
2,437,719
A BENZOIC ACID di-CIS-2-(4'-CARBOXY-BUTYL)-3:4-DIAMINO-TETRAHYDRO-THIOPHENE SULFATE COMPLEX
Donald E. Wolf and Anthony C. Shabica, Jr., Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application September 16, 1944, Serial No. 554,459
9 Claims. (Cl. 260—329)

9. A benzoic acid di-cis-2-(4'-carboxy-butyl)-3:4-diamino-tetrahydrothiophene sulfate complex, sparingly soluble in water, having a melting point of about 255–256° C., the empirical formula $C_{16}H_{26}S_2N_2O_8$ and the structural formula:



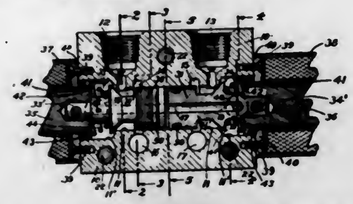
2,437,720
METHOD OF AND APPARATUS FOR MEASURING THE COMPOSITION OF GAS
Robert A. Ackley, Chicago, Ill., assignor to Republic Flow Meters Company, Chicago, Ill., a corporation of Illinois
Application June 14, 1943, Serial No. 490,736
9 Claims. (Cl. 73—25)

2. The method of measuring the oxygen content of a gas sample which comprises mixing the sample with a combustible gas in predetermined proportions, burning the mixture in air to produce a flame, and measuring the temperature of the flame.



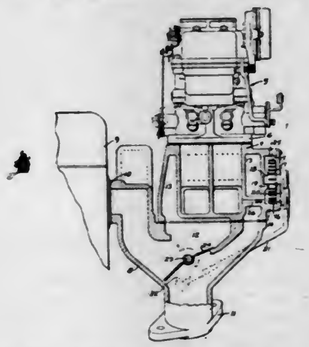
2,437,721
COIN COUNTING MACHINE
Walter A. Barganz and Earl W. Quirk, Watertown, Wis., assignors to Brandt Automatic Cashier Company, Watertown, Wis., a corporation of Wisconsin
Application November 26, 1945, Serial No. 630,763
6 Claims. (Cl. 133—8)

1. A coin counting machine including a hopper for said coins, a coin discharge way, means for delivering coins from said hopper to said coin discharge way and counter-actuating means at the outlet of said coin discharge way, said coin discharge way comprising oppositely disposed guide means one of which is relatively fixed and provided with a coin separating point, and the other guide means comprising pivotally



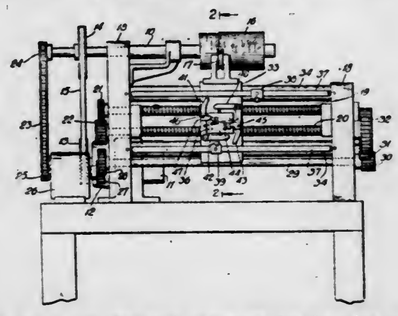
connected members and means for relatively adjusting said pivotally connected members radially and tangentially of said delivery means to move the connected member nearest to the coin discharge way toward or away from the coin separating point according to the size of coins to be counted.

2,437,722
SLIDE RULE
Oscar E. Batori, New York, N. Y.
Application March 16, 1946, Serial No. 654,951
5 Claims. (Cl. 235—84)



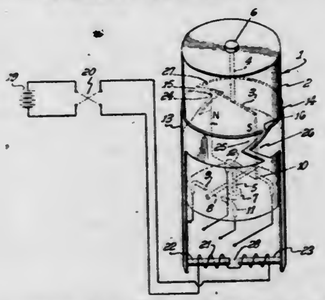
1. A computer comprising a fixed circular base member having thereon an exposed logarithmic scale; a rotatable ring member in front of and within the base member, having an outer exposed logarithmic scale and two inner partly concealed logarithmic scales thereon, one of last said two scales inverted with respect to the other scales; a result indicator member in front of the ring member, fixed to the base member and of a diameter to conceal an inner marginal part of the ring member and the scales thereof and having an annular segmental opening in alignment with said inner concealed scales of the ring member to expose to view parts thereof; a movable peripheral indicator, supported by the outer edges and outer cylindrical surface of the base member, said indicator being cooperative with said exposed scales of the base and ring members, respectively.

2,437,723
POPPET VALVE
Walter R. Brant and Harvey G. Chapman, Jr., Glendale, Calif., assignors to Adel Precision Products Corp., a corporation of California
Application December 4, 1944, Serial No. 566,598
8 Claims. (Cl. 137—144)



6. In a solenoid operated valve, an elongated valve body having a bore extending from end to end thereof, counterbores at each end of said bore forming a pair of opposed valve seats, a valve seated on each of said seats, each of said valves having a reduced diameter stem portion extending into said bore, a spool valve member on each of said valve stem portions stem engageable with the wall of said bore, interconnected pressure ports communicating with said valve chambers, interconnected return ports in communication with said bore adjacent said spool valve members, a motor port communicating with said bore at points between each of said return ports and the associated valve seat, means operable normally to hold said valves seated and separate solenoid operated means associated with each of said valves for selective operation thereof, each of said valves and its associated spool valve member and ports being so constructed and arranged that when the valve is seated the return port associated therewith will be in communication with the associated motor port.

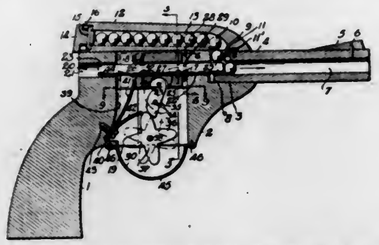
2,437,724
MANIFOLD HEAT VALVE CONTROL
Morris C. Brown, Richmond Heights, Mo., assignor to Carter Carburetor Corporation, St. Louis, Mo., a corporation of Delaware
Application August 24, 1945, Serial No. 612,475
5 Claims. (Cl. 123—122)



1. In an internal combustion engine, intake and exhaust manifolds, a by-pass for diverting a part of the exhaust from said exhaust manifold in close proximity with said intake manifold, a valve for controlling said by-pass, a thermostat adjacent said exhaust manifold and controlling said valve, said thermostat being exposed to atmosphere, and suction means for drawing air past said thermostat at a variable rate in accordance with the suction in said intake manifold.

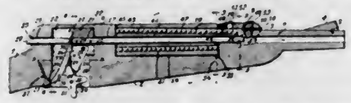
2,437,725
WINDING MACHINE
Edward A. Conner, Stratford, Conn., assignor to American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York
Application November 23, 1945, Serial No. 630,245
6 Claims. (Cl. 242—9)

1. In a coil winding machine for forming coils of even successive layers of line of the type including means producing winding motion and relative traversing motion between a line guide and the coil being formed, the combination of a carriage mounted for movement to cause relative traverse, a pair of screw members rotatable in response to winding motion, a nut alternatively engageable with either screw member and operative upon such engagement to cause motion of the carriage, the screw members driving the nut in opposite directions, and means producing lost motion between the winding motion and the motion of the carriage upon disengagement of the nut from one screw member and engagement with the other, whereby a dwell is produced in the motion of the carriage at the end of traverse.



2,437,726
POLARIZED RELAY
Arthur C. Davis, Burbank, Calif.
Application August 18, 1944, Serial No. 550,098
8 Claims. (Cl. 200—93)

1. A polarized relay comprising a circular vacuum tube having an axis, a polarized vane in said tube, contacts in said tube controlled thereby, means supporting said vane for movement about said axis, a pair of arcuate pole pieces arranged end to end around said tube and around said vane concentric with said axis, the adjacent ends of said pole pieces being separated by air



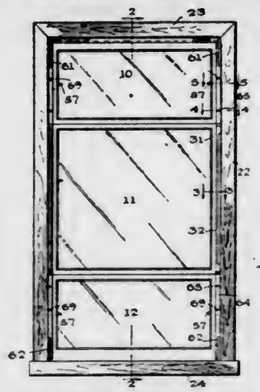
gaps at opposite sides of said tube, said pole pieces having extensions beyond said tube, an air gap between said extensions, and coil means on said extensions for oppositely magnetizing said pole pieces.

2,437,727
TOY GUN
Edward L. Drumheller, Buena Vista, Va.
Application June 4, 1946, Serial No. 674,168
5 Claims. (Cl. 124—27)

1. In a toy gun comprising a handle body, a recess in said handle body, a passage in said handle body, a rod mounted for reciprocation in said passage, a block connected to said rod, said block being located in said recess, a plurality of flat leaf power springs extending upwardly in said recess, the lower ends of said springs being secured to said handle body and the upper end of at least one of said springs pressing against the rearward end of said block, an elongate cam pivotally mounted in said recess, one end of said cam engaging said block to actuate the same rearwardly against the force of said one of said springs, a star-shaped trigger pivotally mounted in said recess, the fingers of said trigger engaging the other end of said cam in turn for actuating the same, and one of said springs extending into the space between two adjacent fingers of said star-trigger, the fingers of said trigger also engaging said last mentioned one of said springs in turn to retract the same.

2,437,728
ROTARY MAGAZINE FOR TOY GUNS
Edward L. Drumheller, Buena Vista, Va.
Application June 4, 1946, Serial No. 674,169
4 Claims. (Cl. 124—48)

1. In a toy gun comprising a body portion, a barrel connected to said body portion, and a plunger rod mounted for reciprocation in said body portion in alignment with said barrel, a magazine rotatably mounted on said rod, said magazine having a plurality of forwardly and inwardly inclined projectile receiving passages therein, and a passage leading into said barrel from said magazine.

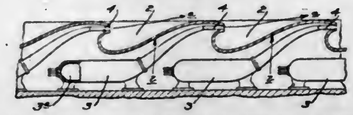


2,437,729
BELT BUCKLE
Edward M. Easter, Detroit, Mich.
Application January 10, 1945, Serial No. 572,227
2 Claims. (Cl. 24—194)

1. A belt buckle including a belt guide adapted for slidably receiving one end of a belt, a transverse rib in the guide, and a locking member including diverging legs and having trunnions slidably and rotatably mounted in the guide for movement of the locking member toward and away from said rib, said legs straddling the rib and

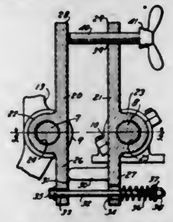
adapted for wedging a belt against the rib upon exertion of a pulling force on the belt in either direction, and means on the guide operable outwardly of the latter for engaging and releasing said locking member.

2,437,730
WINDOW
Roger W. Eisinger, Washington, D. C.
Application April 1, 1943, Serial No. 481,475
10 Claims. (Cl. 20—42)



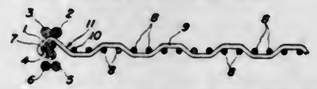
1. In a window of the type described, in combination, a plank frame having a sill, an outside or blind stop, a center sash one-half the height of the frame and engaging said stop, top and bottom sash against the said stop each of one-quarter frame height and receiving support respectively from the center sash and the sill, a parting stop at the top and behind the center sash only, each of the small sash having a bottom rail contoured to fit the support beneath and to provide a water and wind stop, that of the lower sash being constructed to remain tight when the said sash is tilted inwardly at the top through a substantial angle to act as a ventilator and single means to hold the lower sash in adjusted ventilator positions and in adjusted overlapping relation to the center sash.

2,437,731
HYDROCAFFEIC ACID AND ESTERS AS ANTIOXIDANTS
Lucius W. Elder, Madison, and Harold S. Levenson, Orange, N. J., assignors to General Foods Corporation, New York, N. Y., a corporation of Delaware
Application January 29, 1945, Serial No. 575,132
12 Claims. (Cl. 260—398.5)



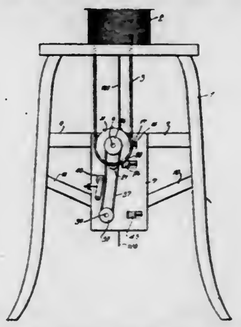
1. A process of stabilizing fats, fatty acids, fatty acid derivatives and oils of animal and vegetable origin against oxidative deterioration which comprises adding thereto a material selected from the group consisting of hydrocaffeic acid and alkyl esters thereof.

2,437,732
APPARATUS FOR PROPELLING AND INCREASING THE LIFT OF AIRPLANES
Clyde B. Ferrel, San Francisco, Calif., assignor to Ferrel Industries, Inc., Reno, Nev., a corporation of Nevada
Application January 12, 1943, Serial No. 472,138
4 Claims. (Cl. 244—12)



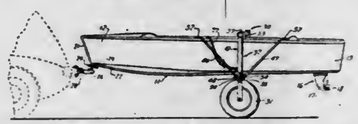
1. In an airplane having a motor-driven propeller for propulsion of the plane, an auxiliary motor for increasing lift and boosting the speed of the plane during the taking off period comprising, a rocket motor having a nozzle discharging a rearwardly directed propelling jet of gases to boost the speed, and a series of pockets formed in the upper surface of the fuselage of the plane and located beyond the inner ends of the wings at said nozzle and beneath and adjacent the rearwardly directed jet of gases so that the pockets will be partially evacuated by the jet action of the gas whereby atmospheric pressure on the plane below the pockets will produce an upward thrust and increase the lift of the plane.

2,437,733
ROLL STABILIZER FOR TAKING UP PLAY IN BEARINGS OF ROLL MILLS
Walter Fincher, Salina, Kans.
Application February 7, 1944, Serial No. 521,361
7 Claims. (Cl. 241—232)



1. In a mill of the character described having a pair of cooperating rolls, shafts for said rolls, bearings supporting the shafts, said shafts having play in the bearings to compensate for expansion and contraction and provide for substantially free rotation of the shafts in said bearings, a pair of arms having support on the shafts and separate from the bearings, a fulcrum supported on one of the arms and having contact with the other of the arms, and means for spreading said arms apart on said fulcrum to selectively position the shafts in said bearings.

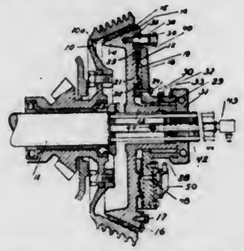
2,437,734
TAPE FOR SLIDE FASTENERS
Osborne Firing, Staten Island, N. Y., and Robert M. Gibbons, Jr., Meadville, Pa., assignors to Talon, Inc., a corporation of Pennsylvania
Application March 24, 1945, Serial No. 584,640
5 Claims. (Cl. 139—384)



1. In a tape for slide fastener stringers of the class described, a plurality of longitudinally extending warp threads, a weft thread interwoven back and forth through and between said warp threads so as to provide a woven web, a beaded edge arranged along one edge of said tape comprising two oppositely disposed groups of cords with each group consisting of a plurality of longitudinally extending intertwisted cords, the weft thread extending through the web, over and around one of and between the cords of one group, over all of the intertwisted cords of the other group, back over and around one of and between the cords of said last mentioned group, under all of the cords of said first mentioned group, and through the web so that the weft thread is interwoven with both groups of cords and entirely concealed thereby along the beaded edge.

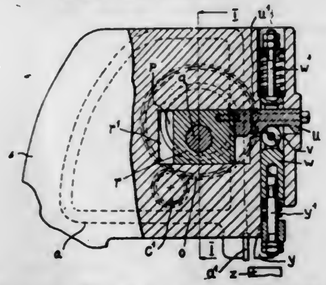
2,437,735
METHOD OF AND APPARATUS FOR SEPARATING KNITTED FABRICS
James L. Getaz, New York, N. Y.
Application July 25, 1945, Serial No. 606,899
6 Claims. (Cl. 66—147)

1. The method of manufacturing knitted articles which includes knitting in a continuous length of fabric a series of articles of body yarn with at least one course of a separating yarn therebetween, said separating yarn having reduced tensile strength under certain conditions which do not adversely affect said body yarn, and, as said length of fabric issues from said knitting point, applying said conditions to weaken said separating yarn and tension to separate said articles.



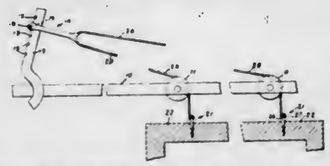
2,437,736
CARRIER FOR MARINE CRAFT HULLS AND THE LIKE
James A. Good, Grosse Pointe, Mich.
Application October 29, 1945, Serial No. 625,333
4 Claims. (Cl. 9—1)

4. A carrier for marine craft having a hull provided with longitudinally spaced oar locks at each side, comprising a bar adapted to extend transversely of the hull between the oar locks, a pair of vertical struts having the upper ends respectively supported on opposite ends of the bar, a pair of ground engaging wheels respectively rotatably supported on the lower ends of the struts,



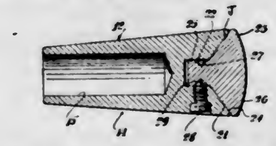
and side braces having the lower ends pivoted to the lower end of each strut and having the upper ends respectively engageable in the oar locks at opposite sides of the bar.

2,437,737
CLUTCH OPERATING MECHANISM
Edwin G. Halby, Marion, Ohio, assignor to Marion Power Shovel Company, a corporation of Ohio
Application September 15, 1943, Serial No. 502,475
17 Claims. (Cl. 192—88)



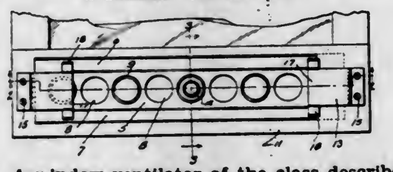
1. In a clutch of the type comprising a pair of opposed clutch members one of which is adapted to be rotatably mounted on a shaft and held against axial movement thereon and the other of which is adapted to be mounted on said shaft for rotation therewith and for axial movement thereon, said clutch members having cooperating clutching surfaces, at least one of which is of friction material, an annular member having means whereby it may be mounted about said shaft on the outer side of said axially movable clutch member for rotation with said shaft and held against axial movement with relation to said shaft, a fluid operated device carried by said annular member and acting on said axially movable clutch member to move the latter into operative engagement with the opposed clutch member, and means for adjusting said axially movable clutch member toward said opposed clutch member to compensate for the wearing away of said friction material while maintaining the same in operative relation to said fluid operated device.

2,437,738
SHEARING MACHINE DRIVE
Max Hänggi, Fehren, Switzerland
Application November 26, 1945, Serial No. 630,860
In Switzerland December 4, 1944
3 Claims. (Cl. 164—47)



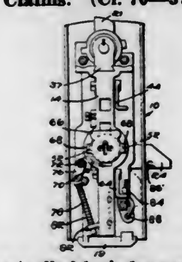
1. In sheet-shearing machines of the character described, a drive for the shear-blade slide vertically guided in fixed lateral machine-frame standards, comprising a drive shaft journaled in said slide, drive means for said drive shaft, a pair of crank shafts also journaled in the said slide, a gear wheel keyed to each end portion of the said drive shaft, a gear wheel fastly secured to each of said crank shafts and adapted to mesh with one of the said drive-shaft gear wheels, a slide block sliding in a horizontal way of each of the said standards and in which an eccentric crank pin on each of the said crank shafts is journaled; the whole in such combination that the rotations transmitted by the said drive shaft onto the said crank shafts are resolved into a vertical drive component effecting the operation of the said slide corresponding to said eccentricity of said crank pins and into a horizontal idling component effecting the displacement of the said slide blocks in said horizontal ways.

2,437,739
MEANS FOR CONNECTING THE DOBBY JACK AND THE HARNESS FRAME OF A LOOM
Clarence E. Harris, Laurens, S. C.
Application February 26, 1946, Serial No. 650,256
1 Claim. (Cl. 139—84)



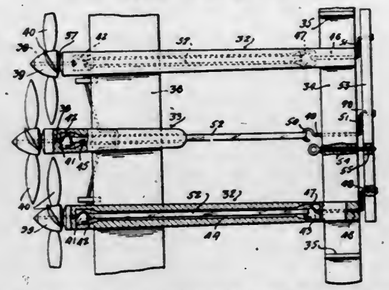
In a loom harness frame actuator connector, the combination, which comprises, a dobby cord and jack associated with a loom frame, said jack adapted for reciprocatory action, a dobby head loop comprising a connecting member with spaced parallel flat prongs integral at one end with a head member of greater width than that of the prongs and having an arcuate eye extending therethrough from side to side with the eye curved in a plane parallel to that of the prongs, a roller pivotally mounted between the opposite ends of the prongs positioned to engage with spaced notches in the harness frame actuator, a screw attached to the end of the dobby cord extending through the dobby head loop for attaching the cord to a harness frame, and a roller pivotally mounted in the end of said screw to which the end of the dobby cord is attached.

2,437,740
REPLACEABLE NOSE FOR SPOT WELDING TIPS
Thomas M. Haynes, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application October 26, 1945, Serial No. 624,692
6 Claims. (Cl. 219—4)



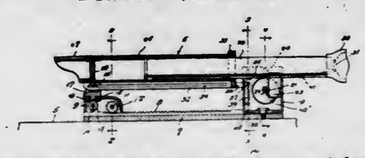
1. A welding tip having a body adapted to fit into a tip holder, the shank of said tip having a cavity formed therein for circulation of cooling fluid; a removable nose for said tip comprising a welding face and a surface complementary with the head of said tip; and a clamping member mounted on said tip to force said complementary surface into intimate contact with the head of the tip whereby a joint having high thermal and electrical conductivity is obtained, said joint being located between the welding face and the end of the cooling fluid cavity in the welding tip shank.

2,437,741
WINDOW VENTILATOR
Roy H. Hoach, Detroit, Mich.
Application September 25, 1946, Serial No. 699,261
2 Claims. (Cl. 98—97)



1. A window ventilator of the class described, comprising a rectangular plate having its upper and lower longitudinal edge portions inclined outwardly, a pair of outwardly spaced brackets carried by a window sash having upper and lower tongues inclined outwardly from the sash and frictionally contacting the inclined edge portions of the plate to support the plate, spaced openings in the plate registering with similar openings in the window sash when the device is in an opened position, and a finger gripping means for sliding said plate horizontally to move the openings into and out of registry.

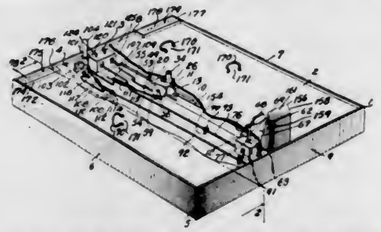
2,437,742
COIN CONTROLLED LOCK
George Hofmann, Boston, Mass., assignor to American Locker Company, Inc., Boston, Mass., a corporation of Delaware
Application July 25, 1945, Serial No. 607,047
9 Claims. (Cl. 70—370)



1. A coin controlled lock for use with checking cabinets, comprising a frame, a barrel supporting cradle in the frame, means for securing the frame to a checking cabinet having a door for closing the cabinet, a locking bolt carried by the frame for rotation about the longitudinal axis of the cradle to door locked and unlocked positions, a locking barrel removably mounted in the cradle and having an outer portion non-rotatably fixed to the frame and an inner rotatable portion, means supporting the locking bolt in the frame, independently of the locking barrel, for rotation about said axis, cobperating shoulders keying the inner portion to rotate with the locking bolt when the barrel is in operative position in the cradle, and barrel securing means movable to closed and open positions and cooperating in closed position with the barrel to hold it in said operative position, the barrel being removable from the frame and bolt when said means is moved to the open position.

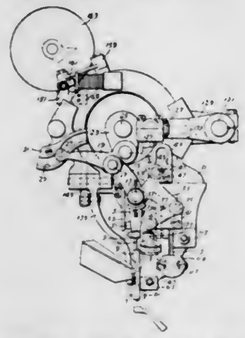
2,437,743
TOY AIRPLANE
Jakob Hojnowski, Nekoosa, Wis.
Application January 7, 1944, Serial No. 517,427
1 Claim. (Cl. 46—78)

A toy airplane, comprising wing and tail units, a pair of elongated body members having said units joined thereto and disposed transversely thereof, the body members each being longitudinally chambered and having a longitudinal shaft bearing leading through each end from the chamber, a propeller shaft mounted in the bearing at the front end of each body, a crank shaft mounted in the bearing at the rear end of each body, an elastic strand extending through each body chamber and connecting the propeller and crankshafts, a crank upon the rear end of each crankshaft, a propeller unit secured upon the front end of each propeller shaft, a member coupling the cranks for facilitating unitary rotation thereof, comprising a bar extending transversely of the body members at the rear end of the tail unit and means for latching the bar to the tail unit to hold the shafts from turning.



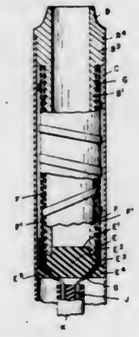
2,437,744
TELESCOPE ATTACHMENT FOR FIREARMS
John W. Horvath, Bronx, N. Y.
Application October 17, 1944, Serial No. 559,040
4 Claims. (Cl. 33—50)

1. In combination with a firearm, a telescope having sighting means therein, said telescope having a forward tube and a draw tube slidable longitudinally in the rear portion of the forward tube, the said parts, as assembled, being mounted for both vertically and horizontally swingable movement, a support for the forward end portion of the telescope on the firearm with means for moving the support forwardly and rearwardly selectively on the firearm and simultaneously tilting the telescope to the proper angular relation on the firearm, means for moving the draw tube longitudinally inwardly and outwardly of the forward tube, said last-mentioned means comprising a longitudinal rack on the draw tube, a gear meshing with the rack, manual means for rotating the gear to move the draw tube in and out of



the forward tube with cooperative provision for simultaneously raising and lowering said gear during its rotation in either direction to thereby change the angular relation of the telescope on the firearm during inward and outward longitudinal movement of the drawtube in said forward tube.

2,437,745
MECHANICAL PITCHING AND BATTING DEVICE FOR BASEBALL GAMES
Irvin N. Jacobs, Kansas City, Mo., and Herbert C. Jones, Easton, Kans.
Application November 12, 1946, Serial No. 709,298
7 Claims. (Cl. 273—89)

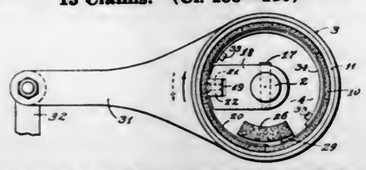


7. In an apparatus of the character described, pitching and batting mechanisms, each including an oscillatably mounted member for effecting actuation of said mechanisms, springs for energizing said member, a latch for each member for retaining the springs in loaded condition, crank arms connected with said members, a pivotally mounted cocking lever, links connected with the cocking lever and having spring engaging terminals, rods connected with said cranks, springs on said rods, means for anchoring the end of said springs to the rods in the direction of said crank arms for retaining the other ends of the springs in position for engagement by said terminals, separate means for independently releasing said latches, a spring tension key for releasing each latch, a rock lever connected with each key, and rods connecting the rock levers with said latches.

2,437,746
FASTENER INSERTING MACHINE
Frank Bycroft Keall, Leicester, England, assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application June 13, 1945, Serial No. 599,225
In Great Britain June 29, 1944
2 Claims. (Cl. 1—18)

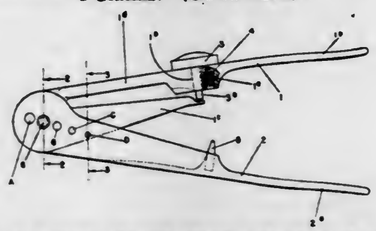
1. In a fastener inserting machine, a fastener inserting driver, crank operated mechanism for actuating the driver, and means cooperating with said mechanism for accelerating the driver when on its operative fastener inserting stroke.

2,437,747
ELECTRICALLY HEATED TOOL
Frank Kuhn, Detroit, and Laurence H. Thomas, Birmingham, Mich., assignors to American Electrical Heater Company, Detroit, Mich., a corporation of Michigan
Application May 4, 1942, Serial No. 441,698
1 Claim. (Cl. 219—26)



A terminal connection for an electrical heating resistor comprising a longitudinally extending metallic strip wrapping for the end portion of the resistor, a bar of greater thickness and cross section welded to the outer end portion of said wrapping, and a binding screw threadedly engaging said bar and adapted to secure a service conductor thereto.

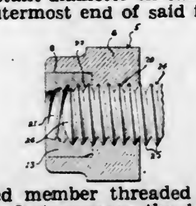
2,437,748
ADJUSTABLE HEADBAND CONSTRUCTION
Robert L. Malcom, Chicago, Ill., assignor to Chicago Eye Shield Company, a corporation of Illinois
Application June 11, 1945, Serial No. 598,848
2 Claims. (Cl. 2—8)



1. A headband which comprises a curved strip having end portions in overlapping relationship, said end portions each having a slot therein formed lengthwise of the strip, a sleeve around the overlapped portions of the strip and having an aperture in the outer wall thereof, and a tension means to clamp the overlapped portions of the strip together in the sleeve, said tension means comprising an inner member engaging one of the end portions of the strip and extending through the slots and the apertures in the outer wall of the sleeve and an outer member extending through the aperture in the outer wall of the sleeve in threaded engagement with the inner member and engaging the other end portion of the strip for directly clamping together the overlapping end portions of the strip in the sleeve.

2,437,749
SHOCK ABSORBER
Bonnie L. Mallory, Cleveland Heights, Ohio, assignor to The B. L. Mallory Company, Hazel Park, Mich., a corporation of Michigan
Application September 28, 1945, Serial No. 619,179
15 Claims. (Cl. 188—130)

5. A shock absorber comprising a stud for nonrotative attachment to a part of a vehicle, a casing journaled on said stud and having an internal cylindrical wall concentric to the stud, a part within the casing fastened to said stud and having a peripheral portion in spaced relation to said cylindrical wall, an energizing band of resilient sheet metal operatively connected, within a single restricted area that is spaced a substantial distance from both ends of the band but considerably nearer one of its ends than the other, to said peripheral portion and extending about said cylindrical wall, a lining of friction material between the energizing band and said wall, said band being free to expand at every point throughout its length, the ends of the band being closely adjacent to, but entirely free from, each other so as to be capable of independent action, and means connecting a part of the casing radially spaced from said stud to a part of the vehicle that is movable toward and from the aforesaid vehicle part.

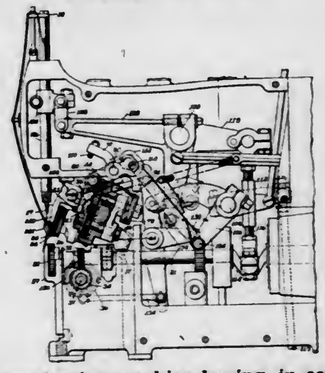


2,437,750
SHEAR TESTING DEVICE
John Daniel Mann, National City, Calif.
Application July 11, 1944, Serial No. 544,440
4 Claims. (Cl. 73—101)

4. In a shear testing device, the combination of a pair of members hinged together, an arm portion on one of said members and said member having a resilient portion to permit flexing relative to the arm portion, an indicator on the member carrying said arm portion engageable with said arm portion, and said members being provided with shearing holes spaced from the hinge axis.

2,437,751
LOCK NUT
Robert Mitchell, Detroit, Mich.
Application February 25, 1943, Serial No. 477,040
5 Claims. (Cl. 151—22)

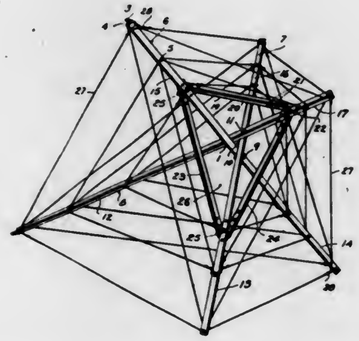
5. A threaded fastener comprising a body having a threaded opening with substahtially constant diameter threads terminating at one end in an enlarged cylindrical recess, and an annular insert formed of softer metal than said body portion snugly fitted in said recess and having a central opening containing an inner threaded portion having constant diameter threads aligned with and of substantially the same diameter as said body opening threads and also having a gradually-tapered outer threaded portion aligned with and diminishing in diameter from said constant diameter threaded insert portion to the outermost end of said insert, where-



by a threaded member threaded through said body opening first engages the large diameter threads of said insert to firmly anchor said insert in said recess before engaging the gradually-tapered threaded portion thereof with its increased resistance, said insert having the periphery of its inner end bevelled whereby to facilitate its insertion in said recess.

2,437,752
STABILIZATION OF FROZEN GRAPEFRUIT
John T. R. Nickerson, Wakefield, Mass., assignor to General Foods Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application January 29, 1945, Serial No. 575,185
12 Claims. (Cl. 99—193)

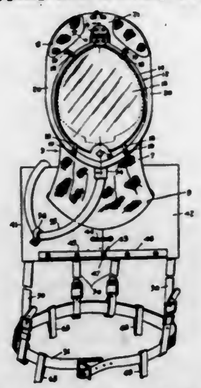
1. A method of inhibiting the development of off-flavor in frozen grapefruit, which comprises treating the pulp of grapefruit with a substance selected from the group consisting of alkyl esters of caffeic acid of less than seven carbon atoms in the alkyl radical, hydrocaffeic acid, and alkyl esters of hydrocaffeic acid of less than eleven carbon atoms in the alkyl radical, and thereafter freezing the treated fruit, whereby it will be effectively stabilized against off-flavor development during freezing and subsequent frozen storage.



2,437,753
ROUGHENING MACHINE
John R. Oliver, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Original application November 4, 1943, Serial No. 508,913. Divided and this application August 7, 1945, Serial No. 609,460
19 Claims. (Cl. 12—1)

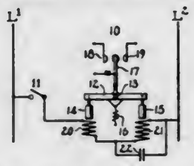
1. A roughening machine having, in combination, a rotary wheel formed about its periphery

to abrade the surface of the work operated upon for the reception of cement, and means for feeding the work past the abrading wheel, comprising rolls mounted substantially coaxially with and disposed one on either side of the abrading wheel.



2,437,754
JETTY
George W. Rehfeld, Manhattan, Kans.
Application May 11, 1945, Serial No. 593,125
4 Claims. (Cl. 61—3)

3. A jetty including a pair of main members arranged one crossing the other at a point intermediate ends of said members to provide upwardly and outwardly diverging arms and outwardly and downwardly diverging legs, means for connecting the main members together in said crossing relation, a prop member crossing one of said pair of main members to provide a prop leg cooperating with the legs of the pair of main members to form a tri-point support for said jetty and an upwardly and outwardly diverging arm, means for securing the prop member to said member crossed thereby, a substantially rigid spreader member connecting the arm of the prop member with one of the arms of the pair of members above the crossing point of said crossed members, and similar rigid spreaders connecting said last named arms with the leg of said other member of said pair of members below said crossing points.

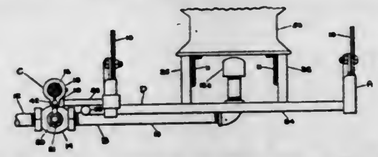


2,437,755
GAS MASK
Carl Rich, Montreal, Quebec, Canada, assignor of one-half to Paul Koenig, Montreal, Quebec, Canada
Application March 3, 1945, Serial No. 580,760
2 Claims. (Cl. 128—141)

1. A gas mask comprising a flexible fabric hood including a head portion and an adjustable metal head frame overlying and secured to the head portion, said head frame including a front portion having an opening therein registering with an opening in the head portion of the hood, a transparent member closing said openings, side plates joined to the front portion of the head frame, and a strap extending rearwardly from the upper edge of the front portion of the head frame across the top and downwardly along the back of the head portion of the hood, said side plates being provided with resiliently connected extensions lapping and slidably secured to com-

plementary extensions of said strap to provide for expansion and contraction of the head frame.

2,437,756
ELECTROMAGNETIC TIMING RELAY
Theodore F. Rosing, Whitefish Bay, and Edwin W. Seeger, Wauwatosa, Wis., assignors to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application November 7, 1945, Serial No. 627,261
4 Claims. (Cl. 175—320)



2. In a timing system, a relay comprising an oscillatable armature normally biased to a neutral position, a pair of direct current electromagnets acting upon said armature and tending to move it in opposite directions respectively, the windings of said electromagnets being connected in series with each other for normally passing the same energizing current therethrough, said electromagnets being so constructed and calibrated that the operating effect of one of the same upon said armature for any given current exceeds the effect of the other, and means electrically connected in parallel with the winding of one of said electromagnets to delay the rate of change of the current therein relative to the rate of change of said energizing current upon transient changes thereof.

2,437,757
CAN TREATING DEVICE
Otto B. Rufus, Chicago, Ill., assignor to The Lathrop-Paulson Company, Chicago, Ill., a corporation of Illinois
Application October 14, 1940, Serial No. 361,117
1 Claim. (Cl. 134—49)

A can treating device comprising a frame including a track on which cans are moved for treatment, conduit means for delivering fluid to a can at one position along said track, conduit means for delivering fluid to a can at another position along said track, each of said conduit means being equipped with a valve having a

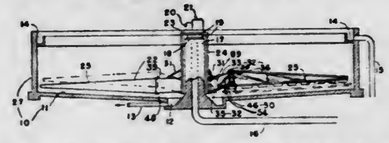
plunger which is movable to open the valve and release treating fluid through the conduit means, a bar extending longitudinally of said track and mounted for reciprocal longitudinal movement, means for driving said bar in reciprocating movement, separate actuating means pivotally supported by said bar adjacent each of said valve plungers and movable longitudinally with said bar, each of said actuating means being arranged to operate the adjacent plunger to open the valve carrying the same when the actuating means is turned to one angular position and moved longitudinally by the movement of the bar, a weighted arm connected to each of said pivotally-mounted actuating means and normally holding

the actuating means in an angular position wherein the actuating means is not effective to open the adjacent valve, a rocker shaft associated with each of said weighted arms and adapted to be actuated to support the weighted arm, each of said rocker shafts being associated with a finger extending normally above said track and adapted to be depressed by a can moving along said track, the depression of said finger actuating said rocker shaft to support the weighted arm whereby said pivotally-mounted actuating means is turned to said one angular position to operate the adjacent valve upon reciprocating movement of the bar and the actuating means supported thereby.

2,437,758
DARNING LAST
Jay L. Saulsberry, Tucumcari, N. Mex.
Application May 24, 1946, Serial No. 672,034
2 Claims. (Cl. 223—100)

1. A darning last comprising in combination, an elongated base formed with an opening substantially at the center thereof, a frame secured to said base and surrounding said opening, a clamping piece removably receivable in said frame, and a pair of spring clips hingedly connected to said clamping piece, said clips being releasably engageable with the ends of said base.

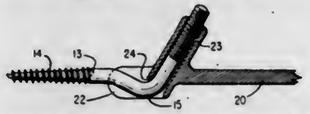
2,437,759
PROCESS OF PYROLYZING ALPHA-PINENE TO ALLO-OCIMENE IN LIQUID PHASE
Theodore R. Savich and Leo A. Goldblatt, New Orleans, La., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application September 17, 1945, Serial No. 616,955
1 Claim. (Cl. 260—677)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A process of pyrolyzing alpha-pinene to allo-ocimene in the liquid phase, comprising feeding liquid alpha-pinene continuously through a closed reactor maintained at a temperature of about from 400° to 500° C. at a feed rate of about from 480 to 20,000 volumes of the reactor per hour, the higher rates of feed being used at the higher temperatures.

2,437,760
RAKING CLASSIFIER
Charles H. Scott, Summit, N. J., and Frank L. Graner, New York, N. Y., assignors to The Dorr Company, New York, N. Y., a corporation of Delaware
Application April 14, 1945, Serial No. 588,360
18 Claims. (Cl. 198—224)

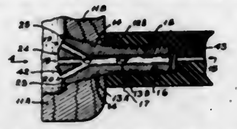
1. A classifier having a tank with an inclined bottom, a pair of laterally disposed rake structures having transverse raking blades and longitudinally disposed in the tank, and means for imparting longitudinal reciprocating strokes to the rake structures including a rockable shaft longitudinally disposed with respect to the tank, means for supporting the rake structures from the shaft, and means for interruptedly rocking the shaft for alternately raising and lowering the rake structures during transition from one of their strokes to another.



2,437,761
SEDIMENT RAKING MECHANISM FOR A SETTLING TANK COMPRISING A CENTRAL SUPPORT AND A HINGED BODY BETWEEN THE SUPPORT AND THE RAKING MECHANISM
Charles H. Scott, Summit, N. J., assignor to The Dorr Company, New York, N. Y., a corporation of Delaware
Application June 15, 1946, Serial No. 677,004
12 Claims. (Cl. 210—55)

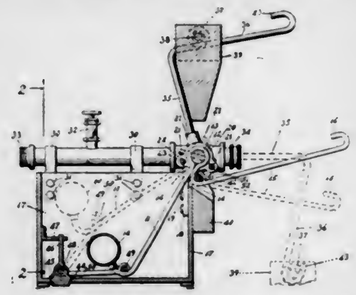
1. A sedimentation unit comprising a tank having a bottom with a depressed portion providing a sediment-receiving sump in the central portion thereof, a marginal wall rising from said bottom, means for supplying liquid mixture to the tank, supernatant liquid withdrawal means leading from the upper portion of the tank, a sediment-discharge leading from said sump and in operative association with the foregoing a sediment raking mechanism having supporting means fixedly positioned with respect to the tank; a main bearing member supported from said supporting means; a movable bearing member mounted on said main bearing member and turnable about a vertically-extending axial line centrally disposed with respect to the marginal wall of the tank; a vertically-extending main carrier supported by said movable bearing member and turnable therewith; means for turning said movable bearing member and said main carrier in a forward direction about said vertically-extending axis; certain yieldably supported rake-carrying arms extending outwardly with respect to said

axis equipped with sediment engaging and impeller elements extending downwardly therefrom and each having a hinge connected section; means for yieldably supporting said certain rake-carrying arms from said turnable main carrier and characterized in that there is included for each yieldably supported rake-carrying arm an outwardly-extending intermediate hinge body of rigid construction, an inner hinge between the turnable main carrier and the inner end portion of said intermediate hinge body whereby the latter is swingably supported from said turnable main carrier, an outer hinge between the swinging end of said intermediate hinge body and the hinge connected section of the arm whereby the latter in turn is carried from the swingable end of said intermediate hinge body, the pintle axes of said inner and outer hinges sloping downwardly and rearwardly with respect to the horizontal paths of the forward turning movement therefor, a compression strut disposed in advance of the lower portion of said intermediate hinge body and hingeably connected at one end of the turnable main carrier and at the other end to the rake-carrying arm whereby the means comprising said intermediate hinge body and the means comprising said strut complete a swingable supporting mechanism; and low limit stop means between the turnable main carrier and a swingably supported member affording support to the rake-carrying arm in a lowermost operative position therefor with respect to the floor of the tank but in a manner to permit a rising of the rake-carrying arm when an abnormal raking load is imposed upon the latter.



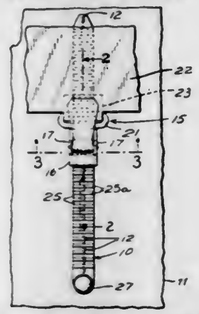
2,437,762
HOOK INSERTING TOOL
Louis Simonin, Hillsboro, Ill.
Application January 17, 1946, Serial No. 641,816
3 Claims. (Cl. 145—50)

1. A tool for inserting a hook formed with a shank portion, a stem portion extending at an obtuse angle to said shank portion and a bent offset portion between said shank and stem portions, the bend of said offset portion lying in the plane passing through the shank and stem portions, said tool comprising a shank, a pair of parallel spaced jaws extending from the end of the shank, the spacing of said jaws being sufficient to embrace the offset portion of said hook, and a tubular extension projecting generally laterally from the jaws and at substantially the same angle to the jaws as that between the shank and stem portions of the hook and adapted to receive the stem of the hook, said tubular extension having a portion projecting between the jaws to engage in the bend of the offset portion of the hook, whereby the shank of the hook and the shank of the tool become axially aligned upon application of end pressure to the shank of the tool and toward the hook.



2,437,763
SMOKING PIPE
Emanuel J. Sonn, Riverton, N. J.
Application August 9, 1945, Serial No. 609,846
8 Claims. (Cl. 131—225)

1. A smoking pipe comprising a pipe bowl having a vertical wall provided with a perforation adjacent its bottom wall, said perforation having the form of a truncated cone which tapers from the interior to the exterior of the bowl, the axis of said perforation extending at an angle to the bowl axis, a stem disposed entirely outside the interior surface of said bowl, and terminating adjacent said perforation and provided with a smoke passage and a countersunk hole confronting the bowl and communicating with said smoke passage, a connecting plug consisting of a stem-

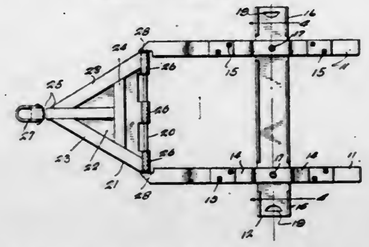


held end and a bowl-held end, said perforation and said bowl-held end being correspondingly tapered, said plug being provided with end surfaces confronting the interior of the bowl and the countersunk hole in the stem, said plug being provided with a main smoke passage extending between said end surfaces and with at least one auxiliary smoke passage providing communication between the interior of said bowl and said main smoke passage.

2,437,764
SPRINKLER CONTROL
John D. Spence, La Crescenta, Calif.
Application December 4, 1945, Serial No. 632,712
5 Claims. (Cl. 137—139)

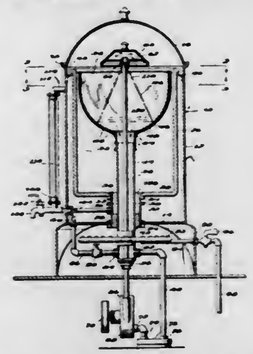
1. In a mechanism for controlling the flow of liquid from a supply line to a service point; a pipe adapted to be connected between said line and said point, a main valve operable in said pipe line to start and stop the flow therethrough, a timing tank associated with said pipe line; a valve discharge member in said pipe adjustable for varying the rate of flow of liquid from said pipe into said tank when said main valve is opened; a discharge opening in said tank; a normally closed discharge valve controlling said opening; a rock shaft on said tank, means connecting said main valve and said shaft for opening and closing said main valve responsive to the turning of said shaft; a sleeve member mounted on said shaft for limited turning movement relative thereto, coacting drive pins on said sleeve member and said shaft for turning said shaft responsive to turning of said sleeve; an angular crank member fixed at one end to said sleeve member so that when swung into a predetermined elevated position the sleeve member and shaft will be turned to open said main valve, and when swung into a predetermined lowered position, the sleeve member and shaft will be turned to close said main valve; a weight slidable on said crank member so that when the crank member is moved into said elevated position the weight will slide into a balanced position intermediate the ends of said crank member to hold it in said elevated position to open said main valve and when the crank member is tilted out of said elevated position the weight will overbalance and slide along said crank member and swing it into said predetermined lowered position to close said main valve; a float-controlled means operating responsive to the liquid discharged from said pipe into said tank to a predetermined level therein, for turning said sleeve member and tilting said crank member to a position in which the weight will swing the crank member into said lowered position to close said main valve, and means responsive to said float-controlled means for opening said tank discharge valve and emptying said tank.

2,437,765
ADJUSTABLE FASTENING DEVICE
Noel Statham, Greenwich, Conn.
Application March 17, 1945, Serial No. 583,203
1 Claim. (Cl. 24—206)



A fastening and adjustment device for securement to two parts together, said device having a track consisting of an integral strip of flexible tape-like material for securement directly to one of said parts, and a slider for securement to the other of said parts, said slider engaging beneath the edges of said track and having its free edges spaced from one another to permit the direct securement of the track along its longitudinal central portion, said slider being movable along the track and having a clamp coacting with the strip for fixedly securing the slide at a desired point on said track by a clamping action directly upon the flexible tape-like material.

2,437,766
METHOD OF CULTURING FUNGI
Elmer C. Stevenson, Takoma Park, and John W. Mitchell, Silver Spring, Md., assignors to United States of America, as represented by the Secretary of Agriculture
No Drawing. Application July 20, 1945, Serial No. 606,296
6 Claims. (Cl. 195—81)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



5. A method of cultivating *Penicillium notatum* comprising adding a member selected from the group consisting of 2,4-dichlorophenoxyacetic acid and the alkali metal salts of said acid to a fungus nutrient medium to inhibit the growth of contaminating bacteria therein, inoculating the medium with *Penicillium notatum*, and incubating the inoculated medium.

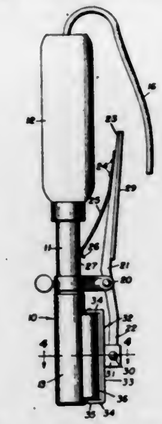
2,437,767
SLEIGH
Donald W. Thompson, Windham, N. Y., assignor to Thompson Brothers, a copartnership composed of Ferris B. Thompson, Raymond H. Thompson, and Donald W. Thompson, all of Windham, N. Y.
Application April 2, 1945, Serial No. 586,057
1 Claim. (Cl. 280—19)

In a sleigh for logging and lumbering operations consisting of steel girders, runners consisting of I-irons, a bolster consisting of an I-iron provided with two flattened portions, bolster blocks consisting of H-irons cut to a trapezoidal shape and having a seating surface on the runners equal to the width of the same and an enlarged upper surface for seating the bolster, means for fixing said bolster and blocks simultaneously on the runners by means of a joint-like connection said means comprising a band for each side, fixed to the upper flanges of the I-iron forming the runner, and passing over the flattened portions of the bolster, and a bolt passing through said band, bolster and bolster block inclined with respect to the runner and fixed on one flange thereon, said bolt and band clamping the above-named parts firmly together while permitting a relative twisting movement around the bolts between them.

2,437,768
METHOD AND APPARATUS FOR MAKING BEVERAGES
Journey Franklin Timberlake, Charlottesville, Va.
Application February 10, 1944, Serial No. 521,824
8 Claims. (Cl. 99—71)

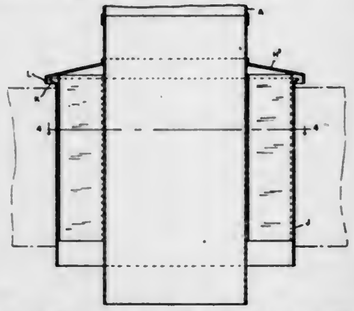
1. In a device of the type described, a water container, a coffee solution container, a funnel shaped filter adapted to support ground coffee and having a discharge orifice, a baffle plate positioned above said filter, a fluid pump, means connecting said pump to receive water from said

water container, means for directing the output of said pump forcefully against said baffle for distribution to said filter, means connecting said pump to receive fluids passing through said filter orifice, said filter being adapted to pass to said coffee solution container a portion of the fluids received thereby and to cause a portion of the water received thereby to wash a portion of the ground coffee on said filter into said discharge orifice, and means connecting said pump to receive the water and ground coffee passing into said filter orifice, whereby a continuous circulation of water and entrained grounds takes place from said filter to said pump, then to said baffle, and back to said filter.



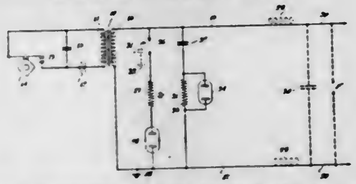
2,437,769
MECHANICAL PENCIL WITH STEP-BY-STEP FEED
John B. Traylor, Denver, Colo.
Application April 24, 1945, Serial No. 590,035
6 Claims. (Cl. 120—17)

1. In a pencil construction, a handle member, a lead guiding tip on one end of said handle through which a lead is fed to expose a short length outwardly of the tip, a lead guide extending longitudinally of said handle, a push rod slidably mounted in said lead guide and having a pawl extending laterally of said push rod, a longitudinally extending slot in said lead guide, through which said pawl extends, the material of the lead guide at one side of said slot being provided with a plurality of ratchet teeth engageable with said pawl, and a weight means mounted in said handle for free longitudinal movement along said handle for imparting an impact to said push rod upon a reciprocatory movement of the assembly to move said push rod and pawl to the next tooth in the direction of the movement of lead out to the tip of the pencil.



2,437,770
COMBINATION IMPLEMENT
Jacques T. Van Olden, Durban, Natal, Union of South Africa
Application November 26, 1946, Serial No. 712,449
3 Claims. (Cl. 219—19)

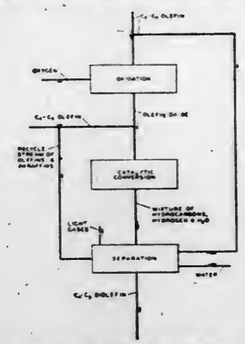
1. A combination implement which includes, an elongated circular cylindrical heater, a neck extending from one end thereof in axial alignment therewith, a handle on the end of the neck opposite the heater, a collar adjustably mounted on the neck, a set screw extending through the collar for impingement against the neck to hold the collar in adjusted position on the neck, a pair of ears projecting radially from the collar, a lever pivoted intermediate its ends between the ears to swing about an axis which lies perpendicular to the longitudinal axis of the heater, a yoke pivoted to the end of the lever adjacent the heater to swing about an axis which lies parallel with



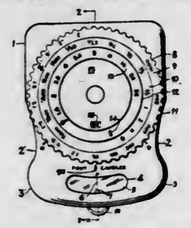
the axis about which the lever swings, at least one roller mounted in said yoke to rotate about an axis which lies perpendicular to the axis about which the yoke swings and a spring between the end of the lever remote from the yoke and the neck yieldingly to urge the roller into peripheral contact with the heater.

2,437,771
STACK
Clyde F. Wait, Flint, Mich., assignor to Palace Corporation, Flint, Mich., a corporation of Michigan
Application December 6, 1943, Serial No. 513,081
2 Claims. (Cl. 98—84)

1. A stack comprising a cylindrical portion extending upward above the roof of the building, a conical cap spaced above and secured to said cylindrical portion to extend radially beyond the same forming projecting eaves, a cylindrical sleeve surrounding and spaced from said cylindrical portion to overlap and extend parallel thereto for a large portion of its length being also spaced from the outer edge of the eaves portion of said cap and extending above the same, said sleeve being open at its lower end, an outwardly flaring flange at the upper end of said cylindrical portion for directing any upward current in the sleeve outward beyond said eaves, a conical contracting portion at the upper end of said sleeve extending above the apex of said conical cap, a conical flange surrounding said cylindrical portion below the lower end of said sleeve for directing current upward through the latter, a second sleeve surrounding the portion of said cylindrical portion which passes through the roof and forming a heat insulation for the latter, said second sleeve extending upward beneath said last mentioned conical flange and spaced therefrom for the escape of air therethrough.



2,437,772
ELECTRICAL HARNESS TESTER CIRCUIT
Alexander C. Wall, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application December 7, 1943, Serial No. 513,238
5 Claims. (Cl. 175—183)

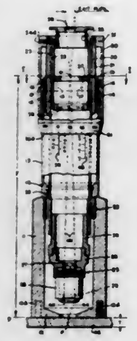


1. An electrical testing apparatus for testing the electrical characteristics of a utility having a breakdown path comprising leads to be connected to the utility to be tested, a source of alternating voltage connected across said leads to supply testing voltage thereto, a shunt discharge path connected across said leads having a gap adapted to break down and pass current when subjected to said testing voltage, said path having impedance characteristics to damp out any high frequency currents produced by the discharge across said gap, a high frequency shunt path connected across said leads having high pass filter means to discriminate against the low frequencies produced by said gap discharge, said high frequency shunt path cooperating with the breakdown path of said utility to form a high frequency circuit in which high frequency oscillations are produced by a discharge across said breakdown path, indicating means for showing passage of current in said shunt discharge path, and an indicator connected in said high frequency circuit, said indicator being operable when the current through said high frequency shunt path reaches a predetermined magnitude.

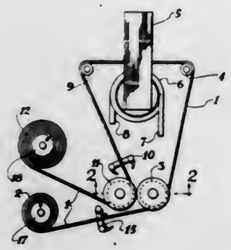
2,437,773
PROCESS FOR THE PRODUCTION OF DIOLEFINS
Thomas H. Whaley, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application January 7, 1944, Serial No. 517,451
13 Claims. (Cl. 260—681)

5. A process for the production of a diolefin of four to five carbon atoms per molecule from olefins of two to five carbon atoms per molecule, which comprises passing an olefin of two to three carbon atoms per molecule to an oxidation zone under such conditions as to effect conversion to the olefin oxide; passing said olefin oxide in admixture with an olefin of four to five carbon atoms per molecule to a conversion zone into contact with a dehydrogenation catalyst under such conditions as to effect dehydrogenation of said four to five carbon atom olefin to diolefin, reduction of said olefin oxide to olefin, and condensation of resulting low molecular weight olefin with olefin oxide to form diolefin, olefin oxide also functioning in said dehydrogenation as a hydrogen acceptor; separating olefins of two to three carbon atoms per molecule from the effluent from said conversion zone; and recycling said last named olefins to said oxidation zone.

2,437,774
DIRECT READING PHOTOELECTRIC EXPOSURE METER
Frederick P. Willcox, Arlington, Va.
Application December 16, 1944, Serial No. 568,429
7 Claims. (Cl. 88—23)



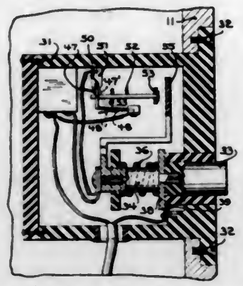
1. In a photoelectric exposure meter, a light sensitive cell, a meter connected to said cell and having a pivoted indicating needle, a continuously variable resistor connected to said meter and said cell, an indicia-bearing element arranged to adjust said variable resistor, a member pivotally mounted upon an axis substantially parallel to the pivotal axis of said needle and bearing a fiducial mark arranged for movement contiguous to the path of said needle to permit alignment of the needle and mark, and a continuous motion-transmitting connection between said member and said element, said connection being so arranged that movement of said element in a direction to reduce the resistance of said variable resistor causes a concomitant movement of said member in that direction of needle movement corresponding to a reduction in energization of said cell.



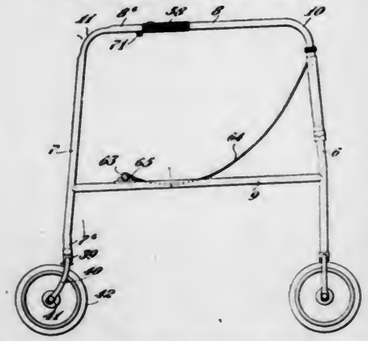
2,437,775
OPTICAL MICROMETER FOR MEASURING THE THICKNESS OF TRANSPARENT OR TRANSLUCENT BODIES
William Ewart Williams, Pasadena, Calif.
Application February 11, 1946, Serial No. 646,787
4 Claims. (Cl. 88—14)

1. An optical micrometer for measuring the thickness of transparent or translucent bodies,

which comprises a support having a reference surface adapted to engage the front surface of the body to be measured, a lens system adapted to be focused on the surfaces of said body, a member carrying said lens system and movable relative to said support in so focusing said lens system, screw means connecting said support and said member for so moving said member, the pitch of said screw means in turns per unit of linear movement between said member and support being ten times the index of refraction of the material to be measured, a rotating decimal graduated micrometer scale, carried by said screw means, and a scale carried by said support, cooperating therewith and graduated in units of rotation of said screw means, whereby the units of said scale indicate the linear movement of the object plane of said lens system rather than the linear movement between said member and support.

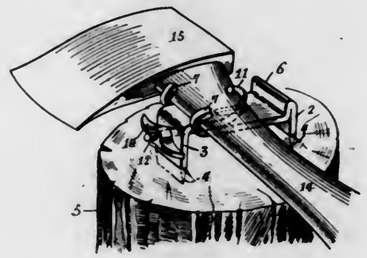


2,437,776
ELECTRIC INDUCTION FURNACE FOR CONTINUOUSLY HEATING METAL STRIP
Golder P. Wilson, Alton, Ill., assignor to Olin Industries, Inc., a corporation of Delaware
Application May 22, 1944, Serial No. 536,750
11 Claims. (Cl. 219—13)



1. An electric induction furnace for heating metal strip comprising a primary induction means, means for advancing said strip about said primary induction means, a metal roll in contact with the portion of the strip advancing toward said induction means, a metal roll in contact with the portion of the strip leaving said induction means, and metal roller means electrically connecting said metal rolls.

2,437,777
DOOR OPEN SIGNAL SYSTEM
Karol Zajc, New York, N. Y.
Application March 20, 1945, Serial No. 583,764
4 Claims. (Cl. 177—311)

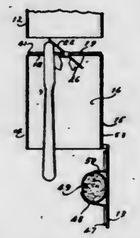


1. In combination with a hinged door, an insulation housing having mounted on the jamb of said door, a push button projecting from said housing to be pressed inwards when said door is closed, resilient means urging said push button outwards, a stationary contact within said housing and a contact carried by said push button to engage said stationary contact when said push button is extended, a bell circuit including in series said contacts and a high resistance circuit interruptor, a shunt circuit by-passing said high resistance and circuit interruptor and including in series a contact arm and a low resistance bi-metal thermostat, means for pivotally supporting said contact arm, means for resiliently urging said contact arm against said bi-metal thermostat when the latter is cool and past the thermostat when the latter is warm, and means operated by said push button for resetting said contact arm against said thermostat when said push button is depressed.

2,437,778
PORTABLE SUPPORT FOR INVALIDS
Butler Ames, Boston, Mass., assignor to The Walkabout Company, Lowell, Mass., a corporation of Massachusetts
Application February 2, 1944, Serial No. 520,745
9 Claims. (Cl. 155—22)

9. A portable support for invalid or similar use comprising a pair of supporting units and a back and hinge means uniting the back to each supporting unit, the hinge means being so constructed and arranged that, at will, the supporting units may be folded into substantially parallel relation to the back, and a seat normally interposed between the supporting units, each unit including lengths of hollow tubular material shaped to provide a substantially horizontal hand-supporting rail and front and rear legs, each hand-supporting rail including a tubular guide member provided with a bore constituting a guideway, a pair of plugs sliding in said guideway, a flexible transmitter attached to each plug and extending through the hollow hand-supporting rail and to the lower end of one of the respective legs, a wheel carried by each leg, a brake for each wheel, each brake being movable axially of the leg and a spring urging each brake toward the periphery of its respective wheel, means connecting the lower end of each transmitter to one of the respective brakes, a cylindrical sleeve mounted to turn on each of said tubular guide members, each sleeve having a pair of axially spaced, oppositely inclined cam slots in its wall, a pin projecting from each plug into one of said cam slots, and means for turning the sleeve, thereby to cause the plugs to move toward or away from each other and thus release or apply the brakes to the several wheels, and a manually-actuable locking element operative at will to connect the cylindrical sleeve to a relatively stationary portion of the hand-supporting rail.

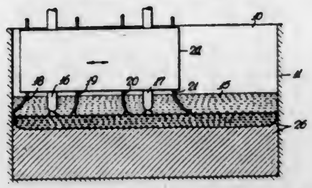
2,437,779
TOOLHOLDER
Leoni Carpentier, Montreal, Quebec, Canada
Application January 3, 1947, Serial No. 720,049
In Canada January 9, 1946
6 Claims. (Cl. 51—218)



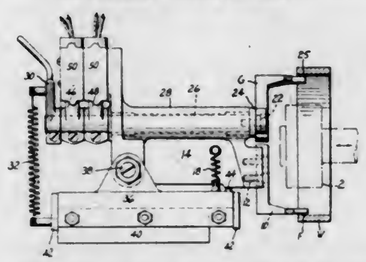
2. A tool holder comprising an inverted U-shaped member having a base and sharpened sides for driving into a body of wood, a pair of hooks formed at the edges of said base and extending outwardly therefrom, said base having a slot perpendicular to the planes of said sides, a hook received in said slot and having a threaded free end extending through one of said sides, and a nut on said end and bearing against the outer surface of the last named side.

2,437,780
GRAIN CAR DOOR IMPLEMENT
Cornell Flagstad, Minneapolis, Minn.
Application April 22, 1944, Serial No. 532,296
7 Claims. (Cl. 254—113)

5. An implement for raising grain car doors each having a rest member and a hook member mounted in vertically spaced relation, comprising in combination, a handle having an operating end, a pin in said operating end, a leg member having an operating end and a pin therein and said member having a pivotal connection between its other end and the handle and permitting swinging and spreading movements of its operating end toward and away from the operating end of the handle in response to manipulation of the handle, the said pins being releasably engageable with the hook and rest members in the doors for exerting vertical spreading movements between the doors, the said leg member including a bifurcated portion, and spring means for urging said bifurcated portion of the leg member into frictional engagement with the handle to hold the leg member in adjusted positions with respect to the handle.

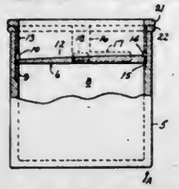


2,437,781
TOOTHBRUSH HOLDER
Eold J. Hagglund, Erie, Pa.
Application March 17, 1945, Serial No. 583,365
5 Claims. (Cl. 206—15.1)



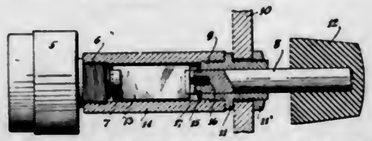
5. A tooth brush holder comprising a container formed by separable upper and lower parts, the upper part constituting a closure for the top opening of the lower part, a continuous ledge extending inwardly of the walls of said container, said ledge serving to divide the interior of said container into two compartments and providing a restricted opening therebetween, said ledge having slots on opposite sides of and joining said restricted opening, a shutter pivotally mounted in said opening in a manner to be oscillatable into and out of the plane of said ledge whereby to open or close the open ends of said slots, and a closure for the bottom opening of the lower part of said container, said closure being pivotally swingable into a position to give access to the interior of the lower part of said container and the mounting and removal of a brush with respect to said ledge and shutter.

2,437,782
MANUFACTURE OF COMPOSITE METAL ARTICLES
Robert K. Hopkins, New York, N. Y., assignor to The M. W. Kellogg Company, New York, N. Y., a corporation of Delaware
Application June 18, 1945, Serial No. 600,174
4 Claims. (Cl. 22—204)



1. In the method of uniting metals in which electrodes are oscillated across the bonding surface of a metal body while they are progressed along said surface to effect progressive areal fusion of said surface and in which variations in electric energy input into said surface by reason of the oscillations of said electrodes result in the fusion of varying depths of the metal of said body, the steps comprising, preparing a metal body with a bonding surface contoured to compensate for variations in electric energy input into said body due to the oscillations of the electrodes employed in fusing said surface, discharging electric current through gaps between a plurality of spaced electrodes and the bonding surface of said metal body to fuse metal of said body, depositing molten metal in contact with the fused surface of said metal body to effect an integral bond between said body and the deposited metal, and oscillating said electrodes in unison across said surface while advancing said electrodes along said surface to effect progressive areal coverage of said surface by said electrodes and to fuse metal of said body to depths required to provide a substantially straight line between the deposited metal and the metal of said body when the deposited metal solidifies.

2,437,783
WORK GAUGING DEVICE FOR BORE GRINDING MACHINES
Philip H. Hutchinson, Montclair, N. J., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application March 17, 1945, Serial No. 583,280
13 Claims. (Cl. 51—165)



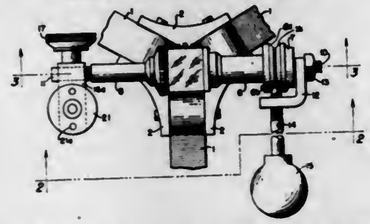
1. In a device of the character indicated, means for rotatably supporting a circular work piece, a gauge carrier floatingly supported on the work, a work engaging feeler mounted on the floating carrier for movement peripherally of the work, and a spring urging the feeler peripherally of the work.

2,437,784
NONSPILLABLE CUP
Louis J. Laskin, Los Angeles, Calif., assignor to William I. Zidell and Louis J. Laskin, both of Los Angeles, Calif., doing business as Lasdell Products Co., Los Angeles, Calif., a partnership
Application September 4, 1944, Serial No. 552,643
6 Claims. (Cl. 65—13)

1. In a cup, a hollow body element having a shoulder extending around the inner circumference thereof, and a dished cover element nesting within the body element and engaging the shoulder, the body element having recesses therein extending through and below the shoulder, the cover element having a passage for the flow of liquid therethrough and having an air vent, the cover element being rotatable to move the passage and vent into register with the respective recesses to communicate the hollow of the body with the interior of the cover element, the passage and vent being arranged to be closed by the shoulder when the cover element is rotated upon the shoulder to a position placing the passage and vent out of register with said recesses.

2,437,785
ELECTRICAL INSTRUMENT COUPLING
George J. Mucher, Brooklyn, N. Y., assignor to Clarostat Mfg. Co., Inc., Brooklyn, N. Y., a corporation of New York
Application May 19, 1945, Serial No. 594,774
6 Claims. (Cl. 64—1)

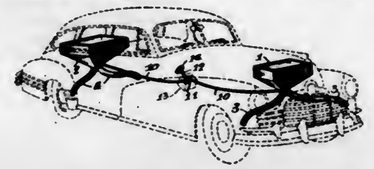
1. In combination, an electrical unit, a mounting member spaced therefrom, substantially aligned bushings extending from said mounting member and unit and having their ends spaced and extending towards each other, a tube mounted between said bushings and connecting the same, an operating shaft extending from said electrical unit through the adjacent bushing and terminating within said tube, an actuating shaft extending through the bushing supported by said mounting member, into said tube and terminating at a point spaced from said first named shaft, the adjacent ends of said shafts being formed with notches in their end faces and a flat bridging strip having its ends disposed within said notches, said strip being restrained from sidewise displacement from said notches by said tube.



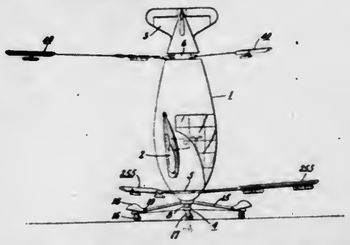
2,437,786
TETHER APPARATUS
George S. Oberdorf and Thelma J. Oberdorf, Chula Vista, Calif.
Application September 25, 1945, Serial No. 618,561
6 Claims. (Cl. 242—107)

1. In a tether apparatus of the class described a combination of a casing having a spike in connection therewith adapted to be forced into the ground, a shaft rotatably mounted in said casing, a spool secured in connection with said shaft, a coil spring having its inner end in connection with said shaft, a disc shaped transfer plate connected to the outer end of said coil spring, a second coil spring connected at its inner end to

said transfer plate and secured at its outer end to said casing, radially disposed pegs connected to the hub of said spool intermediate the ends thereof, said casing provided with a U-shaped slotted portion in its sidewall, the legs of said U-shaped slotted portion aligned with said spool at opposite sides of said radially disposed pegs.



2,437,787
PANORAMIC CAMERA TRIPOD CONTROL
Van A. Parker, San Diego, Calif.
Application February 17, 1945, Serial No. 578,499
5 Claims. (Cl. 248—183)

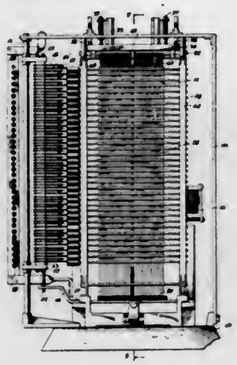


1. In a camera control, a support rotatable on a vertical axis, a fixed bevel gear mounted on said axis, a torque tube rotatably mounted in said support and having rigidly mounted thereon a bevel gear engaging the first mentioned bevel gear, a torque rod within said torque tube and supporting a camera mount at one end thereof and supporting at the other end thereof a lever to lock temporarily said torque tube to said torque rod.

2,437,788
SANDING DEVICE FOR MOTOR VEHICLES
Joseph Ulric Richard, Montreal, Quebec, Canada
Application November 21, 1946, Serial No. 711,332
In Canada February 13, 1946
1 Claim. (Cl. 291—35)

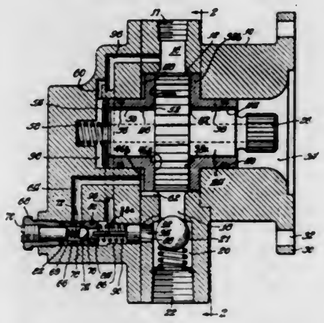
In combination with a motor vehicle, a pair of hoppers mounted thereon, tubes leading from said hoppers to points in front of the forward and rear wheels of said vehicle, said tubes merging at said hoppers, a valve slidable through the merged tubes at each hopper, flexible thrust members extending from lugs pivotally mounted on said valves and having their free ends in proximity to each other, a triangular wedge block movable between said free ends engaged thereby, and a pedal on said wedge, and means to return said slidable valves to normally closed position.

2,437,789
AIRCRAFT PROVIDED WITH FIXED AND ROTARY WINGS FOR CONVERTIBLE TYPES OF FLIGHT
Samuel Davis Robins, New York, N. Y.
Application September 28, 1942, Serial No. 459,897
11 Claims. (Cl. 244—7)



10. An aircraft comprising in combination at least a pair of coaxial counter-rotating free-bladed propellers capable of developing a thrust in either direction of the propeller axis, said propellers being located at either side of the center-of-gravity of the aircraft with said center-of-gravity located at approximately one third the distance from one propeller to the other; and, a fixed wing located between said propellers with its center-of-pressure substantially coincident with said center-of-gravity.

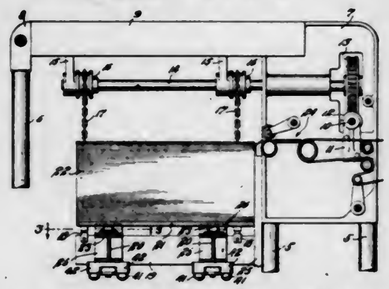
11. In an aircraft rotor, the combination with a blade member of aerodynamic control means, said member and means together forming an aerodynamically stable lift-producing structure, said control means comprising a blade elevator at either end of said blade member, said elevators being angularly related to each other so as to impart a "twist" to said blade member in its flight path sufficient to impart a substantially uniform angle of attack to said blade member throughout its span; and, pilot operated means for angularly adjusting said blade elevators simultaneously so as to vary the stable angle of attack at which said blade assembly meets the air.



2,437,790
ELECTRIC CIRCUIT CONTROLLER
Bert W. Roth, Riverdale, N. Y., assignor to Trans-Lux Corporation, New York, N. Y., a corporation of Delaware
Application July 27, 1944, Serial No. 546,884
16 Claims. (Cl. 177—353)

5. A controller including in combination movable permutation bars, selector bars, means for

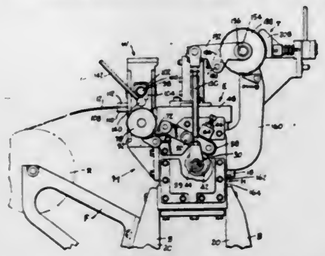
moving one of said selector bars subsequently to the movements of said permutation bars, actuating units connected to be longitudinally shifted by said selector bars, projections and members engaged thereby to effect the control of circuits individual to a projection and member, said projections being disposed in groups, each comprising a multiplicity of projections, the projections in each group providing a different permutation and being of a number less than the total of said members, one each of said groups being connected to each of said actuating units, and said members being disposed in a single group common to the projections of all groups.



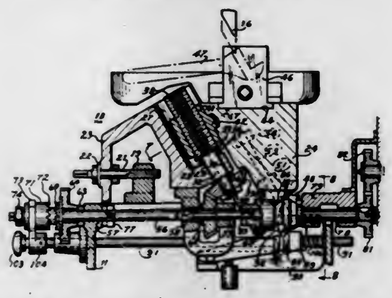
2,437,791
PUMP WITH UNLOADING BUSHING
Jay M. Roth, Euclid, and John A. Lauck, South Euclid, Ohio, assignors, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application June 26, 1943, Serial No. 492,383
9 Claims. (Cl. 103—126)

8. In a liquid pressure pump: means defining a housing having a low pressure liquid inlet, a high pressure liquid outlet and an intervening pump chamber receiving intermeshing gears between the end walls thereof adapted to be driven by an external source of power for generating liquid pressure; axially adjustable bearing and pumping seal defining means in said chamber adjacent at least one side face of each of said gears, said means including a radial flange portion having a first surface on one side thereof radially outwardly coextensive with the gear teeth, said flange portion having a second surface on the opposite side thereof normally separated from the adjacent housing end wall and providing a space for liquid under pressure generated by said gears for urging said radial flange into pumping seal relation with the associated gear face; conduit defining means effective to place said space and second surface in pressure liquid communication with the pressure generated by said gears; and means responsive to the generation of a pressure by said gears having a selected maximum value effective to place said space in communication with said inlet whereby to cause said first surface of said bearing and pumping seal defining means to move axially out of pumping seal engagement with said gear side face and the liquid in said pump to be recirculated from the outlet of said gears back to the inlet to said gears between said gear side face and said flange to thus relieve the load on said pump.

2,437,792
SHEET FEEDING APPARATUS
Walter E. Schneider, Pearl River, N. Y., assignor to Dexter Folder Company, Pearl River, N. Y., a corporation of New York
Application June 1, 1944, Serial No. 538,239
4 Claims. (Cl. 271—62)



3. In sheet handling apparatus of the type having a pile elevator, means for supporting a pile of sheets on said elevator comprising two longitudinally spaced cross beams, brackets secured to opposite ends of said cross beams and each having vertically spaced laterally projecting arms, a jack screw rotatably mounted in said arms, and a hook member disposed between the arms and having threaded engagement with said jack screw.



2,437,793
ZIPPER MANUFACTURING MACHINERY
David Silberman, New York, N. Y.
Application September 23, 1944, Serial No. 555,572
40 Claims. (Cl. 153—1)

1. Slide fastener stringer manufacturing apparatus including means for feeding a tape into a predetermined position, means for feeding a metallic member towards that position, and means immediately at that position for performing all operations upon the fed member to form slide fastener elements from the fed member and to attach the elements to the fed tape directly from the fed member, the feeding means including a base, a shaft carried by the base, a ram, and cooperating means carried wholly by the ram and the base and driven from the shaft for forming and cutting elements from the member and attaching the elements to the tape.

5. In punch press construction, a base having a recess formed therein, a die block fitted into said recess and retained therein, a ram retained for movement towards and away from the die block, a punch block fixed to the ram, the punch block having a recess formed therein, means to form a wall at one end of the recess, the die block having a recess immediately below the recess in the punch block, a punch-retaining member clampingly retained in the recess in the punch block to position punches retained thereby towards and away from the recess in the die block, and a die-piece-retaining member clampingly locked in the recess in the die block and having means for interrelation with said punches, the punch-retaining member and the die-piece-retaining member being separable from the press without disturbing the relation of the ram and the punch block or the relation of the ram to the base or the relation of the die block and the base.

2,437,794
METALWORKING MACHINE
Ernest H. Varmee, Jamestown, N. Y., assignor to Rane Tool Company, Inc., Jamestown, N. Y., a corporation of New York
Application September 29, 1943, Serial No. 504,282
8 Claims. (Cl. 90—49)

1. In a machine having an overhead reciprocable cutting tool, a base, a work mounting fixture on said base, said fixture comprising relatively movable parts, one of said parts being secured to said base and the other of said parts including a work piece mounting, guide means associating said parts, a feed mechanism for said other part including means for moving a work piece into and out of the path of operation of said tool, a two directional drive for said mechanism, clutches for connecting said drive with a source of power, manually operable means for actuating one of said clutches and means associated with said drive for actuating the other of said clutches.

2,437,795
PROCESSES OF MAKING ORGANIC PHOSPHINES
Cheves Walling, Montclair, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 13, 1944, Serial No. 544,835
3 Claims. (Cl. 260—607)

1. The process which comprises making a mixture of an alkali metal salt of an organic phosphine and an ester of an inorganic acid in an inert liquid medium, said phosphine compound being represented by the formula PR'R''Me, wherein R' is a member of the class consisting of alkyl radicals of 1 to 18 carbon atoms and allyl, benzyl, beta-phenylethyl, tetrahydro-naphthyl, cyclopentyl, borneyl, cyclohexyl, phenyl, tolyl and naphthyl radicals, wherein R'' is a member of the class consisting of hydrogen, alkyl radicals of 1 to 18 carbon atoms and allyl, benzyl, beta-phenylethyl, tetrahydronaphthyl, cyclopentyl, borneyl, cyclohexyl, phenyl, tolyl and naphthyl radicals, and wherein Me designates an alkali metal, said ester compound being represented by the formula RX wherein R is a member of the class consisting of alkyl radicals of 1 to 8 carbon atoms and benzyl, cyclohexyl, allyl and cyclohexenyl radicals, and wherein X is a member of the class consisting of acid radicals of halogen acids, sulfuric, sulfurous, nitric, phosphoric, phosphorous and carbonic acids, and retaining said compounds in admixture at reaction temperature until the metal is replaced by the radical R.

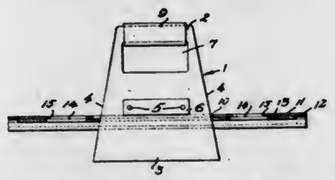
2,437,796
PROCESS FOR MAKING ORGANIC PHOSPHORUS HALIDES
Cheves Walling, Montclair, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 13, 1944, Serial No. 544,836
7 Claims. (Cl. 260—607)

1. The process which comprises dissolving in an inert liquid organic solvent an organic phosphine represented by the formula RPH_2, wherein R is a member of the group consisting of alkyl radicals of 1 to 18 carbon atoms, benzyl, cyclohexyl, phenyl, tolyl and naphthyl radicals and the corresponding inertly substituted radicals in which said inert substituent is selected from the group consisting of fluorine, chlorine, bromine, iodine, nitro, —NHCOR, —OR, —SR and $—SO_2R$, wherein R has the meaning hereinbefore defined, adding sufficient of a halogen selected from the group consisting of chlorine, bromine and iodine to replace hydrogen attached to the phosphorus of said phosphine, and maintaining a temperature at least as high as the temperature at which the reaction medium is liquid and not higher than the refluxing temperature of the medium, until said hydrogen which is attached to the trivalent phosphorus is replaced by the halogen.

2,437,797
NEW METAL SALTS OF ORGANIC PHOSPHINES AND PROCESSES OF MAKING THE SAME
Cheves Walling, Montclair, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 13, 1944, Serial No. 544,837
6 Claims. (Cl. 260—607)

1. A metal salt of an organic phosphine repre-

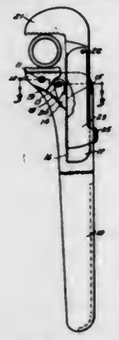
sented by the formula PRR'Me, wherein R is a member of the group consisting of alkyl radicals of 2 to 18 carbon atoms and allyl, benzyl, cyclohexyl, cyclopentyl, borneyl, phenyl, tolyl and naphthyl radicals, and wherein R' is a member of the group consisting of hydrogen, alkyl radicals of 1 to 18 carbon atoms and allyl, benzyl, cyclohexyl, cyclopentyl, borneyl, phenyl, tolyl and naphthyl radicals.



2,437,798
NEW SECONDARY ORGANIC PHOSPHORUS HALIDES AND PROCESSES FOR MAKING THE SAME
Cheves Walling, Montclair, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 13, 1944, Serial No. 544,838
5 Claims. (Cl. 260—607)

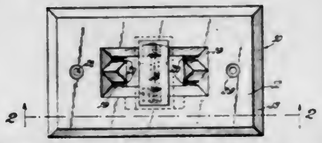
1. Di-n-butyl bromo phosphine.

2,437,799
CRAZE-RESISTANT SYNTHETIC RESIN COATED PRODUCT AND PROCESS OF MAKING IT
Nelson Richard Yorke, Trenton, N. J., assignor to St. Regis Paper Company, New York, N. Y., a corporation of New York
No Drawing. Application June 22, 1945, Serial No. 601,075
9 Claims. (Cl. 154—121)



1. The process for producing a laminated product, having a craze-resisting and pigmented surface, which comprises: applying to a foundation body a surface sheet coated with a thermosetting synthetic resin varnish containing pigment and about 2 to 12% of glass fibers by weight of the total solids in said varnish, and consolidating the assembly under heat and pressure to produce a body having a substantially infusible, insoluble and craze-resisting pigmented continuous film on its surface.

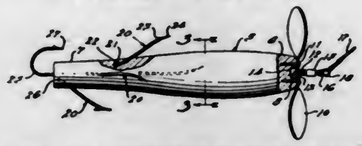
2,437,800
BOTTLE HOLDER
Henry C. Andersen, Lancaster, Calif.
Application October 17, 1945, Serial No. 622,901
4 Claims. (Cl. 294—87)



1. A bottle carrier, comprising a pair of relatively superposed slidable plates having openings aligned in one position to receive the bottles, and relatively off-center in another position to clamp the bottles between edges thereof, the plates having slots aligned in one position and relatively off-center in another position, and a handle mounted in the slot and having downwardly and outwardly angled side parts forming a wedge to engage the ends of the slots to move said plates with the slots and openings off-center when the handle and bottles are lifted to clamp the bottles, means for slidably holding the plates together, and means for preventing detachment of the handle, said handle having a cross bar forming a stop to prevent removal of the handle from the slot although allowing limited sliding movement through the slot.

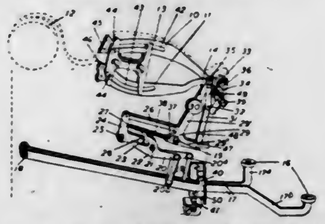
2,437,801
PIVOTALLY AND SLIDABLY MOUNTED OUTER JAW WRENCH
Thomas K. Andersen, Staten Island, N. Y.
Application September 4, 1945, Serial No. 614,252
2 Claims. (Cl. 81—100)

1. A wrench comprising a hollow handle having a jaw at its upper end, a head slidable through the upper end of said handle and tiltable laterally with respect thereto, said head having at its upper end a jaw for coaction with said handle jaw and having a series of teeth along its front edge, a dog pivoted to said handle and having a series of teeth along its back edge for coaction with said head teeth, a spring normally urging the dog teeth into engagement with the head teeth, and a yoke engageable with the dog whereby to disengage the dog from the rack teeth on the head, the arms of which straddle the sides of said head and are fastened at their upper ends thereto, the cross-bar of said yoke being exposed at the back of said handle and constituting a thumb-bearing portion to receive the pressure of the thumb of the hand which grasps the wrench handle.



2,437,802
ELECTRICAL WALL OUTLET
Melvin S. Adler, Chicago, Ill.
Application May 13, 1946, Serial No. 669,261
2 Claims. (Cl. 200—115.5)

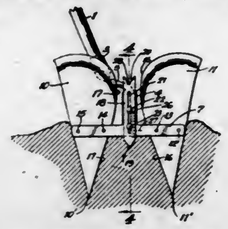
1. A wall outlet, including a face plate having a longitudinally extending shallow depressed portion of rectangular cross section at the outer face thereof, a chamber of rectangular cross section extending transversely of said plate and underneath thereof opening into said depressed portion, a casing secured to said face plate, two pair of contacts in said casing, a pair of links connecting corresponding contacts of each pair, one of said links having a spring contact intermediate its ends, a terminal plate on said outlet connected with one of said links, and provided with a spring contact, a second terminal plate



secured to said outlet, and a fuse carrier in said chamber extending with spring clips into engagement with the spring contacts of said link and terminal plate, said fuse carrier having its outer face flush with the outer face of said face plate.

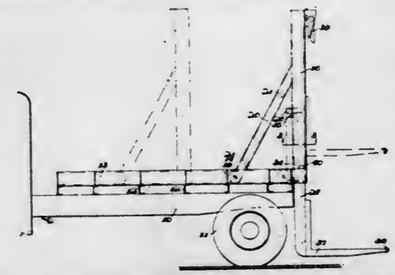
2,437,803
FISH LURE
John Irving Bell, Royal Oak, Mich.
Application December 1, 1943, Serial No. 512,425
3 Claims. (Cl. 43—47)

1. A fish lure comprising a body portion having a series of fish hooks carried thereby, and a propeller mounted on the front of the body portion, said propeller having its axis offset relative to the the axis of said body portion to cause said fish lure to travel through the water in a zigzag path and simultaneously rotate about its own axis.



2,437,804
END THRUST TYPE BAR ACTION FOR TYPEWRITING MACHINES
Claude Wellington Brumhill, Leicester, and Arthur Pateman, Rothley, England, assignors to The Imperial Typewriter Company Limited, Leicester, England
Application September 7, 1945, Serial No. 614,898
In Great Britain September 14, 1944
9 Claims. (Cl. 197—25)

1. A typewriting machine having end thrust type bars having type blocks, an upstanding supporting and operating lever for each bar movable about a fixed pivot lower than the bar, curvilinear cam tracks associated with the type bars for producing a substantially rectilinear final movement of the type blocks, a toggle interposed between each type bar and a fixed pivot to straighten as said bar moves forward on its support lever and track, a swinging weight for each toggle, a lever arm for each weight, and a link between said lever arm and the associated toggle.

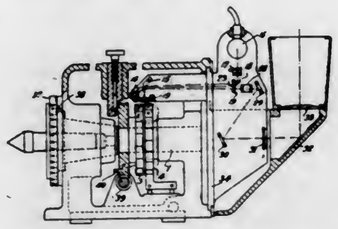


2,437,805
HAND GARDEN CULTIVATOR AND FURROW FORMER
Archibald M. Chilcote, Glen Ellyn, Ill.
Application August 29, 1945, Serial No. 613,325
5 Claims. (Cl. 97—70)

2. In an implement of the class described, a support member having a laterally extending offset portion thereon, one end of said support member having a sleeve incorporated therein for the reception of a handle, the other end of said support member being substantially flat and extending in a vertical plane; a rearwardly curved horizontally extending cross bar integrally secured medially to the free end of said vertically extending end of said support member, furrowing

members of substantially V-shape having the inside edges thereof bent outwardly rigidly secured to said cross bar, and a seed channel-forming member having a pointed end secured to said cross bar medially of said furrowing members.

2,437,806
TRANSPORTING EQUIPMENT
George R. Dempster, Knoxville, Tenn.
Application November 30, 1944, Serial No. 565,837
23 Claims. (Cl. 214—65)

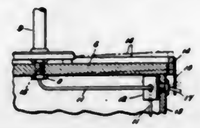


1. In a transporting equipment, in combination with a base provided with horizontal tracks, a carriage having rollers mounted for movement on said tracks said carriage provided with vertically disposed ways, means for moving said carriage along said tracks, a second carriage forming a part of said first carriage and movable on the ways of said first carriage at right angles to said base, means on said first carriage for moving said second carriage on said first carriage, and load carrying means mounted on said second carriage and movable therewith.

2,437,807
OPTICAL PROJECTION DIVIDING HEAD
John Hendri Dowell, London, Robert Siegmund Sternberg, Ilford, and Thomas Curson, Foleshill, Coventry, England, assignors to Alfred Herbert Limited, Coventry, England
Application December 19, 1944, Serial No. 568,874
In Great Britain November 8, 1943
4 Claims. (Cl. 88—24)

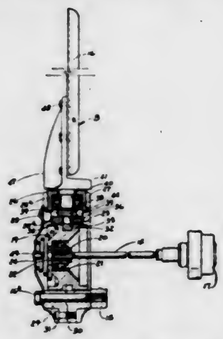
1. In a dividing machine, a light source; a collimating device positioned to receive light from said source and including an objective; means providing an index line in the focal plane of said objective; an arrangement of reflecting surfaces together constituting a first polygon; means mounting said polygon and said collimating device for relative rotation and with said polygon in the path of parallel light projected from said

collimating device; a second arrangement of reflecting surfaces constituting a vernier polygon; means mounting said vernier polygon in the path of parallel light projected from said collimating device, the means mounting said collimating device and said vernier polygon providing for relative rotation between said collimating device and said vernier polygon; a device for viewing an image at the focal plane of the objective, said first polygon and said vernier polygon being arranged so that parallel light projected from said collimating device is received angularly by surfaces of said polygons and so that light projected from said collimating device will be re-



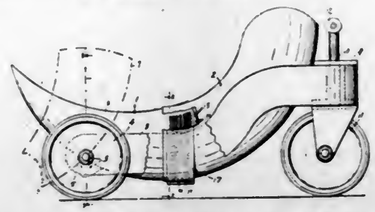
flected back into said objective to form, at the focal plane of the objective, an image of said index line formed by light reflected from one of the faces of said first polygon and an image of said index line formed by light reflected from one of the faces of the vernier polygon; and an indexing device for effecting relative rotation between said first polygon and said collimating device and between said two polygons to move the image of said index line formed by light reflected from said face of said first polygon across the field of said collimating device, and thus to define the angular position of said first polygon relative to said vernier polygon.

2,437,808
LOADING DEVICE
Henry Drettmann, Detroit, Mich.
Application September 15, 1945, Serial No. 616,528
2 Claims. (Cl. 214—140)



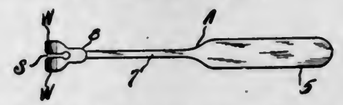
1. A power loader accessory device for tractors comprising a pair of standards adapted to be fixed to the rear axle of a tractor adjacent the wheels thereof, a pair of arms hinged to said standards near the lower end thereof and extending forward to in front of said tractor, a material handling element pivotally mounted at the forward ends of said arms, a pair of cylinders hinged to said standards above said arms and provided with pistons and piston rods connected to said arms at points spaced from the hinges thereof, latch means normally preventing the pivotal movement of said material handling element but releasable to permit such pivotal movement and thereby to dump contained material, means whereby fluid under pressure may be supplied to said cylinders to draw said rods into said cylinders to thereby lift said arms, and means for automatically restoring said material handling element to latched position when said arms are lowered.

2,437,809
SWITCH OPERATOR FOR LAMP TABLES
Henry C. Engelbrecht, Carthage, Mo.
Application November 26, 1945, Serial No. 630,916
2 Claims. (Cl. 200—85)



1. In a piece of furniture of the table type, having an elevated planar element constituting a support for an electric lamp, the combination of a switch for controlling the lamp circuit, mounted on the piece of furniture adjacent said planar element; a rim member disposed along the edge of said planar element and leaving the supporting surface thereof exposed, said rim member being mounted for vertical movement relative to the element; and operating connections between said rim member and switch, whereby the latter may be actuated through movements of the former.

2,437,810
VARIABLE PITCH FAN BLADE ASSEMBLY
Samuel C. Earley, Norman B. Earley, Elmore J. Sanders, Willard C. Skareen, Ray L. Davies, and Joseph A. Hughes, Toledo, Ohio, assignors, by mesne assignments, to Evans Products Company, Detroit, Mich., a corporation of Delaware
Application November 20, 1944, Serial No. 564,278
4 Claims. (Cl. 170—163)



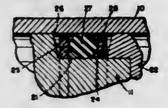
1. A variable pitch fan assembly comprising a pair of abutting hub sections having a central apertured portion, a plurality of fan blades mounted for rotary movement in said hub sections and including fan blade supporting stub shafts extending radially between said sections, bearing means for the respective stub shafts mounted between and supported by said hub sections, a disc fixed to the end portion of each of said stub shafts, a pin disposed parallel to and eccentric with said stub shaft, carried by the respective disc and projecting inwardly therefrom, a sleeve disposed in said apertured hub portion for axial movement, grooves in the peripheral portion of said sleeve arranged at right angles to the axis thereof and extending at right angles to said stub shafts, one groove being provided for each pin, a block fitting in each groove having a bearing socket for the adjacent pin, and means for axially moving said sleeve.

2,437,811
EMERGENCY TIRE CARRIER
Russel E. Folden, Oakland, Calif.
Application March 26, 1945, Serial No. 584,937
8 Claims. (Cl. 280—61)

1. A carrier for supporting a deflated rim-mounted pneumatic tire that is on a vehicle for movement over the ground with the weight of the vehicle off said tire comprising ground wheels and rim engaging means carried thereby for engaging the rim carrying such tire and for supporting said rim a sufficient distance above the ground to relieve the tire thereon of the weight of the vehicle, locking means for releasably securing said rim to said rim engaging means against accidental release of said rim therefrom, means supporting said locking means for movement into and out of locking relation with said rim, means automatically actuated by relative movement of the tire and carrier to the position in which said rim engaging means so supports said rim for moving said locking means into said locking relation.

2,437,812
FRENUM GUIDE
John A. Freel, Bay City, Mich.
Application October 9, 1944, Serial No. 557,841
5 Claims. (Cl. 128—15)

1. A surgical instrument comprising a handle terminating in a flat, relatively wide section, the end portion being turned to overhang said end section and extend upwardly at an angle therefrom, and a slit provided in said section and turned portion and open to the end of the instrument.



2,437,813
CONTROL FOR MACHINE TOOLS
Harry McMurtry Griffin, Webster Groves, Mo., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application October 26, 1943, Serial No. 507,768
7 Claims. (Cl. 153—21)

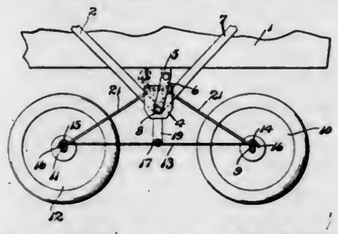
5. In a dimpling machine having support means for a pair of cooperating working members, actuating means for opening and closing said support means respectively to permit introduction of a perforate work piece between the members and to cause the work piece to be deformed between the working faces of the members, said support means comprising a guide slidably supporting one member for extension from seated position thereon in a direction toward the other member and for return from extended position to the seated position, a pilot element carried by said guide and extending through the working face of said member for register with a perforation in the work piece, means for resiliently holding said member in said extended position, and means responsive to seating of said

member for operating said actuating means to close the support means.

2,437,814
SEALING MEANS
Robert O. Hallen, Los Angeles, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application May 25, 1944, Serial No. 537,281
7 Claims. (Cl. 286—26)

1. Means for sealing between two members arranged one within the other, there being an annular space between the members defined by an end wall and a bottom wall as portions of one of said members, said means comprising a sealing ring of flexible resilient material engaged in said space to seal with said members, and an axially-compressible, radially-expansible, yieldable backing ring of pliant material arranged in said space between the sealing ring and said end wall, said backing ring being substantially in contact with the bottom wall of said annular space and the adjacent wall of the other of said members and being adapted to be compressed axially by the sealing ring, when the same is forced axially against it by fluid pressure, and thereby to be expanded radially inwardly and outwardly to contact both of said members to prevent the extrusion of the material of the sealing ring between the surfaces of the members beyond said end wall.

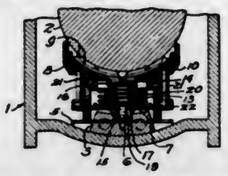
2,437,815
PROCESS OF MAGNESIUM PRODUCTION
Fritz J. Hansgirg, Black Mountain, N. C., assignor to The Permanente Metals Corporation, Oakland, Calif., a corporation of Delaware
Application January 19, 1946, Serial No. 642,384
10 Claims. (Cl. 75—67)



1. In the production of metallic magnesium comprising the reduction of magnesium oxide by carbon, wherein a mixture of magnesium vapor and carbon monoxide is produced and the magnesium vapor is cooled to condense solid magnesium powder, the step which comprises introducing relatively cool dry natural gas into the mixture of magnesium vapor and carbon monoxide

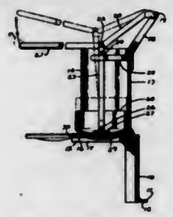
gas emerging from the reduction zone and instantaneously shock-chilling the magnesium and carbon monoxide to a point where they are stable in the presence of each other and thereby simul-

taneously preventing the magnesium from reacting with the natural gas to form magnesium carbides and avoiding the formation of objectionable amounts of magnesium oxide by back-reaction of magnesium and carbon monoxide.



2,437,816
STEERABLE VEHICLE RUNNING GEAR
Edsko Hekman and Louis H. Hekman, Grand Rapids, Mich., assignors to Henri W. Jonkhoff, New York, N. Y.
Application July 24, 1944, Serial No. 546,233
20 Claims. (Cl. 280—48)

18. In a vehicle, a body, and a wheeled carriage for supporting said body, comprising a body supporting member, a flexible quadrangle consisting of front and rear parallel cross wheel axle members and longitudinal side members pivotally connecting the front and rear axle members and pivoted intermediate their ends to the body supporting member, whereby the quadrangle can be transformed when the pivot points of the longitudinal members are moved ahead of the other longitudinal member, and arched longitudinal braces intermediately pivoted to the body supporting member and at their ends to the front and rear axle members.

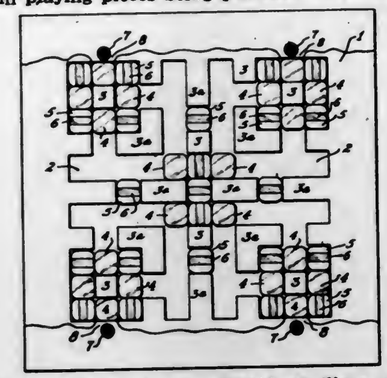


2,437,817
RAILWAY JOURNAL LUBRICATOR
James J. Hennessy, Montclair, N. J.
Application March 11, 1944, Serial No. 526,003
9 Claims. (Cl. 308—84)

1. In a journal lubricator of the class described including a pump and a distributor above the same for application to the journal to be lubricated, and a conduit comprising a bellows leading in a substantially straight line from the pump to the distributor and constructed to automatical-

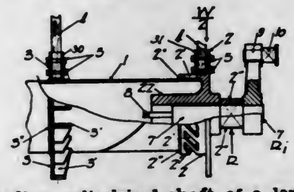
ly shorten and lengthen along said line to accommodate variations in the distance between the pump and distributor.

2,437,818
MACHINE FOR CUTTING POTATOES, INCLUDING A STATIONARY CUTTER AND RECIPROCATING PLUNGER
Walter A. Hetzler, Decatur, Ill.
Application December 13, 1945, Serial No. 634,677
2 Claims. (Cl. 146—169)



1. A device of the class described, comprising a base having a cylindrical vertically extending body portion open at its upper end and its front, a horizontally extending substantially U-shaped support open at its front end and of closed circular formation at its rear end and formed to provide a recess, a circular plunger mounted for reciprocal movement within said cylindrical body portion, a removable cutting instrument in said recess having a centrally disposed opening therein and a plurality of cutting wires secured across said opening in intersecting relation to one another to form a cutting screen with relatively large meshes, said wires secured at their intersections, said intersecting wires being of dished formation and the lower end of said plunger being convex to fit within said wires, and means including a vertical shaft attached to said plunger and a horizontal lever pivoted at one end to said body portion and having a handle portion at its other, and pivotally secured intermediate its ends to the upper end of said shaft.

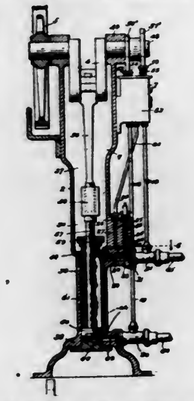
2,437,819
GAME APPARATUS
Marion F. Heuser, Cincinnati, Ohio
Application October 15, 1945, Serial No. 622,351
2 Claims. (Cl. 273—131)



1. A playing board having recessed areas thereon arranged in a definite pattern, the recessed areas having lateral dimensions suitable for receiving main playing pieces of such size and shape as to fit within the recessed areas and be restrained to limited movement therein, said main playing pieces having flat upper surfaces, and auxiliary playing pieces adapted for movement on the flat upper surfaces of the main playing pieces, some of said main playing pieces having no indicia thereon to indicate movement of

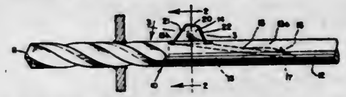
said auxiliary playing pieces and other of said main playing pieces being provided with indicia

for blocking movement of said auxiliary playing pieces.



2,437,820
ROTARY SHAFT CONSTRUCTION
Edwin B. Hudson, Middletown, Ohio
Application March 18, 1944, Serial No. 527,103
7 Claims. (Cl. 74—596)

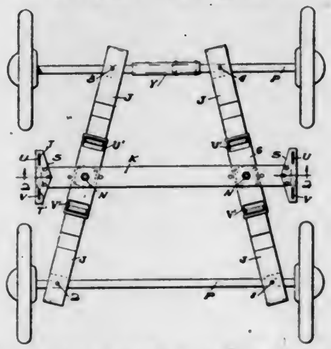
1. A hollow cylindrical shaft of a length several times its diameter, bearing and driving means for said shaft at the opposite ends thereof, and means for preventing mechanical failure of said shaft at said ends comprising a substantially rigid end member mounted on each end thereof having a collar extending interiorly of the shaft and a hollow journal extending exteriorly thereof, and a torque shaft passing through said journal with a snug fit and extending into said collar and rigidly connected to said member at said collar.



2,437,821
HYDRAULIC PULSATOR SYSTEM AND MAKE-UP MEANS THEREFOR
Leigh E. Hughes, Indianapolis, Ind.
Original application January 29, 1940, Serial No. 316,128, now Patent No. 2,312,337, dated March 2, 1943. Divided and this application February 25, 1943, Serial No. 477,004
6 Claims. (Cl. 60—54.5)

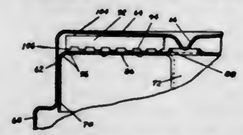
1. In a hydraulically operable system having a working unit including a pressure operable piston and a cylinder therefor, said pressure operable piston being of floating type and a power supplying pressure unit including a cylinder and a piston therein, both pistons being double acting, a power operable rod for actuating the last mentioned piston, a power transmitting rod connected to the first piston, means for maintaining the synchronous movement of said pistons, a conduit connecting the rod end of the second cylinder to the rod end of the first cylinder, and another conduit independent of the first conduit and connecting the opposite rodless end of the second cylinder to the opposite rodless end of the first cylinder, each rod being slidably supported by the first mentioned rod ends of the cylinders, and for balanced operation of the system, the combination of a pressure liquid make-up supply conduit for each of the conduits near one end thereof, said make-up conduits having no direct communication with each other, a single make-up reservoir, dual pump means connected to the reservoir and to each of the make-up conduits, an interdependent adjustable pressure re-

lief valve to maintain the proper relationship of pressure to load on the rod end of both cylinders, and an interdependent adjustable pressure relief valve to maintain the proper relationship of pressure to load on the rodless end of said cylinders, said dual pump means combined with both relief valves and including their mutual interdependence comprising the means for maintaining the floating piston in synchronous movement with the piston of the power supplying unit.



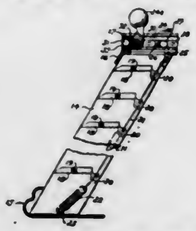
2,437,822
COMBINED DRILL AND DEBURRING TOOL
Dedger Jones, Columbus, Ohio, assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application October 30, 1944, Serial No. 560,938
5 Claims. (Cl. 77—66)

1. A tool for removing burrs from the face and reverse margins of a drilled bore comprising a body having a slot formed therein, a burr removing blade element positioned in said slot, and means for supporting and biasing said blade element including an arm member secured at one end in said slot and carrying said blade at its opposite end for swinging movement from a position projecting from the slot for effective contact with the bore margins to a retracted position within the slot to permit passage of the blade through the bore, said means biasing the blade element to said projecting position, said blade element having opposed and oppositely inclined cutting edges, one cutting edge being effective upon advancement of the tool into the bore to remove burrs on the face margin while simultaneously forcing said blade to swing to retracted position for allowing the blade to pass



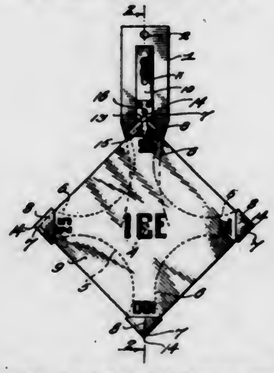
through the bore, and the opposed cutting edge being effective upon withdrawal of the tool from the bore to remove burrs on the reverse margin while simultaneously forcing said blade to swing to retracted position for allowing return passage of the blade through the bore.

2,437,823
WHEELED CARRIAGE FOR VEHICLES
Henri W. Jonkhoff, New York, N. Y.
Application August 23, 1944, Serial No. 550,785
21 Claims. (Cl. 280—48)



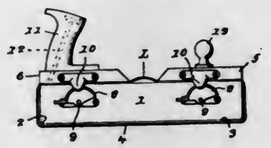
2. In a vehicle, a body, and a wheeled carriage for supporting said body, comprising a body supporting member and a flexible quadrangle consisting of two parallel cross wheels axles, side members pivotally connecting the front and rear axles and disposed in angular position relative to each other and constituting the side members of the quadrangle and pivotally connected at their centers to the body supporting member, whereby the quadrangle can be transformed when the pivot points of one of the members are moved ahead of the pivot points of the other member.

2,437,824
METHOD OF ASSEMBLING PISTONS
Floyd F. Kishline, Kenosha, Wis., assignor to Nash-Kelvinator Corporation, Kenosha, Wis., a corporation of Maryland
Original application June 19, 1942, Serial No. 447,636. Divided and this application August 26, 1944, Serial No. 551,357
7 Claims. (Cl. 29—156.5)



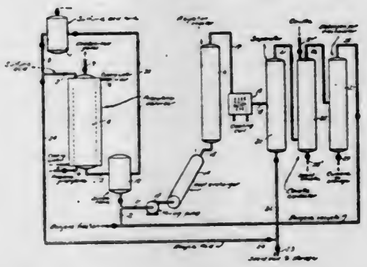
1. A method of assembling pistons for an internal combustion engine which comprises providing a stamped outer member having a head forming element, providing a stamped inner member having an inner head reinforcing element, deforming the head forming element of said outer member downwardly, deforming the head reinforcing element of said inner member upwardly, placing a rosette of ribbon metal within said outer member and against the underside of the head forming element, placing said inner member within said outer member, pressing said inner and outer members and the interposed rosette together with sufficient force to return to normal the deformed portions of said head forming and reinforcing elements, and, while the parts are so held, subjecting the so-assembled piston to a hydrogen brazing operation.

2,437,825
LAMP SHADE
Max Kohn, Brooklyn, N. Y.
Application April 19, 1946, Serial No. 663,548
6 Claims. (Cl. 240—108)



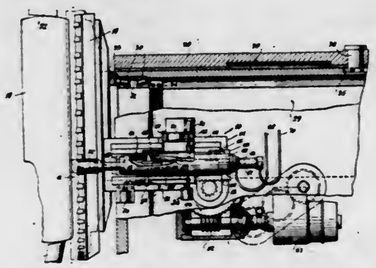
1. In a lamp shade of the class described, a body including a plurality of panels each formed by a set of spaced angularly adjustable vanes, means operatively connecting the vanes in each set in substantial parallelism, biasing means yieldingly urging the vanes of each set toward one extreme position, a manually operable control member comprising a rotatable ring member, adjustable connections operatively connecting said control member with the vanes of each panel and providing therewith common control for the adjustment thereof, and detent means for releasably securing said rotatable ring control member in any one of a plurality of vane adjusting positions in opposition to said biasing means, the adjustable connection between said control member and each set of operatively connected vanes providing for individual adjustment of the vanes of each panel independent of adjustment of said control member, said control member being disposed adjacent the upper end of the body formed by said panels and substantially coaxial with the body formed by said panels.

2,437,826
ROTATABLE HOLDER FOR ICE CARDS
Alvin M. La Brant, San Diego, Calif.
Application January 14, 1946, Serial No. 641,026
6 Claims. (Cl. 40—70)



1. A holder for ice cards comprising, in combination, a base, a pivot on said base, a support rotatable on said pivot, a plurality of arms on said support, means for removably securing said card to said arms, an indicator pointing to a number inscribed on said card, and slidable means on said base for releasably engaging said arms.

2,437,827
HAND OPERATED ABRADING AND POLISHING TOOL
Werner John Lund, Staples, Minn.
Application April 16, 1946, Serial No. 662,520
1 Claim. (Cl. 51—187)

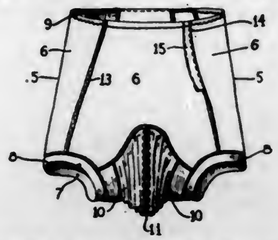


In a manually actuated sander, an elongated rectangular-shaped brick-like block, a felt pad covering the lower surface of the block, an endless band having an abrasive outer surface longitudinally positioned around said block, a vertically disposed plane handle positioned on the rear end of said block, a clamp block on which said handle is mounted, a gripping knob positioned on the forward end of said block, a clamp block complementary to the former clamp block positioned on the forward end of the block on which the knob is mounted, hinges hinging the said clamp blocks to the block at one side, projections extending downwardly from the opposite sides of the said clamp blocks, and latches with arcuate cam surfaces clamping the clamp blocks against the abrasive band on the block, the inner edges of said clamp blocks spaced apart providing a gap to receive slack in the abrasive band.

2,437,828
ALKYLATION OF AROMATIC HYDROCARBONS WITH SULFURIC ACID CATALYST AVOIDING SULFONATION OF PRODUCT
Daniel J. Lyons, Martinez, Arthur Lazar, Berkeley, and Lloyd L. Ingraham, Los Angeles, Calif., assignors to Tide Water Associated Oil Company, San Francisco, Calif., a corporation of Delaware
Application February 14, 1944, Serial No. 522,304
3 Claims. (Cl. 260—671)

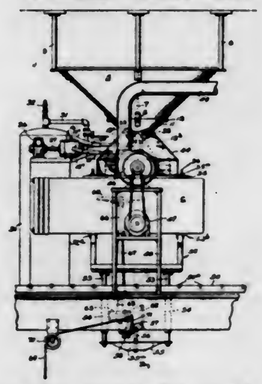
1. The method of alkylating benzene hydrocarbons with olefines in which the presence of water is utilized to dilute sulphuric acid present during the reaction below sulphonating strength, which comprises reacting an olefin with sulphuric acid of a concentration between 65% and 90% and in quantity not greater than two mols of acid per mol of olefin, contacting the reacted mixture with an excess of benzene hydrocarbon, while maintaining the temperature between about 60° F. and about 150° F., water at all times being present in sufficient quantity to dilute all sulphuric acid present during and formed by the reaction below 90% strength to avoid sulphonation, separating the contacted mixture into an oil layer and an acid layer, removing the acid layer, neutralizing the acidity of the oil layer, and fractionally distilling the neutral oil layer to separate alkylated hydrocarbons from unreacted hydrocarbons.

2,437,829
SCALPING MACHINE CONTROL APPARATUS
Elliott W. Mason, Spokane, Wash., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application July 25, 1944, Serial No. 546,538
9 Claims. (Cl. 90—16)



1. In a machine tool of the type described, a rotary cutter, a feeler associated therewith, power means for moving said cutter and said feeler in unison toward a work piece disposed forwardly thereof but outside the circle described by said cutter, said feeler being adapted to engage the outer face of said work piece whereby its forward motion is terminated while said cutter continues to advance relative to said feeler into a cutting position behind the plane of the outer face of said work piece, control means operable responsively to said relative movement between said cutter and said feeler for stopping said power means with said cutter in a feeler determined position with respect to said outer face of said work piece, control means responsive solely to cutter advance for stopping said power means with said cutter in a fixed distance relation with respect to the inner face of said work piece, and means for rendering each of said control means operable alternately in the order named in a first cut and a second cut sequence on opposite faces of said work piece respectively.

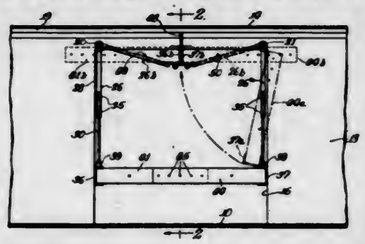
2,437,830
COMBINATION GIRDLE AND PANTIE
Alma S. McAllister, Morris, Minn.
Application December 28, 1944, Serial No. 570,159
2 Claims. (Cl. 2—43)



1. A nether garment as a combination girdle and panties comprising a front panel, a rear panel and side panels joined together along adjacent edges to form a form-fitting trunk-embracing portion, a pair of elastic bands each joined along a portion of its circumference to the lower edge of a side panel and adapted to encircle a leg of the wearer near the crotch and an exten-

sible crotch panel joined to the lower edges of the front and rear panels and to portions of the

elastic bands remote from the junctions of the elastic bands and the side panels.



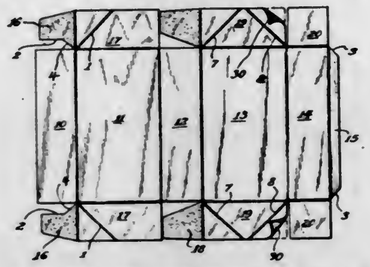
2,437,831
APPARATUS FOR APPLYING INSULATION
John C. Moore, Connersville, Ind., assignor to Rex Manufacturing Company, Inc., Connersville, Ind., a corporation of Indiana
Application May 9, 1940, Serial No. 334,296
8 Claims. (Cl. 20—101)

8. In a machine for transferring loose insulation material to a space to be insulated, a hopper, a series of conduits arranged to direct material from said hopper to said space, said conduits having their discharge ends arranged to deliver material into said space at different points over the latter, a master plate overlying said space and substantially closing off the latter around said conduits, an adapter mounting said master plate to accommodate said plate to different sizes and shapes of articles to be insulated, a source of air under pressure, means for conducting air from said source and applying it to the material in said conduits towards the discharge end of the latter and means for periodically interrupting the flow of air into said conduits to thereby cause the material to be discharged from said conduits in batches distributed over the space.

2,437,832
LADING BRACE FOR FREIGHT CARS
John P. Murphy, Jr., Chicago, Ill.
Application September 27, 1944, Serial No. 555,918
3 Claims. (Cl. 105—369)

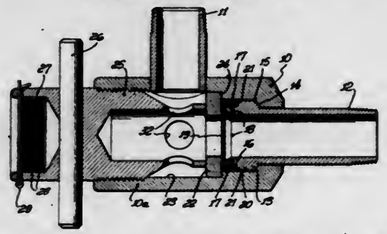
1. A lading brace for use in freight cars having a floor, sides and door openings in the sides, and comprising, in combination, a pair of beams extending practically across the car in separated and substantially parallel relation near the door openings, a pair of arms secured at their ends to each of the beams, each pair of arms being spaced apart and projecting from one beam toward the other longitudinally of the car, means for adjustably connecting the arms of one pair to the arms of the other in a manner such that said beams and said arms form a substantially rigid frame of adjustable longitudinal extent when in operative bracing position, pairs of hangers, means for pivotally connecting an end of each of the hangers of each pair to one of the beams, means fixed in position for rotatably supporting the other ends of the hangers near the top of the car, and means for adjusting the lengths of said hangers for determining the distance of the frame from the floor of the car, said arms, when disconnected, being swingable to positions of substantial parallelism adjacent the hangers, means for holding said arms adjacent the hangers, said hangers, together with the arms, being swingable to an out-of-the-way position near the top of the car, and hook means secured to the top of the car and releasably engageable with said beams for holding the hangers and arms in said out-of-the-way position.

2,437,833
N-BENZYL-N-MYRISTYL MORPHOLINIUM HALIDES
Joseph B. Niederl, Brooklyn, and Victor Niederl, Round Top, N. Y., and Martin E. McGreal, Somersworth, N. H.
No Drawing. Application June 29, 1946, Serial No. 680,522
4 Claims. (Cl. 260—247)



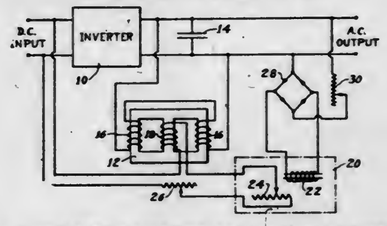
1. A new class of compounds N-myristyl-N-benzyl morpholinium halides.

2,437,834
CUTICLE STICK AND NAIL CLEANER
Bernard Barton Peritz, New York, N. Y.
Application April 2, 1946, Serial No. 658,957
1 Claim. (Cl. 132—75.3)



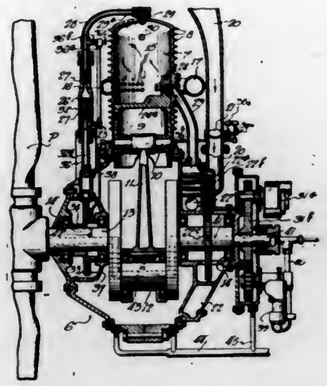
A cuticle stick and nail cleaner having a long curved surface extending from one side to the other side at one end, said end also having flat converging faces at each side of said curved surface to impart a tapered shape to said end, said curved surface having a longitudinal groove therein between said flat faces, the sides of the groove intersecting said faces adjacent said end to form scraping edges for cleaning beneath the nails, said groove providing a space in which foreign particles under the nails are lodged during the cleaning operation.

2,437,835
COLLAPSIBLE CARTON
Harold Riege and Edwin C. Siewert, Wausau, Wis., assignors to Marathon Corporation, Rothschild, Wis., a corporation of Wisconsin
Application September 9, 1944, Serial No. 553,414
1 Claim. (Cl. 229—33)



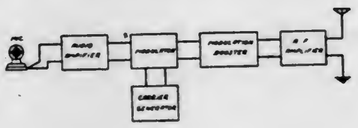
An improved one-piece paper board blank designed for automatic high speed machine assembly into a collapsible carton comprising a folding tray forming part having a bottom wall panel, a front wall panel, a rear wall panel, and two opposite side wall panels of substantially equal height hinged to said bottom wall panel, a score line extending from each corner of said bottom wall panel diagonally across the adjacent side wall panel, said diagonally extending score lines defining a front triangular section and a rear triangular section in each of said tray side wall panels, a connecting flap hinged to each end of said front wall panel and separated from the front edge of the adjacent side wall panel and designed for adhesive attachment to the inside face of the adjacent front triangular section of the tray side wall panel, a connecting flap extending from the rear edge of each of said tray side wall panels and separated from said rear wall panel and designed for adhesive attachment to the adjacent inside face of said rear wall panel, an abutment flap hinged to the upper edge of said tray front wall panel, said diagonally extending score lines permitting folding first of said tray side wall panels into a position substantially parallel to and overlying said bottom wall panel and then folding said front and rear tray wall panels to overlie said tray side wall panels when the assembled carton is in collapsed position, said blank including a folding cover-forming part comprising a top cover panel hinged to the upper edge of said rear wall panel and having an area substantially equal to said bottom wall panel of the tray part, a front cover panel hinged to the front edge of said top cover panel and having an area substantially equal to said tray front wall panel, a pair of opposite side cover panels hinged to the opposite side edges of said top cover panel each substantially equal in area to the side wall panel of said tray part, a score line extending from each front corner of said top cover panel diagonally across the adjacent side cover panel defining a front triangular section in each of said side cover panels, a connecting tab extending from the front end of each of said side cover panels but separated from the adjacent side edge of said front cover panel and designed to be adhesively secured to the inside face of the adjacent front cover panel, said diagonally extending score lines in said side cover panels permitting folding first of said side cover panels to overlie said top cover panel and then folding of said front cover panel to overlie said side cover panels when the assembled cover part is in collapsed position, said tabs having an abutment edge associated therewith adapted to cooperate with the abutment flap associated with the tray front wall panel to releasably retain the cover part in closed position when the carton is assembled and erected.

2,437,836
SAFETY PRESSURE RELEASE
James J. Santiago, Los Angeles, Calif., assignor to Grant Oil Tool Company, Los Angeles, Calif., a corporation of California
Application April 7, 1945, Serial No. 587,099
5 Claims. (Cl. 220—89)



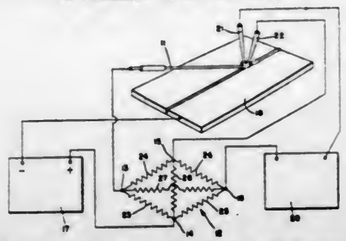
1. A safety device of the character described, comprising a body having an inlet and an outlet, a fluid pressure rupturable disc contained within a bore in the body and normally sealing said inlet from the outlet, a seat engaged by the low pressure side of the disc, means forming an annular wall spaced from the wall of said bore and forming an annular recess, a rubber ring contained within said recess and having its inner surface engaged and confined by said annular wall, said rubber ring engaging and forming a fluid tight seal against the high pressure side of the disc, and means forming a passage for communicating fluid pressure through said annular wall to said inner surface of the ring.

2,437,837
VOLTAGE REGULATOR
Simon Saretzky, Brookline, Mass., assignor to First Industrial Corporation, Boston, Mass., a corporation of Delaware
Application October 28, 1944, Serial No. 560,797
3 Claims. (Cl. 171—242)



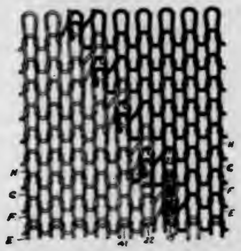
1. A voltage regulating system for an inverter having a direct current input and an alternating current output, said system comprising a compensating load having parallel-connected capacitance and inductance, said inductance being variable to vary the reactance of the compensating load and comprising a direct current saturating winding reactor, an energizing circuit for energizing the saturating winding with direct current from the input side of the inverter, and means under the control of the energizing circuit and responsive to small changes in inverter output voltage for varying the energization of the saturating winding to vary the inductance of the reactor.

2,437,838
FUEL PUMP FOR INTERNAL-COMBUSTION ENGINES
Garlin E. Seals, San Antonio, Tex.
Application December 24, 1942, Serial No. 470,047
6 Claims. (Cl. 103—37)



1. A fuel pump including a body having a valve controlled restriction intermediate its ends, a plunger reciprocably arranged in said body below said restriction having a valve controlled axial fuel passage, a fuel supply line in communication with said body below said plunger, an actuating rod on said plunger, a cam adapted to axially move said rod, an oscillatable, multi-toothed cam in juxtapositioned relation to said first cam, and manually actuated means for oscillating said multi-toothed cam to vary the degree of displacement of said plunger rod effected by said cam.

2,437,839
MODULATION BOOSTER
Frank H. Slaymaker, Rochester, N. Y., assignor to Stromberg-Carlson Company, Rochester, N. Y., a corporation of New York
Application April 3, 1946, Serial No. 659,229
5 Claims. (Cl. 179—171.5)

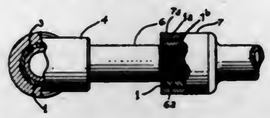


1. Means for producing a high degree of modulation of a source of carrier waves, a plurality of amplifiers of the space current type connected in tandem, means associated with said amplifiers and normally effective to prevent the flow of space current therethrough, an output circuit for the first amplifier in tandem tuned to the frequency of said source, means for coupling said source to said first amplifier, an output circuit for the last amplifier in tandem tuned to a harmonic of the frequency of said source, and means for appreciably increasing the percentage of modulation between said source of carrier waves and said harmonic of said source.

2,437,840
METHOD OF MULTIARC WELDING
Colby Weston Steward, Kenmore, and Malcolm R. Rivenburgh, Williamsville, N. Y., assignors, by mesne assignments, to Cornell Research Foundation, Inc., a corporation of New York
Application March 9, 1944, Serial No. 525,740
8 Claims. (Cl. 219—10)

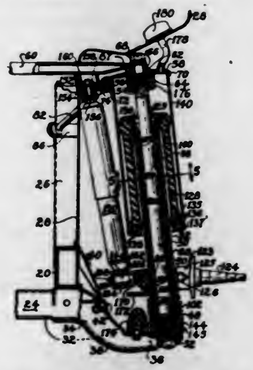
1. A method of arc welding, comprising preheating an electrically conductive work piece and a metallic welding rod by means of a first electric arc placed adjacent to said work piece and said welding rod until fusion has commenced, thereafter striking a second electric arc between the welding rod and the work piece in the atmosphere of said first arc, and cooperatively moving said arcs along said work piece whereby to accomplish welding of said work piece, said first electric arc being actuated by a source of alternating current and said second electric arc being actuated by a source of direct current.

2,437,841
SUTURE
Eugene St. Pierre, Pawtucket, R. I., assignor to Hemphill Company, a corporation of Massachusetts
Original application December 8, 1945, Serial No. 633,629. Divided and this application May 24, 1947, Serial No. 750,294
1 Claim. (Cl. 66—179)



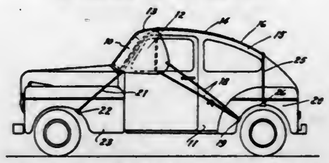
In a split foot stocking, a suture structure joining a widened portion of the sole and the corresponding portion of the instep composed of sole and instep yarns, said structure being made up of suture units each in a different wale and each comprising, in one wale, two consecutive loops of one of said yarns followed by two consecutive loops of the other of said yarns, each suture unit of four loops being in correspondence with two consecutive courses of the instep and sole.

2,437,842
MORTAR AND CEMENT COMPOSITIONS
Frank G. Uhler, Alexandria, Va.
No Drawing. Application March 25, 1946, Serial No. 657,062
9 Claims. (Cl. 106—90)



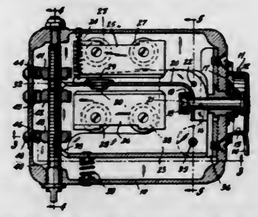
9. The process of increasing the hardness and decreasing the time required for the initial and final "set" of cements and mortars which comprises incorporating water and a water soluble alkanol amine with a mortar material selected from the class consisting of Portland cement and lime, said water soluble alkanol amine being present in an amount not less than 5.3% based on the weight of the mortar material and not more than 42.8% based on the weight of lime and not more than 35.7% based on the weight of Portland cement.

2,437,843
RESILIENT BUSHING
Henry E. Van Ness, Elmira, N. Y.
Application June 6, 1945, Serial No. 597,741
2 Claims. (Cl. 285—160)



1. In a joint between telescopic pipe or rod ends having internal and external screw threads respectively, means for sealingly connecting the ends together comprising a resilient bushing of rubber-like material having external and internal threads on its outer and inner walls respectively engaging those of the pipe or rod ends respectively.

2,437,844
WHEEL SUSPENSION
Nils Erik Wahlberg, Chicago, Ill., and Gustav V. Hedstrom, Kenosha, Wis., assignors to Nash-Kelvinator Corporation, Kenosha, Wis., a corporation of Maryland
Application January 22, 1942, Serial No. 427,706
14 Claims. (Cl. 280—96.2)

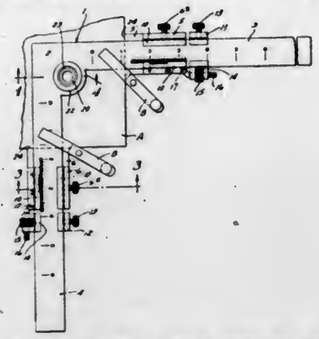


1. Wheel suspension structure for an automobile comprising a generally vertical king pin secured to said automobile, a sleeve positioned telescopically about said king pin and movable longitudinally and rotatably with respect thereto, wheel supporting structure carried by said sleeve, a rigid cylindrical member fixed relative to said automobile and having one end positioned about said king pin and intermediate of the ends thereof, a tubular spring formed of deformable material, rings of rigid material bonded to the ends of said spring and having rim portions extending out of said deformable material, and a bearing positioned on top of said sleeve, the rim portion of the ring at the top of said sleeve being engageable with said bearing, the rim portion of the ring at the bottom of said sleeve being engageable with the end of said rigid cylindrical member.

2,437,845
WINDSHIELD COVER
Ralph S. Wyeth, Newark, Ohio
Application April 7, 1945, Serial No. 587,145
5 Claims. (Cl. 296—84)

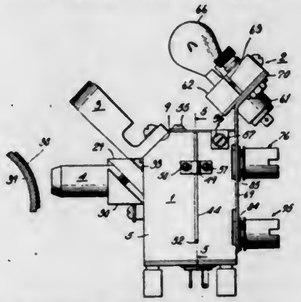
1. A windshield protector comprising a flexible cover sheet of the size adapted to extend completely over the outer surfaces of a motor vehicle windshield and at least partially the side windows of a motor vehicle, fastening cables extending rearwardly from the sides of said cover sheet, and fastening means carried by the ends of said cables for detachably connecting the same with the rear wheel fenders of an associated vehicle.

2,437,846
FOLLOW-UP CONTROL
John O. Yeida, Herculaneum, Mo., assignor, by mesne assignments, to Missouri Automatic Control Corporation, a corporation of Missouri
Application October 25, 1943, Serial No. 507,556
15 Claims. (Cl. 318—32)



1. In a control, a power means, a motive means operable to effect operation of the power means, and mechanism to control operation of the power means in response to movements of the motive means, comprising a control device adapted to be displaced from an initial position in one direction to effect operation of the power means, and in the other direction to stop operation thereof, a member interposed between the motive means and the control device to apply movement of the former to the latter, a driven element operated upon operation of the power means, and engaging means operated by the driven element displaced in accordance to the amount of movement thereof, and adapted to engage the interposed member to displace the same to maintain the control device in its initial position after predetermined movement of the power means, regardless of the position of the motive means.

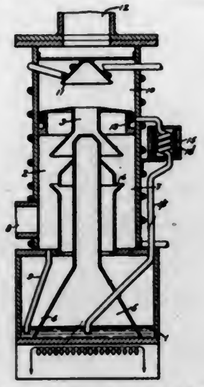
2,437,847
PRECISION LOCATING TOOL
Alfred A. Zeise, Minneapolis, Minn.
Application May 2, 1946, Serial No. 666,649
2 Claims. (Cl. 33—189)



2. In a device of the class described, a frame comprising a body portion and a pair of arms

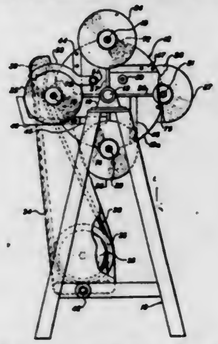
projecting therefrom at right angles to one another and in the same plane, linear scale indicia on said arms, work piece engaging blocks longitudinally slidably mounted on said arms, scale indicia on said slide blocks cooperating with the

scale indicia on said arms, means for locking said slide blocks on said arms, and a drill-receiving opening in said central body portion having its axis coincidental to the point of intersection of the work-engaging faces of said slide blocks.



2,437,848
SUPPORT FOR ELECTROOPTICAL APPARATUS
Austin G. Cooley, New York, N. Y., assignor to Times Facsimile Corporation, a corporation of New York
Application December 30, 1944, Serial No. 570,602
3 Claims. (Cl. 248—295)

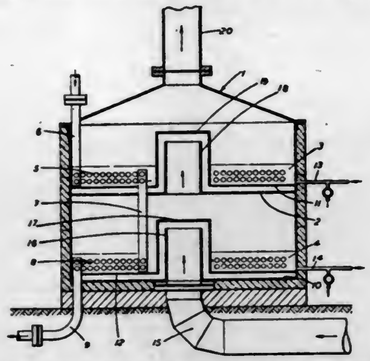
1. An electro-optical unit comprising a lens system, a lamp, means to support said lamp in optical alignment with said lens system, a pair of eccentric pivots for said lamp support means, said pivots being rotatable independently of each other and thereby to adjust said lamp support means in mutually perpendicular and coplanar directions.



2,437,849
PUMP
Joseph H. Cox, Pittsburgh, August P. Colaiaco, Wilkinsburg, and Herbert A. Rose, Pittsburgh, Pa., assignors, by mesne assignments, to the United States of America, as represented by the United States Atomic Energy Commission
Application November 8, 1944, Serial No. 562,518
7 Claims. (Cl. 230—101)

1. A multistage diffusion pump comprising a boiler compartment for each pump stage, a condensing chamber for each pump stage, a separate condensate return from each condensing chamber to the respective boiler chamber and heating

means associated with one of said condensate returns.



2,437,850
GRINDING APPARATUS
William O. Dennis, San Dimas, Calif.
Application June 13, 1947, Serial No. 754,339
16 Claims. (Cl. 51—166)

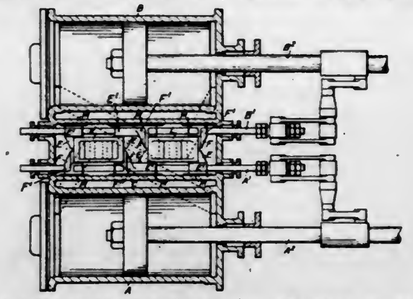
1. A grinder comprising a reel rotatably mounted on a supporting stand, a plurality of shafts rotatably mounted to the reel, grinding elements mounted on the respective shafts, and drive means adapted to cause rotation of individual ones of the shafts as the reel is rotated to engage the shafts with the drive means.

2,437,851
COOLING OF FLUIDS
Robert Cowell Godfrey, London, England, assignor to The British Oxygen Company Limited, London, England, a British company
Application November 18, 1944, Serial No. 564,075
In Great Britain January 21, 1944
6 Claims. (Cl. 62—168)

4. Apparatus for cooling a fluid by heat interchange with a gaseous coolant, comprising a plurality of containers each adapted to contain a mass of liquid, a tubular element in each said container located below liquid level, said tubular elements being serially inter-connected for conveying the fluid through the apparatus and an inlet to each said container for a gaseous coolant arranged below the tubular element, the arrangement being such that the gaseous coolant traverses the liquid in each container in succession, the direction of flow of the gaseous

coolant with respect to the successive masses of liquid being in a direction counter to that of the fluid with respect to the successive masses of liquid.

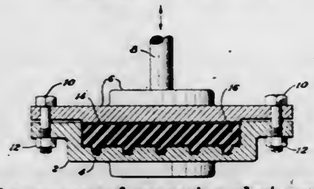
2,437,852
PROCESS FOR SEPARATING DIACETONE AND MONOACETONE SORBOSE
William R. Graff, Plainfield, and William S. Harmon, Elizabeth, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application September 30, 1944, Serial No. 556,676
13 Claims. (Cl. 260—338)



1. The process that comprises continuously distilling a neutral to mildly alkaline solution composed predominantly of acetone, monoacetone sorbose, diacetone sorbose and water to remove volatile fractions composed of acetone and acetone polymers, and at the same time continuously withdrawing as bottoms an aqueous mixture containing monoacetone sorbose and diacetone sorbose essentially free of volatile components.

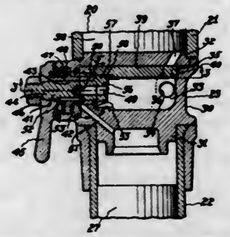
2,437,853
PREPARATION OF DIHYDROXANTHOPTERIN AND XANTHOPTERIN
George H. Hitchings, Tuckahoe, N. Y., assignor to Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York
No Drawing. Application December 1, 1943, Serial No. 512,479
3 Claims. (Cl. 260—251)

1. The process of preparing dihydroxanthopterin comprising the steps of heating 5-chloroacetamino - 2,4 - diamino - 6 - hydroxypyrimidine with excess sodium bicarbonate, and recovering dihydroxanthopterin.



2,437,854
SLIDE VALVE ASSEMBLY FOR THE FLUID PRESSURE POWER CYLINDERS OF DUPLEX RECIPROCATORS
George Kirkpatrick Johnstone, Glasgow, Scotland, assignor to J. H. Carruthers & Company Limited, Glasgow, Scotland, a corporation of Great Britain
Application June 5, 1945, Serial No. 597,706
In Great Britain November 17, 1943
2 Claims. (Cl. 121—114)

1. A slide valve assembly for the fluid pressure power cylinders of a duplex reciprocator, including a valve chest, two main slide valves and two cut-off valves operating on the backs of said main valves within said valve chest, two valve-actuating reciprocatory spindles, lugs attached to said spindles, the lugs on each spindle engaging one



main slide valve and one cut-off valve so as to impart reciprocating movements to said valves, and guide-forming members carried by said spindles and engaging guide surfaces within said valve chest.

2,437,855
VENEERING ELASTOMERS
Elden Earl Leach, Jr., Norristown, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application October 20, 1942, Serial No. 462,755
12 Claims. (Cl. 18—59)

1. The process of veneering elastomers which comprises applying to the surface of a hot mold a coating of a vulcanizable veneering elastomer composition in an inert volatile liquid, drying the coating, placing in the coated mold a mass of a different vulcanizable elastomer composition, applying pressure to force such mass to conform to the mold and then vulcanizing the compositions in the mold.

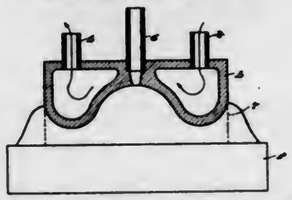
2,437,856
PRESSURE FLUID CONTROLLING DEVICE
Paul A. Lincoln, Bloomsbury, N. J., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application March 17, 1943, Serial No. 479,455
1 Claim. (Cl. 277—19)

In a pressure fluid controlling device, the combination of a casing having a reservoir for pres-

sure fluid and a pair of outlets and an inlet for the reservoir, a throttle valve of the rotary plate type to control communication between the reservoir and one of the outlets, teeth on a portion only of the periphery of the throttle valve, a rotary plug valve arranged perpendicularly to the axis of rotation of the throttle valve capable of movement independently of the throttle valve and having a passage to afford communication between the reservoir and the other outlet, and teeth on the end of the plug valve for selective engagement with the teeth on the throttle valve for transmitting rotary movement from the plug valve to the throttle valve.

2,437,857
TERPENE PRODUCT
Donald A. Lister, Brunswick, Ga., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 11, 1945, Serial No. 593,311
1 Claim. (Cl. 260—631.5)

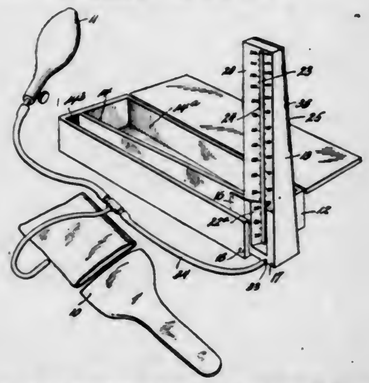
A water-soluble unsaturated trihydric terpene alcohol prepared by the oxidation of terpinolene, the hydroxyl radicals of which alcohol are secondary and tertiary hydroxyls, two of the hydroxyl radicals being attached to adjacent carbon atoms, said alcohol also having one double bond per molecule and being characterized by the capacity of forming white, triclinic crystals having a melting point of 121°–122° C. and a refractive index of about 1.54 when crystallized from aqueous acetone.



2,437,858
PROCESS FOR TREATING DIACETONE SORBOSE AND MONOACETONE SORBOSE
John F. Mahoney, Westfield, and Henry H. Bassford, Jr., Garwood, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application September 30, 1944, Serial No. 556,674
8 Claims. (Cl. 260—338)

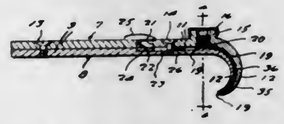
1. In a process for producing diacetone sorbose the step that comprises neutralizing an acidic mixture containing acetone, monoacetone sorbose, and diacetone sorbose by adding said mixture with agitation to an aqueous alkaline solution, the amount of water present being merely sufficient to dissolve substantially all of the salt formed during neutralization, separating the salt formed during neutralization from the neutralized mixture as a saturated aqueous solution, and recovering an acetone solution immiscible with said saturated aqueous solution and containing substantially all of the monoacetone sorbose and diacetone sorbose and a small amount of water.

2,437,859
PROCESS OF PREPARING FRESH GREEN VEGETABLES
Orville Lee Moulthrop, Selma, Calif., assignor to Western Frozen Foods Co., Fresno, Calif., a corporation of California
No Drawing. Application June 25, 1945, Serial No. 601,544
6 Claims. (Cl. 99—154)



1. In a process of preparing fresh green vegetables for freezing, the steps of: subjecting fresh green vegetables to the action of a forcible spray of an aqueous salt solution at a temperature of between about 100° F. and 130° F. for a period of from about 25 seconds to 60 seconds, said solution having a sodium chloride content of between about 20% and 30% by weight at 60° F., while permitting excess solution to drain from the vegetables, and then subjecting the wet vegetables to the action of steam to raise the temperature thereof to about 190° F.–210° F. within a period of less than 5 minutes, and then rapidly cooling the vegetables to inhibit cooking of the vegetables.

2,437,860
METHOD OF MANUFACTURING OPTICAL ELEMENTS
Herre Rinia, Eindhoven, Netherlands; vested in the Attorney General of the United States
Application January 15, 1941, Serial No. 374,597
In the Netherlands October 10, 1939
4 Claims. (Cl. 18—58)



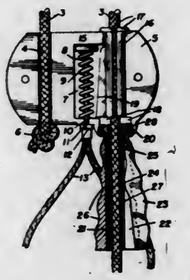
1. A method of manufacturing an optical element of a material which may gel in solution, comprising the steps of placing a quantity of the material in solution upon the surface of a support to which the gelled material adheres, forming the said material in solution into a gelled mass having thicknesses and thickness variations substantially proportional to and greater than those of the element to be formed and length dimensions substantially the same as those of the element to be formed, and desiccating said mass while on the support whereby the thicknesses and thickness variations of said mass are reduced to those of the element to be formed and the said length dimensions are maintained substantially constant.

2,437,861
SPHYGMOMANOMETERS
Charles B. Rohr, Alum Bridge, W. Va.
Application June 8, 1944, Serial No. 539,316
3 Claims. (Cl. 128—2.05)

1. A sphygmomanometer comprising in combination, a mercury chamber having a duct in the wall thereof through which the interior of the chamber may communicate with the surrounding atmosphere and through which air under pressure may be introduced into the chamber, a tube projecting into said chamber the end of which within the chamber is open and is spaced from the chamber bottom, an air chamber in constant communication with the interior of said tube at a point remote from that end thereof which is located within the mercury chamber, the duct or passage connecting the air chamber and tube permitting the ready flow of air therethrough but preventing the passage of mercury, a body of mercury within the mercury chamber and closing the end of the tube within said chamber when the tube is disposed in operative substantially vertical position, displacement of the mercury bringing the interior of the tube, and the interior of the air chamber, into communication with the mercury chamber, whereby atmospheric pressures in said chambers may be equalized.

2,437,862
MAGAZINE RAZOR BLADE HOLDER
Ardie A. Rouse, Orange, Tex.
Application May 14, 1946, Serial No. 669,592
3 Claims. (Cl. 30—40)

1. A magazine razor blade holder comprising a body composed of a pair of substantially similar superimposed sections, means separably securing said sections together, said body comprising a reduced relatively straight handle part terminating at its forward end in a relatively wide, generally rectangular shaving head part having its forward portion thereof curvedly downturned, a blade receptacle on the upper section of the shaving head for containing a stack of blades, blade passage means formed in said shaving head between said sections, and blade-feeding means longitudinally slidably mounted in channel means formed between the sections in said handle part, said channel means communicating with said blade passage means, said blade-feeding means comprising a finger piece projecting through a slot formed in one of the said sections, a shank working in said channel means, and a yoke working in said blade passage means, said yoke in the retracted position of said blade-feeding means being positioned to the rear of the stack of blades and arranged to push the lowermost blade of the stack forwardly into said blade passage means upon forward operation of said blade-feeding means.



2,437,863
CIRCUIT BREAKER MOVABLE CONTACT
William Maxwell Scott, Jr., Bryn Mawr, Pa., assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa., a corporation of Pennsylvania
Original application June 10, 1940, Serial No. 339,689, now Patent No. 2,375,328, dated May 8, 1945. Divided and this application December 30, 1943, Serial No. 516,218
2 Claims. (Cl. 200—171)

1. A movable contact structure for switching apparatus having a contact movable into and out of engagement with a complementary contact, said movable contact structure comprising a contact arm oscillable between two predetermined positions, a contact lever carrying said movable contact on one end thereof, a pivot pin, the back of said contact arm having a part-cylindrical depression and the front of said lever having a corresponding part-cylindrical depression, the two depressions when in correspondence forming a cylindrical opening for receiving said pivot pin, means on said pin for preventing lateral movement thereof, and a spring member extending between said arm and lever at right angles to said pivot pin for maintaining the inside surface of said part-cylinder formed in said lever in abutting engagement with said pin and for maintaining the inside surface of said part-cylinder formed in said arm in corresponding opposed abutting engagement with said pin, a first connection stud connected to said complementary

contact, a second connection stud, a circuit connection from said second connection stud to the other end of said contact lever opposite from the end carrying said contact, the circuit path from said first to said second connection stud through said contacts and contact lever forming a loop, said circuit connection from said second stud including a pigtail connection extending substantially from the end of said lever in a direction to increase the effective length of said lever, the distance from said pivot point of said lever on said arm to the second connection stud being thereby greater than the distance from said pivot point to the engaging contacts to provide a blow-on action of said contacts.

2,437,864
FIRE ESCAPE
Elmer B. Staley, Natrona Heights, Pa.
Application December 10, 1946, Serial No. 715,266
5 Claims. (Cl. 227—30)

1. A rope or cable and pulley type fire escape including a supporting pulley, a rope or cable supported thereby, a housing secured to one end of said rope or cable, rope clamping jaws in said housing, said rope or cable extending between said jaws, a body supporting loop attached to said housing, a cam shoulder on one of said jaws, and means on said loop engageable therewith when a body is in said loop for controlling the operation of said fire escape.

2,437,865

METHOD OF ELECTRODEPOSITING COPPER AND BATHS AND COMPOSITIONS THEREFOR

Jesse E. Stareck, Detroit, Mich., assignor to United Chromium, Incorporated, New York, N. Y., a corporation of Delaware

No Drawing. Application September 25, 1943, Serial No. 503,846
7 Claims. (Cl. 204—52)

7. A method of depositing dense and adherent copper characterized by the bath having a pH between 6.5 and 7.5, and in which the bath consists essentially of 7.5 to 45 g./l. bivalent copper, 100 to 250 g./l. pyrophosphate (P_2O_7), and 5 to 20 g./l. nitrate (NO_3).

2,437,866

METHOD FOR THE PREPARATION OF 1-CHLORO - 3 - BROMO - 2 - (2-CHLOROETHOXY)-PROPANE AND THE COMPOUND PREPARED

Robert M. Vance, Cleveland, Ohio, and Amos G. Horney, Plattsburg, N. Y., assignors to Air Reduction Company, Incorporated, New York, N. Y., a corporation of Delaware

No Drawing. Application August 14, 1947, Serial No. 768,702
7 Claims. (Cl. 260—614)

1. A new chemical compound, 1-chloro-3-bromo-2-(2-chloroethoxy) - propane, with the structural formula:

2. The method of preparing 1-chloro-3-bromo-2-(2-chloroethoxy)-propane which comprises reacting allyl bromide with ethylene chlorohydrin and chlorine.

2,437,867

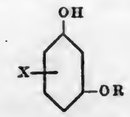
ORGANIC ISOCYANATES

John Joseph Verbanc, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application June 1, 1946, Serial No. 673,887
19 Claims. (Cl. 260—453)

1. An organic isocyanate which, except for the —NCO groups, consists of carbon and hydrogen, having admixed therewith from about 0.3% to about 5.0% of an organic carboxylic acid halide which, except for the

consists of carbon and hydrogen.



2,437,868

DIAZOTYPE LAYERS CONTAINING RESORCINOL MONOESTERS

William H. von Glahn, Loudonville, and Lester N. Stanley, Delmar, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application June 22, 1946, Serial No. 678,676
8 Claims. (Cl. 95—6)

1. As new products, light-sensitive layers on a suitable base containing a suitable light-sensitive diazo compound and an azo coupling component selected from the class represented by the formula

wherein R is an acyl radical and X is a member of the class consisting of hydrogen and substituents which do not adversely affect coupling capacity.

2,437,869

PHENANTHRIDINE DERIVATIVES

Leslie Percy Walls, Teddington, England, assignor to The Imperial Trust for the Encouragement of Scientific and Industrial Research, Westminster, England

No Drawing. Application February 2, 1945, Serial No. 575,931. In Great Britain January 3, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires January 3, 1964
3 Claims. (Cl. 260—286)

1. Quaternary 2:7-diamino-9-phenyl-10-alkyl phenanthridinium salts.

2. A new compound, 2:7-diamino-9-phenyl-10-methylphenanthridinium bromide which is soluble in water and has trypanocidal properties.

3. A new compound, 2:7-diamino-9-phenyl-10-methylphenanthridinium chloride which is soluble in water and has trypanocidal properties.

2,437,870

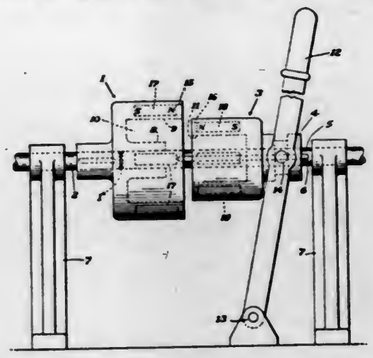
PROCESS OF TREATING SULFIDIC TUNGSTEN ORE CONCENTRATES

Thomas Jefferson Williams, Buenos Aires, Argentina

No Drawing. Application September 29, 1942, Serial No. 460,118
6 Claims. (Cl. 23—22)

6. A process of purifying sulphidic tungsten ore concentrate containing bismuth sulphide which comprises mixing the concentrates with sodium nitrate and manganese dioxide, the ratio of sodium nitrate to manganese dioxide being between 8:1 and 4:1, contacting the mixture with an acid of the group consisting of hydrochloric acid, sulphuric acid and mixtures thereof, thereby forming free tungstic oxide and an acid solution containing dissolved bismuth compounds, separating the acid solution from residual concentrates comprising finer grains and coarser grains, recovering the bismuth compounds from the acid solution, separating the finer grains from the coarser grains of the residual concentrate, and leaching the finer grain sizes with a solvent selected from the class consisting of ammonia and alkaline solutions so as to recover the free tungstic oxide as tungstates.

2,437,871



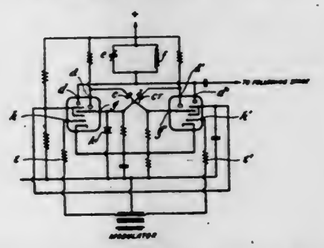
MAGNETIC COUPLING

Alfred R. Wood, Portland, Maine

Application February 9, 1943, Serial No. 475,320
3 Claims. (Cl. 172—284)

1. A clutch comprising a driving member and a driven member, one of said members being slidable with reference to the other, each of said members including annular portions of non-magnetic material, the outside diameter of one of which is less than the inside diameter of the other so that one of said portions may nest within the other without contact therewith, a set of

spaced permanent magnets of the bar type carried by each of said annular portions so that the magnetic action is effective to couple said members when said portions are nested, each set of magnets being disposed parallel to the other set



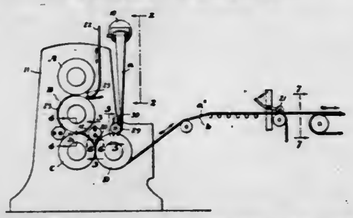
and to the axis of the members with all the north poles of each set being radially alined but disposed in a direction opposite to the other set, and means to slide one of said members relative to the others thereby to bring the annular portions into and out of their nested relation.

2,437,872

PHASE MODULATOR

Christopher E. G. Bailey, Bournemouth, England, assignor to The Mullard Radio Valve Company Limited, London, England, a British company

Application September 14, 1944, Serial No. 554,130
In Great Britain February 5, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires February 5, 1963
5 Claims. (Cl. 179—171.5)



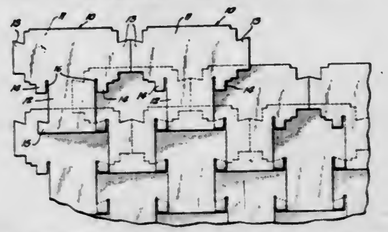
1. Apparatus for producing a phase modulated wave with substantially zero amplitude modulation, comprising a multivibrator type oscillation generator comprising two discharge tubes each having a cathode, a control grid and an anode, coupling capacitors having capacitance values of the order of magnitude of the grid-anode capacitance of said tubes cross-connecting the grids and anodes of said tubes and means to place said oscillation generator in condition for oscillation at a given frequency and to maintain the grids of said tubes at potentials substantially 90° out of phase with respect to each other, said means comprising an element having an inductive reactance at said frequency, means to derive from said grids two voltages substantially 90° out of phase with respect to each other, means to amplitude modulate each of said voltages, and means comprising a common output circuit for combining said modulated voltages to produce a phase modulated wave having substantially zero amplitude modulation.

2,437,873

METHOD OF MAKING VEHICLE TIRES

Chalmer L. Beward, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Application February 2, 1942, Serial No. 429,140
10 Claims. (Cl. 154—9)



1. A method of preparing composite tread and side wall strips having a tread portion and a base portion of different rubber compounds, which comprises forming a tread strip by shaping a relatively wear-resistant compound to a strip having suitable width for forming the road contacting surface of a tire, separately shaping a different rubber compound, of a type suitable for side wall coverings of a tire, to a base strip having greater width than that of said tread strip, feeding said tread strip against said base strip, and while retaining said tread strip in a form having a curved transverse and longitudinal section causing flow of rubber compound of said base strip of substantially uniform transverse thickness to form longitudinal ridges underlying the edge portions of said tread strip.

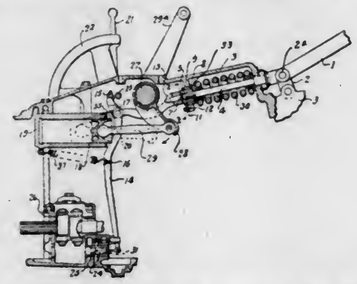
2,437,874

SHINGLE

James E. Black, Chicago, Ill., assignor to James E. Black, Elam L. Black, Whitfield J. Black, and Virginia Black, a partnership doing business as Black Systems, Chicago, Ill.

Application June 7, 1945, Serial No. 598,131
2 Claims. (Cl. 108—7)

1. A shingle of flexible weather resistant material comprising a head portion having parallel lateral edges, three downward projections from the head portion which are severally integral with the head portion but otherwise separate and distinct from each other, two of said three projections being symmetrical locking tabs substantially spaced from each other and equidistantly spaced inwardly from the lateral edges of the head; the other of said three projections being a shank portion substantially wider than and lying between and adjacent to said locking tabs and extending substantially downwardly beyond



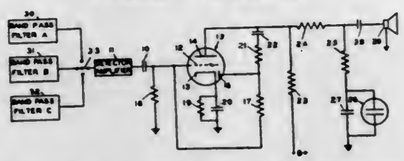
them, and a pair of locking tab engaging tabs projecting laterally in opposite directions from the lower end of the shank portion, each of said locking tabs being adapted to flex relative to the head portion on a transverse line of flexure without causing wind pocket forming flexure of the proximate lateral edge of the shank portion.

2,437,875

AUTOMATIC DEPTH CONTROL FOR GROUNDWORKING IMPLEMENTS

John M. Chambers and Ernest V. Bunting, Dearborn, Mich., assignors to Harry Ferguson, Inc., Dearborn, Mich., a corporation of Delaware

Application January 10, 1945, Serial No. 572,158
10 Claims. (Cl. 97—50)



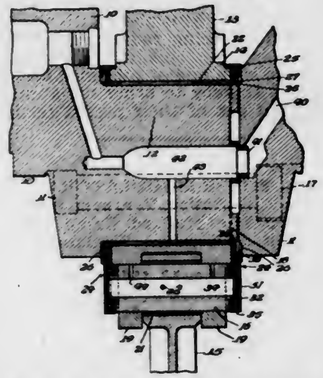
1. In an automatic depth control for groundworking implements of the type in which a link and control rod are moved by forces resulting from an implement working in the ground to operate mechanism to control the depth of the implement in the ground, a spring for resisting said forces, means for making said spring effective to resist said forces coming through the said link and rod and also effective to resist tension forces applied to said link and rod when the forces are insufficient to overcome the moment of the implement due to its weight and leverage, said means comprising a member on the control rod for applying a forward movement of the control rod to the spring, a second member for applying rearward movement of the control rod to the spring, and spring supports at each end of the spring for holding the spring while the movement is applied by one of said members to the opposite end of the spring.

2,437,876

SIGNAL RECEIVER AND WARNING DEVICE

Seymour B. Cohn, Cambridge, Mass., assignor to the United States of America, as represented by the Secretary of War

Application July 9, 1945, Serial No. 604,068
3 Claims. (Cl. 250—20)



3. In radio receiving circuits, a diode-triode vacuum tube, means for impressing a signal voltage on the grid of the triode portion of said tube, means associated with said triode portion to amplify said signal voltage, audio indicator means for reproducing all received signals, other means including the diode portion of said tube for rectifying said amplified signal voltage and for feeding said amplified and rectified voltage back to said grid whereby the potential on the plate of said triode portion is increased proportionally to the amplitude of the received signal, and a normally non-operative relaxation oscillator, means to impress the varying plate potential on said oscillator, said oscillator being adapted to oscillate when a potential in excess of a predetermined value appears on said plate, said potential resulting from a received signal having an amplitude in excess of a predetermined value, said audio indicator means being responsive to said relaxation oscillator in its operative state.

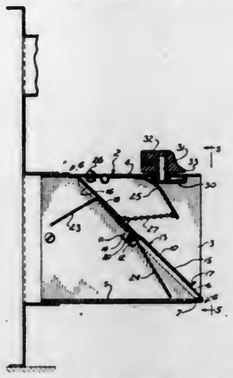
2,437,877

LINK-PIN RETAINING DEVICE FOR RADIAL ENGINES

William Robert Dittmar, Williamsport, Pa., assignor to Avco Manufacturing Corporation, a corporation of Delaware

Application July 4, 1945, Serial No. 603,159
8 Claims. (Cl. 74—580)

1. In a radial engine, which comprises: a shaft with a crank-pin, means for conducting lubricant to the periphery of the crank-pin, a master connecting rod on the crank-pin, a series of link connecting rods, a series of link-pins journalled in said master rod and on which the link-rods are journalled, and provided with means for conducting lubricant to their bearings in the master rod and to the bearings for the link-rods on the link-pins, and a pair of retainers at the sides of, for holding the link-pins axially in, and secured to move with the master rod, provided with recesses into which the end-portions of the link-pins extend and ducts for lubricant from the crank-pin to the recesses; interfitting parts integral with one of the end-portions of the link-pins and one of the retainers, for securing the link-pins against rotation in the retainers.



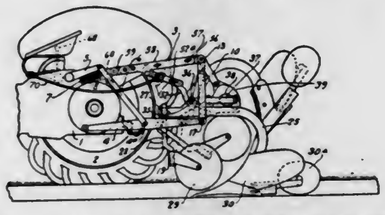
2,437,878

THERMOSTATIC DAMPER CONTROL

John G. Dunville, Chicago, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York

Application June 7, 1943, Serial No. 489,894
4 Claims. (Cl. 236—93)

1. In combination with a stove or the like, an air supply duct therefor, a pivotally mounted main damper for said duct initially biased to closed position, said main damper having an aperture, a pilot damper pivoted coaxially with the main damper and dimensioned to close said aperture, biasing means urging the pilot damper toward open position relative to said aperture, temperature responsive means connected to said pilot damper holding it closed at a predetermined



temperature and operative to release it from closed position in response to a drop in temperature, and a lost motion connection through which the pilot damper then acts to bias the main damper toward open position in response to a further drop in temperature.

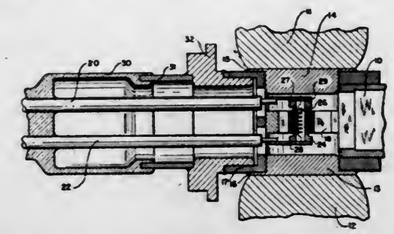
2,437,879

TWO-WAY PLOW

Henry George Ferguson, Arlington, Belfast, Ireland

Application April 14, 1944, Serial No. 531,018
32 Claims. (Cl. 97—29)

1. In combination a tractor including a power unit, hitch means for connecting an agricultural implement to the tractor comprising link means adapted to be raised and lowered by said power unit and a two-way plough carried by said link means comprising two ploughs capable of relative up and down movement so as to be selectively engageable with the soil, and change-over means for causing said relative up and down movement between the ploughs, said change-over means being connected to the link means so as to be actuated automatically as a result of vertical movement of said link means.



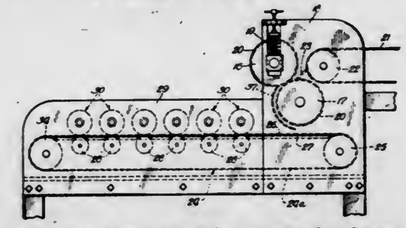
2,437,880

CATHODE SUPPORT STRUCTURE

Polykarp Kusch, New York, N. Y., assignor to the United States of America as represented by the Secretary of War

Application July 9, 1945, Serial No. 604,073
4 Claims. (Cl. 250—27.5)

1. A thermionic tube, including a cylindrical anode structure, a cathode structure, and radially extending lead-in wires connected to said cathode, said wires, holding the axis of said cathode displaced by a small amount from the axis of said anode when the tube is de-energized, said wires being affected by current through the



cathode and general heating of said tube causing the axis of said cathode and the axis of said anode to be substantially colinear after the tube has been energized and reached an operating thermal equilibrium.

2,437,881

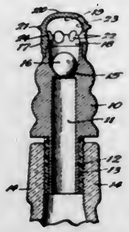
CRUSHING ROLL APPARATUS FOR REDUCING TO POWDER MATERIALS PACKAGED IN TABLET FORM

Frederick A. Lobley and Walter E. Lowell, Elkhart, Ind., assignors to Miles Laboratories, Inc., Elkhart, Ind., a corporation of Indiana

Application January 12, 1944, Serial No. 517,924
8 Claims. (Cl. 241—159)

1. In means for reducing to powder form materials packaged in tablet form by sealing the tablets in protecting envelopes each with a space therein extending about the enclosed tablet and marginal portions extending outwardly from said space and bonded together peripherally about the tablet, primary crushing rolls, means for delivering the packaged tablets edgewise to said rolls, secondary crushing rolls, a conveyor passing beneath said secondary rolls for delivering edgewise thereto the envelopes discharged from said primary rolls, and means for reversing the envelopes discharged from said primary rolls so that the following and leading edges thereof, while passing through said primary rolls, become the leading and following edges and depositing the envelopes in such reversed position upon the upper face of said conveyor, the latter providing a substantially continuous flat surface supporting the envelope and cooperating with said secondary rolls during the secondary crushing operation.

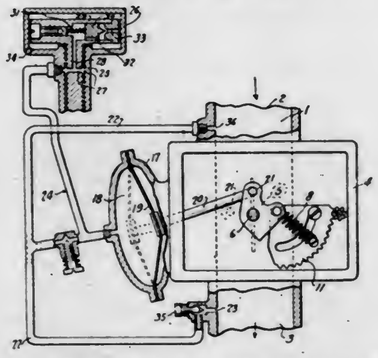
2,437,882



BOTTLE CLOSURE

Leo M. Mallick, Chicago, Ill.

Application September 4, 1945, Serial No. 614,097
3 Claims. (Cl. 215—75)



1. A bottle closure comprising a casing having a longitudinal drain passage therethrough, said casing having an end portion adapted to be received within the neck of a bottle and the other

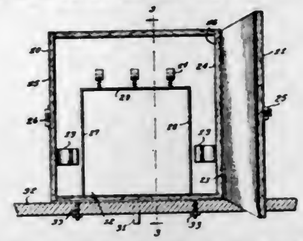
end portion providing a valve seat in said passage and a chamber enclosing said seat, and a ball in said seat heavier than the liquid in the bottle and adapted to seal the passage when the bottle is in an upright position, said casing being provided above said valve seat with a continuous series of closely-spaced openings extending around the casing, said chamber extending beyond said openings and providing a recess adapt-

ed to receive said ball when the bottle is tipped to pouring position without closing any of said openings, said openings being located between said recess and said seat and being large enough to arrest return movement of said ball toward said seat when said bottle is tilted slightly past drain-back position by releasing said ball for return to its seat when a sharper angle of tilt in the drain-back position has been reached.

2,437,883
ENGINE GOVERNOR
Marion Mallory, Detroit, Mich.
Application September 7, 1945, Serial No. 614,910
7 Claims. (Cl. 137—153)

1. A governor for an internal combustion engine having an intake passageway, comprising a throttle valve controlling the flow of motive fluid through said intake passageway, a device actuated by changes in pressure in the intake passageway on the intake passageway outlet side of said valve for imparting movement to said throttle valve, said pressure actuated device tending to move said throttle valve toward closed position in response to a fall in said intake passageway pressure, a valve shaft for supporting said valve, a lever on said shaft, and resilient means connected to said lever tending to open said throttle valve, said resilient means being constructed and arranged for continuously gaining leverage over said throttle valve as it moves toward closed position, said resilient means comprising a spring and an anchor for one end of said spring pivoted eccentrically of said throttle valve shaft and the other end of said spring being connected to said lever whereby pivoting of said anchor changes the tension of said spring.

2,437,884
METHOD FOR MAKING PLASTIC COMB HOLDERS
Charles Edgar Maynard, Florence, Mass., assignor to The Pro-Phy-Lac-Tic Company, Florence, Mass., a corporation of Massachusetts
Application September 18, 1947, Serial No. 774,709
4 Claims. (Cl. 18—47.5)

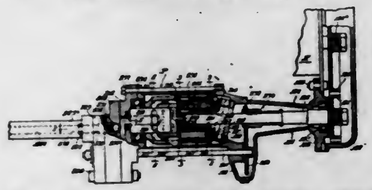


1. The method of making pocket comb holders of thermoplastic material by the use of a tubing machine and its delivery conveyor which consists in tubing the hot material without a core and with a wall thickness to permit slow collapse of the tube form, running the tube, as it is formed, in suspended condition through a working space before it reaches the conveyor, directing cooling jets of air against the outer surface of the tube form all around its circumference to chill its surface to prevent marring when it reaches the conveyor and to help support the tube form until it reaches the conveyor, before it reaches the conveyor squeezing the tube together by identical mechanical action on opposite sides of the tube to heat seal such tube over short portions spaced about double the length of the comb holders wanted, pricking the tube to vent it midway between such portions, carrying the tube form on the conveyor, for partial flattening those portions between the heat sealed portions to neatly receive the form of a comb, cooling the tube to set the material in substantially comb receiving form, and then cutting off the lengths of comb holders midway between such heat sealed portions of the tube and also across such heat sealed portions to form one closed and one open end for each of the cut off comb holders.

2,437,885
MOTOR VEHICLE REFRIGERATOR
Frank W. Merstick, Cleveland, Ohio
Application December 9, 1946, Serial No. 715,025
3 Claims. (Cl. 62—31)

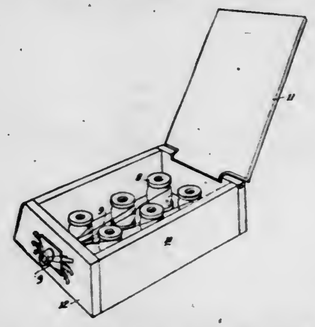
1. In a refrigerating element for motor vehicles and the like, the combination, which comprises, a box-like casing with insulated side, end, top, and bottom walls, an insulated door hinged to the front of the casing providing a substantially sealed closure therefor, a latch for securing the door in the closed position, an inner ice compartment in said casing with side and top walls spaced from corresponding walls of the casing, a drain extending from said ice compartment through the bottom of the casing, and adapted to extend through the floor of a motor vehicle in which the casing may be installed, spring clips

adapted to hold bottles and the like on the inner walls of the casing, and spring product holding



clamps in the casing in the area above the said ice compartment.

2,437,886
PROTECTING DEVICE FOR INDUSTRIAL GLOVES
Irwin W. Millard and Elmer W. Beatty, Danville, Ill.
Application August 11, 1943, Serial No. 498,174
1 Claim. (Cl. 69—21)

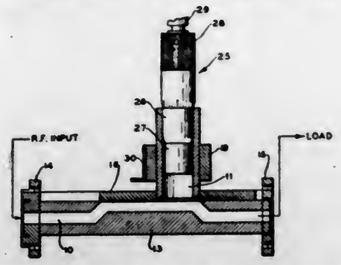


A reenforcement for an industrial glove comprising a generally T-shaped portion of thin flexible leather having one entire face thereof coated with permanently tacky adhesive, one portion of the T being adapted to overlie the glove area to be reenforced and adhesively secured to the same with the other portion of the T projecting as an anchorage strip from said one portion and adhesively secured to an adjacent portion of the glove.

2,437,887
PUMP
Carl W. Mott, La Grange, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application June 30, 1943, Serial No. 492,858
3 Claims. (Cl. 103—162)

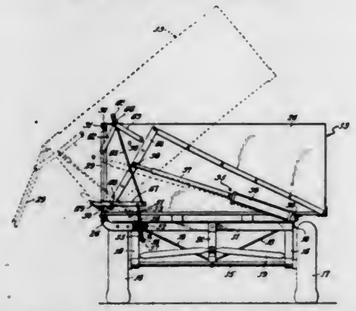
1. In a pump, a rotatable carrier having a radially extending web-like body, cylinders on one end of the carrier body with their axes generally parallel with the rotational axis of the carrier and revolvable about said axis pursuant to carrier rotation, pistons reciprocable in said cylinders to cause expansion and contraction of the space therein, cylinder ports leading through the carrier to the opposite end of the carrier body, commutating means having inlet and outlet ports successively communicatively traversed by the cylinder ports respectively during expansion and contraction of the space in their associated cylinders, an annular force-reaction member encircling the carrier axis at the one end of the carrier within a plane oblique thereto to incline diametrically opposite edge portions of said member axially of the carrier, and means for pressing said pistons axially toward said reaction member to cause the pistons to alternately traverse said inclined edge portions and thereby incur the reciprocation of the pistons, the last-named means including a member having an annular force-reaction portion encircling the carrier axis at the other end of the carrier within a plane generally parallel with the first-named plane, and axially reciprocable thrust members extending axially through the carrier body between the pistons and said annular force-reaction portion.

2,437,888
THREAD CASE
Bettie Narki, Cleveland, Ohio
Application December 7, 1945, Serial No. 633,295
2 Claims. (Cl. 223—106)



2. A thread case, comprising in combination, a front end wall, said end wall having an opening therethrough, a bottom or base, posts mounted on the base retaining a plurality of equally spaced spools in normally fixed positions, each of said spools having a length of thread thereon, a free end of which passes through the opening in the end wall, said means also including a friction device mounted on the top portion of each of said posts retaining the spools in fixed positions, a spring mounted on each of the posts and engaging the inner surface of the tubular portion of a spool, a retention cutter mounted on the said front wall, said cutter including tension means capable of holding the free ends of the thread against the front end wall, the said cutter also having a tube portion mounted in the end wall opening and receiving the aforesaid threads and having a plurality of blade members engaging the same, said blades being bent at their outer free ends and recessed at their central portions, each capable of engaging and cutting one of the aforesaid threads.

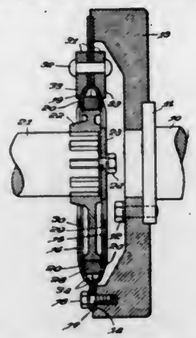
2,437,889
HIGH-FREQUENCY TUNING DEVICE
Arnold T. Nordsieck, New York, N. Y., assignor to the United States of America as represented by the Secretary of War
Application November 27, 1945, Serial No. 631,176
4 Claims. (Cl. 178—44)



4. A roving stub tuner comprising an element of conducting material having a bore extending therethrough to define a main wave guide, said bore being offset for a portion of its length to

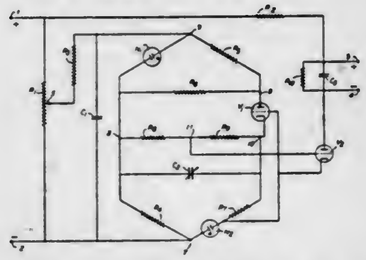
align a surface of said bore with a surface of said element thereby providing an opening along said wave guide, an overlapping sliding wall covering said opening, said sliding wall being movable along said wave guide, a stub wave guide mounted

on said sliding wall and coupled to said main wave guide by an aperture in said wall, means for adjusting the length of said stub wave guide, and means for adjusting the position of said stub wave guide along said main wave guide.



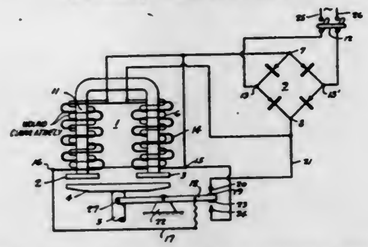
2,437,890
DUMP CART
John W. Orendorff, Canton, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application December 14, 1945, Serial No. 635,007
3 Claims. (Cl. 298—22)

1. A dump cart comprising a wheeled frame, a dump body carried on the frame, a pivoted gate on the body, pivot means connecting the body to the frame for movement thereof to and from dumping position, toggle links pivotally connected to the gate and to the body and actuable to open said gate, latch means for retaining the gate in closed position, link means connecting said latch and said toggle links at the juncture thereof, and resilient means connecting said links to the frame and operative upon movement of the dump body to dumping position to release said latch and actuate said toggle links.



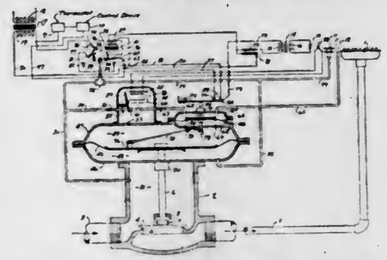
2,437,891
FLEXIBLE COUPLING
Stuart D. Pool, Moline, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application January 19, 1945, Serial No. 573,542
5 Claims. (Cl. 64—14)

1. A flexible shaft coupling comprising a hub member having a plurality of equally spaced radial projections, each projection being curved around at its projecting end and the projections being joined by curved valleys therebetween, a generally annular structure surrounding said hub member and provided with a sinuous recess therein following said projections and said valleys in spaced relation radially and overlapping the projections slightly spaced in an axial direction therefrom, said recess being partially formed by



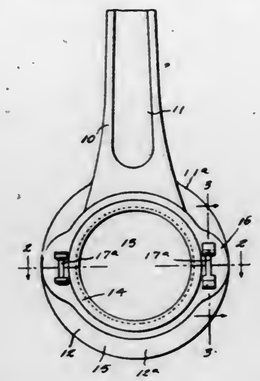
side walls inclined toward each other in a radially outward direction and a V-belt with angled side walls arranged in a sinuous manner over the projections on the hub member and in the recess of the annular structure and contacting at least the circular portions of the projections and having its angled side walls contacting the inclined side walls of the recess.

2,437,892
VOLTAGE CONTROL CIRCUIT
William R. Rambo, Cambridge, Mass., assignor to the United States of America as represented by the Secretary of War
Application October 19, 1945, Serial No. 623,420
3 Claims. (Cl. 250—36)



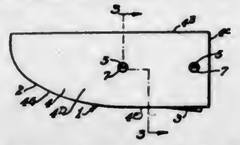
1. A pulse generator of independently adjustable pulse width and frequency comprising: a first capacitor; a main discharge circuit for said capacitor comprising a first discharge tube and resistor in series; means to charge said capacitor at an adjustable rate to determine the pulse frequency; an auxiliary discharge circuit for said first capacitor in parallel with said main circuit comprising controllable means and a second resistor and discharge tube in series, said first discharge tube and said controllable means being connected to the same terminal of said capacitor; a second capacitor having one terminal connected between said first discharge tube and resistor and the other terminal connected between said controllable means and said second resistor, means responsive to current flow in said second resistor to prevent current flow in said controllable means, and means to adjust the discharge rate of said second capacitor through said second resistor and discharge tube to determine the width of the pulse discharge through said second discharge tube.

2,437,893
ELECTROMAGNETIC OPERATOR
William A. Ray, Glendale, Calif., assignor to General Controls Co., a corporation
Application April 13, 1943, Serial No. 482,850
8 Claims. (Cl. 175—335)



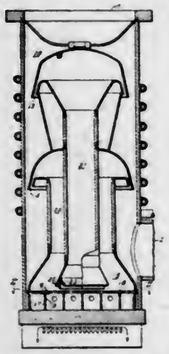
1. In an electromagnet, a magnetic member adapted to be influenced by a magnetomotive force to move from an unattracted position to an attracted position, a coil adapted to be connected to a source of electrical energy, another coil also adapted to be connected to said source, and magnetically coupled in cumulative relation to said first coil and connected to said source in parallel with the first coil, and means operated in response to substantial movement of said member from its unattracted position for successively disconnecting said other coil for parallel arrangement and short-circuiting the said other coil.

2,437,894
FUEL PRESSURE IGNITION CONTROL FOR BURNER SYSTEMS
William A. Ray, Glendale, Calif., assignor to General Controls Co., a corporation
Application January 8, 1945, Serial No. 571,722
12 Claims. (Cl. 158—117.1)



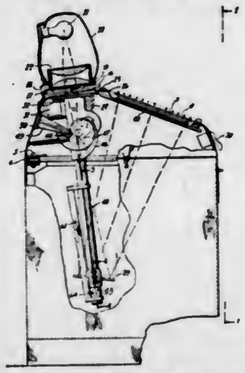
1. In a system of the character described, a fuel burner, an electrically energizable igniter for the burner, a valve for controlling the burner, switch means including a pair of contacts, a fluid pressure mechanism controlled by the fuel supply pressure for operating said valve and said switch means, a control circuit including a control device and said contacts for rendering said igniter active, and means responsive to the existence of a flame at the pilot burner for causing said pressure controlled mechanism to operate the valve to pass fuel to the burner and to render said igniter inactive.

2,437,895
CONNECTING ROD ASSEMBLAGE
Laurence Rose, Washington, D. C.
Application June 2, 1944, Serial No. 538,463
10 Claims. (Cl. 287—93)



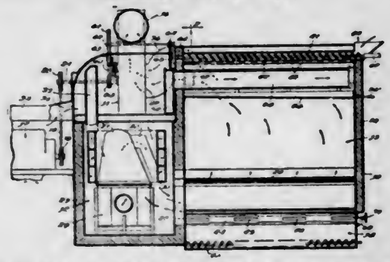
1. In connecting rod assemblies, wherein one end zone of the rod is formed with a bearing opening and is operatively mounted on a crank pin or analogous structure extending within such opening and operative to travel with the pin in a circular path, wherein the assemblage includes an insertable bearing insert mounted on the pin within the bearing opening, and wherein such rod end zone and the bearing insert are each of sectional formation to permit mounting of the assemblage on the pin and the insertion and removal of the bearing insert within the assemblage at will, the combination with such assemblage, of means for operatively securing the end zone sections together about the pin and the interposed bearing insert, said means including an insertable key formation having its lengthwise direction extending in general parallelism with the axis of the bearing insert, and a complemental slot formation in such end zone, said key and slot formations being symmetrically disposed relative to the opposing faces of adjacent sections of the end zone to operatively connect such sections and prevent separation thereof during service, a cross-section of said key formation including a web portion with a pair of spaced head portions integrally united thereto at opposite edges of the web portion and with the head portions projecting laterally beyond a side face of the web portion, the slot formation presenting the web-receiving portion of the slot as crossing the division line between the rod end-zone sections at an angle to such line, said web portion of the key having the depth of its face of gradually-increasing dimension from end to end of its active section-holding length to thereby provide a dimension of tapering characteristic between the opposing inner faces of the laterally-projecting zones of the head portions, whereby key advance after key insertion in the slot formation will cause the adjacent sections to be drawn toward each other, at least one of said key portions having an extension projecting at the advance end of the key and adapted to be bent upon an adjacent exposed face of the end zone to thereby anchor the inserted key against undesired releasing movement of the key due to vibratory effects.

2,437,896
SLIDING WALLPAPER BASE TRIMMER
Marcus Jesse Rutledge, Chicago, Ill.
Application December 29, 1944, Serial No. 570,325
5 Claims. (Cl. 30—286)



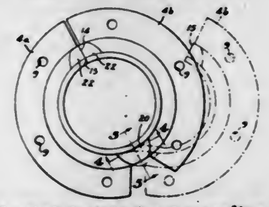
5. A wall paper trimmer which can be held wholly in the palm of the hand of a user with the rear or cutting end extending partly out of the hand for guiding its cutting position, comprising a pair of similarly shaped members forming a blade holder having flat adjacent inner faces and top and rear faces at a right angle to one another, the members being formed of cross-sections which converge to form a combined sharp or narrow leading edge consisting of a rear portion in the form of a straight line which extends forwardly from the rear face of the holder a distance equal to about the length of the cutting blade and the remaining forward portion of the leading edge extending to the forward end of the top face of the holder in the form of a parabolic curve, a pair of dowels on the inner flat face of one of said members, a cutting blade mounted on the dowels and having a triangular cutting edge portion projecting beyond said straight line portion of the leading edge of the holder near the rear face of the holder, and a pair of bolts for securely holding said members in face contact with each other with the cutting blade pressed between them.

2,437,897
PUMP
Glenn R. Stoltenberg, New York, N. Y., and August P. Colaiaco, Wilkinsburg, Pa., assignors, by mesne assignments, to the United States of America as represented by the United States Atomic Energy Commission
Application December 29, 1944, Serial No. 570,418
7 Claims. (Cl. 230—101)



1. A vacuum pump comprising a substantially cylindrical pump chamber, a plurality of axially spaced pumping jets in said chamber, a plurality of coaxial vapor passages for delivering vapor to said jets, a common boiler adapted to contain pumping liquid for producing the pumping vapor, means in closely-spaced relation above the level of said liquid for associating the vapor passages with predetermined portions of the surface of the liquid in the boiler said means including a depending baffle for impeding migration of pumping vapor, and means in said boiler for controlling the quality of the vapor evolved in the several portions of the boiler.

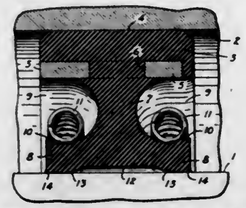
2,437,898
AUTOFOCUS PHOTOGRAPHIC ENLARGER OF THE FOLDED-LIGHT-PATH TYPE
Keith N. Swanson, Hollywood, Calif., assignor to Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Application August 4, 1945, Serial No. 608,937
8 Claims. (Cl. 88—24)



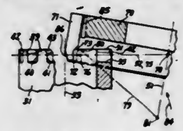
1. In a photographic enlarger, the combination of a master holder, a copy holder and a mirror so arranged that said mirror forms a folded optical path between said master and copy holders and said mirror being mounted for adjustment longitudinally of the folded portions of said optical path, a projection lens disposed between said master holder and mirror for projecting light from said master holder to said mirror and mounted for adjustment along the portion of said light path between said master holder and mirror, and adjusting means conjointly operative on said mirror and lens to simultaneously effect said adjustments thereof at predeterminately portioned velocities maintaining conjugate foci of said lens at the planes of said master and copy holders.

2,437,899
SUCTION-TYPE GRAIN DRYER AND COOLER
Albert B. Welty, Moline, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application June 19, 1944, Serial No. 540,967
4 Claims. (Cl. 34—65)

1. A grain dehydrator having an insulated housing comprising an engine, a vertical grain chamber, an auger for feeding grain along the top of said grain chamber, grain discharge rolls at the bottom of said grain chamber, said auger and discharge rolls rotatably driven by said engine, a heating plant requiring a supply of air, an air intake positioned over said engine, whereby air utilized by the heating plant is preheated, a communicating passage between the heating plant and the grain chamber, and suction means for drawing air in over the engine, through the heating plant and up through the grain chamber, said grain chamber having an auxiliary air entrance located beneath the discharge rolls and bypassing the heating plant and entering said grain chamber at a level beneath the level of the entrance of the hot air communicating passage and whereby the suction means draws cool air up from the auxiliary air entrance around the discharge rolls to mingle with the heated air in the lower portion of the grain chamber.



2,437,900
LIQUID SEAL
Thomas H. Winkeljohn, Wabash, Ind., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application December 10, 1943, Serial No. 513,663
10 Claims. (Cl. 286—5)

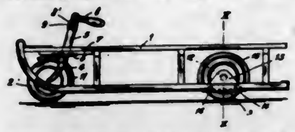


1. An oil retaining device for sealing the space between a housing and a rotatable shaft comprising a backing member to be maintained stationary with respect to said housing and having two sections; a one-piece, centrally apertured molded sealing element of a rubberlike material having a body portion permanently attached to said sections of said backing member by surface adhesion and a sealing portion with a lip adapted to bear against said shaft; said sealing element having one transverse slit between the adjacent sections of said backing member to permit relative movement between portions of said sections, one end of each section of said backing member being spaced from the end of another section nearest thereto more than the other end to permit hinged opening of said annulus to C-shape by distortion of only a relatively small portion of said body portion of said sealing element while preventing concentration of stress at adhered surfaces sufficient to cause relative surface movement between any part of said sealing element and said backing portion.

2,437,901
SEALING RING
Thomas H. Winkeljohn, Wabash, Ind., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application December 23, 1944, Serial No. 569,471
1 Claim. (Cl. 288—2)

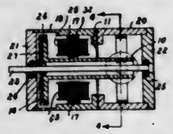
A sealing ring for insertion between concentric cylindrical surfaces comprising a body of elastic and pliable material having a positioning rim with a cylindrical face engageable with one of said cylindrical surfaces, a flexible central web integral with the rim, flexible flanges extending laterally from said web and spaced radially from said rim to form channels opening to opposite sides of the ring, an endless cylindrical metal reinforcing ring having circumferentially spaced perforations, said ring being embedded in the inner portion of said positioning rim and overlying said web with its perforations alined with the web to firmly anchor said ring and to provide a relatively rigid rim with a layer of elastic material of substantial thickness exteriorly of said reinforcing ring, and springs exerting a radial pressure upon the inner faces of said flanges.

2,437,902
METHOD OF PRODUCING FACE CLUTCHES
Ernest Wildhaber, Brighton, N. Y., assignor to Gleason Works, Rochester, N. Y., a corporation of New York
Original application November 17, 1942, Serial No. 465,862, now Patent No. 2,384,583, dated September 11, 1945. Divided and this application March 14, 1945, Serial No. 582,637
17 Claims. (Cl. 90—9.4)



1. The method of cutting and chamfering the teeth of a face clutch member which comprises employing a face mill cutter that has side cutting edges of one pressure angle extending from the tip of the cutter for part of the effective cutting height of the cutter and chamfering edges of greater pressure angle for the rest of the effective cutting height of the cutter, positioning said cutter so that, when it is at full depth cutting position, its axis will pass through points of intersection with a plane containing the clutch axis of normals to a tooth side and a chamfered surface of the work at mean points in the length of said tooth side and chamfered surface, and rotating the cutter in engagement with the work, while holding the work stationary on its axis and while effecting a relative depthwise feed movement between the cutter and the work.

2,437,903
SPORTS VEHICLE
Otto Züllig, Zurich, Switzerland
Application April 18, 1944, Serial No. 531,627
In Switzerland November 27, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires November 27, 1962
1 Claim. (Cl. 280—8)



A sports vehicle comprising a toboggan having an upper platform and lower side runners, a dirigible front wheel detachably mounted on the upper platform and a pair of rear wheels detachably mounted on the lower side runners, all of said wheels being disposed between the side

runners, the mounting for the rear wheels including bearing plates having channel portions

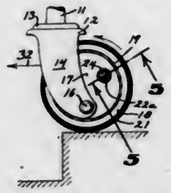
at their lower ends embracing the side runners and a cross axle for the wheels mounted in the upper ends of said bearing plate.

2,437,904
ALTERNATING CURRENT OR LIKE MOTOR WITH GYRATORY ARMATURE
Albert Ernest Adams and Dmitri Waloff, Wells, England, assignors to Scophony Limited, London, England
Application April 24, 1946, Serial No. 664,480
In Great Britain January 12, 1945
11 Claims. (Cl. 172—278)

1. A dynamo-electric device comprising a first member mounted upon a flexible support which permits gyration but prevents rotation of said first member relatively thereto, a second member mounted for rotation relatively to said first member and in rolling engagement with a part of said first member which moves in a circular path, and electromagnetic means for imparting gyratory motion to said first member to produce relative rotation between said first and second members.

2,437,905
CYANOALKYL ETHERS OF POLYHYDRIC ALCOHOLS
Herman A. Bruson, Rydal, Pa., assignor to The Resinous Products & Chemical Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Original application January 15, 1941, Serial No. 374,603. Divided and this application December 29, 1945, Serial No. 638,451
3 Claims. (Cl. 260—464)

1. Compounds of the formula:



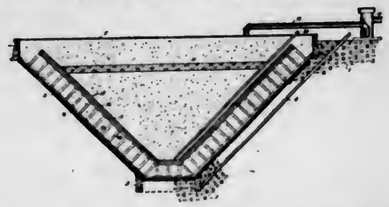
$$NCCH_2CH_2—O—A—O—CH_2CH_2CN$$

wherein A is an alkylene group having ten to twelve carbon atoms between oxygen atoms and containing from ten to eighteen carbon atoms, inclusive.

2,437,906
CYANOETHYLATION OF CARBONYLIC COMPOUNDS
Herman A. Bruson, Rydal, and Warren D. Niederhauser, Philadelphia, Pa., assignors to The Resinous Products & Chemical Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application January 3, 1946, Serial No. 638,918
3 Claims. (Cl. 260—464)

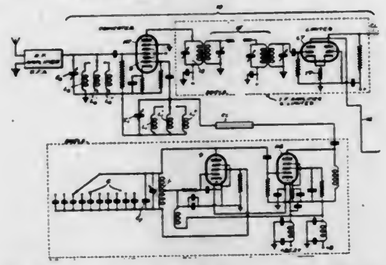
1. A process of cyanoethylating a saturated aliphatic ketone having a reactive hydrogen on the carbon atom contiguous to the carbonyl group thereof and having three to five carbon atoms which comprises reacting by condensing together ethylene cyanohydrin and said ketone at about 80° C. to about 110° C. in the presence of 0.5% to 5% (based on the weight of the reactants) of an alkaline catalyst selected from a member of the class consisting of oxides, hydroxides, amides, hydrides, and alcoholates of the alkali metals and the strongly basic quaternary ammonium hydroxides.

2,437,907
CASTER
Ervin J. Casper, Vallejo, Calif., assignor of one-half to Kenneth K. Casper, Vallejo, and one-half to William Henry Wilson, San Francisco, Calif.
Application June 12, 1946, Serial No. 676,213
7 Claims. (Cl. 16—46)



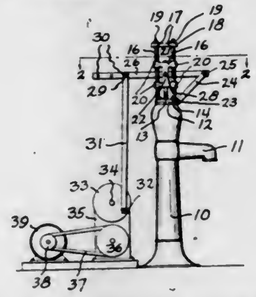
1. A caster comprising a frame, a wheel eccentrically and revolubly carried by said frame, an annulus revolubly mounted around said wheel, whereby the height of the caster is automatically self-adjustable, and means to vary selectively such self-adjustability.

2,437,908
PRINTING INKS
Caesar Frank Chiappe, Philadelphia, and John William Kroeger, Drexel Hill Plaza, Pa., assignors to Fred'k H. Levey Co., Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application May 22, 1946, Serial No. 671,666
4 Claims. (Cl. 106—30)



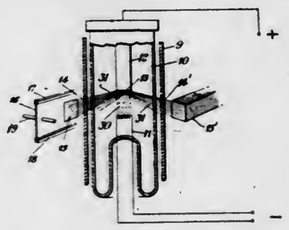
1. A printing ink consisting essentially of coloring material, a solvent consisting of an alkane diol containing five to eight carbon atoms inclusive and a resinous binder for the coloring material which is soluble in the solvent.

2,437,909
STORAGE MEANS FOR LIQUEFIED GAS
Howell C. Cooper, Sewickley, Pa.
Application November 27, 1945, Serial No. 631,021
11 Claims. (Cl. 62—1A)



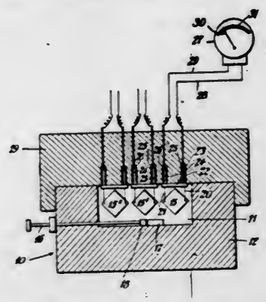
1. In combination with an earth cavity for the purpose described, a receptacle for liquefied natural gas within said cavity, said cavity having a vapor proof sheath including cooperative liner and cover portions and said receptacle having filling and withdrawing means extending through said sheath, and detritus within said sheath about said receptacle forming a matrix defining intercommunicating voids providing an aggregate volume sufficient to accommodate the contents of said receptacle substantially below the level of the surrounding earth.

2,437,910
RECEIVER AND WAVE MONITOR
Murray G. Crosby, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 24, 1943, Serial No. 480,281
14 Claims. (Cl. 179—171.5)



12. In a system of the class described, a converter tube having an anode and a cathode and having a control grid excited by current to be converted in frequency, an amplifier having circuits tuned to a fixed frequency and coupled to said converter, an oscillation generator the frequency of which may be changed in steps through a given range, and a frequency multiplier operative to produce at least one harmonic of the generated frequency coupling said oscillation generator to a control electrode of said converter tube, the steps through which the frequency of said generator may be changed being such that said currents exciting said control grid may fall in several frequency bands and yet provide current to said amplifier of a frequency within the range to which it is tuned.

2,437,911
PUMP JACK
Nicholas W. Franzkowiak, Schaller, Iowa
Application July 23, 1945, Serial No. 606,568
4 Claims. (Cl. 74—41)

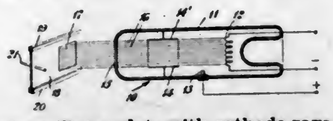


3. A pump jack mechanism comprising a lever pivotally attached to the pump rod, said lever having an extending portion, a fulcrum member pivotally attached at the extremity of said extending portion, a driving rod pivotally attached at the other end of said lever, means for driving said driving rod, a framework attached adjacent to said pump rod including a pair of vertical posts attached to the pump, a bearing member slidably engaged with said posts and pivotally attached to said lever, said posts being parallel to the pump rod, said bearing member including two pairs of spaced sliding bearings each pair of which receives one of said posts, means for varying the stroke and power of said lever including a plurality of openings at the end thereof to provide selective attachment of said driving rod therewith.

2,437,912
QUARTZ OSCILLATOR PLATE
Clifford Frondel, Flushing, N. Y., assignor to Reeves-Ely Laboratories, Inc., New York, N. Y., a corporation of New York
Application December 15, 1944, Serial No. 568,324
21 Claims. (Cl. 171—327)

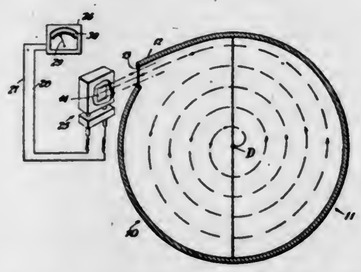
1. In the manufacture of quartz oscillator plates, the improvement which comprises treating each oscillator plate with X-rays adapted to decrease its frequency of oscillation.

2,437,913
QUARTZ OSCILLATOR PLATE
Clifford Frondel, Flushing, N. Y., assignor to Reeves-Ely Laboratories, Inc., New York, N. Y., a corporation of New York
Application December 15, 1944, Serial No. 568,326
17 Claims. (Cl. 171—327)



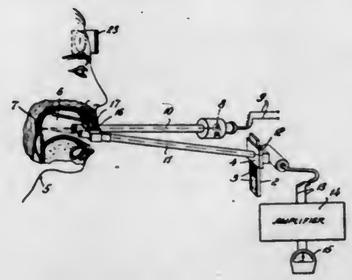
17. In the manufacture of oscillator plates the step comprising decreasing the frequency of the oscillator plate by treating the same with radiations from a radio-active substance.

2,437,914
QUARTZ OSCILLATOR PLATE
Clifford Frondel, Flushing, N. Y., assignor to Reeves-Ely Laboratories, Inc., New York, N. Y., a corporation of New York
Application December 15, 1944, Serial No. 568,328
16 Claims. (Cl. 171—327)



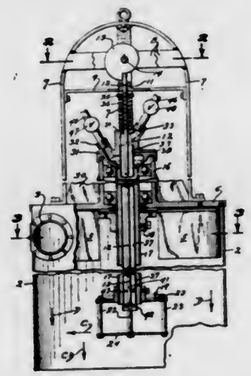
1. In the manufacture of quartz oscillator

plates, the improvement which comprises treat-



ing each oscillator plate with cathode rays adapted to decrease its frequency of oscillation.

2,437,915
QUARTZ OSCILLATOR PLATE
Clifford Frondel, Flushing, N. Y., assignor to Reeves-Ely Laboratories, Inc., New York, N. Y., a corporation of New York
Application December 15, 1944, Serial No. 568,329
16 Claims. (Cl. 171—327)

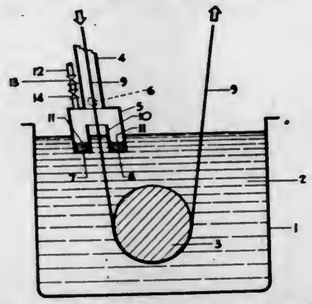


1. In the manufacture of quartz oscillator plates, the improvement which comprises bombarding each oscillator plate with high speed deuterons adapted to decrease its frequency of oscillation.

2,437,916
APPARATUS FOR EXAMINING LIVING TISSUE
Willard F. Greenwald, Woodmere, N. Y., assignor to Philip Morris & Company, Ltd., Inc., New York, N. Y., a corporation of Virginia
Application December 11, 1943, Serial No. 513,912
15 Claims. (Cl. 128—2)

3. An apparatus for determining changes in coloration of living tissue in the human throat comprising a support having means engageable by the teeth to determine the spaced relation of the support with reference to the throat of the patient, means for projecting a beam of light upon a selected portion of the wall of the oral cavity, means for transmitting light reflected from such portion of the wall, means for connecting the light-projecting and reflected-light-transmitting means to the support at one side of the teeth-engaging means for relative adjustment with respect to each other and with respect to said support, means for indicating the relative adjustments of said light-transmitting members, whereby they subsequently may be reset to the same relative positions, a photoelectric cell carried by the reflected-light-transmitting means and disposed in the path of reflected light transmitted therethrough, and means for measuring the electrical output of the photoelectric cell.

2,437,917
APPARATUS FOR PREPARING LIVESTOCK FEED
Charles Hoeh, Santa Rosa, Calif.
Application January 10, 1947, Serial No. 721,303
5 Claims. (Cl. 259—24)

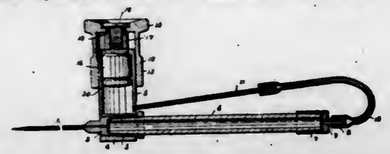


1. A mixing apparatus of the character described comprising a receptacle, a rotatable tube located centrally within said receptacle, propeller vanes attached radially to said tube in line of flow of material conveyed thereto under pressure, a distributer plate carried by said tube and positioned below and in alignment with the bottom end thereof and adapted to rotate therewith, said distributer plate and a portion of said tube disposed within said receptacle, a non-rotatable tube provided within said first named tube, means to control the introduction of additive material to said non-rotatable tube, and means to control emission of said additive material from said non-rotatable tube.

2,437,918
METHOD OF PRODUCING PENICILLIN
Robert B. McCormack, Milltown, N. J., assignor to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Application January 21, 1944, Serial No. 519,207
4 Claims. (Cl. 195—36)

3. The method of producing penicillin which comprises growing a penicillin-forming mold in submerged culture in a synthetic liquid nutrient medium including an ingredient of the group consisting of inorganic, water-soluble sulfites, bisulfites, metabisulfites, hyposulfites, and thiosulfates, which ingredient is included in amount capable of yielding a proportion of sulfite radical to medium of about 0.02% to about 0.65%.

2,437,919
PROCESS AND MEANS FOR IMPROVING THE ADHERENCE OF ALUMINUM COATINGS
Kasimir Oganowski, Franklin, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a corporation of Ohio
Application July 19, 1945, Serial No. 605,990
7 Claims. (Cl. 117—114)



1. In apparatus for the purpose described, in combination with a container for a bath of molten coating metal, a hood terminating in a bell, an end portion of said bell dipping beneath said bath, said hood and said bell serving to protect metal to be coated from the external atmosphere while it is carried into said bath, and an open top container for alkali metal located within said bell and formed in part of the bell walls, including inward and upward extensions thereof, said container extending about said bell on the inside and serving to maintain alkali metal in heat exchange relationship to the metal of said bath, the top of said container being open and located in close proximity to the surface of the bath within said bell, and means for introducing alkali metal into said container through the bell wall without opening up said bell to the surrounding atmosphere, said means comprising means in connection with said bell for accepting said alkali metal, and means operable sequentially to close said last mentioned means to the atmosphere in said bell and open it to the external atmosphere for receiving said metal, and to close it to the external atmosphere and open it to said bell for admitting said metal to said bell.

3. In a process of coating ferrous metal articles with molten coating metal of a class consisting of aluminum and aluminum alloys in which the metal articles are passed through a hood into a bath of said molten coating metal, the steps of maintaining a protective atmosphere in the hood substantially non-oxidizing to ferrous metals and introducing an atmosphere containing alkali metal vapor between the surface of said bath of molten coating metal and said protective atmosphere.

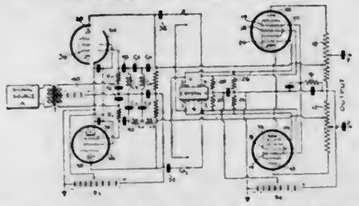
2,437,920
VACCINATION SYRINGE
George N. Overton, Kingston, Jamaica, British West Indies, assignor of one-half to Robert Karl Nunes, Kingston, Jamaica, British West Indies
Application January 19, 1946, Serial No. 642,316
In Great Britain July 26, 1945
3 Claims. (Cl. 128—253)

1. A vaccination syringe, comprising a hollow needle, a tubular lymph reservoir extending from the butt end of the needle and communicating at one of its ends with the bore of the latter, a cylinder mounted on the syringe adjacent the butt end of the needle and disposed laterally of the axis thereof, a piston arranged for sliding movement in said cylinder, a screw-threaded member located close to the butt end of the needle, connected with the piston and engaging with a screw-threaded portion of the cylinder, and a tubular connection between the other end of the lymph reservoir and said cylinder, the

lymph alternatively being drawn into the reservoir through the needle or expelled at the needle point by rotating said screw-threaded member in one direction or the other to cause said piston to move in said cylinder to enlarge or reduce the air space therein which is in communication with the lymph reservoir.

2,437,921
PHENOL RECOVERY
Frank Porter, Syracuse, N. Y., assignor to Allied Chemical & Dye Corporation, a corporation of New York
Application December 28, 1940, Serial No. 372,062
12 Claims. (Cl. 260—621)

1. In the recovery of phenol from the vapor mixture formed by the vapor phase oxidation of benzene to phenol at elevated temperatures, the improvement which comprises washing the reaction vapor mixture containing phenol and water vapor with benzene at ½ to 2 atmospheres pressure and at a temperature above 50° C. at which there is no condensation of water from said vapor mixture, cooling the washed mixture to condense benzene and an aqueous condensate, separating the benzene and aqueous condensate, and using at least a part of the thus dewatered benzene as wash liquid for washing phenol from additional reaction vapor mixture.

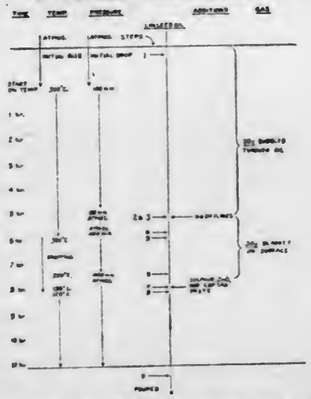


2,437,922
ROTOR FOR SYNCHRONOUS ELECTRIC MOTORS
Jay Rose, New York, N. Y.
Application April 15, 1947, Serial No. 741,615
1 Claim. (Cl. 172—120)

A rotor for a synchronous electric motor as described comprising a plurality of circular iron laminae and two outer identical copper rings, one on each side of the assembled laminae, said laminae having recesses in their rims forming spaced slots in the circumference of the assembled laminae axially thereof, each copper ring having outwardly extending radial arms including a tooth portion at the free end of each arm extending to one side of the arm and abutments formed in the rim integral with said arms at the bases thereof, said tooth portions and said abutments being radially alined on said rings, the tooth portions on one ring extending in a direction opposite to the tooth portions on the other ring, the arms of one of the copper rings being bent in one direction around the edges of the assembled laminae on the one side thereof and embedded in alternate slots in the laminae, the

arms of the other copper ring being bent in the opposite direction around the edges of the assembled laminae on the other side thereof and likewise embedded in alternate slots in the assembled laminae, the tooth portions on each of said rings engaging the laminae on the opposite side in circumferentially alternate positions to clamp said laminae between said tooth portions and the said abutments.

2,437,923
WAVE LENGTH MODULATION
George L. Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application February 18, 1944, Serial No. 522,878
7 Claims. (Cl. 179—171.5)

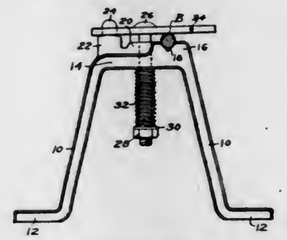


1. In a signalling system, an arrangement for modulating an oscillator of the regenerative type having two tubes each having a plurality of electrodes including a cathode a control grid and an anode-like electrode in a circuit including a piezo electric crystal having two pairs of terminals one of which pairs couples the control grids for differential operation and the other pair of which terminals couples the anode electrodes for differential operation, a pair of modulator tubes having output electrodes coupled differentially to corresponding electrodes of said first two tubes, and having input electrodes coupled to the generating circuits and excited through said last coupling by voltages of like phase displaced in phase with respect to the generated voltages, and a source of modulating potentials coupled to corresponding electrodes of the modulator tubes for differentially modulating the gains of the modulator tubes.

2,437,924
LIGHT-SENSITIVE ELEMENT FOR COLOR PHOTOGRAPHY
Arthur Wright, Forest Hills, N. Y., assignor to Keller-Dorian Colorfilm Corporation, New York, N. Y., a corporation of Delaware
Application July 27, 1944, Serial No. 546,760
7 Claims. (Cl. 95—2)

1. A device for obtaining multicolor pictures comprising a film having therein a transparent support and, accessible to a beam of transmitted light, both a layer of a light sensitive substance and, in light transmitting relationship to said substance between the support and the light sensitive substance, a layer of heterogeneously arranged substantially uniformly distributed fine closely adjacent particles of a pleochroic material in a substantially single particle thickness which exhibits orange, green and red colors, respectively, to polarized transmitted light according to the particular plane in the substance which is parallel to the plane of vibration of the polarized light.

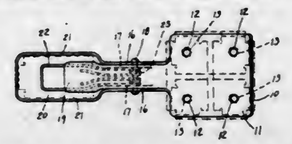
2,437,925
PROCESS FOR MAKING RUBBER EXTENDERS
Laszlo Auer, South Orange, N. J., assignor to Ridbo Laboratories, Inc., Paterson, N. J., a corporation of New Jersey
Application April 18, 1942, Serial No. 439,513
24 Claims. (Cl. 260—399)



1. A process for making a rubber extender comprising heating a batch of linseed oil to a temperature in the neighborhood of 300° C. under a pressure considerably reduced from atmospheric pressure; for a period of several hours at said temperature and pressure, bubbling sulphur dioxide through the batch; then adding up to 5% sodium hydroxide to the batch at said temperature but under an increased pressure and maintaining said temperature for a period of at least one-half hour after addition of the sodium hydroxide; after addition of the sodium hydroxide again reducing the pressure for a period of time; effecting reduction in temperature of the batch, but without permitting the temperature to drop below about 120° C., adding sulphur to the batch, and vulcanizing the batch by maintaining the temperature thereof at from about 120° C. to 125° C.

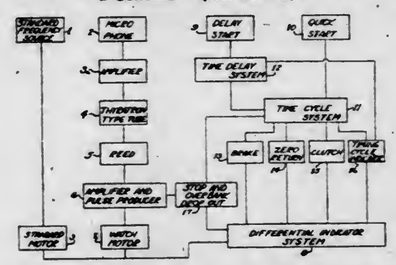
2,437,926
CONTAINER
Charles O. Ball, Gerald L. Swope, and Franklin D. Scott, Toledo, Ohio, assignors to Owens-Illinois Glass Company, a corporation of Ohio
Application February 2, 1945, Serial No. 575,781
5 Claims. (Cl. 229—17)

1. A container comprising a rectangular body of sheet material and a plural ply top comprising flaps integral with the side walls of said body and folded inwardly therefrom, said flaps forming a bottom or inner ply, an intermediate ply and a top outer ply, said intermediate ply being adhered to the bottom ply and comprising a removable section unadhered to said bottom ply and integrally united to the adhered portion of the intermediate ply by weakened lines defining said removable section, said top ply comprising a hinged section adapted to be swung up and down, said hinged section being adhered to the said removable section of the intermediate ply for lifting the latter and severing it along said weakened lines when said hinged section is swung upward, said bottom ply and said removable and swinging sections each having an opening therethrough, the openings being in register to provide a pour opening, and a friction plug forming a closure for said openings, said plug being hinged to said removable section of the intermediate ply for swinging movement to and from position for closing said pour opening while the said hinged section of the top ply is in its down position and so that the plug is wthdrawn from the pour opening and swings as a unit with the swinging section when the latter is lifted, the plug having a marginal flange seated on the removable section and fitting within the opening in said swinging section, with the upper surface of the flange substantially flush with the upper surface of the said swinging section.



2,437,927
VALVE STEM FACING FIXTURE
Vernie R. Becker, Port Huron, Mich.
Application August 8, 1946, Serial No. 689,303
1 Claim. (Cl. 51—217)

A work holder comprising a flat bridge, a pair of legs connected to opposed ends of said flat bridge and diverging therefrom, said legs being adapted to be attached to a work bench, a V-shaped groove extending transversely on said bridge, a lug extending upwardly from said bridge and above the V-shaped groove, a reduced portion projecting from said lug whereby a shoulder is formed between said lug and said reduced portion, a leaf spring blade seated on said shoulder and having an opening, said reduced portion fitting withing said opening thereby retaining said blade on said shoulder, said blade overlying said V-shaped groove, and tension means for forcing said blade toward said V-shaped groove for gripping a work piece therebetween, said means including a tension bolt through said blade and bridge and extending into the space between said legs, a nut adjustably threaded on said bolt, and a coil spring about said bolt and extending between said bridge and nut whereby said nut adjusts the compression of said spring.



2,437,928
HOLDER FOR DOUBLE-EDGED WAFER TYPE BLADES
Clark F. Bennett, Montpelier, Ind.
Application July 21, 1944, Serial No. 545,965
4 Claims. (Cl. 30—338)

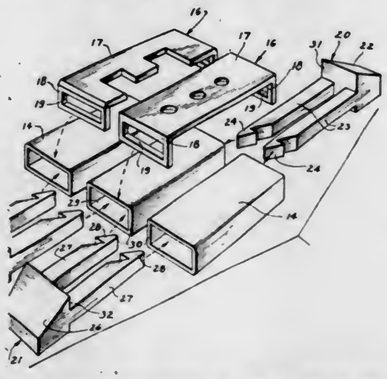
1. A razor blade mount for scraping and cutting purposes including a pair of substantially square outlined jaws having sides slightly less in length than the blade length, four pins carried by one jaw, the other having corresponding pin seating sockets, the pins being positioned relative to each other and the jaw edges so that any two adjacent pins are adapted to retain a blade between the jaws and expose a projecting blade edge therefrom as determined by said pins, handle means for said jaws and of a width appreciably less than that of the jaws and centrally

thereof for blade edge simultaneous exposure at opposite sides of the handle means and immediately adjacent same, and means constraining the jaws into blade clamping position, the blade edge being selectively exposable at any one of the four sides of the jaws.

2,437,929
TIMING APPARATUS
William Ogle Bennett, Jr., Lancaster, Pa., assignor to Hamilton Watch Company, Lancaster, Pa.
Application June 18, 1941, Serial No. 398,633
4 Claims. (Cl. 73—6)

1. In a device of the character described, a differential device adapted to be operated jointly by a current of a given frequency and one of regulated frequency, an indicator adapted to register the result of the operation of said differential device, automatic delay means adapted to maintain said indicator in inoperative relation with said differential device for a controlled period of time, automatically operated means adapted to link and maintain said indicator in operative relation with said differential device for a controlled period of time, means for positively holding said indicator in its final position and means for releasing said holding means.

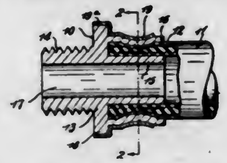
2,437,930
PRODUCTION AND RECOVERY OF OLEFIN OXIDES
Ingolfur Bergsteinsson, Billings, Mont., and James R. Scheibli, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application August 28, 1943, Serial No. 500,456
6 Claims. (Cl. 260—348.5)



1. A continuous process for preparing ethylene oxide which comprises continuously subjecting an ethylene fraction containing ethylene and paraffin hydrocarbons to the action of oxygen at a temperature of between about 200° C. and about 360° C. in a reaction zone containing a silver catalyst prepared by reducing an ammoniacal silver solution in the presence of a silicon carbide support material, thereby forming a reaction mix-

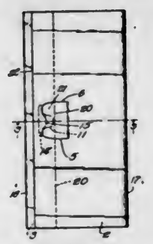
ture comprising ethylene oxide, unreacted ethylene, paraffin hydrocarbons, oxygen and relatively minor amounts of by-products capable of poisoning the catalyst, continuously withdrawing said reaction mixture from the reaction zone and continuously contacting it with methyl alcohol at a temperature of from about −20° C. to about 0° C. and under conditions substantially inhibiting any reaction between the ethylene oxide and the methyl alcohol, thereby selectively extracting the ethylene oxide and the said undesirable by-products, distilling the resulting methyl alcohol solution to separate the ethylene oxide therefrom, and recycling that portion of the reaction mixture which does not dissolve in the methyl alcohol solvent to the reaction zone for further oxidation of the ethylene present to ethylene oxide, thereby increasing the yield of ethylene oxide and materially prolonging the catalyst life due to the removal of the undesirable by-products which are capable of poisoning the catalyst.

2,437,931
PROCESS OF INDURATING BOARDS OF FIBROUS MATERIALS
Hilding Olof Vidar Bergström, Stocksund, Gustaf Bristol Heijmer, Enebyberg, and Karl Gustaf Trobeck, Stockholm, Sweden
No Drawing. Application November 22, 1944, Serial No. 564,734. In Sweden May 14, 1943
2 Claims. (Cl. 117—149)



1. In the production of oil-hardened wood fiber boards, the process which comprises impregnating a wood fiber board with an oily product, comprising a distillate produced by distilling tall oil in a vacuum and collecting the distillate from the commencement of the distillation up to the point at which all of the tall resin oil and at least part of the tall fat acid have distilled off and the distillate is no longer capable of forming an emulsion with tenfold its weight of raw linseed oil and double its weight of water which emulsion is stable for at least 24 hours, then heat treating the so-impregnated board to produce drying and hardening of said distillate and consequent hardening of the board.

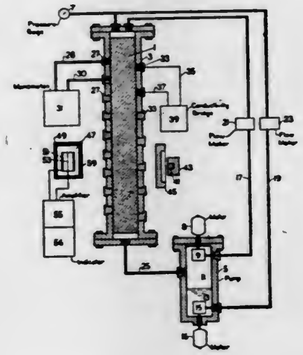
2,437,932
DECORATIVE CHAIN STRUCTURE
Abraham Blumstein, Forest Hills, N. Y.
Application March 29, 1945, Serial No. 585,476
7 Claims. (Cl. 59—80)



1. In a chain structure, in combination with a series of hollow members arranged side by side, a number of indicia elements each associated with one of said hollow members and having portions extending in juxtaposition to the ends of the member, and a number of link units for interconnecting said hollow members and securing the associated indicia elements thereto, each of said link units extending through a pair of contiguous hollow members and through the portions of the indicia elements juxtaposed to the ends of said contiguous hollow members.

2,437,933
HOSE FITTING
Joseph B. Brennan, Cleveland, Ohio
Application September 16, 1944, Serial No. 554,429
4 Claims. (Cl. 285—84)

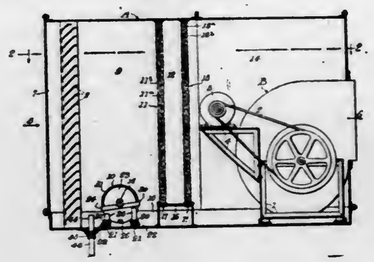
1. In a hose connection, a hollow body having a polygonal portion and a pair of spaced coaxial inner and outer sleeve portions, a resilient hose having an end thereof extending into the space between said sleeve portions, and a deformable metal band surrounding said outer sleeve portion and having a polygonal portion engaging the polygonal portion of said body for holding the band against relative rotation, said band and outer sleeve portion being deformable and being annularly indented into said hose for connecting said body with the hose and sealingly pressing the latter against said inner sleeve portion.



2,437,934
CLOSURE
John G. Brink, Evanston, Ill., assignor to Rand McNally & Company, a corporation of Illinois
Application April 14, 1945, Serial No. 588,274
2 Claims. (Cl. 229—84)

1. A closure for containers and the like, comprising a body portion; a first flap hingedly mounted on said portion and being made of flexible material and having a substantially W-shaped slit therein, said flap being continuous from the slit to the marginal edge opposite the hinged mounting and said slit forming on one side thereof a first tongue having on its outer edge a notch, and forming on the other side thereof a second tongue, and a second flap of flexible material hingedly mounted on said portion, said second flap having a substantially straight continuous marginal edge opposite its hinged mounting of a length greater than the width of the slit,

and said second flap having a slot therein spaced from its said marginal edge a distance less than the length of said first tongue, said slot being adapted to receive said second tongue, said flaps being movable between open and closed positions, said second tongue extending into said notch when said flaps are in open position, and said second flap having its said marginal edge traversing said first tongue when the flaps are in closed position whereby said first tongue may be inserted under said marginal edge of the second flap and said second tongue may be inserted in said slot.



2,437,935
RADIOLOGICAL MEASUREMENT OF THE PERMEABILITY OF POROUS MEDIA
Eugene M. Brunner, El Cerrito, and Edwin S. Mardock, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application May 7, 1945, Serial No. 592,512
8 Claims. (Cl. 250—83)

1. In a method for determining the permeability at high pressures of a porous body with regard to a fluid flowing therethrough under polyphase flow conditions, the steps of confining said body in a zone maintained at a high pressure, simultaneously saturating said body with a plurality of fluid phases, at least one of said phases being a fluid containing hydrogen atoms, causing a fluid flow through said body, measuring the rate of said fluid flow, measuring the pressure drop occurring during said flow between points in said body spaced from each other along the line of said flow, subjecting said body to neutron radiation, detecting the neutrons slowed down within said body by collison with hydrogen atoms, and determining the saturation of said body with regard to said hydrogen containing fluid from the amount of the detected slow neutrons.

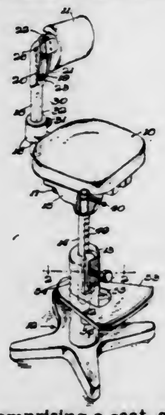
2,437,936
AIR CONDITIONING APPARATUS
Thomas W. Carraway, Dallas, Tex.
Application November 30, 1944, Serial No. 565,839
7 Claims. (Cl. 261—92)

1. In air conditioning apparatus, a duct; equipment for moving air through said duct; and means for creating in said duct a diffused volume of liquid, said means comprising a disc having a concentric groove in at least one of its faces, means providing a supply of liquid, means mounting said disc to rotate with a portion thereof including said groove running through said liquid, and means for rotating said disc, said groove having an outer annular wall substantially constituting a cylindrical surface whereby liquid picked up in said groove from said supply will gradually and progressively work its way laterally

to the grooved face of the disc thus retarding the discharging of part of the groove-held liquid from the disc and causing the character of the diffused liquid to vary progressively from a forceful spray of relatively coarse separated particles in one part of said duct to finely atomized liquid constituting a fog or mist in another part of said duct.

2,437,937
PROCESS FOR TREATING TOMATOES
David Childs, Albert E. Braun, and James Hanson, Sunnyvale, Calif., assignors to Libby, McNeill & Libby, Chicago, Ill., a corporation of Maine
No Drawing. Application March 29, 1946, Serial No. 658,229
4 Claims. (Cl. 99—186)

2. The process of treating tomatoes, which comprises immersing them in approximately a 60% solution of calcium chloride maintained at a temperature of approximately 280° F., and continuing the immersion treatment for a period of approximately fifteen seconds to sixty seconds depending on the maturity and variety of the tomatoes, and finally removing the exocarp freed by such immersion treatment.

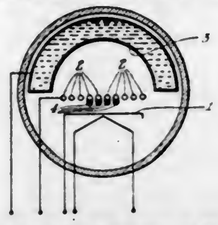


2,437,938
CATALYTIC OXIDATION OF SUBSTITUTED PYRIDINE BASES
Francis E. Cislak and William R. Wheeler, Indianapolis, Ind., assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application May 31, 1941, Serial No. 396,175
7 Claims. (Cl. 260—295.5)

1. The process of producing a pyridine carboxylic acid by partial oxidation of an alkyl pyridine, which consists in subjecting the alkyl pyridine to partial oxidation in vapor phase with a mildly oxidizing oxygen-containing gas at elevated temperature in comparison with room temperature, in the presence of an oxidation catalyst essentially comprising an oxide of an element of the A sub-groups of groups V and VI of the periodic system, and in the absence of substantial quantities of contaminants which oxidize selectively with relation to the alkyl pyridine, and recovering the thus produced pyridine carboxylic acid.

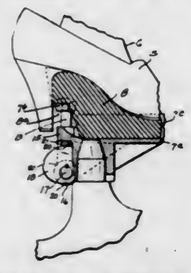
2,437,939
PROCESS FOR THE CLARIFICATION OF FERMENTED LIQUORS
Ralph T. K. Cornwell and Donald S. Porter, Fredericksburg, Va., assignors, by mesne assignments, to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 6, 1943, Serial No. 497,686
1 Claim. (Cl. 260—637)

A process for the purification of fermented liquors comprising the steps of treating a fermented liquor with a water-soluble sulfide to precipitate iron as iron sulfide, dialyzing the liquor, treating the diffusate with a water-soluble salt of an alkaline earth metal to precipitate sulphates therefrom thereafter making the diffusate acidic and then treating the diffusate with oxalic acid to precipitate alkaline earth metals therefrom, decolorizing the diffusate by contacting it with an absorbent material, and filtering the purified diffusate.



2,437,940
PIVOTED SPRING BACK REST
Roy A. Cramer, Harold W. Cramer, and Roy A. Cramer, Jr., Kansas City, Mo.
Application March 16, 1944, Serial No. 526,734
7 Claims. (Cl. 155—156)

2. A chair comprising a seat, supporting means for the seat, a member carried by and extending upwardly from said supporting means and provided at its upper end with a cut-away portion defining a hollow recess, a back-rest support having a hub portion pivotally mounted on said recessed member within the recess adjacent the upper end thereof, a leaf spring connected with said support and extending downwardly within the recess, said spring being operatively connected at its lower end with the recessed member, and a back rest carried by said support.

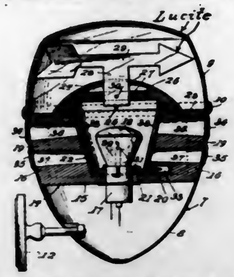


2,437,941
ELECTRON DISCHARGE TUBE WITH PARTIALLY COATED GRID
Eduard Gerardus Dorgelo, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 22, 1946, Serial No. 663,821
In the Netherlands April 11, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires April 11, 1962
3 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising in successive arrangement a cathode, a grid and an anode, and gettering material covering solely

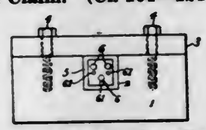
the cathode side of that portion of said grid in the vicinity of the central area of said cathode.

2,437,942
PAD SUPPORT FOR SHOE PRESSES
Ernest Dunford, St. Louis, Mo., assignor to Landis Machine Company, St. Louis, Mo.
Application December 23, 1946, Serial No. 717,946
6 Claims. (Cl. 12—33)



1. A shoe press pad support comprising a member adapted to receive a deformable cushion, a relatively narrow elongated cushion engaging segment having a depending pin slidably mounted in one end portion of said member, and a rotatable cam to adjust said segment relative to said member and having a series of indentations in its periphery to receive said pin to hold said segment in adjusted position.

2,437,943
PONTIC TOOTH
John B. Earman, West Palm Beach, Fla.
Application June 29, 1945, Serial No. 602,329
3 Claims. (Cl. 32—9)

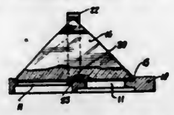


1. A dental pontic comprising an artificial tooth, a pin the head of which is fused to the center of the tooth on the lower half of the longitudinal axis thereof, a backing to fit a portion of the posterior surface of the tooth and a tube open at both ends secured to said backing to form a rigid support therewith for said tooth, said pin protruding from the posterior surface of the tooth at an acute angle to the upper half of the longitudinal axis for insertion into the open tube to which it is cemented for securing the tooth to the backing.

2,437,944
VEHICLE TURN SIGNAL
Charles E. Edwards, Santa Paula, Calif.
Application January 8, 1946, Serial No. 639,853
7 Claims. (Cl. 177—329)

4. A turning signal comprising a casing having a transparent wall portion, an arrow within the confines of said transparent wall portion, said arrow being formed of light-permeable material exposed to view throughout the length of said arrow, a light source in said casing and spaced from an edge portion of said arrow, opaque means in said casing shielding all but said edge portion of said arrow against direct rays from said light source, said opaque means including a hollow rotatably mounted member carrying said arrow and containing said light source, and means for turning said hollow rotatably mounted member to selectively turn said arrow to any of a plurality of signalling positions.

2,437,945
PRESS TOOL
Erich Engel, Tonteg, near Pontypridd, and Maks Salamon, Cardiff, Wales, assignors to Aero Zipp Fasteners Limited, London, England, a British company
Application July 23, 1946, Serial No. 685,752
In Great Britain December 18, 1944
1 Claim. (Cl. 164—124)

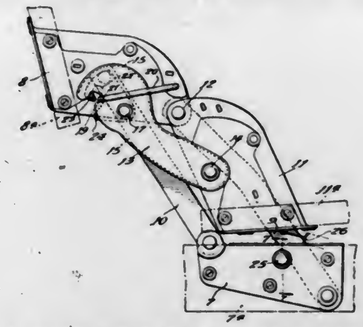


A press tool comprising a plurality of tool parts, a carrier, the said tool parts being set into said carrier by a fusible filling material, a tool head provided with a recess for receiving said carrier, a bridge plate, and means for releasably attaching said bridge plate to said tool head to close the recess in said tool head and thereby to clamp the said carrier to said tool head whereby the said carrier with the tool parts set therein is easily and quickly replaceable.

2,437,946
PLASTICIZED PROLAMINE COMPOSITION
Cyril D. Evans, Peoria, Ill., and Ralph H. Manley, St. Paul, Minn., assignors to United States of America, as represented by the Secretary of Agriculture
No Drawing. Application July 27, 1944, Serial No. 546,900
4 Claims. (Cl. 106—153)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A coating composition consisting essentially of prolamine as the essential film-forming ingredient thereof, and N-butyl lactamide as a plasticizer.

2,437,947
MOUNTING FOR AND INCLUDING OPTICAL REFRACTING MEANS AND METHOD OF FORMING THE SAME
Adin Daniel Falkoff, Brooklyn, N. Y., assignor to Universal Camera Corporation, New York, N. Y., a corporation of New York
Application February 17, 1944, Serial No. 522,828
14 Claims. (Cl. 88—1)

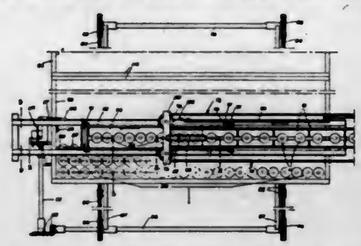


1. A method of mounting an optical element on a support for assembly in an optical instrument, which comprises superimposing a flat thermoplastic element upon the support, placing the optical element upon said thermoplastic element and adjusting the same thereon by movement substantially parallel to the plane of said thermoplastic element to its final position relative to the support, heating the thermoplastic element to soften the same, and producing in the softened thermoplastic element an impression of the base of the optical element to form a depressed recess defining continuous wall surfaces bounding the periphery of said base and adapted to separably maintain the optical element in said adjusted position thereof.

8. A mounting for and including a light refracting element comprising a supporting shelf having openings therein, a flat thermoplastic element extending on said shelf having openings registering with the openings of the shelf and portions in engagement with surfaces of the shelf to maintain the thermoplastic element in fixed position on the shelf, an optical refracting element having a base superimposed upon said thermoplastic element in optically adjusted position and separated thereby from the shelf surface, a depressed recess in the thermoplastic element for the base of the optical element defining continuous wall surfaces bounding the periphery of said base and separably retaining the optical element in its adjusted position, and means for maintaining the optical element in assembled relation with the thermoplastic element.

2,437,948
PRODUCTION OF BRANCHED CHAIN HYDROCARBONS CATALYZED BY A METAL HALIDE CATALYST SUPPORTED BY A COMPOSITE OF ALUMINA AND TITANIA
Eric William Musther Fawcett, Gwilym Islwyn Jenkins, and John Habeshaw, Sunbury-on-Thames, England, assignors to Anglo-Iranian Oil Company Limited, London, England, a British joint-stock corporation
No Drawing. Application May 10, 1943, Serial No. 486,424. In Great Britain March 4, 1942
4 Claims. (Cl. 260—683.5)

1. A catalyst for the isomerisation of normal aliphatic hydrocarbons, consisting of a volatile anhydrous metal halide in intimate association with a porous catalyst support consisting essentially of alpha alumina hydrate and a small proportion of titanium hydroxide prepared by partial dehydration of washed alpha alumina hydrate and titanium hydroxide precipitated in gel form from a mixed solution of an aluminium and a titanium salt the proportion of the titanium being in the range 5% to 25% of the total material of the support, the titanium content being reckoned as parts by weight of titanium dioxide in 100 parts of dry material.

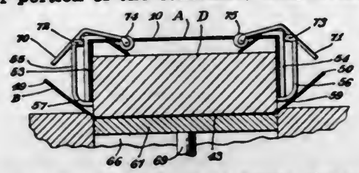


2,437,949
SOFA BED HINGE STRUCTURE
Martin Fox and George F. Hassel, Chicago, Ill., assignors to The Seng Company, a corporation of Illinois
Application December 8, 1944, Serial No. 567,149
6 Claims. (Cl. 5—47)

1. A convertible sofa bed hinge structure for a back section and a seat section comprising: a back plate, adapted to be secured to the back section, and provided with carrying arms for pivotally connecting said back plate to a supporting frame; a small latching finger fixed to the back plate; a seat plate hinged to said back plate and adapted to be secured to the seat section; a transfer pawl pivotally connected to the seat plate and having a large notch which opens downwardly to engage said latching finger when said plates are in sofa position, intermediate position, or between said positions; a disengaging notched tumbler pivotally mounted on said pawl adjacent to said pawl notch, the notch in said tumbler being shaped to provide an inner shouldered carrying portion to receive the latching finger whenever said finger is received by the inner portion of the pawl notch, and said tumbler notch having an outer throw-out portion to receive the latching finger when said finger is moved from the inner portion to the outer portion of the pawl notch, said tumbler having an integrally formed guard extending inwardly across the throw-out portion of the tumbler notch towards the carrying portion of the tumbler notch so that the finger can only enter said throw-out portion after it has entered said carrying portion of the tumbler, a detent on said tumbler adjacent to said carrying portion of the tumbler notch and extending downwardly beyond the lower edge of the pawl so as to engage the finger and move the notched portion of the tumbler above the pawl notch when said pawl is returning from disengaged bed-position; and means for urging the notched portion of said tumbler to swing downwardly from all positions of the pawl.

2,437,950
MACHINE FOR DISTRIBUTING FRUIT IN ROWS ON DRYING TRAYS
Norman E. Gaddini, Winters, Calif.
Original application May 1, 1944, Serial No. 533,548. Divided and this application March 5, 1945, Serial No. 581,036
18 Claims. (Cl. 226—14)

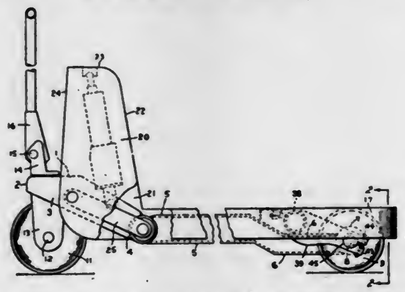
1. A drying tray loading machine comprising, in combination, a substantially horizontal driven conveyor on which cut fruit is adapted to be conveyed, means below said conveyor at one end thereof to support a drying tray for lateral movement, a fruit transfer shuttle mechanism mounted for movement beneath said end of the conveyor lengthwise thereof and transversely of the tray, means to reciprocate the shuttle mechanism, means operative to feed fruit from the conveyor



onto the moving shuttle mechanism in a row, and means to release the row of fruit from the shuttle mechanism onto the drying tray when said shuttle mechanism reaches a predetermined position relative to said tray.

2,437,951
FOLLOW-UP CONTROL
Sidney Godet, Albany, N. Y., assignor to General Electric Company, a corporation of New York
Application March 1, 1943, Serial No. 477,508
6 Claims. (Cl. 318—30)

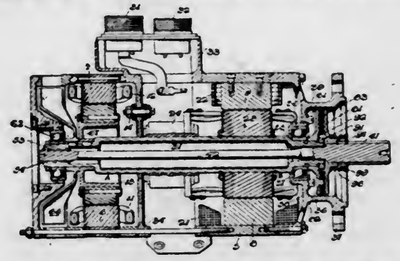
1. A follow-up control comprising in combination, means for producing a periodically varying control voltage, electric valve means for amplifying said voltage, an electric motor supplied from said electric valve means, and stabilizing means comprising a resistance-reactance network included in the connections between said control voltage producing means and said electric valve means for supplying to said electric valve means a periodically varying voltage having the same periodicity as the periodicity of said control voltage and having a modulation envelope which is the first derivative of the modulation envelope of said control voltage.



2,437,952
METHOD AND APPARATUS FOR PACKING CONTAINERS
Reynolds Guyer, St. Paul, Minn., assignor to Waldorf Paper Products Company, St. Paul, Minn., a corporation of Minnesota
Application March 3, 1945, Serial No. 580,808
20 Claims. (Cl. 93—3)

1. The method of packing a container having two box-like sections designed to engage in telescoping relation with the side walls of one section enclosing the side walls of the other section, the method consisting of placing in the larger section a plastic mass of a size to substantially fill the larger section, removing the plastic mass from the larger section and simultaneously admitting air between the plastic mass and the larger portion of the container, compressing the

mass and inserting the same within the smaller of the sections, and telescoping the sections.

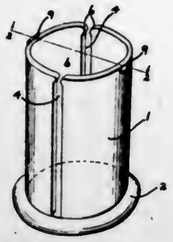


2,437,953
ELEVATING TRUCK
Russell Hastings, Jr., Wellesley, Mass., assignor to Lewis-Shepard Company, Watertown, Mass., a corporation of Massachusetts
Application January 17, 1945, Serial No. 573,283
17 Claims. (Cl. 254—10)

2. An elevating truck comprising a frame having a head provided with wheeled steering mechanism and having a transverse tubular torque-resisting bolster rigid therewith, a transverse shaft journaled in said bolster, a reach rigid with said torque-resisting bolster extending rearwardly therefrom having a relatively narrow rear end portion provided with a horizontal axle-housing, a rear axle mounted in said axle housing, rear wheels mounted on end portions of said axle, removable spacing means extending from the ends of said axle housing engaging the inner faces of the hubs of said rear wheels, means for raising and lowering said load supporting means including a pair of front links pivotally connected at their upper ends to the load supporting means and at their lower ends engaging the ends of said bolster shaft, and a rear link parallel to said front links having at its upper end a horizontal tubular torque-resisting means pivotally mounted on said load supporting means and located in proximity to the load supporting surface thereof and at its lower end mounted upon said axle and said spacing means acting in cooperation with the torque-resisting bolster to stabilize the load supporting means against distortion.

2,437,954
ACCESSORY DRIVE CONTROL
Clinton Hunter Havill, South Orange, N. J., assignor to Bendix Aviation Corporation, Bendix, N. J., a corporation of Delaware
Application January 30, 1943, Serial No. 474,163
3 Claims. (Cl. 74—574)

2. In a machine adapted to be rigidly mounted on and driven from a pulsating power source, a hollow cylindrical housing, a rotor rigidly mounted on a stiff tube, end bearings for said tube and supporting said rotor in said housing, a resilient drive shaft extending longitudinally in said tube and in spaced relation thereto, one end of said shaft being drivingly connected to and within one end of said tube and the other end of said shaft extending from the other end of said tube for an external driving connection, a constricted portion of said housing forming a shield at said other end of the tube, the other end of said tube extending through one of said end bearings and into said end shield, first and second plates positioned within said end shield, means drivingly connecting the first plate to said shaft, other means drivingly connecting the second plate to said tube, a coil spring encircling said shaft to bias one of said plates toward the other plate, one of said connecting means including a spline connection for permitting longitudinal movement of said one plate relative to the other plate under the biasing force of said coil spring so as to maintain a frictional driving relation between said plates to dampen torsional and lateral vibrations of said shaft, and said plates cooperating with said constricted portion of said housing in shielding said one end bearing.



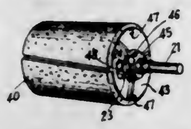
2,437,955
METHODS OF PRODUCING MOLDING COMPOUNDS COMPRISING FURFURYL ALCOHOL REACTION PRODUCTS
Herman I. Hersh, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a corporation of Ohio
No Drawing. Application March 9, 1944, Serial No. 525,794
5 Claims. (Cl. 260—17.4)

3. The method which comprises mixing furfuryl alcohol and a carboxylic compound of the group consisting of maleic acid, maleic anhydride, fumaric acid, and oxalic acid, thereby forming a solution, mixing the solution while in liquid form with a lignin enriched lignocellulose filler material before any substantial polymerization of the alcohol, heating the mixture to a temperature of from 250 degrees F. to 350 degrees F. and reacting the material while held at said temperature from ½ minute to 15 minutes.

2,437,956
TOKEN HOLDER
Ernest R. Hessel, Spokane, Wash.
Application May 17, 1946, Serial No. 670,424
3 Claims. (Cl. 312—42)

1. A token holder comprising a body having a base and an annular wall extending upwardly therefrom, the wall being formed of resilient material and having opposed longitudinally extending slots leading from its upper end for receiving ears of tokens stacked in the body and dividing the wall into yieldable sections, and bosses integral with the wall sections and projecting to-

ward each other from opposite sides of upper ends of the slots for engaging ears of tokens in the

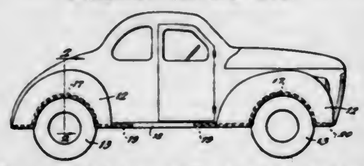


holder and preventing accidental movement of tokens out of the holder.

2,437,957
LATHE CENTER
Bartholomew Holohan, New York, N. Y., assignor to Nelpin Manufacturing Company, Long Island City, N. Y., a firm
Application June 23, 1944, Serial No. 541,678
1 Claim. (Cl. 82—33)

A center for the headstock of a lathe comprising a tapered body provided with a flat face at one end thereof, an axial bore extending into said body from the opposite end of this latter and defining a shoulder in the body, an axial center pin slidably mounted in the body with its end portions projecting respectively outwardly of said flat face of the body and into said bore, a collar on the end portion of said center pin which projects into the bore adapted to engage said shoulder to limit the outward movement of the center pin, a rod extending through the spindle of the lathe headstock having one end portion projecting into said bore and provided with a shoulder, a spring bearing against said shoulder of the end portion of the rod and said collar of the center pin to normally urge this latter to abut against the shoulder of the body, said end portion of the rod being threadedly mounted in the bore for adjustment longitudinally thereof into abutting engagement with the center pin to variably limit the amount of inward movement of the center pin in opposition to the spring.

2,437,958
FLOOR SURFACING MACHINE
William E. Holt, Oakland, Calif.
Application March 14, 1942, Serial No. 434,677
8 Claims. (Cl. 51—194)

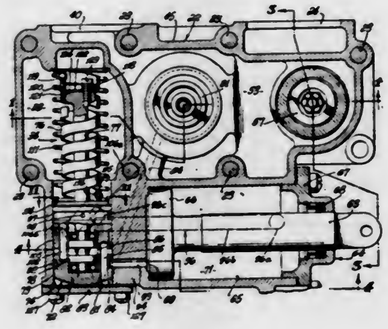


1. A replaceable cushioning device for a rotary drum having a cylindrical peripheral surface provided with a slot arranged lengthwise of and obliquely to the drum axis of rotation, which comprises two substantially semi-cylindrical relatively thin plates of substantially rigid material forming a two-part backing sheet shaped to fit around the peripheral surface of the drum with spaced oblique plate edge portions conforming with the edges of said slot, and a continuous layer of resilient material shaped to fit around the peripheral surface of said drum and cemented to the outer side of said backing sheet substantially throughout its extent.

2,437,959
POULTRY BLINDER CLIP
Milton Horowitz, Farmingdale, N. J., assignor to Harwood Company, Farmingdale, N. J., a firm composed of Milton Gene Harwood and Louis Jay Harwood
Application January 5, 1945, Serial No. 571,461
3 Claims. (Cl. 119—97)

1. A blinder for poultry comprising spaced outer vision obstruction portions and an intermediate bowed connecting portion, the vision obstruction portion having pointed extensions adjacent the ends of the connecting portion and in the space between the vision obstruction portions.

2,437,960
FENDER STRUCTURE
John T. Hughes, Chicago, Ill.
Application September 13, 1945, Serial No. 615,931
3 Claims. (Cl. 280—152)

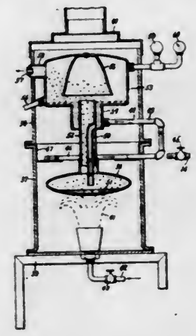


3. In combination with a rigid automobile body equipped with a running board, a pair of spring rods having laterally-extending portions secured to the bottom of said running board and having longitudinally-yieldable portions unsupported except by said board extending upwardly and longitudinally thereof, and a pair of resilient non-metallic webs in the shape of fenders, each having its inner side lying against and secured to said automobile body and having its outer edge spaced from said body, said outer edge of each fender being equipped with a rolled edge portion receiving the rod adjacent thereto, each of said rods having free end portions turned inwardly to support end portions of said fenders.

2,437,961
THERMOSTATIC SHUTTER CONTROL AND SURGE PROTECTION
Raymond W. Jensen, Los Angeles, Calif., assignor to The Garrett Corporation, Airesearch Manufacturing Company division, Los Angeles, Calif., a corporation of California
Application March 12, 1945, Serial No. 582,318
11 Claims. (Cl. 236—35)

1. A combined temperature and overriding pressure control mechanism for a cooler for liquids, including means for passing a coolant in heat exchange relation to said liquid and means for varying the flow of said coolant, comprising:

a servomotor for operating said flow varying means; control valve mechanism for diverting a portion of said liquid into said servomotor for energizing the same, said control valve mechanism including a cylinder having connections with the heat exchanger for receiving liquid from a high pressure region thereof and discharging the liquid back to a low pressure region thereof, connections between said cylinder and said servomotor for delivering the liquid under pressure to one side of the servomotor and permitting liquid from the other side of the servomotor to return to the cylinder, a piston shiftable in said cylinder under pressure in said liquid above a predetermined value and adapted when thus shifted to direct the flow to said servomotor so as to effect the operation of said coolant flow varying means



in a manner to substantially shut off the flow of coolant, and thermo-responsive valve means within said piston and operably connected therewith to control the flow through said connection to the servomotor when said piston is in a normal position determined by pressure in said liquid below said predetermined value, said thermo-responsive valve means being adapted, in response to one class of temperature condition, to assume a position in which it effects the circulation of the liquid through said connections to the servomotor in one direction for operating said flow varying means in one direction, and in response to temperature conditions of a different class, to reverse the connections to the servomotor and effect a reverse flow of the fluid to and from said servomotor, causing said flow varying means to be operated in the opposite direction.

2,437,962
COPOLYMERS OF ALLYL ESTERS OF POLYBASIC ACID WITH SATURATED MONOHYDRIC ALCOHOL ESTERS OF UNSATURATED POLYCARBOXYLIC ACID
Edward L. Kropa, Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 17, 1943, Serial No. 498,980
10 Claims. (Cl. 260—78.5)

1. A clear colorless resin which is a copolymer of a composition comprising as its sole polymerizable component a mixture of copolymerizable esters consisting of (1) a polyester of allyl alcohol with a polybasic acid and (2) a polyester of a saturated monohydric alcohol and an alpha, beta-unsaturated polycarboxylic acid, said mixture containing at least 5% of each polyester.

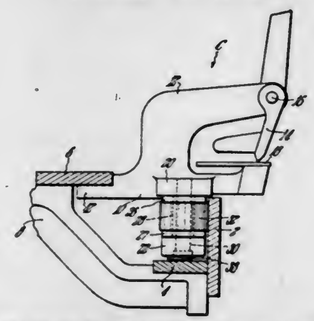
2,437,963
METHOD AND APPARATUS FOR PRODUCING AEROSOLS
Irving Langmuir and Vincent J. Schaefer, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application March 24, 1943, Serial No. 480,302
6 Claims. (Cl. 252—359)

3. The method of suspending in the atmosphere minute particles less than about a micron in diameter of a material which is substantially non-evaporating at ordinary atmospheric temperatures which consists in converting said material at an elevated temperature into vapor and projecting said heated vapor into the atmosphere at a high velocity approximating the velocity of sound in said vapor, whereby said vapor by admixture with the relatively cooler atmosphere will be condensed within a few milliseconds of time in the state of desired minute suspended particles.

6. In apparatus for producing an aerosol, the combination comprising a heating chamber, a boiler within said chamber, means for applying heat to said boiler, a source of vaporizable fluid, means connected between said source and said boiler comprising preheat means positioned within said chamber above said boiler, a vapor chamber positioned in said heating chamber above said boiler and preheat means, a vertical vapor conduit connecting said boiler and said vapor chamber, said vapor chamber being provided with a member serving as a sump for collection of condensed fluid therein, and an orifice in communication with said vapor chamber for ejection of said vapor.

2,437,964
FINISH REMOVER COMPOSITION
Paul E. Marling, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application December 1, 1944, Serial No. 566,245
8 Claims. (Cl. 252—140)

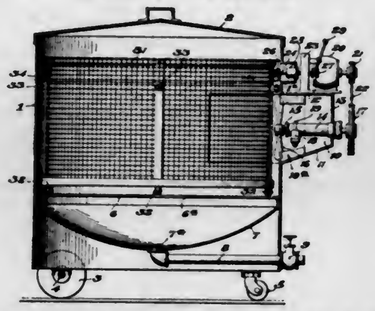
1. A fluent finish remover suitable for removing paints, enamels, varnishes and lacquers comprising diethyl phosphite combined with a thickening agent miscible therewith, the proportion of said thickening agent being from 1% to 10% by weight of the weight of said phosphite.



2,437,965
METHOD FOR RELAXING KERATINOUS FIBRES
Edwin B. Michaels and Bernard Lustig, Stamford, Conn., assignors to Lawrence Richard Bruce, Incorporated, Stamford, Conn., a corporation of Connecticut
No Drawing. Application January 18, 1944, Serial No. 518,774
8 Claims. (Cl. 132—31)

1. The method of relaxing keratinous material which comprises treating the same at room temperatures with a water-soluble bisulphite, at a pH between 5 and 6, the cation of which contains a mono-basic nitrogenous organic base having swelling-increasing properties.

2,437,966
INTERPOLYMER OF STYRENE AND FUMARODINITRILE PLASTICIZED WITH AN ALKYL PHTHALYL ALKYL GLYCOLLATE
David T. Mowry, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application April 26, 1944, Serial No. 532,871
3 Claims. (Cl. 260—36)



1. A plastic composition comprising an interpolymer consisting of styrene and fumarodinitrile, said interpolymer containing between 10% and 30% by weight of copolymerized fumarodinitrile and an alkyl phthalyl alkyl glycollate compatible therewith.

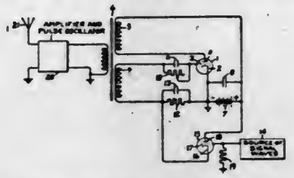
2,437,967
TENTER MACHINE CLIP
John C. Nash, Providence, R. I.
Application March 12, 1947, Serial No. 734,066
6 Claims. (Cl. 26—61)

1. A tenter clip comprising in combination, a body having a plate and a gate swingable relative thereto at the forward side thereof for clamping a web of material thereto, said body provided with a recess having an opening at the lower side of the body, a roll in said recess rotatable on a member therein and having a portion of its periphery extending below the lower face of the body for rolling along a lower horizontal portion of a rail below said clip and supporting said clip, upper and lower lugs extending outwardly from opposite ends of said body, links at opposite ends of the body having ends between said lugs, pivotal connections between the ends of said links and said lugs, and rolls between said ends of the links rotatable relative to said pivotal connections for rolling along a vertical portion of a rail at the forward side of said clip for guiding said clip.

2,437,968
WASHER FOR ARTICLES OR THE LIKE
John J. Palotsee, Youngstown, Ohio
Application March 17, 1947, Serial No. 735,185
17 Claims. (Cl. 68—148)

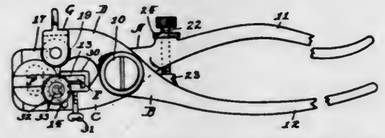
1. In a cleaning or washing machine, a cylindrical casing for fluid open at its top and having a bottom; a removable cover for said top; a false bottom within the casing disposed above the casing bottom and having a relatively large central opening therein; said bottom having a valved outlet therein; a rotatable open cylindrical basket within the casing seating upon the false bottom; a hollow lateral protuberance on the side of the casing above the false bottom having its sides communicating with the casing through relatively large openings therethrough; an impeller journaled within the protuberance adjacent one side thereof adapted to set up a swirling motion of the fluid above the false bottom; a motor; means actuated by the motor for rotating the impeller to swirl the fluid in one direction; and means actuated by the motor for rotating the basket in the opposite direction.

2,437,969
DEFORMABLE SWITCH
Nathan Paul, Long Island, N. Y., assignor to Elliott F. Barlow, Yonkers, N. Y.
Application January 24, 1946, Serial No. 643,059
7 Claims. (Cl. 200—86)



1. A switch comprising a compressible insulating cover; a tubular flexible electrode made of braided springy metal contained within the cover; a second electrode contained within the tubular electrode; and insulating spacer means positioned between and normally separating the two electrodes; said tubular electrode being compressible to establish contact with the second electrode when said insulating cover is compresed, and being restorable by the combined action of said insulating spacer and the natural resiliency of said flexible electrode to its original position when the pressure is released.

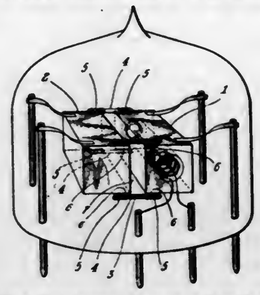
2,437,970
PULSE COMMUNICATION
Philip J. Reich, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application October 11, 1944, Serial No. 558,149
5 Claims. (Cl. 179—171.5)



1. In combination, an electron discharge device including an anode circuit and a control elec-

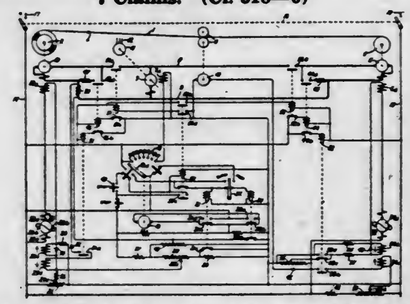
trode circuit coupled to produce oscillations, a grid leak resistor and a capacitor connected in parallel circuit relation in said control electrode circuit, said capacitor and resistor having a time constant sufficiently large intermittently to interrupt said oscillations at a predetermined mean

repetition rate, a source of signal waves, a second resistor in said control electrode circuit, and means for impressing across said second resistor a signal potential derived from said source thereby to modulate said repetition rate in accordance with said signal.



2,437,971
SKIVER
George W. Russell, Los Angeles, Calif., assignor of one-half to Philip V. Ames, Los Angeles, Calif.
Application February 13, 1947, Serial No. 728,273
3 Claims. (Cl. 69—20)

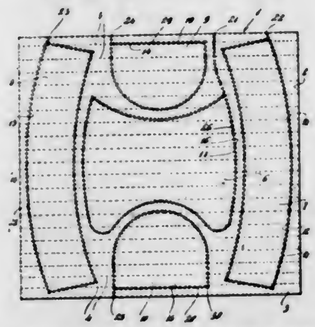
1. A skiver comprising a pair of scissor-like lever arms having a pair of cooperating work arms and a pair of hand operable power arms, a laterally disposed table supported on one of said work arms having a forward edge portion, a laterally disposed cutting blade having a cutting edge juxtaposed to said forward edge portion of said table, said blade being supported by said table supporting work arm, and a gauge roller rotatably supported on the companion work arm in spaced relation above the table, said table, knife blade and gauge roller being supported in outstanding position at one side of said work arm to provide unobstructed passage for the material as it is being skived.



2,437,972
ELECTRODE SPACER FOR ELECTRON DISCHARGE TUBES
Gerrit Schmidt, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, as trustee, Hartford, Conn.
Application April 26, 1946, Serial No. 665,023
In the Netherlands June 16, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires June 16, 1964
5 Claims. (Cl. 250—27.5)

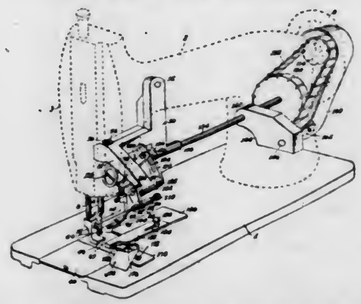
1. An electric discharge tube comprising an envelope, two electrodes within said envelope, means maintaining a fixed distance between said electrodes comprising a spacer having a metallic core, an insulating coating around portions of said core, metal members attached to said coating and insulated from said core by said coating, each of said metal members being attached to one of said electrodes, said spacer having a length between the points of attachment of said metallic pieces to said electrodes of the order of mag-

nitude of the distance of separation between said electrodes.



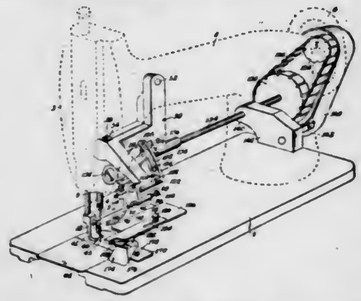
2,437,973
ELECTRICAL TENSIONING CONTROL SYSTEM
Anton W. Schmitz, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 28, 1945, Serial No. 637,675
7 Claims. (Cl. 318—6)

7. A control system comprising in combination, an adjustable voltage generator, a dynamo electric machine which is subjected to a constant power variable torque load and is connected to pump back to said generator, a pair of supply conductors, a voltage divider connected across said conductors, an excitation circuit for the field of said machine connected across said conductors, means for producing a reference voltage comprising a second voltage divider connected across said conductors, a potentiometer connected to said supply conductors, means for producing a signal voltage proportional to the armature current of said dynamo electric machine comprising a voltage drop resistor connected in the armature circuit of said machine and having one terminal connected through a selected portion of said potentiometer to one of said supply conductors, a contactor for short circuiting said portion of said potentiometer, an exciter having its armature connected in said excitation circuit and provided with a directional control field connected to be responsive to the difference of the voltages across said first voltage drop device and said selected portion of said first divider and provided with an opposing control field winding connected to be responsive to the difference of said signal and reference voltages for controlling said exciter to counteract changes in said armature current, means for decelerating said dynamo electric machine, and means responsive to operation of said decelerating means for opening said contactor to



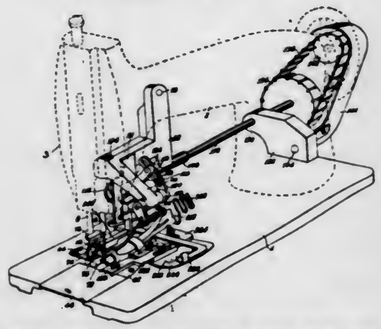
add the voltage across said portion of said potentiometer to said signal voltage thereby to effect a reduction in said armature current during deceleration.

2,437,974
GARMENT ARTICLE AND METHOD OF MAKING THE SAME
Frank M. Schwartz, New York, N. Y.
Application February 8, 1946, Serial No. 646,255
11 Claims. (Cl. 2—278)



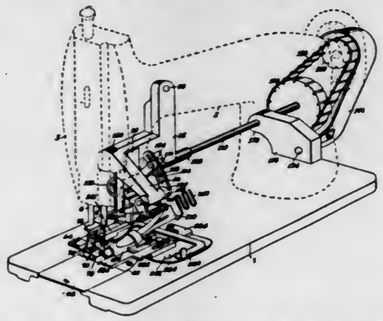
1. An article to be used in making component pieces of garments and the like, comprising a bag receptacle of any desired basic shape, and a filling of a non-matting material, the two faces of said bag receptacle being sealed together for each component piece to be derived from said bag receptacle, along a first line defining the predetermined final outline of the component piece, and along a second line outwardly paralleling said first line, both aforementioned lines being extended to at least one edge of the bag receptacle to provide a cutting path.

2,437,975
SEWING MACHINE AND ATTACHMENT THEREFOR FOR MAKING CROSS-STITCHES
Charles Seaman, Jamaica Estates, N. Y.
Application February 20, 1945, Serial No. 578,848
16 Claims. (Cl. 112—158)



4. In a sewing machine having a head, a normally vertically reciprocating needle carried by said head, drive means including a shaft to actuate said needle, feed dogs and a presser foot cooperating with said feed dogs, a yieldingly mounted support, a needle pusher finger carried by said support and normally disposed laterally of and in spaced relationship to said needle, a pin carried by said support, and means actuated at predetermined times to engage and release said pin to thereby alternately shift said support and permit it to return to its original position whereby the needle pusher finger will alternately engage the needle and bend it below the shank thereof and release said needle.

2,437,976
HEMMED MATERIAL AND METHOD OF MAKING THE SAME
Charles Seaman, Jamaica Estates, N. Y.
Application February 20, 1945, Serial No. 578,849
10 Claims. (Cl. 112—262)



1. A method which comprises forming an edge fold in base material in which the original edge of the material is positioned intermediate top and bottom plies, stitching only the base material adjacent the inner edge of the edge fold with a single line of straight stitches without passing through any of the plies of the edge fold, and at predetermined intervals stitching through the edge fold and the base material to secure the plies of the edge fold to the base material.

2,437,977
BLIND-STITCHED PIPING AND METHOD OF PRODUCING SAME
Charles Seaman, Jamaica Estates, N. Y.
Application February 20, 1945, Serial No. 578,850
12 Claims. (Cl. 112—262)

3. The method of forming a blind-stitched piping which comprises feeding a binding material folded longitudinally thereof with at least one of the edges turned inwardly to form a top edge fold having at least top and bottom plies, bending the said folded binding transversely to the feed thereof, stitching with a vertically reciprocating needle through the bottom ply of the top edge fold at the bend thereof from the under surface thereof whereby the needle enters and emerges from said under surface of said bottom ply without passing through said top ply and without passing through the opposite edge portion of the binding, shifting said bend out of the vertical path of travel of the needle whereby the needle does not pass through the folded binding, thereafter at predetermined times inclining the needle to stitch through the opposite edge portion of the binding with a cross-stitch joined to said first stitch, and causing the needle to assume its normally vertical path of travel at a time to permit the bobbin thread to pass through the loop formed in making the cross-stitch.

2,437,978
SEWING MACHINE
Charles Seaman, Jamaica Estates, N. Y.
Application February 20, 1945, Serial No. 578,851
13 Claims. (Cl. 112—158)

1. A sewing machine comprising feed dogs, a normally vertically reciprocating needle, a folder to fold a binding longitudinally thereof with at least one of the edges turned inwardly to form a top edge fold having at least top and bottom plies, a presser foot under which the folded binding is passed for feeding by the feed dogs, means to position the bend of the edge fold in the path of travel of the needle whereby the needle will enter and emerge from the under surface of the bottom ply of said edge fold without passing through said top ply of said top edge fold and without passing through the opposite edge portion of the binding, means to position the folded binding out of the path of travel of the needle whereby the needle will not pass through any part of the folded binding, and means cooperating with said needle at predetermined times to form a cross-stitch passing through the opposite edge portion of the binding.

2,437,979
PIPING AND METHOD OF PRODUCING SAME
Charles Seaman, Jamaica Estates, N. Y.
Application February 20, 1945, Serial No. 578,852
3 Claims. (Cl. 112—262)

1. A piping comprising a binding material folded longitudinally throughout its length with at least the top edge turned inwardly to form a top edge fold having at least an inner and outer ply, a base fabric having an edge thereof positioned between the inner ply of said top fold and the opposite edge portion of the folded binding, said top edge fold and the opposite edge portion of the folded binding being secured by spaced cross-stitches passing through all the plies of the top edge fold adjacent the inner bend thereof, the base fabric and the opposite edge portion, said spaced cross-stitches being connected by a line of straight stitches which pass only through said base fabric.

2,437,980
CHLOROBENZALACETONE COPOLYMER
Raymond B. Seymour and David T. Mowry, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application April 15, 1944, Serial No. 531,282
6 Claims. (Cl. 260—63)

5. The process which comprises emulsifying in an aqueous solution a polymerizable mixture containing from 2% to 50% by weight of a compound having the general formula:

$$Ar.CH{:}CHC(=O).CH_3$$

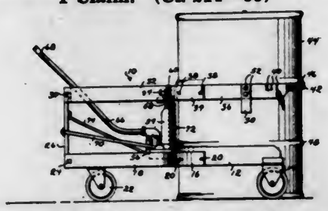
where Ar is a phenyl radical containing at least one chlorine substituted in the ring, the balance of said polymerizable mixture consisting of material selected from the group consisting of (A) a compound having the structure:

$$CH_2{:}CR.CR'{:}CH_2$$

where R and R' are selected from the group consisting of hydrogen, chlorine and methyl and (B) a mixture consisting of (A) and sufficient styrene to supply from 5% to 30% of styrene in said polymerizable mixture and polymerizing said mixture by the application of heat thereto.

2,437,981
PHENOLIC RESIN ADHESIVE
John Thomas Stephan, Reino Alexander Jarvi, and Jacob Richard Ash, Seattle, Wash., assignors, by mesne assignments, to Monsanto Chemical Company, Seattle, Wash., a corporation of Delaware
Application October 4, 1944, Serial No. 557,204
5 Claims. (Cl. 260—57)

1. An improved water-soluble phenolic adhesive for making hot press plywood comprising the product of an initial reaction of a phenol having a distillation range between 180° and 220° C. and not containing more than 15% of at least one phenol selected from the group consisting of orthocresol, xylenol, and mixtures



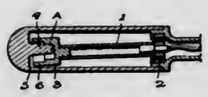
thereof, aqueous formaldehyde and caustic soda, in the range between 2.25 and 3.50 molecules of formaldehyde per molecule of the phenol and caustic soda in the range between 0.15 and 0.50 molecule per molecule of the phenol, said initial reaction product having added to it 0.15 to 0.50 molecule of caustic soda per molecule of the phenol so that the total caustic content lies in the range between 0.3 and 1.0 molecule per molecule of the phenol.

2,437,982

HYDRAULIC DRUM JACK AND CARRIER

Tim Tietsema, Oviedo, Fla.; Oleva I. Tietsema, administratrix of said Tim Tietsema, deceased, assignor of one-half to Oleva I. Tietsema and one-half to Olive M. Packard

Application June 19, 1946, Serial No. 677,779
1 Claim. (Cl. 214—66)



A device of the character described, comprising upper and lower superposed semi-circular bands, parallel superposed arms, outwardly extending arcuate shaped portions on said arms adapted to be secured to the front center of said bands, and extending forwardly thereof, jack means connected to said arms intermediate thereof and forwardly of said arcuate shaped portions, compression means connected to said arms on opposite sides of said jack, an upright secured to the forward end of said lower arm in vertical relation thereto, the forward end of said upper arm being pivotally connected to the upper end of said upright and means secured to the lower arms and lower band whereby articles supported on said upper band may be transported.

2,437,983

VIBRATOR

Harald Svenning Wenander, Riksby, Stockholm, Sweden, assignor to Vibro-Plus Corporation, New York, N. Y., a corporation of Delaware

Application March 24, 1945, Serial No. 584,594
In Sweden May 25, 1944
2 Claims. (Cl. 259—1)

1. In a vibrating device, a vibratory casing, a shaft rotatably supported at one end by and revolving about its axis within said casing, a weighted member fixed to said shaft having a surface of revolution forming a zone of contact with a surface of revolution fixed relatively to said vibratory casing, said weighted member being provided with a part projecting on one side of said zone of such mass as to substantially counterbalance the mass of said shaft on the other side of said zone with said zone serving as a fulcrum, and means for rotating said shaft and weighted member.

2,437,984

PROCESS FOR THE PREPARATION OF GAMMA-DIBUTYLAMINOPROPANOL

Arthur W. Weston, Waukegan, Ill., assignor to Abbott Laboratories, North Chicago, Ill., a corporation of Illinois

No Drawing. Application August 9, 1945, Serial No. 609,921
2 Claims. (Cl. 260—584)

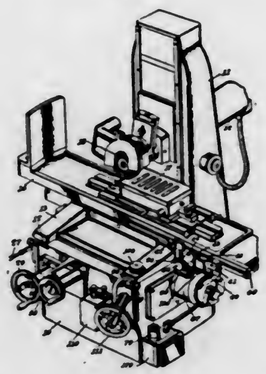
1. The process of preparing the compound gamma-dibutylaminopropanol which consists of combining allyl alcohol with dibutylamine in the presence of a catalyst, selected from the group alkali metals.

2,437,985

PRODUCTION OF THIOKETONES

De Loss E. Winkler, Berkeley, and Seaver A. Ballard, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application June 16, 1944, Serial No. 540,750
14 Claims. (Cl. 260—607)



1. A process for the production of thioisophorone which comprises reacting isophorone with hydrogen sulfide in the presence of an activated bauxite at a temperature of about 500° C.

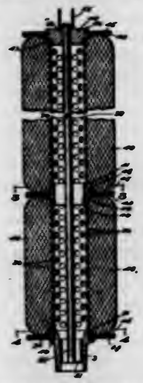
2,437,986

CROSS-FEED MECHANISM

Stephen E. Woodbury, Beverly, Mass., assignor to Reid Brothers Company, Inc., Beverly, Mass., a corporation of Massachusetts

Application September 21, 1945, Serial No. 617,712
9 Claims. (Cl. 51—2)

1. In a feed mechanism, the combination of a main frame, a slide movable on the frame and serving to effect relative cross movements between a cutting tool and a work piece, a rotatable screw and a rotatable nut engaging the screw, one of the last said elements being rotatably connected with the slide and axially movable in unison therewith and the other of the said elements being rotatably connected with the frame and held against axial movement whereby rotation of either element relative to the other causes movement of the slide, means for rotating the screw intermittently relatively to the nut to effect cross feeding movements of the slide, manually operable means for rotating the nut relatively to the screw to effect cross movements of the slide supplemental to those effected by



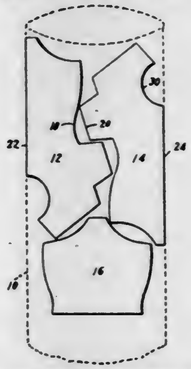
rotation of the screw, frictional means for resisting the rotation of the nut under frictional drag of the screw, and means for establishing a positive rotary connection between the nut and screw.

2,437,987

SPACER AND PROTECTOR FOR YARN-HOLDING DEVICES

Harry C. Wolfenden, Attleboro, Mass.

Application April 24, 1945, Serial No. 590,070
1 Claim. (Cl. 68—198)



An openwork spacer and protector for yarn-holding tubes comprising a hollow hub, having an interior diameter corresponding to that of the tubes to be held and spaced, said hub having flanges to interlock with adjacent tubes adapted to abut on the hub, said hub having radially extending rods attached at their outer perimeter to an encircling rod, said encircling rod being of a diameter to protect the yarn carried by said tubes and to permit free flowing of liquid or air thru the center of the tube and into the end portions of the yarn adjacent said radial rods.

2,437,988

GARMENT

William W. Artzt, New Rochelle, N. Y., assignor, by mesne assignments, to Lisle Mills, Inc., Allentown, Pa., a corporation of Pennsylvania

Application July 12, 1945, Serial No. 604,571
3 Claims. (Cl. 2—80)

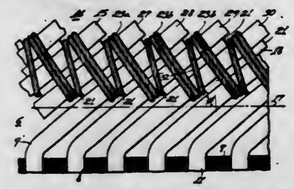
1. A garment of the class described comprising a single piece of fabric including an entire rear panel and front halves of a waist portion, said panel having a neck opening and being folded upon itself along lines which meet the neck opening at points below the center line thereof whereby said halves will lie on the upper portion of the panel with the adjacent edges in aligned overlapping relation, a lower front portion permanently secured adjacent its side edges to the edges of the lower portion of the panel, said lower front portion having its upper edge folded over upon itself to simulate a front belt portion.

2,437,989

GARMENT AND METHOD OF MAKING THE SAME

William W. Artzt, New Rochelle, N. Y., and Ely Lesavoy, Allentown, Pa., assignors to Lisle Mills, Inc., Allentown, Pa., a corporation of Pennsylvania

Application January 29, 1946, Serial No. 643,996
1 Claim. (Cl. 2—78)

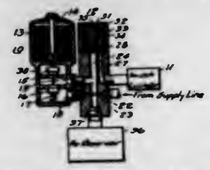


The method of forming a garment of the character described from a fabric tube flattened along lines midway of the portions thereof which are to constitute the front and back of the garment, comprising cutting out portions of the superimposed layers of fabric substantially below the upper end thereof to constitute the complete armholes, severing both layers of the flattened tube on a contoured line above the armholes to form the front and back neck portions of the garment with shoulder straps therebetween, severing both layers of the flattened tube on a contoured line at a predetermined point below and remote from the armholes to form the bottom of the garment, securing the cut-out portions of the fabric to each other and to one of said flaps, and securing separable attaching means to the said portions adjacent the free edge thereof and complementary separable attaching means to the other of said flaps, whereby the said portions will provide a crotch pocket portion when the attaching means are secured to each other.

2,437,990

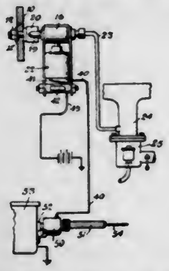
DYNAMOELECTRIC MACHINE

John S. Askey, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania



Application July 28, 1945, Serial No. 607,642
3 Claims. (Cl. 171—252)

1. A dynamo-electric machine having a rotor member and a stator member, the stator member having a cylindrically bored core having winding-receiving slots, a winding having coil-sides in said slots and having a plurality of layers of end-winding portions, each end-winding layer comprising a continuous circle of spaced, substantially straight end-winding portions, inclined at an

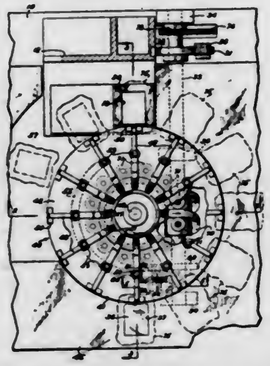


acute angle with respect to the tangent of a circle passing through all of the straight end-winding portions of that layer, one or more arch-bound rings of short spacers disposed in the spaces between the successive spaced, substantially straight end-winding portions of each end-winding layer, all of the spacers which are comprised in any ring of arch-bound spacers being disposed at substantially equal distances from the end of the core, and a roping-means for each arch-bound ring of spacers, each roping-means comprising a plurality of groups of a plurality of turns of twine for binding each spacer in place between its adjacent straight end-winding portions, each group of a plurality of turns of twine extending at substantially right angles across $(n+1)$ straight end-winding portions, so as to bind n spacers, where n is greater than one, successive groups of twine-turns encircling groups of $(n+1)$ straight end-winding portions and including a common end-winding portion or portions.

2,437,991
CONTROL APPARATUS
Cyril E. Baston, Irwin, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 12, 1943, Serial No. 478,898
4 Claims. (Cl. 121—38)

1. In control apparatus, in combination, a fluid-operated device, an electromagnetically operated valve for controlling the flow of a fluid to and from said device, and valve means disposed between said magnet valve and said device for delaying the operation of said device for a predetermined time interval after the operation of said magnet valve, said valve means having an enclosed reservoir of a fixed volume detachably connected thereto and a pressure-operated valve member for controlling the flow of fluid from said reservoir to said device and from said device to atmosphere.

2,437,992
CARBURETOR ATTACHMENT FOR CONSERVING FUEL
Barney Bennett, New York, N. Y.
Application August 14, 1945, Serial No. 610,718
2 Claims. (Cl. 180—82.1)

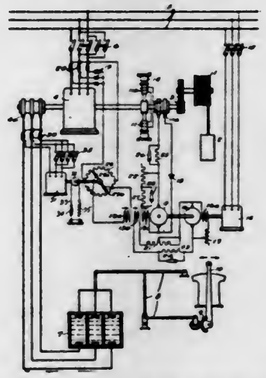


1. In combination with a motor vehicle having a conventional intake manifold through which air is normally supplied, means for supplying additional air to said motor, said means including a valve, an air intake for said valve, means for adjusting the opening of said valve, means for yieldingly holding said valve in closed position, a magnet for opening said valve, a circuit, a centrifugal switch for closing said circuit when said vehicle reaches a predetermined speed and a mercury switch adapted to break said circuit when the front of said vehicle is on a higher plane than the rear thereof.

2,437,993
FLUORINATION OF ACYCLIC OLEFINIC COMPOUNDS
Anthony F. Benning, Woodstown, N. J., and Joseph D. Park, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 12, 1946, Serial No. 683,140
20 Claims. (Cl. 260—653)

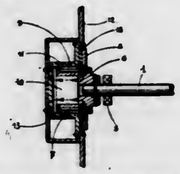
1. The process of adding fluorine to a double bond of an acyclic olefinic compound which consists of carbon and at least one of the members of the group consisting of hydrogen, chlorine, bromine and fluorine which comprises mixing, in a reaction vessel at a temperature below 0° C., at least 0.5 mole of the olefinic compound and at least 5 moles of HF with one mole of a member of the group consisting of Co_2O_3 and MnO_2, closing the reaction vessel, causing the temperature to rise above 0° C. to that at which the reaction proceeds rapidly, maintaining the mixture at at least the latter temperature until the reaction is complete and then separating the products.

2,437,994
BLANKING APPARATUS
Charles M. Beyer, Flemington, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application March 5, 1946, Serial No. 652,182
1 Claim. (Cl. 164—20)



A blanking apparatus comprising a blanking die having an opening of a given contour, an actuatable companion punch therefor, a table having a recess therein spaced from the punch and die, a locating target similar in contour to the die opening disposed in the recess, a spider, mounted for rotation between the target and the punch and die, including a support having an upper surface, a hub mounted centrally of the support, and equally spaced radially extending fingers pivotally carried by the hub and having widened ends normally urged toward the upper surface of the support to grip and firmly hold materials selectively located on the target, a drive shaft, means operated by the shaft to intermittently rotate the spider the distance between the radial centers of the fingers to feed the materials successively between the punch and die, means adjacent the target operated by the shaft to lift the adjacent finger from the support for the location of the next material on the target and to free the finger to grip the material prior to the next rotary movement of the spider, means operated by the shaft to move the punch through an operating cycle to blank a portion from the material positioned between the punch and die leaving the scrap of the material gripped by the adjacent finger and support, and means to move the fingers to free the scrap after they leave the punch and die.

2,437,995
SELENIUM RECTIFIERS
Wayne E. Blackburn, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application November 10, 1943, Serial No. 509,818
5 Claims. (Cl. 175—366)



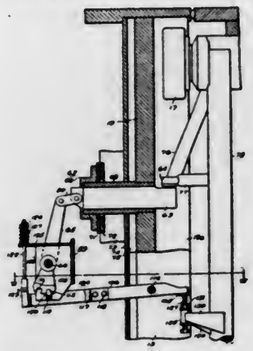
1. The process of making selenium units which comprises depositing a layer of selenium on a metallic plate, forming a contact layer on the free surface of said selenium, annealing the unit thus formed and thereafter applying a direct-current voltage across the selenium in a direction tending to send current in the high resistance direction while maintaining the temperature of said unit at about 155° C., said voltage having an initial value below the maximum which said unit must stand in the reverse current direction in service, and being gradually raised to a value higher than said maximum.

2,437,996
INDUCTION MOTOR CONTROL BY ELECTRIC BRAKE
Herbert Stirling Carnegie and Harry Dolan, Stafford, England, assignors to The English Electric Company Limited, London, England, a British company
Application December 15, 1945, Serial No. 635,352
In Great Britain January 29, 1945
10 Claims. (Cl. 318—302)

1. In combination, an alternating-current motor having a wound rotor, a control means for said motor comprising a resistance circuit connected to said rotor and adjustable means for controlling the resistance of said circuit, an electromagnetic brake for said motor having a brake winding, electric means connected to said field winding to supply energization therefor and having two opposingly acting control windings so that said energization is controlled in dependence upon the differential value of the excitation of said respective control windings, circuit means connected to one of said control windings for providing it with reference excitation, and circuit means connected to said other control winding and associated with said control means for exciting said other control winding substantially in accordance with the motor speed, whereby said brake winding is energized when said speed exceeds a value determined by said reference excitation.

2,437,997
WINDING DEVICE FOR CINEMATOGRAPH FILMS AND OTHER APPLICATIONS
André Marie Bernard Charlin, Montrouge, France
Application September 17, 1945, Serial No. 616,881
In France April 9, 1945
3 Claims. (Cl. 242—55)

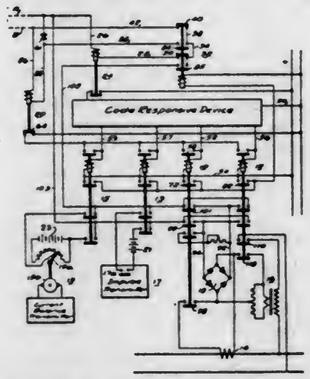
1. A winding device for cinematographic films comprising a winding shaft, bearings supporting said shaft, driving means at one end of said shaft, a hub support fixed at the other end of said shaft, a disk made of magnetic material and a hub made of non-magnetic material having a low coefficient of friction fixed on said hub support, a plate made of non-magnetic material having a low coefficient of friction applied on said disk, a magnet presenting a magnetic pole at either end of its axis housed inside said hub, a dome-shaped reel hub having a peripheral flange and being disposed on the hub of said shaft in such a manner that the bottom of said reel hub is maintained in spaced relation from the end of said magnet while said flange is forced against said plate by the magnetic attraction of said magnet on said reel hub, a disk secured to the outer edge of said flange, a reel body fixed on said reel hub, and means on said reel body for securing the end of the film to be wound on.



2,437,998
BETA-HALOGENATED UNSATURATED NITRILES
Albert M. Clifford and Joy G. Lichty, Stow, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application November 29, 1940, Serial No. 367,772
3 Claims. (Cl. 260—464)

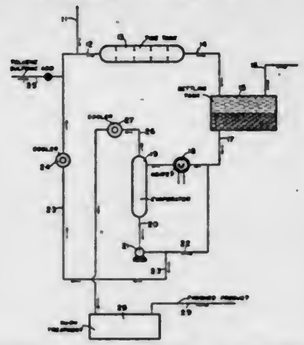
3. As a new chemical compound, a nitrile having the structural formula

$$\begin{matrix} HC{=}C{-}CN \\ | \quad | \\ X \quad R \end{matrix}$$



wherein X is a halogen atom and R is a radical of the group consisting of alkyl, halo alkyl, aryl, aralkyl, and alkoxy radicals.

2,437,999
LOCKING APPARATUS FOR ELEVATOR PLATFORMS
Charles A. Dana, North Plainfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 28, 1946, Serial No. 650,950
9 Claims. (Cl. 187—75)

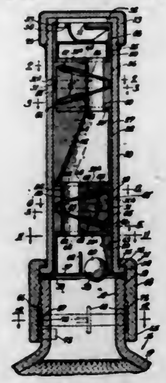


1. In an elevator for serving a floor, a hoisting means for the elevator, dead stop means disposed at the floor for positively stopping the elevator thereat, locking means mounted at the floor for locking the elevator to within a predetermined distance of the floor, and interlocking means responsive to movement of the elevator a predetermined distance from the dead stop means while the locking means is in its locking position for preventing unlocking operation of the locking means.

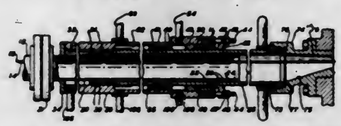
2,438,000
TELEMETERING SYSTEM
Willard A. Derr, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 31, 1945, Serial No. 625,906
7 Claims. (Cl. 177—351)

1. In a remote signalling system for control and remote stations connected by a signalling channel, transmitting means at the remote station operable to energize the channel with a voltage of one polarity variable in accordance with a condition to be indicated, receiving means at the control station responsive to said energization of the channel, control means at the remote station responsive to a flow of current through the channel in excess of a predetermined value which is greater than that produced by the voltage at the remote station operable to effect disconnection of the transmitting means from the channel, an asymmetric conducting means connected across the channel intermediate the control means and the transmitting means to provide a path of predetermined impedance for a voltage of reverse polarity from the control station, and means at the control station operable to effect energization of the channel with a voltage of said reverse polarity and of sufficient value to produce a current through the control means in the same direction as that produced by the transmitting means and of sufficient value to operate the control means.

2,438,001
TOLUENE SULFONIC ACID TREATMENT OF AROMATIC HYDROCARBONS
Ralph L. Dockendorff, Goose Creek, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application April 19, 1946, Serial No. 663,417
9 Claims. (Cl. 260—674)



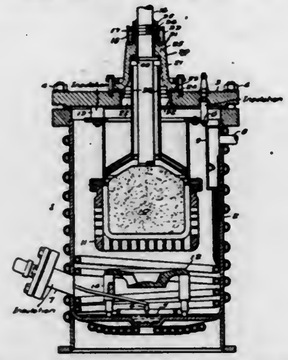
1. A method for treating an unfinished normally liquid fraction comprising a major portion of aromatic hydrocarbon and a minor portion of unsaturated straight chain hydrocarbon contaminant including the steps of mixing said fraction in a liquid state with a sufficient quantity of substantially anhydrous toluene sulphonic acid to form an admixture which will separate into at least two phases upon settling, settling of said admixture to separate it into two immiscible layers one of which is a toluene sulphonic acid layer, withdrawing said toluene sulphonic acid layer and distilling said withdrawn toluene sulphonic acid layer to recover therefrom a finished aromatic fraction substantially free from said contaminant.



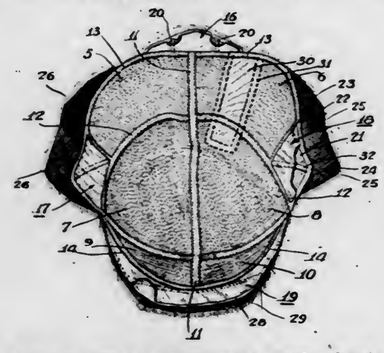
2,438,002
MEASURING DEVICE WITH GRAVITY OPERATED VALVES
William H. Duggan, Chicago, Ill.
Application February 3, 1944, Serial No. 520,899
13 Claims. (Cl. 222—456)

1. A fluid measuring device for a bottle or the like comprising a body having an inlet communicating with the interior of the bottle and an outlet through which fluid is adapted to be discharged, a first valve assembly comprising a pair of valves, means for mounting said pair of valves

at said inlet for movement transversely of the longitudinal axis of said body and angularly toward each other, and a second valve assembly comprising a second pair of valves, means for mounting said second pair of valves at said outlet for movement transversely of the longitudinal axis of said body and angularly toward each other.



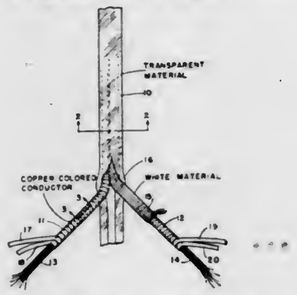
2,438,003
CLOSURE
Karl C. Edwards, Chase, and David D. Jones, Towson, Md., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 13, 1945, Serial No. 616,012
4 Claims. (Cl. 18—6)



4. In a continuous extrusion and vulcanization apparatus including an extrusion head and a vulcanizing tube, the combination of an adapter designed to be secured to the outlet of the extruding head and having a conical socket in the outer end thereof, a gasket seated in the adapter, a reciprocable tube having a conical plug on the end thereof adjacent to the adapter and designed to cooperate with the gasket and the conical socket in the adapter to form a pressure-tight joint, said reciprocable tube also being provided with an annular piston formed thereon, an annular cylinder designed to be secured to the end of the vulcanizing tube in which the reciprocable tube slides for enclosing the annular piston, piston rings mounted upon the piston to form pressure-tight joints with the vulcanizing tube and the piston, and means for introducing a fluid under pressure on either side of said piston to move the reciprocable tube either toward or away from the adapter.

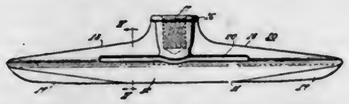
2,438,004
LEAD-IN BUSHING FOR VAPOR ELECTRIC DEVICES
Max Garbuny and William Elmer Pakala, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 24, 1947, Serial No. 730,280
3 Claims. (Cl. 250—27.5)

1. A vacuum electric device comprising a metallic container having an opening therein, an electrode in said container, a heavy glass bushing mechanically secured to said container and embracing said opening, an electrode stem extending through said bushing and mechanically attached thereto whereby said electrode and said stem are supported on said container by said bushing, a substantially annular insert embedded in said bushing adjacent the opening in said container, said insert composed of a metal readily wetted by glass and having a coefficient of expansion closely matching the glass, one edge of said insert being integrally united to the container to provide a vacuum-tight seal between said container and said bushing, a second substantially annular insert in said bushing, the edge of said second insert being integrally connected to said stem to provide a vacuum-tight connection between said stem and said bushing.



2,438,005
WIG CONSTRUCTION
Samuel J. Goldman, Philadelphia, Pa.
Application April 4, 1946, Serial No. 659,541
8 Claims. (Cl. 132—53)

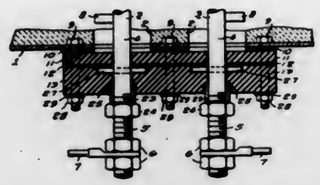
2. A masculine wig covered with short hair comprising a substantially hemispherical scalp portion of closely woven silk fabric covered with hair, a pair of side fastening portions at either side of said scalp portion so as to be located in front of the ears, a forehead fastening portion attached at the middle of the front of the scalp portion, and a nape fastening portion connected to the rear of the scalp portion and extending substantially from one side fastening portion to the other, said forehead and side fastening portions being formed of at least two layers of fish



skin, a layer of open mesh netting overlying at least one of said fastening portions and having relatively short hair attached to it and projecting beyond it generally parallel to the plane of the netting so that the hair lies closely against the head of the user in a natural manner.

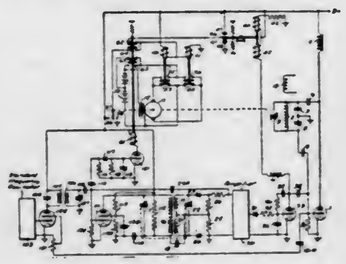
2,438,006
ELECTRIC CORD
Gilbert E. Gustafson, River Forest, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application June 5, 1944, Serial No. 538,731
4 Claims. (Cl. 174—112)

1. A flesh-colored cord for people of the white race comprising, in combination, a pair of conductors encased in a transparent plastic material, one of said conductors being of copper color and the other conductor being covered with whitish material whereby the assembled cord has a color resembling flesh color.



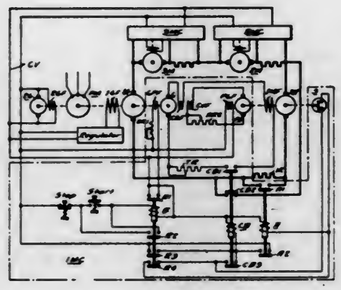
2,438,007
TROLLEY CONDUCTOR DEVICE
Raymond P. Hanna, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 7, 1945, Serial No. 614,944
7 Claims. (Cl. 191—43)

1. A trolley conductor support comprising, a unitary die-cast body having an elongated channel portion with depending lips arranged to be peened about a trolley conductor, a support boss, and an elongated web joining the boss and the channel portion throughout the length of the channel portion, said web having an elongated recess adjacent the junction with the channel portion to facilitate bending the channel portion about a conductor.



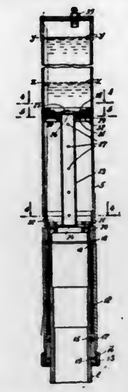
2,438,008
GAS-TIGHT SEAL AND TERMINAL FOR ELECTRIC FURNACES
John G. Hoop, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 12, 1946, Serial No. 640,783
3 Claims. (Cl. 174—151)

1. A terminal structure primarily for an industrial electric furnace, comprising the combination with a metallic wall-portion for said furnace, a terminal conductor insulatedly passing through a hole in said wall-portion, said conductor having a threaded outer end, and a plurality of spaced bolts; of a plurality of facing insulating boards, each having a central hole, said holes being coaxial, said conductor passing through said coaxial holes, means associated with said bolts, for gas-tightly holding said plurality of boards against said wall-portion, a first of said



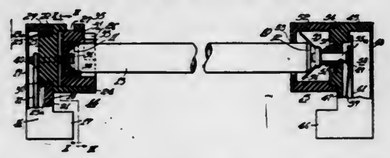
boards having an elongated groove extending from the central hole in said first board, said groove being in a side of said first board, which is adjacent the second of said boards, a transverse extension associated with said conductor and lying in said groove, said hole having an enlarged portion and packing therein, and means comprising a nut screwed on said threaded end of the conductor for compressing said packing for sealing said hole-means against gas-leakage.

2,438,009
CONTROL SYSTEM
Theodore P. Kinn and David R. Tashjian, Baltimore, Md., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 17, 1945, Serial No. 583,293
2 Claims. (Cl. 250—36)



2. In combination with an oscillation generator having a tank circuit embodying an adjustable reactance, a motor for adjusting said reactance, a second oscillation generator, means for beating the frequency of said first oscillation generator and said second oscillation generator, means for impressing the beat frequency thus obtained upon a discriminator having a resonant circuit and having an output voltage which reverses polarity when said impressed voltage passes through the resonant frequency of said resonant circuit, relay means responsive to departure of said beat frequency from said resonant frequency for controlling said motor to make its direction of rotation dependent upon the polarity of the output voltage and said discriminator when said beat frequency departs from said resonant frequency by less than a predetermined amount, a limit switch for said variable reactor, said relay means making the direction of rotation of said motor dependent on the position of said limit switch when said departure is greater than said predetermined amount.

2,438,010
ELECTRIC MOTOR CONTROL SYSTEM
George E. King, Swissvale, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 16, 1944, Serial No. 563,754
5 Claims. (Cl. 318—270)

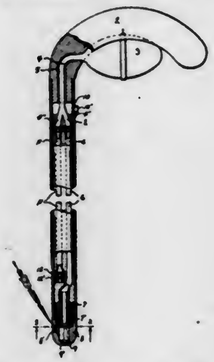


5. In an electric drive, the combination of, a motor having an armature winding and field winding means, a resistor in series with said armature winding, an acceleration relay for shunting said resistor upon energization thereof, a contactor normally shunting said armature winding and resistor which contactor when energized removes said shunt, means for producing a constant electrical current connected in circuit with said motor armature and resistor, means for producing a constant electrical potential, a run relay which when energized connects said means for producing a constant electrical potential to said field winding means to effect normal running operation of said motor, a brake relay which when energized reversely connects said means for producing a constant electrical potential to said field winding means, means including electrical interlocks for the run and brake relays for selectively operating said relays over a complete cycle of operation of the motor, means for producing a variable electrical potential which varies according to the counter voltage of the motor, a voltage relay for connecting the means for producing a variable electrical potential to said field winding means in opposition to said constant potential as applied by said run relay, when said variable potential reaches a certain value, means forming a part of said brake relay for deenergizing the voltage relay upon operation of the brake relay, means for energizing the run relay, means forming a part of the run relay for energizing said contactor, means forming a part of said run relay and said contactor for energizing said accelerating relay, means forming a part of the accelerating relay for maintaining said contactor energized when the run relay is deenergized, a switch responsive to the speed of operation of the motor for maintaining the accelerating relay energized independently of the run relay until the speed of said motor reaches a certain low value, means for deenergizing the run relay, means forming a part of the run relay and operable upon deenergization thereof to energize said brake relay, said switch opening at said certain low motor speed to deenergize the accelerating relay, thereafter said contactor and brake relay drop out in the sequence named.

2,438,011
SHOCK ABSORBING STRUT FOR AIRCRAFT
Thomas Knox, Newtown, Pa., assignor, by mesne assignments, to Kaiser Fleetwings, Inc., a corporation of California
Application May 1, 1945, Serial No. 591,389
8 Claims. (Cl. 267—64)

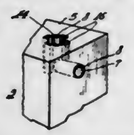
1. A shock absorbing strut for aircraft comprising telescoping cylinders, the outer cylinder being partially filled with a liquid, a diaphragm in the outer cylinder having an opening, a metering tube of lesser diameter than the opening secured to the inner cylinder and having a plurality of longitudinally spaced metering orifices, the uppermost orifice being in the otherwise closed upper end of the metering tube and communicating directly with the space above the diaphragm when the strut is extended, and a valve associated with the diaphragm and adapted to seal and unseal the opening about the tube as the latter moves inwardly and outwardly with respect to the outer cylinder.

2,438,012
LAMP HOLDERS
Alfred H. Laidig, Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 20, 1945, Serial No. 606,149
10 Claims. (Cl. 176—32)



1. In a discharge tube lighting system, the combination with a gaseous discharge tube having a contact element at each end thereof, of a pair of lamp holders for supporting and conducting current to the tube, one of said lamp holders having a receptacle portion disposed to receive one end of the tube and operable to mechanically lock the end of the tube in said holder and embodying a switch actuated by said receptacle portion for controlling the energizing circuit for the tube, and the other of said lamp holders embodying a switch actuated to its closed position when the other end of the tube is inserted into the holder for controlling the tube circuit.

2,438,013
TREATED STEEL SHEET AND PROCESS
Robert R. Tanner, Detroit, Mich., assignor to The Patents Corporation
No Drawing. Application July 22, 1940, Serial No. 346,810
12 Claims. (Cl. 29—195)

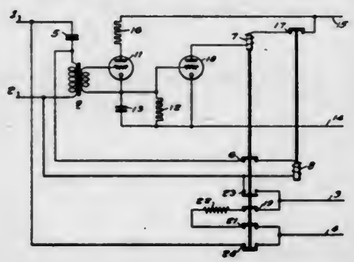


1. A ferrous sheet having thereon a plating not over .0001'' thick of metal of the group consisting of cadmium, nickel, lead, and copper, and having the plating covered with a thin glassy coating formed by baking thereon a solution containing hexavalent chromium and the PO_4 radical.

2,438,014
TRICK WALKING CANE
Bernard V. Lukowitz, Milwaukee, Wis.
Application July 12, 1946, Serial No. 683,237
2 Claims. (Cl. 135—47)

2. In a hollow stemmed cane having an offset handle; a ferrule therefor, comprising a chambered tip having an orifice in communication therewith, a cored plug communicating with the orifice tip, a discharge check valve carried thereby, a squeeze bulb fitted to the cane handle, a tube communicating with the bulb and ferrule, a second tube section in communication with the first mentioned tube and an intake suction valve nipple carried at the end of said last mentioned tube section.

2,438,015
SHUNTED BRUSH
Clarence Lynn, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 10, 1945, Serial No. 572,125
1 Claim. (Cl. 171—325)



A brush of an electrically conducting composition-material having a fluted hole extending into its top end, said hole having one or more flutes or grooves in its side, a side-hole communicating with a lower portion of said fluted hole, a metallic coating on the walls of said fluted hole, a shunt including a flexible metallic cable extending into said fluted hole, and a soldered connection between said cable and said metallic coating, said flutes or grooves extending approximately straight down along the side of the hole, and having solder therein.

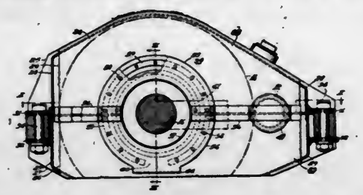
2,438,016
SAFETY SHOE AND PROCESS OF MAKING THE SAME
Harry G. McMurray, Wakefield, Mass., assignor to Safety Box Toe Company, Holliston, Mass., a corporation of Massachusetts
Application January 27, 1947, Serial No. 724,556
5 Claims. (Cl. 36—17)

4. A safety shoe comprising a welt insole, an upper including a steel toe box, welt strips terminating at approximately the tip line of the shoe, a flat toe plug extending between the welt strips and completing the general welt contour of the shoe, an outsole sewn to the welt strips and toe plug, and metallic fastenings securing the toe portion of the outsole in the shoe bottom.

2,438,017
CONTROL SYSTEM
Slavo J. Murcek, Duquesne, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 3, 1945, Serial No. 580,762
5 Claims. (Cl. 177—352)

2. In a transfer relay for connecting an outgoing line to an incoming line in response to initiating signals of a predetermined character, a first relay having an energizing winding connected in series with a first pair of separable contacts across said incoming line, a second relay having an energizing winding connected in series with a second pair of separable contacts which are opened in response to the energization of said first relay, and acting when energized to open said first separable contacts, an electrical discharge tube having a control electrode and having its principal electrodes connected in series with said second relay winding and said second separable contacts, a condenser shunted by a resistor connected to impress its voltage on said control electrode, means responsive to energization of said incoming line to charge said condenser, and means for causing energization of said second relay to connect said outgoing line to said incoming line.

2,438,018
PROCESS FOR TREATING HYDROCARBONS
Alan C. Nixon and David Louis Yabroff, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Original application October 16, 1943, Serial No. 506,612. Divided and this application June 10, 1946, Serial No. 675,843
10 Claims. (Cl. 196—44)



1. In a process for treating a mixture comprising predominately hydrocarbons with an aqueous alkaline treating liquid to effect the separation of components of said mixture which are soluble in the treating liquid from components which are not soluble therein, in which process two phases are produced, a first phase comprising predominately hydrocarbons and a second phase comprising predominately aqueous alkaline treating liquid and at least a substantial portion of components of said mixture which are soluble therein, in which process a relatively stable dispersion of one phase in the other is produced, the improvement comprising the method of reducing the stability of such a dispersion which comprises effecting said treatment in the presence of from about 0.001% to about 1% by volume of said treating liquid of an organic surface-active agent which forms a dispersion itself of particles at least as small as of colloidal dimensions in said aqueous treating liquid, which is substantially insoluble in said mixture and which is a salt of a fatty acid containing between 8 and 14 carbon atoms per molecule.

2,438,019
METHOD FOR PREPARING FUMARIC NITRILE
Henry A. Pace, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application July 23, 1946, Serial No. 685,781
12 Claims. (Cl. 260—464)

1. A method of preparing fumaric nitrile which comprises heating a mixture of fumaramide, phosphorus pentoxide and a powder of a metal having an electropositive potential less than that of each of the alkali metals and alkali earth metals.

2,438,020
GEAR HOUSING
Rawdon E. Rambo and John E. Pastoret, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 25, 1944, Serial No. 560,303
8 Claims. (Cl. 74—606)

1. The combination with a motor having a shaft with a pinion thereon for driving a gear, of a stationary end cap positioned about the shaft between the pinion and the motor and having a peripheral groove, and a housing for the gear and pinion comprising opposed sections separable along a line through the shaft and having an opening on the motor side to receive a portion

of the end cap with the edges thereof positionable in the peripheral groove.

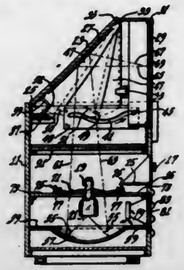
2,438,021
ETHYLENE-POLYHALOETHYLENE REACTION PRODUCTS
John Richard Roland, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 12, 1943, Serial No. 498,425
10 Claims. (Cl. 260—654)

1. The compound

$$ClCH_2CH_2CH_2CH_2CCl{=}CCl_2$$

4. A mixture of compounds of ethylene and a halogenated ethylene containing at least three halogen atoms of atomic weight greater than 30 said mixture being obtained by the process of claim 7 and the compounds of said mixture containing a chain of two to one hundred ethylene units, a terminal valence of the chain being satisfied by a halogen atom of atomic weight greater than 30 and the other terminal valence of the chain being satisfied by the radical obtained by removing a halogen atom from the halogenated ethylene.

7. Process of forming compounds of the formula



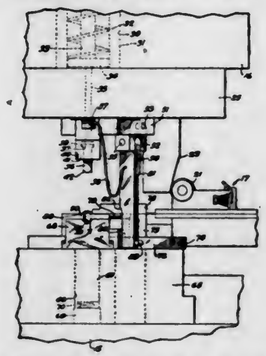
$$X(CH_2CH_2)_nCR{=}CRR$$

wherein X and two of the R's are halogen of atomic weight greater than 30, the remaining R being selected from the class consisting of hydrogen and halogen of atomic weight greater than 30 which comprises reacting ethylene at a pressure of 20 to 1000 atmospheres with a polyhaloethylene having at least three halogens of atomic weight greater than 30 at 25–150° C. in the presence of a catalyst having two directly linked oxygen atoms.

2,438,022
PROJECTION DEVICE FOR TELEVISION APPARATUS
Henry McD. Rundle, Moorestown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 22, 1945, Serial No. 584,095
8 Claims. (Cl. 88—24)

1. A viewing structure for image projection apparatus comprising a cabinet base member, a closure element hinged to said cabinet base member, and a planar viewing screen and support frame unit having one lateral edge hinged to said cabinet closure element, a cam slot positioned on said cabinet base member for guiding the opposite free edge of the viewing screen and support frame unit, and a slidable connection between the free edge of the said screen and support frame and the guide track for positioning the said viewing screen so that its planar surface is in substantially

ly a vertical viewing position when the cabinet closure member is opened to the operating position relative to a predetermined path along which optical images are adapted to be projected from



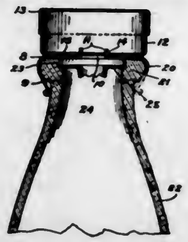
within the cabinet base member and also for locating the said viewing screen in a plane substantially parallel to the closure element when the said closure element is closed upon the cabinet base member.

2,438,023

APPARATUS FOR CUTTING WIRES AND FORMING AND ATTACHING A SLEEVE THERETO

Emil Sirp, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application September 15, 1943, Serial No. 502,495
11 Claims. (Cl. 29—33.5)



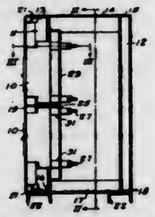
1. An article forming apparatus for severing a length of wire from a supply thereof and forming and attaching a sleeve to the length of wire comprising wire feeding means, strip material feeding means, a ram, means actuated thereby and operable to actuate both of said feeding means, a tool supporting block positioned to cooperate with said ram, cooperating shearing tools on the block and ram for shearing lengths of wire and strip fed to the tools by the separate feeding means, cooperating forming tools on the ram and block for wrapping the sheared length of strip material around the wire to form a sleeve thereon, clamping tools on the ram and block for clamping the wire during the forming operations, and means for releasing one of said clamping tools to resiliently clamp the wire on the operating stroke of the ram, including a cam member mounted on the ram, a latch for normally holding the clamping tool in inoperative position, and means on the latch engageable by the cam member to operate the latch.

2,438,024

MILK BOTTLE UTILITY DEVICE

Joseph Stransky, Chilton, Wis.

Application January 26, 1946, Serial No. 643,736
5 Claims. (Cl. 215—101)



5. A milk bottle utility device comprising, a sheet metal closure cap having integral resilient fingers formed for coaction with the brim of a standard milk bottle to firmly position the cap against the bottle top and also having a medial pouring opening and integral hooks adjoining the opening, and a sheet metal money receptacle cooperable with said hooks to detachably fasten the receptacle to the cap and to thereby seal said opening.

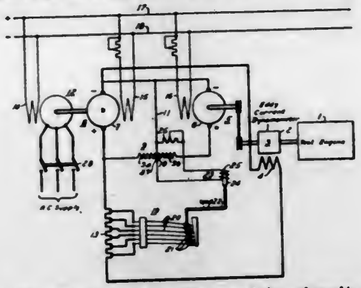
2,438,025

SWITCHBOARD

William R. Taliaferro, Edgewood, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application February 10, 1944, Serial No. 521,809
5 Claims. (Cl. 175—307)

1. In a switchboard structure having a supporting framework, a front panel removably attached to the framework, and a metal pan secured to the framework and spaced from the panel for supporting a plurality of apparatus units, in combination, horizontal and vertical metal barriers extending between the panel and the pan and secured to said pan and disposed between the apparatus units to isolate each unit from the other units and reinforce the pan, said pan having a plurality of openings therein, terminal studs for the apparatus units disposed in said openings, insulating means for spacing the studs and the apparatus units from said pan, means for securing the studs to the pan, and means for connecting the apparatus units to the studs.



2,438,026

DYNAMOMETER

Jay R. Wrathall, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application May 1, 1943, Serial No. 485,282
8 Claims. (Cl. 73—134)

1. Apparatus for testing a prime mover comprising, in combination, an eddy current dynamometer and a control field winding for said dynamometer, a source of constant direct potential permanently connected to said control field winding for energizing said control field winding, a source of direct potential variable in response to the speed of rotation of said dynamometer, electrical regulating means disposed in circuit relation with said control field winding and said source of constant direct potential and means including an electromagnetic device which is responsive to said source of variable direct potential for controlling said electrical regulating means.

2,438,027

ELECTRICAL MEASURING INSTRUMENT

Douglass A. Young, East Orange, Lawrence J. Lunas, Cedar Grove, and Bernard E. Lenehan, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsbugh, Pa., a corporation of Pennsylvania

Application September 2, 1943, Serial No. 500,896
16 Claims. (Cl. 171—95)

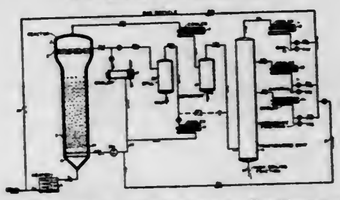
16. In an electromagnetic device, a pair of similar magnetic structures, each of said magnetic structures comprising a hook-shaped magnetic core having a hook section and having a shank section projecting from said hook section, each of said magnetic structures also comprising a magnetic member connected to the shank section and surrounding, but spaced from, a substantial portion of the associated hook section to form therewith an arcuate air gap, a coil having a coil side disposed in the air gaps for movement therethrough, said hook section, shank section and magnetic member of each of said magnetic structures defining a magnetic path for directing magnetic flux through the associated air gap, and means mounting said magnetic cores with their hook sections extending around a common axis, one of said magnetic cores being reversed relative to the other of the magnetic cores about an axis parallel to said radial direction, said magnetic cores being spaced axially along said first-named axis to complete a passage extending through the magnetic cores to permit insertion and removal of the coil therethrough relative to the magnetic structures.

2,438,028

LOCKING MEANS FOR FASTENER STUDS

Rex W. Allen, Palisades, N. Y., assignor to Camloc Fastener Corporation, New York, N. Y., a corporation of New York

Application December 7, 1943, Serial No. 513,233
4 Claims. (Cl. 24—221)

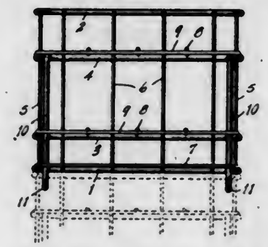


1. A locking means for a fastener stud, comprising a mounting grommet member for said stud and adapted for mounting on a structure, said grommet being provided with a plurality of corrugations on one face, a locking plate fixed against rotation with respect to and axially movable on said stud adjacent said grommet, a plurality of corrugations on said plate adjacent said grommet and for cooperative engagement with the grommet corrugations, and spring means continuously urging the locking plate into engagement with the grommet, whereby rotation of said stud is normally prevented, but, upon exertion of sufficient turning torque in either direction, axial movement of said plate occurs and rotation is permitted.

2,438,029

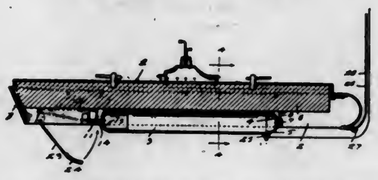
METHOD OF EFFECTING CATALYTIC CONVERSIONS

Harold V. Atwell, Beacon, N. Y., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware



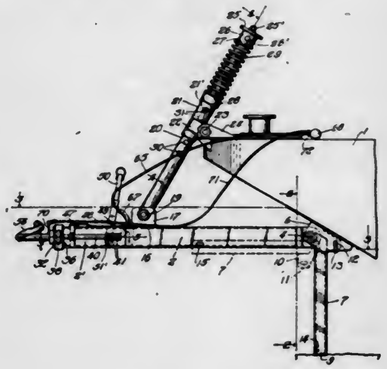
Application May 3, 1944, Serial No. 533,900
3 Claims. (Cl. 23—1)

1. A continuous method for effecting catalytic conversion of gaseous reactants by contact with



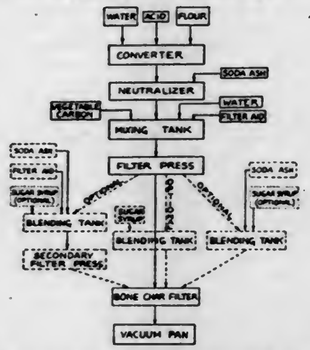
a solid catalyst in particle form at predetermined temperature which comprises continuously passing a liquid upwardly through the particulate solid catalyst in an elongated vertical reaction zone so constructed and arranged that the velocity of flow of liquid through the upper section of the zone is relatively less than that through the lower section at a rate sufficient to disperse and agitate said catalyst particles in said liquid and less than that required to suspend the catalyst particles in said upper section, dispersing gaseous reactants into the lower portion of said zone effecting intimate contact between reactant gas and said catalyst at a temperature determined by said liquid such that substantial conversion of reactants occurs, discharging gases and vaporous products of reaction from the uppermost portion of said reaction zone, and continuously withdrawing said liquid substantially free from catalyst from said upper section of the reaction zone.

2,438,030
TRANSPORTING AND STORAGE CRATE
Dewey H. Bitney, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich., a corporation of Michigan
Application December 7, 1945, Serial No. 633,399
5 Claims. (Cl. 220—19)



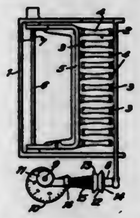
3. In a crate, the combination of top, bottom and intermediate frame members and uprights fixedly secured thereto, and U-shaped runners having their arms disposed within and fixedly secured to the ends of the lower of said frame members supporting the runners substantially below the bottom frame member and terminating below said top frame member, the runners constituting stacking members nestingly engageable within the top frame member of an under-crate on which a crate is superimposed with the bottom frame member in supported engagement with the top frame member of the under-crate.

2,438,031
TOY SUBMARINE
Frank E. Bonner, Pontiac, Mich.
Application September 17, 1946, Serial No. 697,466
2 Claims. (Cl. 46—94)



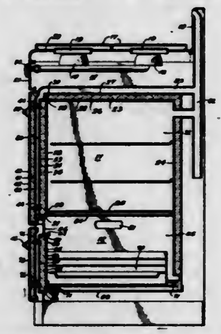
1. A toy submarine of the character specified, comprising a hull formed with a longitudinal space or compartment, a partially concealed ballast tank formed in front end with water inlet opening, rear end with air outlet openings, mounted in said space or compartment of the hull, means for removably suspending the rear end of the ballast tank from the stern of the hull and a trip device for releasing the front end of the tank when the toy submerges and sinks to the bottom of the lake, pond, stream or other body of water.

2,438,032
CARGO TRAILER HITCH
William M. Bready, Milwaukee, Wis., assignor to Cleaver-Brooks Company, Milwaukee, Wis., a corporation of Wisconsin
Application September 21, 1945, Serial No. 617,811
10 Claims. (Cl. 280—33.15)



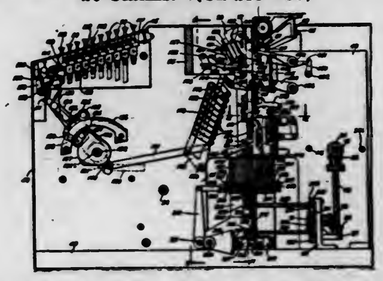
9. A hitch for towing an amphibious watertight cargo trailer on land and water, comprising, a tongue member swingably mounted upon the trailer and having adjacent its forward end a head portion formed with a hollow interior, a coupling member having one end tapered and the other end formed with a circumferential groove, said head portion having an opening leading longitudinally into the hollow interior and a pair of openings leading laterally into the first mentioned opening, a dog slidably mounted in each of said lateral openings, a spring bar for each dog to urge the same inwardly to cause the inner ends of the dogs to enter said groove, a cam for each spring bar to move the bar and its dog outwardly, a release lever to operate said cams, an attaching member extending forwardly from inside the coupling member and having resilient cushioning means on the inside of the coupling member, whereby upon operation of the release lever the coupling member may be released from the hollow interior of the head portion by the cams moving the spring bars and dogs outwardly to remove the dogs from the circumferential groove, and the coupling member may be returned into said hollow interior and fixed therein by a straight longitudinal push, a cable fixed to the coupling member to extend from the interior to the exterior of said hollow interior, and a curved open ended tube leading from the interior to the exterior of the hollow interior adjacent its rear end, said cable being slidable in the curved tube to assist in returning the coupling member into said hollow interior, said tube being curved rearwardly from its bottom open end to its intermediate portion and then forwardly to its open upper end to facilitate sliding movement of the cable therethrough when pulled from a distance in front of the head portion.

2,438,033
DEXTROSE SYRUP
James M. Brown, Melrose, Watson A. Bemis, West Medford, and Frank A. Monroe, Jr., Melrose, Mass., assignors to Revere Sugar Refinery, Charlestown, Mass., a corporation of Massachusetts
Application November 24, 1943, Serial No. 511,580
7 Claims. (Cl. 127—40)



7. The process of manufacturing stable dextrose syrup from commercial wheat flour which comprises adding wheat flour to a starch conversion acid-water mix in the proportion of about five pounds of flour to one gallon of water while maintaining the mix at a temperature exceeding 190° F. during addition of the flour, pressure-heating the flour-acid-water mix at a temperature of 242–250° F. to convert the convertible components of the flour to form a dextrose syrup, then separating unconverted water-insoluble components of the wheat flour from the converted syrup and contacting the converted syrup with both vegetable carbon and bone char to increase the surface tension of the converted syrup to at least 65 dynes per centimeter, whereby said syrup may be concentrated, and then concentrating said syrup under vacuum to a solids content exceeding 67%.

2,438,034
THREAD TENSION ARRANGEMENT IN TEXTILE MACHINES
Albert Brügger, Horgen, Switzerland
Application February 18, 1947, Serial No. 729,314
In Switzerland March 6, 1946
3 Claims. (Cl. 242—147)



1. In a tension arrangement for running thread in winding and other textile machines with at least one thread-brake, of the character described, a thread-tension adjusting means adapted to subject the thread to a numerically predetermined tension, comprising a spiral-shaped pivoted disc provided with a circumferential scale, clamping means for adjusting the rotary position of the said disc, a feeler collar mounted loose on the thread-brake pivot and provided with an index and adapted to engage the rim of the said disc, and a spring mounted between the thread-brake and the said collar for the purpose of pushing the latter into contact with the said disc and of subjecting the thread-brake to a braking action numerically corresponding to the setting of the disc relative to the said collar.

2,438,035
STOVE
Conrad J. Buhman and Leo E. Mendel, Chicago, Ill., assignors to Cribben and Sexton Company, Chicago, Ill., a corporation of Illinois
Application November 18, 1944, Serial No. 564,032
3 Claims. (Cl. 126—39)

1. In a stove, a casing providing a plurality of vertically-spaced cooking compartments, a top burner section above said cooking compartments and spaced from the compartment below by a passage leading to the rear of the stove, insulated doors carried by said stove and closing the front ends of said compartments, said doors being provided with aligned cooling passages extending vertically therethrough and communicating with the passage below said burner section, and a flue outlet means from at least one of said cooking compartments and rising vertically at the rear of the stove, said flue communicating with said passage below said burner section.

2,438,036
PLURAL STORAGE DEVICE ACCOUNTING MACHINE
Fred M. Carroll, Binghamton, and Alfred B. Benson, Union, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application December 23, 1943, Serial No. 515,374
20 Claims. (Cl. 235—60)

1. In a printing machine, a plurality of manipulative devices for setting up an amount, a

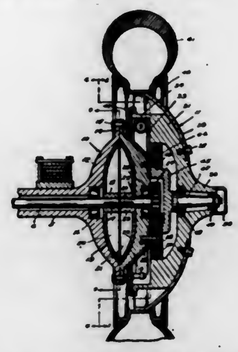
plurality of manipulative devices for setting up an account number, differential devices controlled by said amount devices, a set of type bars each carrying a double set of numeral type, means under control of said differential devices for adjusting said type bars, a magazine, a plurality of amount storage devices assembled in said magazine, each device containing a plurality of settable pins for adjustment to represent amounts, a pair of differential devices adjusted by said manipulative account number devices, means under control of one of said last mentioned differential devices for shifting said magazine laterally, means under control of the other of said pair of differential devices for shifting said magazine longitudinally, said magazine receiving composite movement horizontally to place one of said plurality of storage devices in a selected position, means for elevating the selected storage device into cooperative relation with said type bars, amount reading devices cooperating with the settable pins of said selected storage device, means for moving said amount sensing devices into and out of reading position, operating pawls included in said amount sensing devices and cooperating with said type bars, means for lifting said amount sensing devices while in cooperation with said settable pins to take a reading thereof and transmit the same through said pawls to cause adjustment of said type bars in addition to the adjustment caused by the amount differential, a carrying mechanism cooperating with the type bars to cause additional steps of movement of higher order bars under control of lower order bars, means for effecting a recording impression from the adjusted type bars, means for clearing the selected storage device by resetting the pins therein, means for restoring the type bars with said pawls and sensing means cooperating therewith to reenter a total amount into the pins of the selected storage device, means for preventing restoration of said type bars to maintain the selected storage device in the cleared condition, and means for lowering said selected storage device into the magazine, said restoring means being operated for a second time in each cycle for operation of said type bars to restore them independently of amount storing operations.

2,438,037
FINGER TIP MOISTENER FOR BASEBALL PITCHERS
Matthew H. Chapman, Jr., Providence, R. I.
Application May 1, 1946, Serial No. 666,481
10 Claims. (Cl. 91—54.4)

1. A finger tip moistener for a baseball pitcher, comprising a casing having a rear wall having means projecting vertically thereof having means to firmly secure the top and bottom of said casing to the pitcher's clothing in a vertical position, a side wall of such a length as not to interfere with the free movement of the pitcher's arms and a front wall having a wide opening in the upper portion thereof of a width to simultaneously admit a plurality of the pitcher's finger tips, providing a liquid reservoir of substantial relative size in the casing below said opening, a moistening member of resilient material substantially filling said casing and means to rotatably mount said resilient member on an axis extending substantially centrally horizontally of said casing.

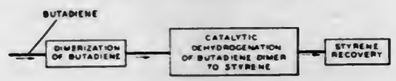
2,438,038
METHOD OF REMOVING PAINT, VARNISH, AND LACQUER FILMS FROM SURFACES
John Kenneth Craver, Webster Groves, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application October 2, 1944, Serial No. 556,894
2 Claims. (Cl. 252—170)

1. A process for the removal of paint, varnish and lacquer films from surfaces bearing said films comprising applying to said surfaces an aqueous solution consisting essentially of water and 40–80% of a substance selected from the group consisting of gamma-valerolactone and gamma-butyrolactone, allowing said solution to remain on said surface until said film is loosened, removing the loosened film by mechanical means and removing any remaining residue by washing said surface with water.



2,438,039
UNITARY SANITARY NAPKIN
Harold Sidney Croft, Elwood, Victoria, Australia
Application August 13, 1945, Serial No. 610,491
In Australia May 29, 1945
5 Claims. (Cl. 128—284)

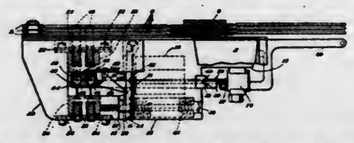
1. A sanitary napkin or diaper comprising a foundation element of gauze like pervious fabric in the form of an isosceles triangle and having inner and outer walls secured together at two lines extending transversely and spaced lengthwise of the height of the triangle so as to form a pocket, an absorbent pad of disintegrable material removably seated in said pocket, said pocket having an access opening in said outer wall and extending lengthwise of the height of the triangle between said securing lines and which is normally closed by unattached overlapping flaps whereby the component parts of the napkin may be readily separated for independent disposal by withdrawing the pad from its pocket through said access opening without having to handle the soiled part of the inner wall.



2,438,040
HYDRAULIC WHEEL DRIVE
Marshall D. Duhaime, White Plains, N. Y.
Application August 8, 1944, Serial No. 548,597
1 Claim. (Cl. 74—189.5)

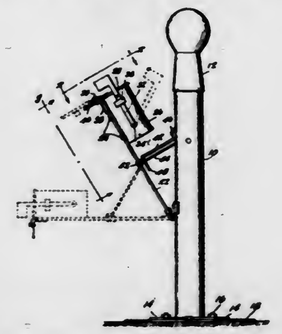
A vehicle wheel drive for the transmission of power from a drive shaft of a vehicle to a wheel, comprising a wheel having an open central portion, a main drive axle, a fixed housing for carrying and journalling the same, an extension on the end of said housing, consisting of curved shells and located within and close to the open central portion of the wheel, hydraulic fluid drive members within said shells, one of said members fixed on the end of the main drive axle, a transmitting stub shaft, aligned with the axle, freely rotatable within said extension and carrying the other hydraulic fluid drive member, a wheel carrier having a wheel supporting stub shaft attached to said housing extension with the last named stub shaft axially aligned with the transmitting stub shaft and axle along the axis of the wheel, a hub structure carrying the wheel and journalled on the wheel supporting stub shaft, a gear wheel centered on and attached to the transmitting stub shaft, a further gear wheel attached

to the hub structure having its center in the axis of the wheel and a freely rotatable eccentric transmission gear wheel carried by the extension of the housing, engaging the two gear wheels centered on the wheel axis.



2,438,041
PROCESS OF PRODUCING STYRENE FROM BUTADIENE
Harris A. Dutcher, Borger, Tex., assignor to Phillips Petroleum Company, a corporation of Delaware
Application August 22, 1944, Serial No. 550,553
1 Claim. (Cl. 260—669)

The process of producing styrene from butadiene which comprises passing butadiene over a solid contact catalyst selected from the group consisting of fuller's earth, bauxite, alumina and silica gel in a dimerization zone at a temperature in the range from 150° to 480° C. and at a pressure in the range from 20 to 30 atmospheres, withdrawing an effluent from said dimerization zone containing not less than one mol of butadiene for each mol of butadiene dimer present, separating tar from said effluent, passing said effluent without further cooling or separation over a solid contact catalyst comprising a mixture of chromium and aluminum oxides, controlling the rate of flow so as to insure a contact time of about 1.5 seconds with said last-mentioned catalyst at a temperature in the range from 400° to 600° C. and a pressure of at least one atmosphere, withdrawing the resulting reaction products and separating styrene therefrom.



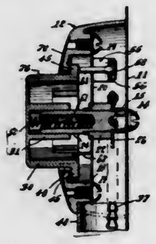
2,438,042
SELECTOR SWITCH
Frank Edgarton, Rochester, N. Y., assignor to Stromberg-Carlson Company, Rochester, N. Y., a corporation of New York
Application April 21, 1945, Serial No. 589,667
18 Claims. (Cl. 179—27.5)

1. In a selector switch having sets of contacts to be operated, a magnet provided with an armature arranged to move toward and away from said magnet in response to the energization thereof, a member movable back and forth under the control of said armature, said member having a ball race therein, a ball contained in said race, ele-

ments projecting into said race for progressively moving said ball along said race as said member moves back and forth, and means including certain of said elements for actuating said sets of contacts in succession under the control of said ball.

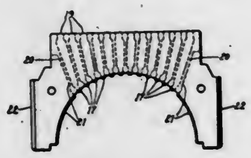
2,438,043
MAIL BOX
Gottlieb Ernst, Cordell, Okla.
Application July 8, 1946, Serial No. 681,878
2 Claims. (Cl. 248—145)

1. A hollow support, a lever pivoted to said support, a receptacle carried by said lever, a counterweight reciprocable in said support, a cable connecting said lever and said counterweight, and a stop for said lever carried by said support, said stop comprising a bracket extending from said support, said cable being guided by and underlying said bracket.



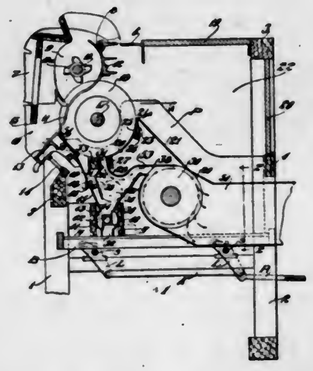
2,438,044
FASTENER CONSTRUCTION
Tibor Freesz, New York, N. Y., assignor to Camloc Fastener Corporation, New York, N. Y., a corporation of New York
Application March 20, 1944, Serial No. 527,193
7 Claims. (Cl. 24—221)

1. A fastener structure, comprising a shell adapted to receive a fastener element, a base for said shell, said base having extending lugs and a substantially vertical wall disposed in spaced relationship to a side of said shell, said wall having an aperture therein, and a retainer for said shell, including a channel having one side wall inwardly curving to overlie the extend-



ing lugs of the base, and an opposite wall provided with a projecting tab adapted to pass through said aperture to loosely secure said shell within said retainer.

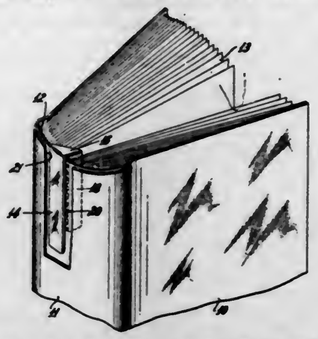
2,438,045
CONTROL DIAL ASSEMBLY
Andrew H. Gerhardt, Skokie, and Arthur P. Schulz, Hinsdale, Ill., assignors to Thor Corporation, a corporation of Illinois
Application November 1, 1946, Serial No. 707,054
20 Claims. (Cl. 74—527)



1. A manual control of the character described, comprising a housing, a shaft carried by said housing and rotatably adjustable to a plurality of angularly related positions and adapted to be operably connected to apparatus to be controlled, a finger engaging knob operably connected to said shaft for rotating the latter, means for releasably locking the knob, relatively to the housing, at each of said angularly related positions of adjustment of said shaft, and detent means carried by the housing and cooperating with said knob for enabling step-by-step rotary adjustment of the shaft and serving to positively arrest the knob and shaft, incident to rotation thereof, at the next successive position of adjustment thereof.

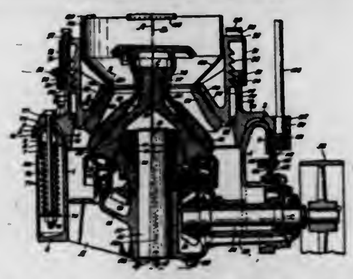
2,438,046
PROCESS FOR MAKING ELECTRICAL UNITS, SUCH AS COMMUTATORS
George A. Giannuzzi, Vestal, and Kenneth J. Miller, Binghamton, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application February 2, 1945, Serial No. 575,916
3 Claims. (Cl. 29—155.54)

3. The method of manufacturing an electrical unit which consists of cutting out from a plate of insulating material cover plates of a desired external configuration, cutting out from a metal insert plate of substantially the same configuration a plurality of internal slots closed at both ends by surrounding metal, filling or molding said slots flush with the surfaces of the metal insert with insulating material, cementing said cover plates to each side of the intermediate metal insert plate, cutting the aligned edges of all three of said plates rectilinearly across one of the closed ends of the slots to a point where the filled-in material at said closed ends is reached and cut away with said surrounding metal, and cutting the aligned edges of all three of said plates curvilinearly across the other closed ends of the slots to a point where the filled-in material at said other closed ends is reached and cut away with said surrounding metal, to thereby provide a plurality of isolated metal contact portions insulated from each other by said filled-in material.



2,438,047
LINTER GIN
Herman C. Graebe, Bridgewater, Mass., assignor to The Murray Company, Dallas, Tex., a corporation of Texas
Application June 17, 1946, Serial No. 677,261
9 Claims. (Cl. 19—58)

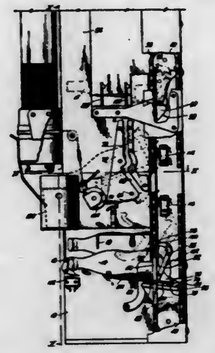
1. A brushless linter gin of the kind wherein the lint is removed from the saw cylinder by suction means and which has a roll-box, a grate-fall, a saw cylinder, means, including a floor, defining an overhead moting space above and to the rear of the saw cylinder, means defining a gravity moting chamber below the saw cylinder, means providing a lint delivery throat extending from adjacent to the periphery of the saw cylinder to the gravity moting chamber, said lint delivery throat being narrow from front to rear as compared with the gravity moting chamber and being defined by substantially parallel and vertical front and rear walls and a lint delivery conduit in which subatmospheric pressure is maintained, the gravity moting chamber having a rearwardly directed outlet providing communication between it and the conduit, the gin being characterized in having an imperforate curved shield extending downwardly and in close adjacency to the periphery of the saw cylinder from the forward edge of the floor of the overhead moting space to the rear edge of the lint delivery throat.



2,438,048
BOOKMARK
William J. Graham, Rego Park, N. Y.
Application January 28, 1947, Serial No. 724,895
4 Claims. (Cl. 116—119)

2. A book mark comprising a top member having substantially the conformation of a right triangle, legs extending at right angles to said top member from the two sides thereof which form the right angle of the triangle, said legs lying in

planes at right angles to each other and having their juxtaposed edges spaced from one another.



2,438,049
PEDESTAL TYPE GYRATORY CRUSHER
Oscar C. Gruender, Milwaukee, Wis., assignor to Nordberg Manufacturing Company, Milwaukee, Wis., a corporation of Wisconsin
Application November 13, 1943, Serial No. 510,150
9 Claims. (Cl. 241—208)

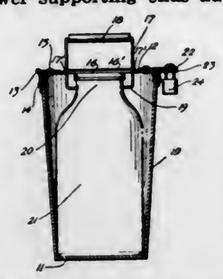
4. In a gyratory crusher having a bowl and adjusting means for the bowl, a circumferential main frame, a bowl support tiltably mounted on the main frame, and including an upwardly extending generally cylindrical supporting sleeve, said sleeve being inwardly screw threaded and having a plurality of circumferentially spaced depressions in its outer face, a bowl structure including an outer portion threaded to engage the inward screw threading of said supporting sleeve, an outer sealing sleeve mounted on said bowl structure and extending downwardly about the exterior of the supporting sleeve in telescopic relationship and means for locking the sleeves against relative rotation and for thereby preventing relative rotation of bowl structure and supporting sleeve including a locking member movably mounted on said sealing sleeve and adapted to penetrate said depressions.

2,438,050
BOTTLE DECAPPING AND POURING MECHANISM FOR VENDING MACHINES
George H. Hansen, Jr., Kansas City, Mo., assignor to C. Earl Hovey, trustee, Kansas City, Mo.
Application May 29, 1944, Serial No. 537,956
6 Claims. (Cl. 225—21)

1. In a vending machine for bottled goods, having a bottle chamber and a decapper, mechanism for moving a bottle from one part of the chamber into operative engagement with the decapper and to another part of the chamber comprising a bottle clamp; a movable support for the clamp; and parts for tipping the clamp and its contained bottle as the support is moved through its path of travel, said clamp comprising a cradle, and a finger having a pair of pressure members on the

free end thereof for engagement with a bottle contained in the cradle on each side of the medial longitudinal plane thereof, said pressure members being swingably mounted on the cradle for movement toward and from the bottle in a plane parallel to the longitudinal axis of the bottle, said cradle and said pressure members each having means for yieldably clamping the bottle therebetween.

2,438,051
STUD RECEPTACLE
Silas W. Hennessey, Jr., Amityville, N. Y., assignor to Camloc Fastener Corporation, New York, N. Y., a corporation of New York
Application December 21, 1943, Serial No. 515,105
2 Claims. (Cl. 85—36)

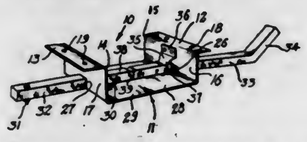


2. A stud-receptacle including a plate formed of resilient stock and provided with an aperture to receive parts of a stud assembly, said plate being formed with notches, mounting members for said plate having a diameter in excess of the diameter of said notches and being formed with grooves of a width such that said plate may be slidably accommodated therein, the diameter of the base of said grooves being substantially less than the diameter of said notches, and projections forming a part of said plate and defining the entrance to said notches; the space between said projections being less than the diameter of the base portions of said grooves.

2,438,052
SAFETY CONTAINER
Norberto Dávila Hernández, Río Piedras, P. R.
Application September 7, 1945, Serial No. 614,974
1 Claim. (Cl. 232—41)

A container having a closed bottom and side walls, a cover hinged to the upper edge of said container having locking means disposed diametrically from said hinge, said cover having an

elongated slot formed through it, a slot covering plate of lesser length than said slot secured to said cover to extend transversely thereof providing spaced apertures at the opposite ends of the slot, an inverted U-shaped handle having inturned lower supporting ends adapted to ex-

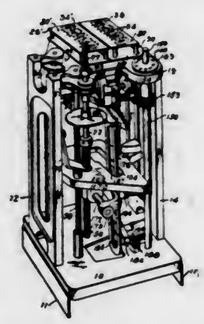


tend through said apertures whereby the inturned lower supporting ends of said inverted U-shaped handle will positively engage a collared object when disposed in said container to support the same, and the top of said object will in turn support said container.

2,438,053
MOTION TRANSMITTING DEVICE
Ralph M. Hettinga, Kalamazoo, Mich., assignor to Shakespeare Products Company, Kalamazoo, Mich., a corporation of Michigan
Application March 5, 1945, Serial No. 581,152
4 Claims. (Cl. 74—501)

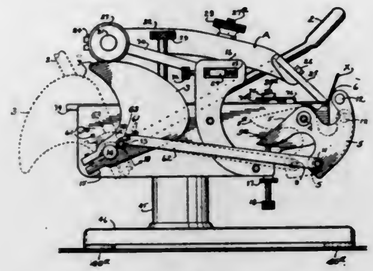
1. A motion transmitting member, comprising a center strand, tensional spring strands lying circumferentially about and along the center strand at an acute angle to the center strand whereby said spring strands have a relatively long pitch, and means for securing the strands at their opposite ends to retain them under tension.

2,438,054
SADIRON HOLDER
Margaret May Holliday, Detroit, Mich.
Application September 29, 1945, Serial No. 619,375
2 Claims. (Cl. 248—117.1)



1. A flatiron holder comprising a U-shaped body member formed with oppositely disposed parallel ends terminating in outwardly directed apertured attaching flanges, said ends having aligned rectangular bearing apertures formed therethrough, a flatiron supporting bar slidably disposed through said bearing apertures with one surface thereof contacting the connecting portion of said body member, a hook on the outer end of said bar, means on the inner end of said bar for limiting the outward adjustment thereof, and means for automatically locking said bar in extended position.

2,438,055
PREPARATION OF SALTS OF MONO-ORGANO SILANOLS
James Franklin Hyde and Oscar Kenneth Johannson, Corning, N. Y., assignors to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application January 10, 1947, Serial No. 721,460
6 Claims. (Cl. 260—462)

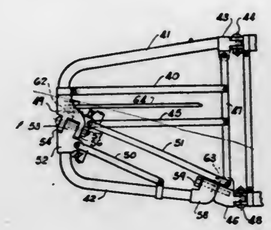


1. The method for the production of salts of mono-organo silanols which comprises interacting the hydrolyzate of a mono-organo silane in which the organic radicals are selected from the group consisting of methyl, ethyl and phenyl and the hydrolyzed radicals are selected from the group consisting of alkoxy and halide with an alkali metal hydroxide in amount between 1 and 3 alkali metal atoms per silicon atom in the presence of between 0.5 and 4 mols of water per atom of alkali metal, and in the presence of an alcohol boiling below water which alcohol is in amount sufficient to dissolve the reactants, and crystallizing from the salt solution so formed a hydrated alkali metal salt of the organosilicon material.

2,438,056
RATIO COMPUTING PHASE SHIFT INDICATOR
Reynold B. Johnson and Clinton E. Larrabee, Binghamton, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application February 21, 1945, Serial No. 580,004
13 Claims. (Cl. 235—61)

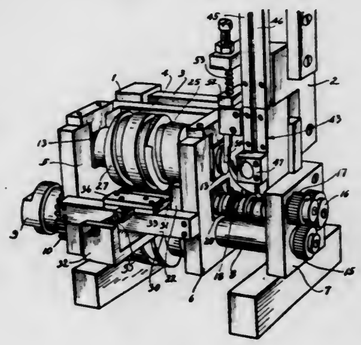
1. In an apparatus of the character described, a manually rotatable driving shaft and a driven shaft, rotary differential gear means for imparting motion from said driving shaft to said driven shaft, said differential means comprising a pair of input elements and an output element connected to said driven shaft, gear means directly connecting said driving shaft to one of said input elements, a worm shaft operatively connected to said gear means and adapted to be driven thereby, a carriage mounted on said worm shaft and movable therealong upon rotation of the latter, a splined shaft connected to said other input element and mounted for rotation therewith, a rack slidably mounted on said carriage and having a toothed portion in meshing engagement with said splined shaft, and cam means operable upon movement of said carriage along said worm shaft during rotation thereof for shifting the position of said rack laterally to impart a component of motion to said latter input gear.

2,438,057
BENDING BRAKE HAVING UNITARY ACTUATING MEANS FOR CLAMPING AND BENDING SHEET METAL
Peter Kilham, Attleboro, Mass.
Application March 23, 1944, Serial No. 527,722
12 Claims. (Cl. 153—16)



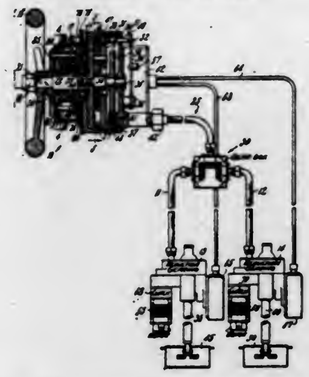
10. In a bending and forming brake, a generally horizontal bed having a free forward edge and an upper surface adapted to receive and support, adjacent said edge, the material to be bent, a clamping blade located adjacent the forward free edge of the bed, and movable downwardly and upwardly toward and away from the upper surface of the bed, an abutment member movable bodily along a generally upright path passing adjacent the free forward edge of the bed, and unitary actuating means adapted first to move the clamping blade downwardly into clamping position and thereafter to move the abutment member upwardly against the lower face of material clamped by the clamping blade, whereby that portion of the material which extends forwardly of the edge of the clamping blade is upwardly bent.

2,438,058
AIR SUPPLY DEVICE FOR RESPIRATORS
Dwight N. Kincheloe, Quincy, Ill.
Application September 15, 1943, Serial No. 502,536
1 Claim. (Cl. 128—141)



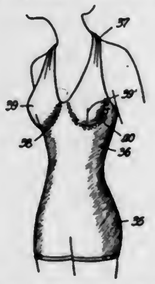
In combination, a respirator, an air filtering unit on one side of the respirator, said air filtering unit comprising a pair of cylindrical cup-like outer and inner members disposed in telescopic relation, one of said members being provided with a perforated sieve-like wall opposed to said side of the respirator with the perforations thereof opening into said respirator, an axial conduit extending from the opposed wall of the other member, an air supply tube connected to the conduit, and an air distributor at the inside of the air filter fixed to said opposed wall of the other member concentrically of said conduit with its perimeter spaced from the circumferential wall of the inner member.

2,438,059
FOLDING COT
Rufus M. Lackey, Birmingham, Ala., assignor to Brown Service Funeral Homes Company, Inc., a corporation of Alabama
Application April 6, 1946, Serial No. 660,155
7 Claims. (Cl. 5—111)



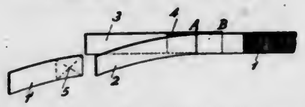
1. In a folding cot of the character described, a main body frame, an end portion hinged to the main body frame transversely thereof and comprising two sections hinged together along a line diagonal to the long axis of the cot.

2,438,060
MECHANISM FOR BENDING SLIDER BODIES
Birdsall P. Lawson, Providence, R. I., assignor to Pilling Chain Company, Providence, R. I., a corporation of Rhode Island
Application January 9, 1946, Serial No. 639,944
17 Claims. (Cl. 153—15)



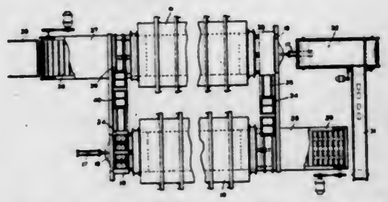
1. A machine for folding sliders for slide fasteners comprising rotating means for engaging and propelling preformed distended sliders along the machine, means for feeding said sliders in succession to said slider-propelling means, a pair of members oppositely rotating in synchronism with said slider-propelling means receiving the sliders therefrom and conveying the sliders to a predetermined folding position in the machine, means mounted for continued rotation about the axes of said members for engaging the wings of the sliders at said predetermined position to fold the sliders, and means functioning in synchronism with the pair of members aforesaid for engaging the folded sliders and conveying the same to a point for discharge from the machine.

2,438,061
REMOTE POSITIONING CONTROL
William P. Lear, North Hollywood, Calif., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich., a corporation of Illinois
Application September 27, 1943, Serial No. 503,872
14 Claims. (Cl. 74—407)



1. A remote position controlling and indicating system comprising, in combination, a driven member; an actuator operatively associated with said driven member; power driving means; mechanism effective upon energization of said power driving means to connect the same to said actuator; a manual driving device; driving mechanism connected to said actuator; planetary gearing connecting said manual driving device to said driving mechanism, said planetary gearing including a gear connected to said manual driving device, a gear connected to said driving mechanism, a movable element, and planetary pinions mounted on said movable element and operatively interconnecting said gears; and switch means operatively associated with said movable element and effective, upon actuation of said manual driving device, to energize said power driving means and operate said driven member.

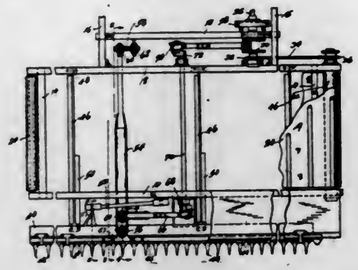
2,438,062
LADY'S GARMENT
Anna Licht, New York, N. Y., assignor to The French Look, Inc., Paterson, N. J., a corporation of New Jersey
Application February 17, 1945, Serial No. 578,455
3 Claims. (Cl. 2—67)



1. A garment, comprising a bodice portion, of laterally stretchable textile fabric, means maintaining said portion upright on the body, said bodice including a pair of spaced cups wholly of textile and integral therewith, and a pair of spaced stiffener braces framing the lower edges of said cups, secured in place thereat, and yieldably connected by the intervening fabric.

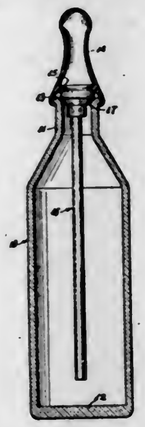
2,438,063
RIBBON THREADING MECHANISM
Louise Lorenz-Risler, Zurich, Switzerland, assignor to Alfred Leonard Lutz, Zurich, Switzerland
Application November 2, 1944, Serial No. 561,597
In Switzerland November 2, 1943
2 Claims. (Cl. 197—172)

1. A ribbon for office machines, comprising a fabric strip impregnated with ink, and provided at one of its end parts with two superimposed strips for receiving between them the end part of another ribbon to be inserted into the machine, adhesive located between the two superimposed strips, at least one of the two strips being part of the ribbon fabric.



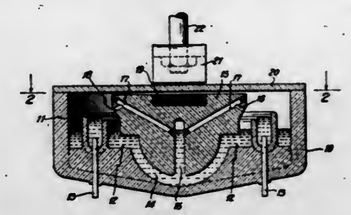
2,438,064
HEATING AND QUENCHING APPARATUS
John H. Loux, Salem, Ohio, assignor to The Salem Engineering Company, Salem, Ohio, a proprietorship
Application January 28, 1942, Serial No. 428,557
3 Claims. (Cl. 266—4)

1. In heat treating apparatus having an elongated hardening furnace, a quench tank adjacent the discharge end of said furnace, and an elongated draw furnace having its charging end adjacent the discharging end of the hardening furnace and its discharging end adjacent the charging end of the hardening furnace, the combination of a plurality of object carrying trays adapted to propel the objects being treated through said furnaces, means to push said trays through said furnaces, means to empty said trays into said tank at the discharge end of said hardening furnace, means to transfer said trays directly from the discharge end of said hardening furnace to the charging end of said draw furnace, and means to convey the objects being treated from said quenching tank to adjacent the charging end of said drawing furnace.



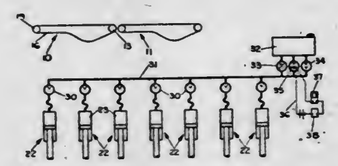
2,438,065
HARVESTING MECHANISM
James E. Love, Garfield, Wash.
Application October 2, 1944, Serial No. 556,762
4 Claims. (Cl. 56—303)

1. In a harvesting mechanism, a frame to be advanced over the ground, a cutter bar including reciprocal cutting means positioned in advance of said frame, means associated with said cutter bar to support the same relative the ground, bar means extending rearwardly from said cutter bar to pivotal connection with said frame whereby the cutter bar may swing about said pivotal connection and have vertical movement of said frame, an oscillator bar operatively



connected forwardly to said cutting means and extending rearwardly therefrom to a connection with said frame, said connection including a pliable member secured to and extending transversely to the axis of the oscillator bar and secured to the frame at a point spaced horizontally from the bar, and means for oscillating said oscillator bar.

2,438,066
NURSING BOTTLE ATTACHMENT
Robert V. Lloyd, New York, N. Y.
Application October 21, 1946, Serial No. 704,638
4 Claims. (Cl. 215—11)



1. In combination, a nursing bottle having a neck portion with an opening therein, a sipper extending through the neck opening of the bottle and into the bottom thereof, said sipper having a flanged head adapted to be secured to the neck portion of the bottle to normally close the same except for the sipper passage extending therethrough, and said flanged head having a valve controlled passage through which the contents of the bottle can be withdrawn when the bottle is tilted up.

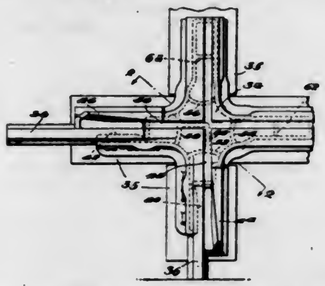
2,438,067
CIRCUIT BREAKER
Hans P. Luhn, Armonk, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application March 17, 1945, Serial No. 583,253
3 Claims. (Cl. 200—32)

1. A circuit breaker comprising a receptacle containing electrically conductive liquid, a rotor supported by the surface of said liquid and rotatable therein, rotating means for the rotor, said rotor having a radial duct communicating with the supporting liquid whereby upon rotation, liquid will flow through the duct and emit a stream of liquid, a contact element located in the path of said stream whereby as the rotor turns, an electrical connection is completed between the liquid in the receptacle and said contact element.

2,438,068
CONVEYOR SLACK TAKE-UP MECHANISM
Stanley M. Mercier, Bexley, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company, a corporation of Ohio
Application August 19, 1944, Serial No. 550,259
7 Claims. (Cl. 198—208)

3. A conveyor including a plurality of endless chains, means for driving each of said chains together, individual slack take-up means for each chain, said take-up means each including a hydraulic piston motor, means for feeding hydraulic fluid to all of said motors to provide for their free expansion to take up slack in their associated chains, means providing for restricted contraction of each of said motors, and means responsive to an excessive pressure created by any one of said motors for relieving the pressure of the hydraulic feed means and for actuating a control device.

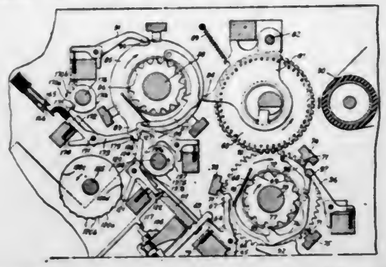
2,438,069
FACIAL INVIGORATING APPARATUS
John Mingea, Long Island City, N. Y.
Application June 7, 1946, Serial No. 675,260
6 Claims. (Cl. 128—402)



1. A facial mask apparatus comprising a plurality of substantially rigid pipes extending substantially vertically in generally parallel relationship, from a top central point to a lower central

point and midway of said points conforming aggregately to the contours of a human face, and

hydraulic connecting members uniting said pipes at said two points.

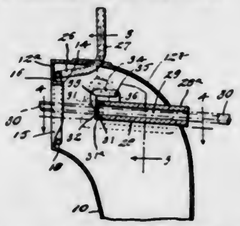


2,438,070
CAST RAIL CROSSING STRUCTURE
Charles H. Nordberg, Chicago Heights, Ill., assignor to Pettibone Mulliken Corporation, a corporation of Illinois
Application May 23, 1944, Serial No. 536,917
9 Claims. (Cl. 246—464)

1. An integrally cast steel railroad crossing element comprising a top having a central portion and armlike portions extending outwardly therefrom, supporting side walls extending around the contour of the top and depending therefrom, the upper surface of said top being provided with car wheel flangeways which cross at the central portion of the element, and at least one integrally cast vertical strengthening rib depending centrally from the base of the flangeways and running longitudinally thereof, a portion of said rib being positioned directly beneath the intersection of said flangeways.

2,438,071
PERFORATED CARD CONTROLLED ALPHABET AND NUMERAL PRINTER
Ralph E. Page, West Orange, N. J., and Horace S. Beattie, Poughkeepsie, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application December 23, 1944, Serial No. 569,444
24 Claims. (Cl. 101—93)

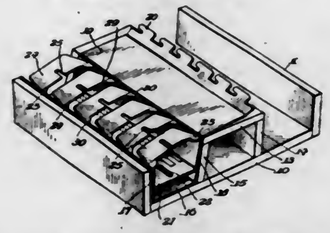
1. In a printing machine controlled by records of the type having holes at digit positions 1–9, O, X, R, a rotatable printing wheel carrying several groups of alphabet type and an auxiliary group of type, means for analyzing said records, means controlled by said analyzing means and operable in response to the analysis of holes at digit positions 1–9 for effecting the rotation of said printing wheel to select a related group of alphabet type, further means operating independently of said last named means and operable in the absence of holes 1–9 to effect the rotation of said printing wheel to select said auxiliary group of type, and type selecting control means controlled by said analyzing means and



operable in response to the analysis of the O, X, R holes for selecting type of the selected group of alphabet type and said auxiliary group of type when the latter is selected for operation.

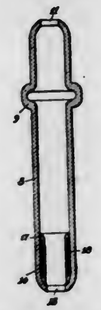
2,438,072
SHOULDER PAD
James M. Piccinni, Brooklyn, N. Y.
Application February 28, 1946, Serial No. 650,829
2 Claims. (Cl. 2—268)

1. An all rubber unitary shoulder pad comprising a triangular wedge shaped member having its thick portion at the base of the triangle and its thin portion at the apex of the triangle and having its upper surface curved convexly to simulate a modified shoulder outline and having its lower surface concavely curved to conform with the contour of a wearer's shoulder, said pad having therein at each triangular corner a securing hole for fastening the pad to an article of clothing, and two pairs of grooves along the under surface of the pad, each of the pairs of grooves having a narrow flexible ridge therebetween.



2,438,073
COLOSTOMY TUBE
George E. Saur, St. Louis, Mo.
Application February 8, 1946, Serial No. 646,305
3 Claims. (Cl. 128—283)

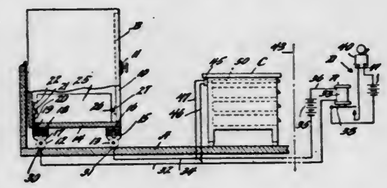
3. A colostomy irrigating device comprising a tubular body, an elbow on one end of said body having an inlet port, a tube extending through said elbow for supporting a catheteral hose therethrough, a cap closing said tube within said body, hinge means mounting said cap on said body, said cap being normally biased to tube closing position and movable to opening position upon



insertion of said hose, and water distributor means in said tube for spraying water into said body and over said cap and tube for flushing said tube.

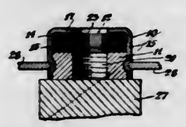
2,438,074
DEVICE FOR ASSEMBLING COLLAPSIBLE EGG CARTONS
Louis Schwartzberg, Chicago, Ill.
Application June 29, 1944, Serial No. 542,743
5 Claims. (Cl. 93—37)

2. A carton assembler for collapsible egg cartons, comprising a base with a central raised support, means secured to the base and extending parallel to the sides of the support forming troughs for receiving cartons therein and limiting the unfolding movement thereof, one of the troughs having inclined sides converging toward the bottom.



2,438,075
CONTACT PIN AND METHOD OF MAKING THE SAME
Newell R. Smith, Bridgeport, Conn.
Application February 9, 1945, Serial No. 576,979
4 Claims. (Cl. 173—361)

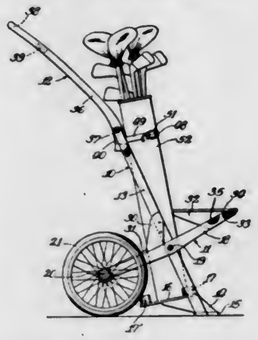
1. An article of manufacture comprising a tubular contact pin having an end opening through which a lead wire may be passed, and an annular-shaped mass of solder through which the lead wire may also be passed located within said contact pin in axial alinement with said contact pin and said opening and intimately bonded in a high thermal conductivity relation to the inside surface of said contact pin.



2,438,076
ELECTRICAL BURGLAR ALARM SYSTEM
Francis C. W. Stelter, New York, N. Y.
Application August 3, 1945, Serial No. 608,668
3 Claims. (Cl. 177—314)

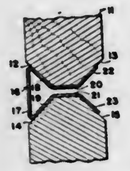
3. A protective system for metal wheeled safes, cabinets, or like heavy receptacles, which comprises, in combination, an electric circuit including a source of current, a relay magnet, and a plurality of contacts at the receptacle to be protected, certain of said contacts adapted to be broken upon bodily removal of said receptacle, said contacts comprising minute inconspicuous metal conductor points set in the floor upon which the receptacle rests, and spaced apart a distance equal to the space between the centers of two of the wheels of the receptacle, the receptacle being positioned so that said wheels normally rest respectively on said contacts, electrical insulation interposed between one of said wheels

and the metal body of said receptacle, the other of said wheels being in electrical contact with said body, other of said contacts being disposed within said receptacle in a position to be actuated by the opening of the door of said receptacle or the removal of certain contents thereof, said last-named contacts serving to bridge the gap in between the metal body of the safe and the insulated wheel; all whereby the circuit will be broken upon moving the receptacles thus de-energizing the relay magnet, an alarm circuit including a switch actuated by said relay magnet, an alarm signal, and a source of current.



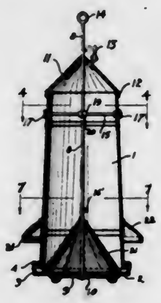
2,438,077
LOCK NUT
J Mills Summers, Englewood, N. J., assignor to Camloc Fastener Corporation, New York, N. Y., a corporation of New York
Application June 23, 1943, Serial No. 491,895
1 Claim. (Cl. 151—7)

A nut comprising a unitary shell stamped from resilient, flat sheet metal and comprising a base portion having means for securement to a member, a housing portion extending upwardly from the base portion, at least two opposed side walls of the housing portion being substantially flat, the upper wall of the housing portion having an opening whose marginal edges are inclined inwardly and downwardly, a separate nut element and a separate locking element positioned within the housing in superimposed relation, each formed with apertures which are generally aligned with the opening in the upper wall, the side walls of the elements conforming generally to the contour of the side walls of the housing and engaging the same to prevent relative rotation between the elements and the shell, the over-all height of such elements being greater than the height of the housing from the base portion to the downwardly-turned edges in the upper wall, the lower-



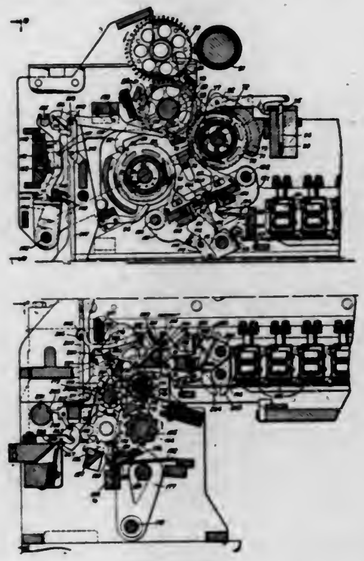
most element having recesses in the side walls thereof, the adjacent side walls of the housing being inwardly moved into such recesses for retaining said elements in the housing under compression against the downwardly-turned edges, the lower surfaces of the lowermost element and the base portion being on substantially the same plane, such normally, downwardly-turned edges being resiliently held upwardly against the upper surface of the uppermost element.

2,438,078
COLLAPSIBLE GOLF CART
Henry R. Sutphen, New York, N. Y.
Application August 14, 1944, Serial No. 549,421
7 Claims. (Cl. 280—36)



1. In a golf cart, a wheeled structure including a downwardly and forwardly inclined main frame, a platform carried by said main frame at its lower end, adapted to receive the bottom of a golf club container, a handle frame pivoted to said main frame adjacent the upper end thereof adjustable to various desired positions about its pivot axis in the use of said cart, a cross member on said handle frame adjustable therewith disposed to contact a golf club container resting on said platform, for adjusting the center of gravity of the load, and means for locking said handle frame in adjustment about its pivot axis.

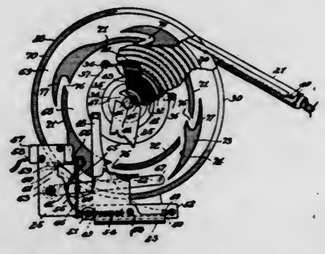
2,438,079
PANEL CONSTRUCTION
Carroll V. Sweet, Madison, Wis.; dedicated to the free use of the People in the Territory of the United States
Application January 23, 1945, Serial No. 574,172
2 Claims. (Cl. 20—15)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A panel construction comprising panels which are subject to contraction and expansion and which are disposed edge to edge in a plane presenting a rear face and a front face of finished appearance, each of said panels at its edge adjacent the edge of another panel having a cut-away corner to provide a plane surface at the front face of the panel extending longitudinally of the edge and at an obtuse angle to the front face, thus to provide a V-shaped groove at the adjacent edges opening toward the front face, at least one of said panels at the said edge having a cut-away portion to provide a plane surface remote from the front face and extending longitudinally of the edge at an obtuse angle to the rear face, and a decorative strip of resilient material bent longitudinally in the form of a triangular prism open along one edge and shaped to fit the V-shaped groove with the side opposite the open edge substantially flush with the front face and the sides adjacent the open edge mating with the sides of the V-shaped groove, said strip having at least one web extending from a side adjacent said open edge, said web having an extension shaped to mate with said plane surface remote from the front face, said strip being inserted between the adjacent panels with the side opposite the open edge flush with the front face and biased to press the sides of the triangular prism adjacent the open edge and the extension into continuous engagement with their mating plane surfaces.

2,438,080
POULTRY FEEDER
Donald Van Meeteren, Sheldon, Iowa
Application November 7, 1945, Serial No. 627,113
1 Claim. (Cl. 119—53)

A poultry feeder comprising a vertically disposed frustoconical container open at the upper and lower ends, a pan over which said container is disposed having an upstanding marginal wall surrounding the lower end portion of the container in spaced relation thereto, a rod extending vertically through the container and having its lower end held to the pan, a conical deflector extending upwardly from said pan into the lower portion of said container and at its apex formed with an opening through which said rod passes, said container being shiftable vertically along the rod to dispose the lower end of the container in desired spaced relation to the conical deflector, a cover for the open, upper end of said container formed with an opening through which the rod passes and being shiftable vertically along the rod into and out of closing relation to the upper end of the container, an eye on the upper end of said rod whereby the feeder may be suspended, and a hook on said cover engageable with said eye to retain the cover out of closing relation with the upper end of the container.

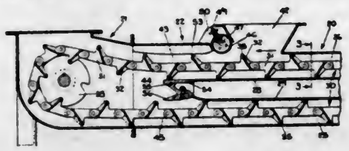


2,438,081
RECORD CONTROLLED ACCOUNTING MACHINE
Thomas J. Watson, New Canaan, Conn., Horace S. Beattie, East Orange, N. J., and Frederick L. Fuller, deceased, late of West Orange, N. J., by Schuyler B. Harrison, East Orange, N. J., and John G. Phillips, New York, N. Y., executors, assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application July 15, 1943, Serial No. 494,820
31 Claims. (Cl. 235—61.8)

3. In combination, a plurality of wheels of a denominationally ordered accumulator and including for each order a digit readout means directly positionable by the related accumulator wheel to represent the tens complement of the digit representation therein, units carry mechanism operable under control of a lower order wheel when the latter passes from 0–1 to carry a unit to the next higher order wheel, further units carry mechanism comprising means operable under control of the highest order wheel when it passes from 0–1 to carry a unit to the lowest order wheel, and entering means for entering the nines complement of the digits or amounts of the first sign and true digits of amounts of the second sign and including means to determine whether the nines complement or true digits are to be entered according to the signs of such amounts, said readout means representing after such entries a positive balance as a true number when amounts of the first sign numerically exceed amounts of the second sign and conversely said readout means representing the nines complement of the digits of the true number of a negative balance when amounts of the second sign numerically exceed the amounts of the first sign.

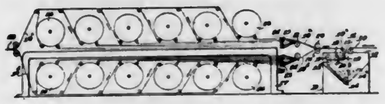
22. In a record controlled machine, record analyzing means, a drive shaft, a type carrying printing wheel, an accumulator wheel of corresponding denominational order, a printing wheel clutch device intermediate said printing wheel and the drive shaft for effecting the rotation of said printing wheel, means under control of the analyzing means for operating said clutch device to initiate the rotation of said printing wheel to a position for printing from a selected digit, an accumulator wheel clutch device for connecting the accumulator wheel with the drive shaft to rotate said accumulator wheel, and means controlled by the printing wheel clutch device to concurrently operate the accumulator wheel clutch device to cause a digit entry corresponding to the selected digit printed.

2,438,082
REELING DEVICE SWITCH
Edwin J. Wester, Rochester, and Eugene R. Ziegler, Spencerport, N. Y., assignors to Ritter Company, Inc., Rochester, N. Y., a corporation of Delaware
Application March 14, 1945, Serial No. 582,620
11 Claims. (Cl. 200—153)



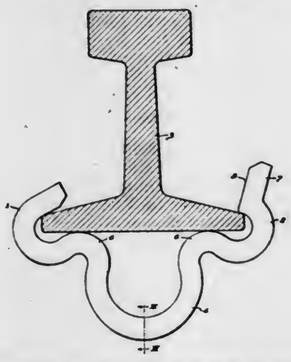
3. In a reeling device, an electrical conductor, a rotary reel adapted to hold a plurality of coils of said conductor for variable extension thereof to different points of use, spring means for rotating said reel to reel and retract said conductor when not in use, said reel being continuously rotatable in opposite directions for said variable extension and retraction of said conductor relative to various points of use, a switch in circuit with said conductor, cam means mounted on said reel in fixed position relative thereto, a movably mounted follower for cooperation with said cam means, a spring for moving said follower in one direction, said follower being arranged to be engaged and moved by said cam means against the action of said spring and said cam means having a portion adapted to be engaged and releasably held by said follower for releasably holding said cam means and reel in predetermined positions against the action of said spring means, and means actuated by the movements of said follower for opening and closing said switch.

2,438,083
CONVEYOR
Paul V. Whitney, Columbus, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company, a corporation of Ohio
Application March 11, 1943, Serial No. 478,781
13 Claims. (Cl. 198—168)



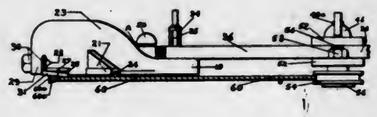
9. A conveyor including a casing providing an enclosed upwardly extending working leg, conveyor mechanism in said leg including a link chain, flights attached to the links of said chain, some of said flights extending forwardly the others rearwardly of said chain during its upward travel thereby to maintain the chain out of contact with the forward and rearward walls

of said working leg while traveling therethrough, none of said flights alone filling the cross-sectional area of the working leg, oppositely extending flights lying in intersecting planes each



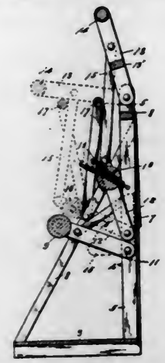
of which makes an acute angle with the axis of the chain during its upward travel, and each flight having a leading edge adjacent the casing and sloping downwardly therefrom while traveling through said working leg.

2,438,084
YARN SMOOTHING APPARATUS AND METHOD
Allison Allen Wood, Lanett, Ala.
Application April 15, 1946, Serial No. 662,238
4 Claims. (Cl. 28—28)



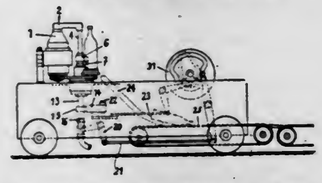
1. Apparatus for sizing a sheet of yarn strands comprising a size box, means for continuously moving the sheet of strands through size in the box, means for separating the sheet of sized strands into equally divided masses, rolls for separating the masses into strands and for smoothing each strand, and means for drying the smoothed strands.

2,438,085
RAIL ANCHOR
Wilbert H. Woodings, Oakmont, and Edmund A. Skowron, Pittsburgh, Pa., and Richard J. McComb, Chicago, Ill., assignors to Woodings-Verona Tool Works, Verona, Pa., a corporation of Pennsylvania
Application March 1, 1946, Serial No. 651,158
1 Claim. (Cl. 238—330)



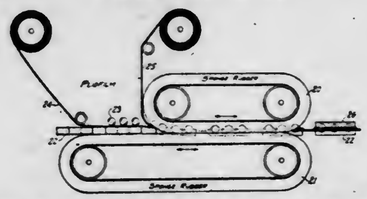
A one-piece rail anchor adapted to extend under a rail base and having at its opposite ends rail-gripping jaws connected beneath the rail by a resilient downwardly bowed portion, said jaws being adapted to receive the opposite sides of the rail base after the jaws have been sprung away from each other far enough to permit the base to enter them, said bowed portion being in the shape of more than half of a circle with its upper ends connected to the adjacent inner ends of the jaws by reverse bends adapted to press against the bottom of the rail base at points spaced inwardly from the sides of the base, and said jaws being formed for engaging tangentially the upper corners of the rail base, the inner surfaces of the jaws between their rail corner-engaging areas and their rail bottom-engaging areas being spaced from the rail, the surfaces of said jaws engageable with said rail corners being substantially flat and extending above the upper surface of the rail base, one of the jaws being formed to overlie the top of the rail base for a greater distance than the other jaw, and said other jaw having at its upper end an upwardly and outwardly projecting lug provided with an inner cam surface adapted to slide upwardly across the adjacent lower corner of the rail base and spring the jaws away from each other while the anchor is being applied to the rail.

2,438,086
SIDE FILE AND JOINTER FOR SPRING AND SWAGE TOOTH SAWS
Ernest G. Wooley, Wichita, Kans.
Application March 2, 1946, Serial No. 651,539
2 Claims. (Cl. 76—47)



1. In a side file and jointer tool for saws; a body element and a saw tooth cutting element, said body element having a transverse recess in one end thereof for the reception of the said cutting element and means for forcibly narrowing the said recess for rigidly holding the cutting element therein, a gauge element, said gauge element being carried by the said body element and projecting therefrom intermediately the ends of the body element, the other end of said body element having a support therein, said support being adjustable to predetermine the ultimate angle of the body element relative to the saw blade and teeth thereof for the purpose described, said body element having projecting elements thereon that are parallelly positioned and spaced apart as finger holds for moving the tool for saw tooth point cutting purposes, an extension arm for said tool, means for attaching said extension arm to the said body element and means on said extension arm for engaging said finger hold elements of the body element to hold the body element in alignment with the said extension arm, a cross bar, said cross bar being stationable on and along the extension arm, and means for maintaining the cross bar at right angles to the extension arm, and means on the extension arm for engaging the back edge of the band saw for the purpose described, said means for engaging the back edge of a band saw being a pair of grooved rollers, said rollers being revolvable, carried one on each end of said cross bar.

2,438,087
MOP WRINGER WITH PRESSURE ROLLERS AND CARRYING BAIL
Edward Wurdeman, Minneapolis, Minn.
Application January 1, 1945, Serial No. 570,847
1 Claim. (Cl. 15—262)

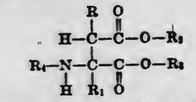


A mop wringer and frame comprising a pail platform, an upright frame on the platform, a fixed lower roll journalled on the frame, a pair of arms pivoted to the frame, an upper roll journalled on the arms for cooperation with the lower roll, a handle bar having a pair of arms pivoted to the frame above the first noted pair of arms, pivoted links connecting the first noted arms to the arms of the handle bar, and a carrying bail for said mop wringer having side members connected by a horizontal member pivoted to the frame, and springs anchored to the frame and attached to the side members of the carrying bail, said springs yieldingly holding said horizontal member against the links and said links in turn holding the pairs of arms, the upper roll in raised inoperative position and the bail in its operative position, when the upper roll is in wringing position over the lower roll, said pairs of arms being substantially horizontally disposed and said links being substantially vertically disposed between the pairs of arms.

2,438,088
DEVICE FOR DISCHARGING HOLLOW GLASSWARE BLOWN IN A FINISHING MOLD
Alphons Wyss, Bottmingen, near Basel, Switzerland
Application January 10, 1946, Serial No. 640,218
In Switzerland January 17, 1945
9 Claims. (Cl. 49—18)

1. A device for discharging hollow glass articles blown in a finishing mould of a machine for fashioning hollow glass articles by blowing, comprising a finishing mould having associated mould halves adapted to be intermittently opened for receiving a parison and for discharging the blown article and to be closed during the blowing action, a turnable carrier, a plurality of mould bottoms supported by said carrier, and means to intermittently turn said carrier in timed relationship to the opening and closing of said mould halves to bring a mould bottom under the finishing mould halves for completing the finishing form before each blowing operation, and to carry away the blown article on continuing said intermittent turning motion, during which travel the blown articles are permitted to cool and set before their conveyance to the lehr.

2,438,089
PACKAGING
Clarence M. Carson, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application August 27, 1946, Serial No. 693,310
7 Claims. (Cl. 18—56)

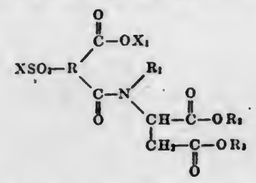


1. The process of packaging an article between two layers of wrapping material which comprises placing the article between them, placing a frame against the outside surface of one of the layers so that its perimeter surrounds the article, and then passing the assembly between resilient pressure means to press the layers of wrapping material together around the article and to press at least a portion of the covered article down into the frame.

2,438,090
DIALKOXY PROPIONITRILES
Albert M. Clifford, Stow, and Joy G. Lichty, Cuyahoga Falls, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application August 26, 1944, Serial No. 551,428
4 Claims. (Cl. 260—464)

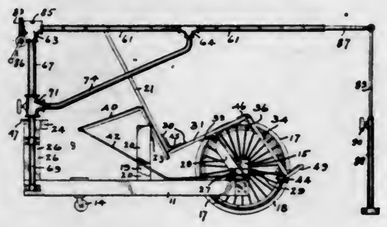
1. Alpha beta dimethoxy propionitrile.

2,438,091
ASPARTIC ACID ESTERS AND THEIR PREPARATION
Kathryn L. Lynch, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 6, 1943, Serial No. 501,417
5 Claims. (Cl. 260—482)



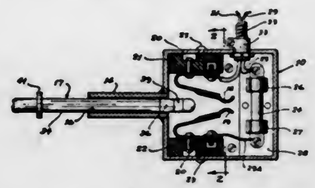
1. N-substituted aspartic acid esters having surface active properties said esters having the general formula:

in which R and R_1 are members of the group consisting of hydrogen, and alkyl radicals having 1 to 3 carbon atoms, R_2 and R_3 are alkyl radicals of from 1 to 18 carbon atoms and R_4 is a member of the group consisting of alkyl and alkoxyalkyl radicals, the total number of carbon atoms in R_2, R_3 and R_4 being at least twelve.



2,438,092
N-SULFODICARBOXYLIC ACID ASPARTATES
Kathryn L. Lynch, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 10, 1943, Serial No. 501,851
9 Claims. (Cl. 260—482)

1. Compounds having the general formula



in which X and X_1 are members of the group consisting of hydrogen and cationic salt-forming radicals, R is the residue of an aliphatic polycarboxylic acid, R_1 is a member of the group consisting of alkyl, alkoxyalkyl and hydroxyalkyl radicals of from 1 to 20 carbon atoms and R_2 and R_3 are members of the group consisting of hydrogen, alkyl and cationic salt-forming radicals.

2,438,093
INVALID BED
Elwood A. Miller, Indianapolis, Ind., assignor of fifty per cent to Benjamin V. Klain, Indianapolis, Ind.
Application November 30, 1944, Serial No. 565,878
2 Claims. (Cl. 5—66)

2. An invalid bed and chair comprising a foundation, a fixed support carried by the foundation; a major bed and back panel hingedly carried by said support; an intermediate panel hinged by a rear end to the forward end of said major panel; a rockable, rigid member hingedly carried by one end portion by said foundation and hinged at a fixed location to said intermediate panel, said location being spaced between the rear and forward ends of the intermediate panel removed from the forward end of the intermediate panel; a foot panel hinged by a rear end to the forward end of said intermediate panel; arm means depending from said major panel to the rear of its hinge connection with said fixed support; and rod means rockably connected to said arm means and to the forward end portion of said foot panel, whereby all of said panels may initially be placed in an end to end planar condition for a bed, and upon pressing downwardly on the rear end of said intermediate panel and the forward end of said major panel between said fixed and rockable supports, said panels will shift to a chair conformation under control solely by said rod means.

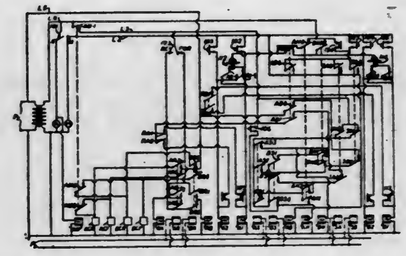
2,438,094
ELEVATOR SWITCH
Felice Petrullo, Jersey City, N. J., assignor to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware
Application February 17, 1945, Serial No. 578,373
1 Claim. (Cl. 171—97)

A safety switch for use in association with a system of elevator doors and the like comprising a sealed casing, a pair of spaced contacts supported within said casing, an actuator to complete a circuit through said contacts, an electrically conductive actuator guide member secured to said casing and having an elongated bore extending into said casing to direct the actuator into position between the contacts, said actuator having an insulating portion normally in contact with said guide member and an electrically conductive tip to cooperate with said contacts, said guide element and said contacts being connected through a source of electrical energy, said circuit being arranged so that when completed through the guide member a flow of current may take place through at least one of said contacts, means electrically connected with the guide to render the circuit permanently inoperative when the circuit is completed through the guide, said actuator being moved by the elevator door or the like to render a circuit through the contacts operative when the door or the like is closed and to render said circuit through the contacts inoperative when the door or the like is open, and said guide-member circuit normally being maintained open by reason of its contact with the insulated portion of the actuator but the guide member circuit functioning to render the entire circuit permanently inoperative when a substitute electrically conductive actuator is substituted for the actuator that cooperates with the door or the like whereby the circuit through the guide member is completed.

2,438,095
SEAM-FILLING SHOE WELT
William E. Phinney, Milton, N. H., assignor to Wright-Batchelder Corporation, Boston, Mass., a corporation of Massachusetts
Application July 18, 1946, Serial No. 684,502
1 Claim. (Cl. 36—78)

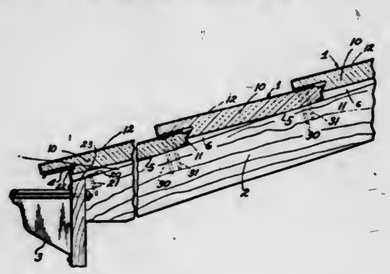
A seam-filling welt of the kind described for use in the manufacture of welt boots and shoes, comprising a horizontal body portion and with an inner edge portion designed to fit a lasted shoe with a low seam-filling bead, the inner edge being adapted to receive inseam stitching, with the body portion extending in horizontal relation with the shoe, said inner edge portion comprising a lower vertical surface, a slanting intermediate surface formed at an angle of approximately 28° with the vertical surface and extending toward and across the width of the body portion, in combination with the low seam-filling bead projecting from the slanting face in a concave radius and with a convex face extending from the body portion, whereby said bead will be drawn within the area of the feather edge of the insole in the shoe in which said welt is incorporated.

2,438,096
STABILIZATION OF ROSIN SIZES
Edward N. Poor, Stamford, and Kenneth L. Howard, Old Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 21, 1945, Serial No. 611,914
4 Claims. (Cl. 106—238)



3. An aqueous liquid rosin size composition stabilized against crystallization by the incorporation therein of stabilizing amounts of a crystallization inhibitor comprising a mixture of approximately equal quantities of formaldehyde and an amine.

2,438,097
THERMOSETTING VINYL CHLORIDE-VINYLIDENE CHLORIDE COPOLYMER COMPOSITIONS
Thomas H. Rogers, Jr., and Robert D. Vickers, Akron, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application December 29, 1943, Serial No. 516,052
6 Claims. (Cl. 260—86)

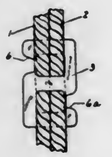


1. A method of preparing a thermoset composition from a thermoplastic copolymer of 75 to 90 percent of vinyl chloride and the balance of vinylidene chloride which comprises incorporating from 1 to 10 percent by weight (based on the copolymer) of a quaternary ammonium compound and thereafter heating the modified copolymer to a temperature between 240° F. and 360° F. for a period of from 15 to 30 minutes.

2,438,098
PHOTOELECTRIC CONTROL MECHANISM FOR FLAME-CUTTING DEVICES
William S. Tandler and David S. Walker, New York, N. Y., assignors, by mesne assignments, to Reconstruction Finance Corporation, New York, N. Y., a corporation of the United States
Application October 9, 1942, Serial No. 461,404
15 Claims. (Cl. 318—162)

1. Photoelectrically-controlled apparatus, comprising a tool, motive means for driving said tool in a predetermined direction, a first photoelectric control record driven synchronously with said tool by said motive means, a second motive means for driving said tool in a second independent direction perpendicular to said first direction, a second photoelectric control record driven synchronously with the motion of said tool by said second motive means along said second direction, said first record bearing control indicia having successive spacings corresponding to desired increments of motion of said tool along said first direction, and said second record bearing control indicia having successive spacings corresponding to desired increments of motion of said tool along said second direction, photoelectric pick-up means cooperating with said first record for stopping said first motive means and starting said second motive means under the control of said first control indicia, and photoelectric pickup means cooperating with said second record for stopping said second motive means and starting said first motive means under the control of said second control indicia, whereby said tool is operated in steps to execute an outline corresponding to both said control indicia.

2,438,099
ROOF STRUCTURE
Irving P. Whitehouse, South Euclid, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey
Application July 23, 1945, Serial No. 606,553
9 Claims. (Cl. 108—8)



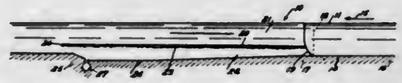
1. A roof structure comprising spaced rafters, a roof member spanning the space between said rafters and resting thereon at its upper end only, and an imperforate metal purlin crimpingly embracing the upper edge of said member and resting on said rafters.

2,438,100
BLEACHING CELLULOSE TEXTILE FIBERS
Thomas C. Whitner, Elizabeth, N. J., assignor to Chemical Laboratories, Inc., a corporation of New Jersey
No Drawing. Application March 17, 1944, Serial No. 527,005
8 Claims. (Cl. 8—111)

1. The process which comprises impregnating undyed cellulose textile fibers at substantially

atmospheric temperature with an aqueous solution of an alkylolamine, said alkylolamine being substantially the only solute in said solution and its concentration being great enough to maintain said fibers in an alkaline condition, separating non-absorbed aqueous solution from said fibers, treating said impregnated fibers at substantially atmospheric temperature with gaseous ozone, and removing substantially all the alkylolamine from the treated fibers.

2,438,101
CORD EQUALIZER FOR VENETIAN BLINDS
Richard H. Wright, Cleveland, Ohio
Application October 9, 1944, Serial No. 557,824
1 Claim. (Cl. 24—129)

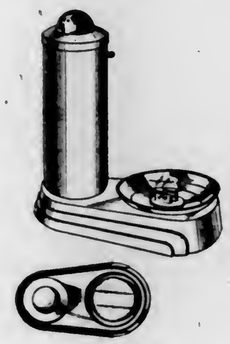


A cord equalizer for Venetian blinds comprising a clamping plate of substantially flat form provided with substantially rectangular clamping openings extending rectilinearly thereof and spaced from each other in the direction of the ends of the plate, said openings having entrance portions leading from a lateral edge of the plate and of smaller diameter than the width of the openings in the direction of the length of the said plate, adapted to be combined with two cord elements passing first through one opening and laced past the side of the middle part of the plate between the openings and then passed through the other opening, each of the said entrance portions to the openings tapering toward the corresponding associated opening from a side portion of the plate and being formed at opposite portions of its inner end and facing toward the said corresponding opening with projections adapted to imbed in the cord members located in said corresponding opening at the inner extremity of each tapered portion, the entrance portions to the openings of the plate leading from opposite side edges thereof so that the plate is of generally S-shaped form in contour, and the two cord elements being adapted to be side by side and of greater transverse diameter than each opening through which they pass so as to be compressed in each opening thereby causing biting engagement of the projections into the cord elements adjacent thereto.

2,438,102
COLOR STABILIZATION OF VINYL HALIDE RESINS
Fred W. Cox, Cuyahoga Falls, and James M. Wallace, Jr., Akron, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application June 25, 1945, Serial No. 601,548
9 Claims. (Cl. 260—78.5)

1. A vinyl halide resin capable of resisting discoloration upon heating which comprises a polymer of from 70 to 100 percent of a vinyl halide and up to 30 percent of another polymerizable mono-olefinic compound, said resin containing intimately dispersed therein from 0.05 to 10 percent by weight of the polymer content, of a compound of the group consisting of magnesium salicylate and alkaline earth metal salicylates.

2,438,103
APPARATUS FOR REGULATING WATER STREAMS AND SAND CLEARING DEVICES
Elisée Montagné, Saint-Girons, France, assignor to Societe L'Entreprise Industrielle, Paris, France, a corporation of France
Application November 20, 1945, Serial No. 629,826
In France July 9, 1941
Section 1, Public Law 690, August 8, 1946, Patent expires October 23, 1964
11 Claims. (Cl. 61—1)

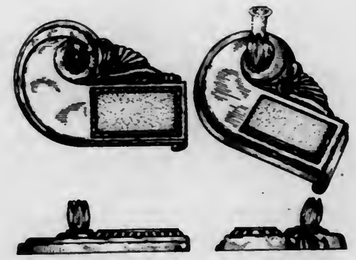


8. Means for clearing suspended matter from a stream of liquid, which means includes: walls forming a first channel section adapted to receive said stream, said first channel section having a substantially constant cross section and gradient and having a length which is large relative to the cross sectional dimensions of said channel; walls forming a second channel section as a downstream continuation of said first channel section, a substantially horizontal plate supported in said second channel section submerged in said flowing stream and adapted to separate said stream into an upper stratum and a lower stratum; walls forming a transverse trench in the bottom of said second channel portion under said plate near the downstream end thereof; walls forming in the bottom of said second channel section a passage of increasing cross section for said lower stratum for a substantial distance of the portion upstream from said trench and diminishing cross section area downstream from said trench; and walls forming an outlet from said trench and adapted to permit the flushing of sand therefrom.

DESIGNS

MARCH 16, 1948

148,971
DESIGN FOR A COMBINATION ASH TRAY AND LIGHT
George David Amato, Astoria, Oreg.
Application October 30, 1946, Serial No. 134,378
Term of patent 14 years
(Cl. D48—20)

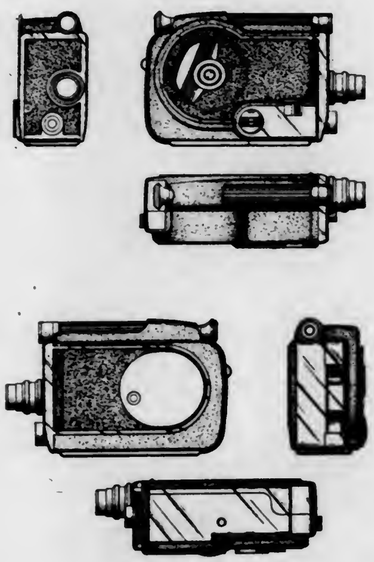


The ornamental design for a combination ash tray and light, as shown.

148,972
DESIGN FOR A CALENDAR STAND
Boris Blecher, Philadelphia, Pa.
Application November 1, 1946, Serial No. 134,442
Term of patent 14 years
(Cl. D74—5)

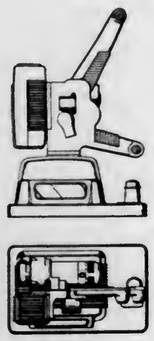
The ornamental design for a calendar stand, as shown and described.

148,973
DESIGN FOR A PENHOLDER
Boris Blecher, Philadelphia, Pa.
Application November 1, 1946, Serial No. 134,446
Term of patent 14 years
(Cl. D74—1)



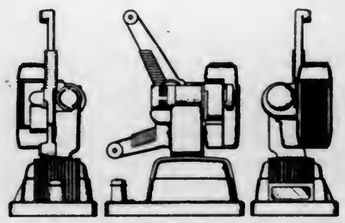
The ornamental design for a pen holder, as shown and described.

148,974
DESIGN FOR A SPECTACLE FRAME
Georges Bolle, Church Way, Wellingborough, England, assignor to Thurgar Bolle Limited, Church Way, Wellingborough, England, a British company
Application June 16, 1947, Serial No. 139,704
Term of patent 14 years
(Cl. D57—1)



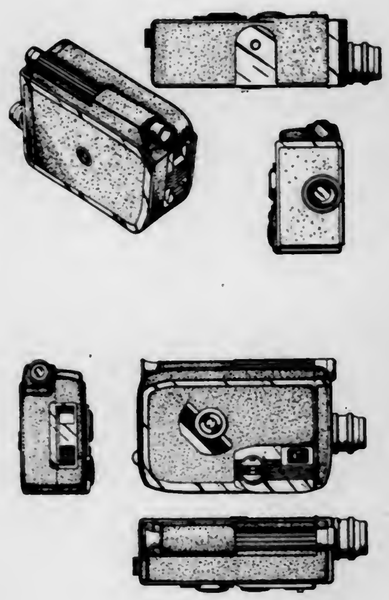
The ornamental design for a spectacle frame, as shown.

148,975
DESIGN FOR A CAMERA
Jack Briskin and Joseph J. Golick, Chicago, Ill., assignors to Revere Camera Company, Chicago, Ill., a corporation of Delaware
Application November 7, 1947, Serial No. 142,374
Term of patent 14 years
(Cl. D61—1)

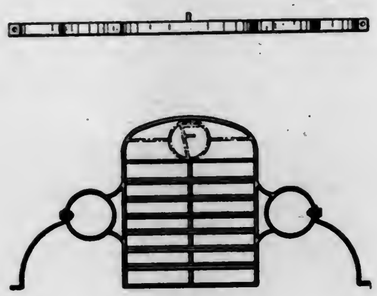


The ornamental design for a camera, as shown.

148,976
DESIGN FOR A MOVIE PROJECTOR
Jack Briskin and Conrad Peto, Chicago, Ill., assignors to Revere Camera Company, Chicago, Ill., a corporation of Delaware
Application November 7, 1947, Serial No. 142,375
Term of patent 14 years
(Cl. D61—1)

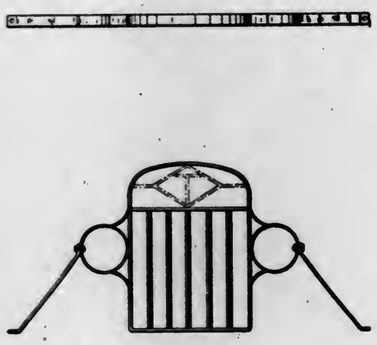


148,976—Continued



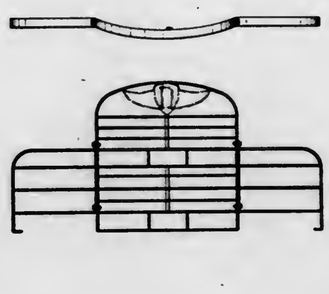
The ornamental design for a movie projector, as shown.

148,977
DESIGN FOR A CAMERA
Jack Briskin and Joseph J. Golick, Chicago, Ill. assignors to Revere Camera Company, Chicago, Ill., a corporation of Delaware
Application November 7, 1947, Serial No. 142,376
Term of patent 14 years
(Cl. D61—1)



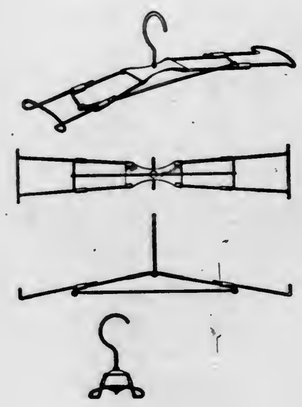
The ornamental design for a camera, as shown.

148,978
DESIGN FOR AN AUTOMOBILE RADIATOR GUARD
Leopold Bustin, Mamaroneck, N. Y.
Application October 1, 1946, Serial No. 133,681
Term of patent 3½ years
(Cl. D14—18)



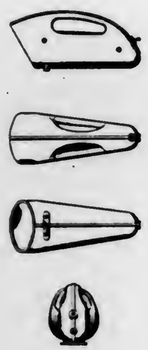
The ornamental design for an automobile radiator guard, substantially as shown and described.

148,979
DESIGN FOR AN AUTOMOBILE RADIATOR GUARD
Leopold Bustin, Mamaroneck, N. Y.
Application October 1, 1946, Serial No. 133,682
Term of patent 3½ years
(Cl. D14—18)



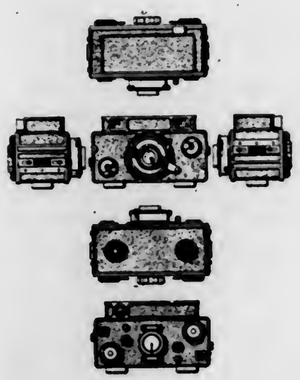
The ornamental design for an automobile radiator guard, substantially as shown and described.

148,980
DESIGN FOR AN AUTOMOBILE RADIATOR GUARD
Leopold Bustin, Mamaroneck, N. Y.
Application November 26, 1946, Serial No. 135,087
Term of patent 3½ years
(Cl. D14—18)



The ornamental design for an automobile radiator guard, substantially as shown and described.

148,981
DESIGN FOR A COAT HANGER
John Martin Cless, West Los Angeles, Calif.
Application January 2, 1947, Serial No. 135,889
Term of patent 3½ years
(Cl. D80—8)



The ornamental design for a coat hanger, substantially as shown.

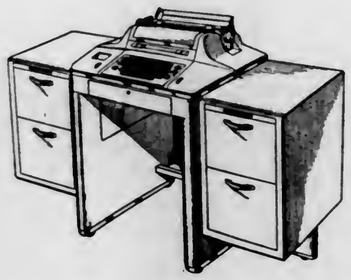
148,982
DESIGN FOR A LAMP CASING
Charles M. Cruze, Los Angeles, Calif., assignor to The Birtcher Corporation, Los Angeles, Calif., a corporation of California
Application August 26, 1946, Serial No. 132,870
Term of patent 7 years
(Cl. D48—20)

The ornamental design for a lamp casing, substantially as shown.

148,983
DESIGN FOR A CAMERA
Gustave Fassin, Los Gatos, Calif., assignor to Adel Precision Products Corp., Burbank, Calif., a corporation of California
Application February 14, 1947, Serial No. 136,919
Term of patent 14 years
(Cl. D61—1)

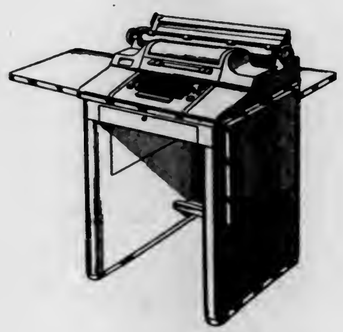
The ornamental design for a camera, as shown.

148,984
DESIGN FOR A TABLE FORK
John Gordon Fenety, New York, N. Y.
Application April 26, 1946, Serial No. 129,004
Term of patent 14 years
(Cl. D54—12)



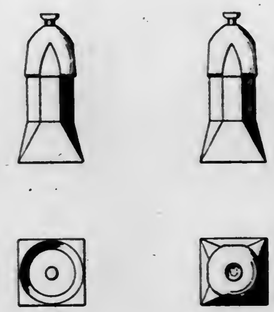
The ornamental design for a table fork, substantially as shown.

148,985
DESIGN FOR A COMBINED TYPEWRITER AND SUPPORT THEREFOR
Frederic S. Grover and Kenneth D. Maier, Rochester, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application November 7, 1946, Serial No. 134,598
Term of patent 14 years
(Cl. D64—11)



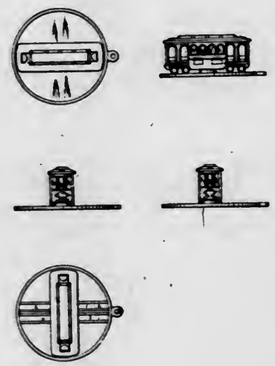
The ornamental design for a combined typewriter and support therefor, substantially as shown and described.

148,986
DESIGN FOR A COMBINED TYPEWRITER AND DESK SUPPORT THEREFOR
Frederic S. Grover, Rochester, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application November 7, 1946, Serial No. 134,599
Term of patent 14 years
(Cl. D64—11)



The ornamental design for a combined typewriter and desk support therefor, substantially as shown and described.

148,987
DESIGN FOR A COMBINED TYPEWRITER AND DESK SUPPORT THEREFOR
Frederic S. Grover, Rochester, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application November 7, 1946, Serial No. 134,600
Term of patent 14 years
(Cl. D64—11)

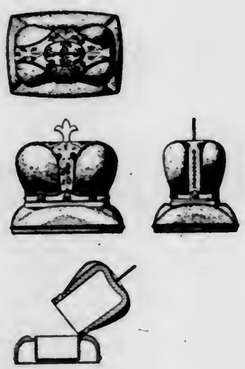


The ornamental design for a combined typewriter and desk support therefor, substantially as shown and described.

148,988
DESIGN FOR A SALT AND PEPPER DISPENSER
Frederick P. Hamrah, near Charlotte, N. C.
Application November 30, 1946, Serial No. 135,189
Term of patent 3½ years
(Cl. D44—22)

The ornamental design for a salt and pepper dispenser, substantially as shown.

148,989
DESIGN FOR A PENDANT OR SIMILAR ARTICLE
King Harrington, San Francisco, Calif.
Application August 30, 1946, Serial No. 132,990
Term of patent 14 years
(Cl. D45—17)

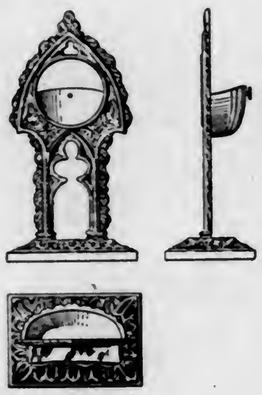


The ornamental design for a pendant or similar article, substantially as shown and described.

148,990
DESIGN FOR A DRESS
Bernard Hurwitz, New York, N. Y.
Application September 8, 1947, Serial No. 141,263
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

148,991
DESIGN FOR A JEWEL BOX OR THE LIKE
Herbert Jacobson, New York, N. Y.
Application April 12, 1947, Serial No. 138,327
Term of patent 14 years
(Cl. D86—9)



The ornamental design for a jewel box or the like, as shown.

148,992
DESIGN FOR A JEWEL BOX OR THE LIKE
Herbert Jacobson, New York, N. Y.
Application April 12, 1947, Serial No. 138,328
Term of patent 14 years
(Cl. D86—9)

The ornamental design for a jewel box or the like, as shown.

148,993
DESIGN FOR A WATCH STANDARD
Reece W. Johnston and John C. Roberts, Fort Worth, Tex.
Application December 8, 1947, Serial No. 143,024
Term of patent 14 years
(Cl. D42—10)

The ornamental design for a watch standard, as shown.

148,994
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 5, 1947, Serial No. 136,685
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

148,995
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 5, 1947, Serial No. 136,688
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

148,996
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 18, 1947, Serial No. 136,984
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

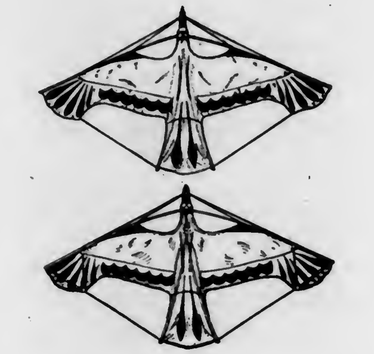
148,997
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 18, 1947, Serial No. 136,987
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

148,998
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 18, 1947, Serial No. 136,991
Term of patent 7 years
(Cl. D45—19)

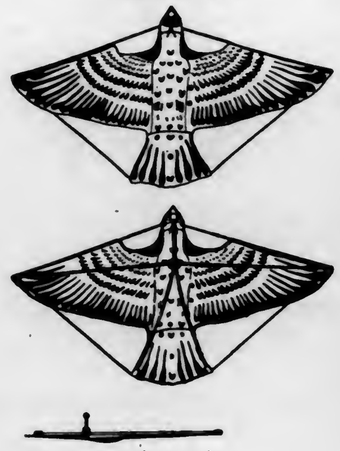
The ornamental design for a separable brooch or similar article, substantially as shown.

148,999
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 18, 1947, Serial No. 136,992
Term of patent 7 years
(Cl. D45—19)



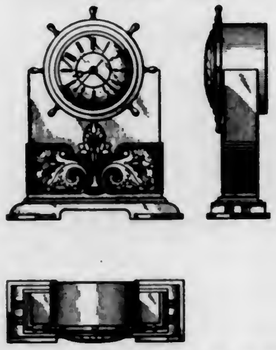
The ornamental design for a brooch or similar article, substantially as shown.

149,000
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 13, 1947, Serial No. 137,576
Term of patent 7 years
(Cl. D45—9)



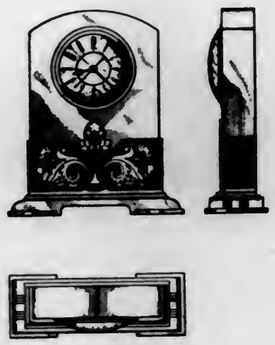
The ornamental design for an earring or similar article, substantially as shown.

149,001
DESIGN FOR A KITE
Sandy Lang, Chicago, Ill.
Application November 14, 1946, Serial No. 134,788
Term of patent 14 years
(Cl. D34—15)



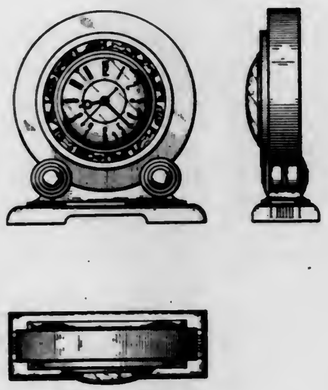
The ornamental design for a kite, substantially as shown.

149,002
DESIGN FOR A KITE
Sandy Lang, Chicago, Ill.
Application November 18, 1946, Serial No. 134,838
Term of patent 14 years
(Cl. D34—15)



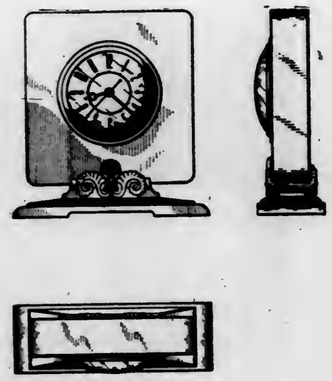
The ornamental design for a kite, substantially as shown.

149,003
DESIGN FOR A CLOCK
Ben Lerman, Chicago, Ill.
Application January 22, 1947, Serial No. 136,297
Term of patent 3½ years
(Cl. D42—7)



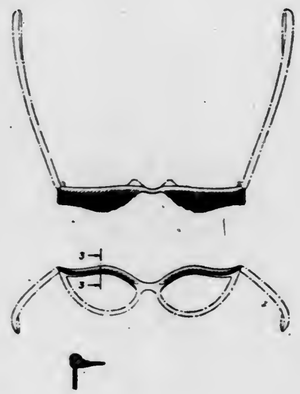
The ornamental design for a clock, substantially as shown.

149,004
DESIGN FOR A CLOCK
Ben Lerman, Chicago, Ill.
Application January 22, 1947, Serial No. 136,298
Term of patent 3½ years
(Cl. D42—7)



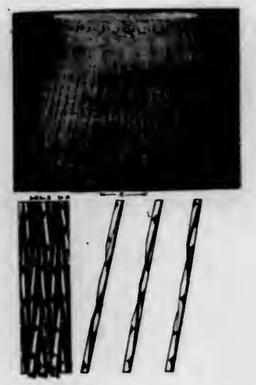
The ornamental design for a clock, substantially as shown.

149,005
DESIGN FOR A CLOCK
Ben Lerman, Chicago, Ill.
Application January 22, 1947, Serial No. 136,300
Term of patent 7 years
(Cl. D42—7)



The ornamental design for a clock, substantially as shown.

149,006
DESIGN FOR A CLOCK
Ben Lerman, Chicago, Ill.
Application January 22, 1947, Serial No. 136,301
Term of patent 7 years
(Cl. D42—7)



The ornamental design for a clock, substantially as shown.

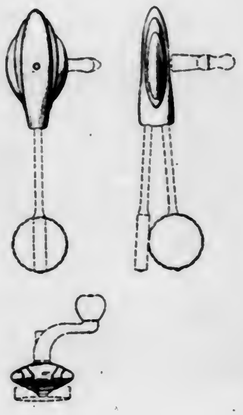
149,007
DESIGN FOR A SPECTACLE FRAME
Golda Lewis, New York, N. Y.
Application April 24, 1947, Serial No. 138,593
Term of patent 7 years
(Cl. D57—1)

The ornamental design for a spectacle frame, as shown and described.

149,008
DESIGN FOR A LAMP SHADE OR THE LIKE
Louis E. Lindenbaum, Brooklyn, N. Y.
Application March 27, 1946, Serial No. 128,006
Term of patent 7 years
(Cl. D48—16)

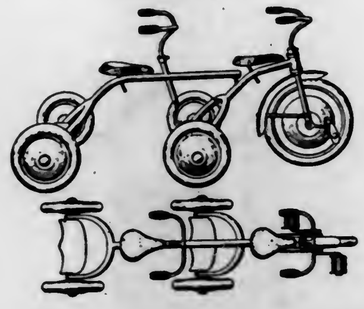
The ornamental design for a lamp shade or the like, as shown.

149,009
DESIGN FOR AN ELECTRIC LIGHTING FIXTURE
Max J. Marks and Martin W. Schwartz, Chicago, Ill.
Application July 1, 1946, Serial No. 131,245
Term of patent 14 years
(Cl. D48—4)



The ornamental design for an electric lighting fixture, as shown.

149,010
DESIGN FOR A TOY FIGURE
Henry A. Nozewski, Detroit, Mich.
Application March 28, 1947, Serial No. 137,995
Term of patent 7 years
(Cl. D34—2)



The ornamental design for a toy figure, substantially as shown.

149,011
DESIGN FOR AN EGG BEATER OR THE LIKE
Wayne F. Owens, Sheridan, Wyo., assignor to Boeing Aircraft Company, Seattle, Wash., a corporation of Washington
Application March 23, 1946, Serial No. 127,882
Term of patent 14 years
(Cl. D44—29)

The ornamental design for an egg beater or the like, substantially as shown.

149,012
DESIGN FOR A COMBINED TRICYCLE AND TRAILER
Ralph E. Parker, Wichita, Kans., assignor to J. Paul Carver, Wichita, Kans.
Application September 23, 1946, Serial No. 133,518
Term of patent 7 years
(Cl. D34—15)

The ornamental design for a combined tricycle and trailer, as shown.

149,013
DESIGN FOR A GASOLINE HOIST
Charles F. Peterson, Arlington, Mass., assignor to New England Trawler Equipment Co., Chelsea, Mass., a corporation of Massachusetts
Application April 1, 1946, Serial No. 128,134
Term of patent 14 years
(Cl. D41—1)

The ornamental design for a gasoline hoist, substantially as shown and described.

149,014
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 21, 1947, Serial No. 137,058
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

149,015
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 21, 1947, Serial No. 137,061
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

149,016
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 21, 1947, Serial No. 137,063
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

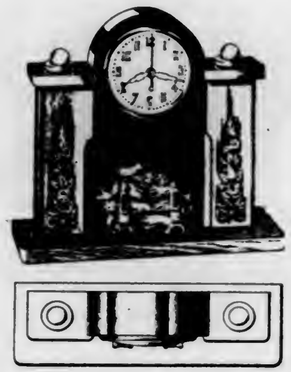
149,017
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 21, 1947, Serial No. 137,064
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

149,018
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 28, 1947, Serial No. 137,247
Term of patent 7 years
(Cl. D45—9)

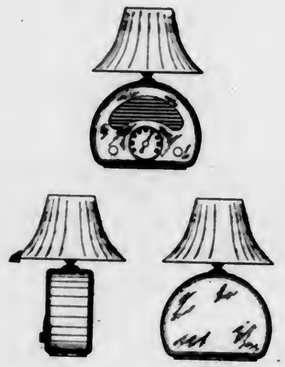
The ornamental design for an earring or similar article, substantially as shown.

149,019
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 28, 1947, Serial No. 137,248
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

149,020
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 28, 1947, Serial No. 137,249
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

149,021
DESIGN FOR A CLOCK CASE
Joseph F. Punzak and Abraham Levy, Brooklyn, N. Y., assignors to United Metal Goods Manufacturing Co. Inc., Brooklyn, N. Y., a corporation of New York
Application January 14, 1947, Serial No. 136,136
Term of patent 7 years
(Cl. D42—7)

The ornamental design for a clock case, as shown.

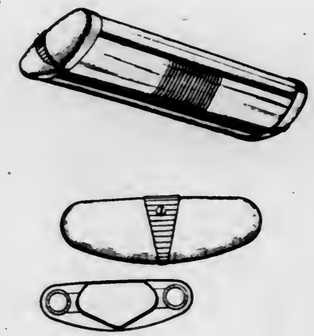
149,022
DESIGN FOR A COMBINATION RADIO AND LAMP
James Robinson, Jr., Cleveland, Ohio
Application January 2, 1947, Serial No. 135,902
Term of patent 14 years
(Cl. D56—4)

The ornamental design for a combination radio and lamp, substantially as shown.

149,023
DESIGN FOR A CLASP
Harold C. Rood, Bridgeport, Conn.
Application May 1, 1947, Serial No. 138,745
Term of patent 14 years
(Cl. D17—9)

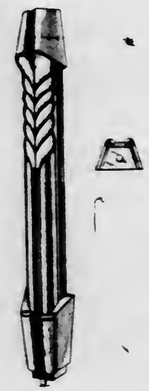
The ornamental design for a clasp, as shown.

149,024
DESIGN FOR A NEGLIGEE OR SIMILAR ARTICLE
Alexander Roth, New York, N. Y., assignor to Wirth-Gold Underwear Co., Inc., New York, N. Y., a corporation of New York
Application July 3, 1947, Serial No. 140,098
Term of patent 3½ years
(Cl. D3—26)



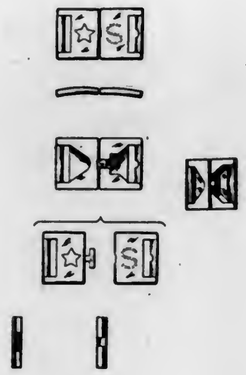
The ornamental design for a negligee or similar article, substantially as shown.

149,025
DESIGN FOR A HAIRPIN OR SIMILAR ARTICLE
Lester T. Sawyer, Leominster, Mass.
Application April 13, 1946, Serial No. 128,577
Term of patent 14 years
(Cl. D86—10)



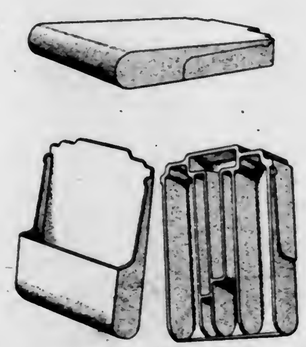
The ornamental design for a hairpin or similar article, substantially as shown and described.

149,026
DESIGN FOR AN ELECTRIC LIGHTING FIXTURE
Martin W. Schwartz and Max J. Marks, Chicago, Ill.
Application July 1, 1946. Serial No. 131,244
Term of patent 14 years
(Cl. D48—4)



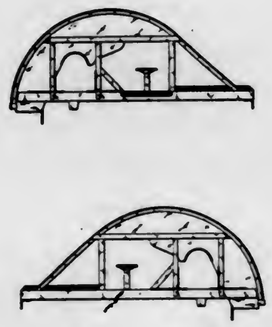
The ornamental design for an electric lighting fixture, as shown.

149,027
DESIGN FOR AN ELECTRIC LIGHTING FIXTURE
Martin W. Schwartz and Max J. Marks, Chicago, Ill.
Application July 1, 1946, Serial No. 131,249
Term of patent 14 years
(Cl. D48—4)



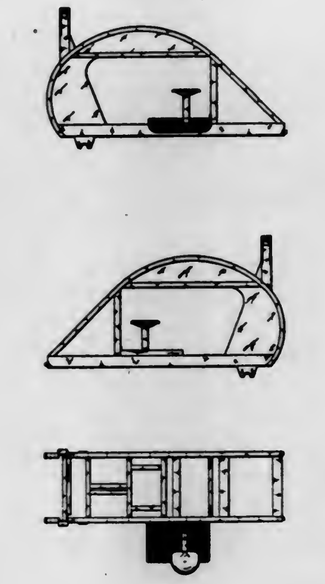
The ornamental design for an electric lighting fixture, as shown.

149,028
DESIGN FOR A BELT BUCKLE
Herbert J. Shepherd, St. Louis, Mo.
Application March 24, 1947, Serial No. 137,837
Term of patent 14 years
(Cl. D17—1)



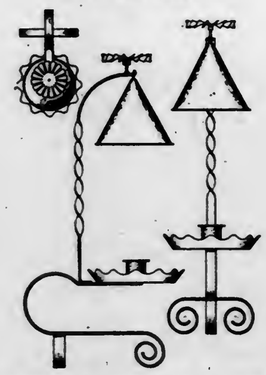
The ornamental design for a belt buckle, as shown and described.

149,029
DESIGN FOR A TOILET KIT
Clyde Sims, Dallas, Tex.
Application March 28, 1946, Serial No. 128,029
Term of patent 14 years
(Cl. D86—10)



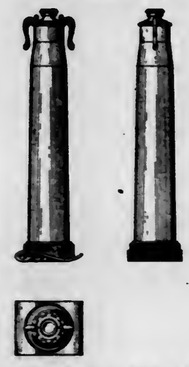
The ornamental design for a toilet kit, as shown.

149,030
DESIGN FOR A TRENCHING MACHINE FRAME
George A. Vaughn, Newton, Iowa
Application November 21, 1946, Serial No. 134,986
Term of patent 14 years
(Cl. D14—3)



The ornamental design for a trenching machine frame, substantially as shown.

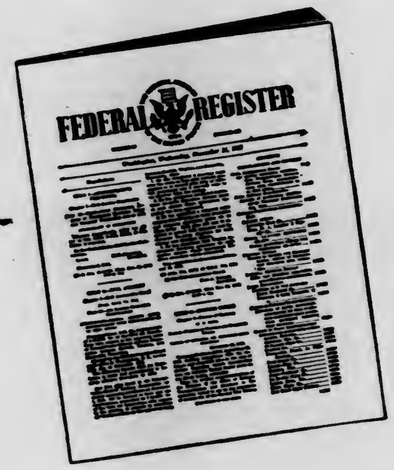
149,031
DESIGN FOR A DITCHING MACHINE FRAME
George A. Vaughn, Newton, Iowa, assignor to The Parsons Company, Newton, Iowa, a corporation
Application November 21, 1946, Serial No. 134,987
Term of patent 14 years
(Cl. D14—3)



The ornamental design for a ditching machine frame, substantially as shown.

149,032
DESIGN FOR A CANDLESTICK
Michael Vozzella, Malden, Mass.
Application December 4, 1946, Serial No. 135,256
Term of patent 7 years
(Cl. D48—20)

The ornamental design for a candlestick, as shown.



149,033
DESIGN FOR A LAMP BASE
William E. Wagner, Chicago, Ill.
Application August 22, 1946, Serial No. 132,733
Term of patent 7 years
(Cl. D48—20)

The ornamental design for a lamp base, substantially as shown.

CLASS 48

Beer. Geo. Wiedemann Brewing Co., Inc. 354,655, Feb. 15, 1938. Republished Mar. 23.
Beer and ale. P. Ballantine and Sons. 337,230, Aug. 4, 1936. Republished Mar. 23.
Beer and ale. Horlacher Brewing Company. 365,939, Mar. 21, 1939. Republished Mar. 23.

CLASS 49

Liquors, Distilled alcoholic. A. S. Bowman. 347,081, June 15, 1937. Republished Mar. 23.
Whiskey. A. S. Bowman. 362,915, Dec. 6, 1938. Republished Mar. 23.

CLASS 50

Leather, Artificial. Respro Inc. 353,871, Jan. 18, 1938. Republished Mar. 23.
Plastic compound, Non-metallic. Pla-Steele Company. 366,677, Apr. 25, 1939. Canceled Feb. 10, 1948. O. G. Mar. 23.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 23D DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Ganter, Francis X., Los Angeles, Calif. Window drape rod hanging means. Re. 22,989, Mar. 23.
Hansen, William W., Garden City, and R. H. Varian, Wantagh, N. Y., assignors to The Board of Trustees of The Leland Stanford Junior University, Stanford University, Calif. Modulation system. Re. 22,990, Mar. 23.
Hitchcock, Rex B., Brussels, Belgium, and W. C. Rosenthal, Chicago, Ill., assignors to International Harvester Company. Implement construction. Re. 22,991, Mar. 23.

International Harvester Company, assignee: *See*—
Hitchcock, Rex B., and Rosenthal.
Rosenthal, William C.: *See*—
Hitchcock, Rex B., and Rosenthal.
Varian, Russell H.: *See*—
Hansen, William W., and Varian.

LIST OF PLANT PATENTEES

Bridges, Everett R., administrator: *See*—
Rogers, Rowland S.
Kellogg, De Ross, Milford, Conn., assignor to Stark Bro's Nurseries and Orchards Company, Louisiana, Mo. Plum tree. 793, Mar. 23.
Rogers, Rowland S., deceased, by E. R. Bridges, administrator, Bloomfield, Ind., assignor to Stark Bro's Nurseries and Orchards Company, Louisiana, Mo. Apple tree. 794, Mar. 23.

Stark Bro's Nurseries and Orchards Company, assignee: *See*—
Kellogg, De Ross.
Rogers, Rowland S.
Williams, Fred D., Porterville, Calif. Peach tree. 795, Mar. 23.

LIST OF DESIGN PATENTEES

Acton, Grant M., assignor to Temp-Rite Manufacturing Company, Arkansas City, Kans. Bottle carrier. 149,034, Mar. 23.
Allen, William M.: *See*—
Clark, Kendall, and Allen.
Arcuni, Joseph P., Long Island, N. Y. Textile fabric or similar article. 149,035, Mar. 23.
Avila, John V., San Jose, Calif. Refrigerated display unit. 149,036, Mar. 23.
Backer, George, New York, N. Y. Woven plastic fabric. 149,037, Mar. 23.
Barber, Joel D., New York, N. Y. Chair. 149,038, Mar. 23.
Barré, Robert A., New York, N. Y. Combined watch case and wrist band. 149,039, Mar. 23.
Barré, Robert A., New York, N. Y. Combined watch case and band. 149,040, Mar. 23.
Becker, Robert H., assignee: *See*—
Rixson, Ewing S.
Beder, Samuel L., New York, N. Y. Figure toy. 149,041, Mar. 23.
Bickel, Saul S.: *See*—
Cooper, Benjamin, and Bickel.
Billingsley, William F., Silver Lake, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Tire. 149,042, Mar. 23.
Bjorncrants, Carl G., Evanston, assignor to Sears, Roebuck and Co., Chicago, Ill. Kitchen range. 149,045, Mar. 23.
Blumenthal, David, and H. L. Seiden, assignors to Phil-Mar Mfg. Corp., Chicago, Ill. Hostess tray. 149,046, Mar. 23.
Boes, W. W., Company, The, assignee: *See*—
Clark, Kendall, and Allen.
Botany Mills, Inc., assignee: *See*—
Goldsmith, Berthold, Jr.
Bouligny, Lawrence A., Miami, Fla. Aquarium table. 149,043, Mar. 23.
Brown, Chester A., and H. Faber, Grand Rapids, Mich. Radio service bench. 149,044, Mar. 23.
Clark, Kendall, Dayton, and W. M. Allen, Hamilton, assignor to The W. W. Boes Company, Dayton, Ohio. Nut-cracker or similar article. 149,047, Mar. 23.
Cooper, Benjamin, and S. S. Bickel, New York, N. Y. Dress. 149,048, Mar. 23.
Coro, Inc., assignee: *See*—
Katz, Adolph.
Davis, John E., Sherman Oaks, assignor to Na Mac Products Corp., Los Angeles, Calif. Condiment container. 149,049, Mar. 23.
Donohue, Kathryn P., Brentwood, Pa. Christmas stocking. 149,050, Mar. 23.
Edwards, Herbert E., Wellesley Hills, assignor to T. J. Edwards, Inc., Boston, Mass. Transfer ribbon unit for marking machines. 149,051, Mar. 23.
Edwards, T. J., Inc., assignee: *See*—
Edwards, Herbert E.
Elnes, Arny O., assignor of one-half to C. H. Taylor, Duluth, Minn. Wrench. 149,052, Mar. 23.
Epstein, Herman, Kansas City, Mo. Plant support. 149,053, Mar. 23.
Evins, Inc., assignee: *See*—
Levin, David E.
Faber, Henry: *See*—
Brown, Chester A., and Faber.
Frei, Otto, New York, assignor to O. A. Scheurmann, Bayside, N. Y. Lace or similar article. 149,054, Mar. 23.
Frei, Otto, New York, assignor to O. A. Scheurmann, Bayside, N. Y. Lace or similar article. 149,055, Mar. 23.
Frei, Otto, New York, assignor to O. A. Scheurmann, Bayside, N. Y. Lace or similar article. 149,056, Mar. 23.
General Time Instruments Corporation, assignee: *See*—
Schlenker, Max E.
Goldsmith, Berthold, Jr., Woodmere, N. Y., assignor to Botany Mills, Inc., Passaic, N. J. Font of type or similar article. 149,057, Mar. 23.
Goodrich, B. F., Company, The, assignee: *See*—
Billingsley, William F.
Groos, Eleanor, Mount Vernon, N. Y. Ring box or similar article. 149,058, Mar. 23.
Hanrahan, Emery M., Kenosha, Wis. Comb holder. 149,059, Mar. 23.
Harvuot, Richard E., Inglewood, assignor to Interstate Aircraft and Engineering Corp., El Segundo, Calif. Brush attachment for vacuum cleaners. 149,060, Mar. 23.
Harvuot, Richard E., Inglewood, assignor to Interstate Aircraft and Engineering Corp., El Segundo, Calif. Nozzle attachment for vacuum cleaners. 149,061, Mar. 23.
Herbst, John, New York, N. Y. Perfume bottle stopper or similar article. 149,062, Mar. 23.
Herbst, John, New York, N. Y. Perfume bottle stopper or similar article. 149,063, Mar. 23.
Herbst, John, New York, N. Y. Perfume bottle stopper or similar article. 149,064, Mar. 23.
Herbst, John, New York, N. Y. Perfume bottle stopper or similar article. 149,065, Mar. 23.

Holley, Selwyn B., assignee, et al.: *See*—
Norman, Bert T.
Holley, Vernal M., assignee, et al.: *See*—
Norman, Bert T.
Interstate Aircraft and Engineering Corp., assignee: *See*—
Harvuot, Richard E.
Kaplan, Barnet D., New York, assignor of one-half to A. Weiner, Brooklyn, N. Y. Hygienic soap dish. 149,066, Mar. 23.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 149,067, Mar. 23.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 149,068, Mar. 23.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 149,069, Mar. 23.
Kinsley, Felix P., St. Louis, Mo. Finger ring. 149,070, Mar. 23.
Koven, Marc, New York, N. Y. Pendant or similar article. 149,071, Mar. 23.
Larsen, Olai F., Jr., Demarest, N. J., assignor to Noma Electric Corporation, New York, N. Y. Wheeled pull toy. 149,072, Mar. 23.
Levin, David E., Brooklyn, assignor to Evins, Inc., New York, N. Y. Lady's shoe or similar article. 149,073, Mar. 23.
Levine, Joseph, Flushing, N. Y. Closure for bung holes or the like. 149,074, Mar. 23.
Lewis, Malcolm W., West Clarkesville, N. Y. Double-headed hatchet. 149,075, Mar. 23.
Loewy, Raymond, New York, N. Y. Building. 149,076, Mar. 23.
Loewy, Raymond, New York, N. Y. Building. 149,077, Mar. 23.
Lucchesi, Jack, Chicago, Ill. Wall bracket. 149,078, Mar. 23.
Lux Clock Mfg. Co., The, assignee: *See*—
Lux, Frederick.
Lux, Frederick, Middlebury, assignor to The Lux Clock Mfg. Co., Waterbury, Conn. Clock casing. 149,079, Mar. 23.
Malkin, Simon, New York, N. Y., assignor to United Cigar-Whelan Stores Corporation. Overhead counter display stand. 149,080, Mar. 23.
Michaels, Maurice A., Montclair, N. J., assignor to Sterilseat Corporation of America, Philadelphia, Pa. Violet ray towel and soap cabinet. 149,081, Mar. 23.
Miller, Willis H., Dallas, Tex. Book end or similar article. 149,082, Mar. 23.
Mooney, Charles, Waco, Tex. Abacus. 149,083, Mar. 23.
Na Mac Products Corp., assignee: *See*—
Davis, John E.
Nelson, Robert W., Minneapolis, Minn. Shrimp knife. 149,084, Mar. 23.
Newman, Nathan S., Denver, Colo. Meat platter or similar article. 149,085, Mar. 23.
Noma Electric Corporation, assignee: *See*—
Larsen, Olai F., Jr.
Norman, Bert T., assignor to S. B. and V. M. Holley, Los Angeles, Calif. Chicken picking finger unit. 149,086, Mar. 23.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 149,087, Mar. 23.
Phil-Mar Mfg. Corp., assignee: *See*—
Blumenthal, David, and Selden.
Primex Equipment Company, assignee: *See*—
Reinecke, Jean O.
Reinecke, Jean O., Oak Park, assignor to Primex Equipment Company, Chicago, Ill. X-ray shoe fitting cabinet. 149,088, Mar. 23.
Rixson, Ewing S., Greenwich, Conn., assignor to R. H. Becker, Tuckahoe, N. Y. Decanter or the like. 149,089, Mar. 23.
Roxy Manufacturing Company, assignee: *See*—
Stein, Sylvia.
Scheurmann, Otto A., assignee: *See*—
Frei, Otto.
Scheurmann, Otto A., Bayside, N. Y. Orphrey or similar article. 149,090, Mar. 23.
Schlenker, Max E., Peru, Ill., assignor to General Time Instruments Corporation, New York, N. Y. Clock. 149,091, Mar. 23.
Sears, Roebuck and Co., assignee: *See*—
Bjorncrantz, Carl G.
Selden, Herman L.: *See*—
Blumenthal, David, and Selden.
Seidenbaum, Jeannette, Brooklyn, N. Y. Bib. 149,092, Mar. 23.
Seymour, Sara L., Altadena, Calif. Coin bank or similar article. 149,093, Mar. 23.
Silverman, Louis, New York, N. Y. Slip or similar article. 149,094, Mar. 23.
Slater, Murray, Brooklyn, N. Y. Brooch or the like. 149,095, Mar. 23.
Sloan, Conrad H., Duluth, Minn. Antiskid chain link. 149,096, Mar. 23.
Sorrentino, Vincent, Providence, R. I. Finger ring or similar article. 149,097, Mar. 23.
Stein, Sylvia, assignor to Roxy Manufacturing Company, Chicago, Ill. Rocking horse. 149,098, Mar. 23.
Sterilseat Corporation of America, assignee: *See*—
Michaels, Maurice A.
Sweet, H. E., Manufacturing Co., assignee: *See*—
Sweet, Hobert E.
Sweet, Hobert E., assignor to H. E. Sweet Manufacturing Co., Providence, R. I. Push pin. 149,099, Mar. 23.
Taylor, Clarence H., assignee: *See*—
Elnes, Arny O.
Temp-Rite Manufacturing Company, assignee: *See*—
Acton, Grant M.
Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
United Cigar-Whelan Stores Corporation, assignee: *See*—
Malkin, Simon.
Ward, Raymond R., Brecksville, Ohio. Soap cake holder. 149,100, Mar. 23.
Weiner, Abner, assignee: *See*—
Kaplan, Barnet D.
Woller-Duff, Hilda, New York, N. Y. Glove. 149,101, Mar. 23.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 23D DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acme Industrial Hydraulics, Inc., assignee: *See*—
Gabriel, Adam.
Adams, Harold E., Norwalk, assignor to Nash Engineering Company, South Norwalk, Conn. Pump. 2,438,104, Mar. 23.
Addressograph-Multigraph Corporation, assignee: *See*—
Curtis, Franklin E.
Gruver, John H., and Hueber.
Aeppli, Albert, assignor to Maag-Zahnrader und- Maschinen Aktiengesellschaft, Zurich, Switzerland. Machine for grinding tooth flanks by means of profile generating discs. 2,438,138, Mar. 23.
Agriculture, United States of America, as represented by the Secretary of, assignee: *See*—
Filachione, Edward M., and Fisher.
Fisher, Charles H., and Fein.
Fraenkel-Conrat, Heinz L., Humfeld, Lewis, Dimick, and Olcott.
Schniepp, Lester E.
Air Reduction Company, Incorporated, assignee: *See*—
Hughey, Howard G.
Aktiengesellschaft Fuer Technische Studien, assignee: *See*—
Ruegg, Rudolf.
Alamo Corporation, The, assignee: *See*—
Toelke, August F.
Alburn, Harvey E., West Chester, Pa., J. Charney, New York, N. Y., and F. W. Bernhart, Solon, Ohio, assignors to Wyeth Incorporated, Philadelphia, Pa. Peroral penicillin compositions. 2,438,106, Mar. 23.
Alexander, Focsaneanu, Flushing, assignor of one-half to A. Lavenburg, New York, N. Y. Gaseous discharge device. 2,438,356, Mar. 23.
Allied Chemical & Dye Corporation, assignee: *See*—
Hoyt, Lester F.
Alves, David S., Richmond, Calif. Paddle target unit for ball games. 2,438,263, Mar. 23.
American Brass Company, The, assignee: *See*—
Candee, Ellsworth T., and Anderson.
American Cyanamid Company, assignee: *See*—
Lecher, Hans Z., Parker, and Long.
Stearns, Edwin I., Jr., and Buc.
American Dairies Incorporated, assignee, et al.: *See*—
Turner, Charles W., and Reineke.
American Laundry Machinery Company, The, assignee: *See*—
Matthews, Albert.
American Maize-Products Company, assignee: *See*—
Schopmeyer, Herman H.
American Molded Products Co., assignee: *See*—
Henry, George L.
American Steel Foundries, assignee: *See*—
Cottrell, Robert B., and Helsten.
Tack, Carl E.
American Viscose Corporation, assignee: *See*—
McDermott, Henry J.
Anderson, Alton R.: *See*—
Candee, Ellsworth T., and Anderson.
Andrews, Roy, assignee: *See*—
McDonough, William P.
Archer Rubber Company, assignee: *See*—
Callahan, John T., and Gilbertson.
Archibald, Raymond C., Berkeley, and B. S. Greensfelder and F. T. Eggertsen, Oakland, assignors to Shell Development Company, San Francisco, Calif. Production of catalysts. 2,438,379, Mar. 23.
Arens, Charles A., assignor to Arens Controls, Inc., Chicago, Ill. Transmission cable. 2,438,380, Mar. 23.
Arens Controls, Inc., assignee: *See*—
Arens, Charles A.
Armour and Company, assignee: *See*—
Sifferd, Robert H.
Arnott, Edward G. F., Upper Montclair, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Mercury pool electronic device. 2,438,139, Mar. 23.
Ashe, Edward J., Knoxville, and O. E. Webber, Fountain City, assignors to Standard Knitting Mills, Inc., Knoxville, Tenn. Undergarment. 2,438,310, Mar. 23.
Ashworth, Handel: *See*—
Doblin, Percy W., and Ashworth.
Auten, Clande L., assignor to Tennessee Coal, Iron and Railroad Company, Birmingham, Ala. Combination plastic and metal building construction. 2,438,140, Mar. 23.
Automatic Electric Laboratories, Inc., assignee: *See*—
Riebe, Theodore C.
Avco Manufacturing Corporation, assignee: *See*—
Caminez, Harold.
B. F. B. Engineers, Incorporated, assignee: *See*—
Buchet, Conrad R.
Babbitt, Daniel R., assignor to Electric Steel Foundry, Portland, Oreg. Pipe coupling. 2,438,107, Mar. 23.
Bailey, Charles L.: *See*—
Lambert, Robert D., and Bailey.
Ball, Albert P., assignor to Briggs Manufacturing Company, Detroit, Mich. Spraying apparatus. 2,438,471, Mar. 23.
Banker, Oscar H., Evanston, assignor to New Products Corporation, Chicago, Ill. Lockup one-way torsional force exerting device. 2,438,381, Mar. 23.
Barler, Richard C., Goshen, and J. H. Yoder, Waterford, Ind.; said Yoder assignor to said Barler. Sheet metal cabinet and making the same. 2,438,108, Mar. 23.
Barnett, Joseph J., assignor to Chase Candy Company, Chicago, Ill. Tubular package forming and filling method and apparatus. 2,438,198, Mar. 23.
Barth, Elmer J.: *See*—
Peterson, Carl D., and Barth.
Becker, Henry E., Chicago, Ill. Method and apparatus for the heat-treatment of low grade coal. 2,438,199, Mar. 23.
Behr, Lyell C., and R. S. Schreiber, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. N,N'-Bis(3-diethylaminopropylamide) of dibasic aliphatic acids. 2,438,200, Mar. 23.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Sebell, Harry.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Brattain, Walter H.
Darlington, Sidney.
Fox, Arthur G.
Belmont Radio Corporation, assignee: *See*—
Marholz, Richard C.
Bender, Joseph, Jr., assignor to The General Industries Company, Elyria, Ohio. Phonograph driving mechanism. 2,438,264, Mar. 23.
Bendix Aviation Corporation, assignee: *See*—
Gregg, David.
Hegy, Louis.
Konet, Henry.
Bennett, Frederick D., Dayton, and T. A. Newkirk, Fairfield, Ohio. Temperature control device. 2,438,109, Mar. 23.
Bergeim, Frank H.: *See*—
Lott, William A., and Bergeim.
Bernhart, Finn W.: *See*—
Alburn, Harvey E., Charney, and Bernhart.
Berry, Russell G., Maplewood, assignor to Carter Carburetor Corporation, St. Louis, Mo. Pump discharge fitting. 2,438,311, Mar. 23.
Biazzi, Mario, Brig, Switzerland. Separation of liquid emulsions. 2,438,244, Mar. 23.
Birdsall, Robert E., Detroit, Mich., assignor of twenty-four percent to G. R. Hotton, Williams Bay, and one-eighth to J. A. Moran, Delavan, Wis. Wall construction. 2,438,428. Mar. 23.
Birtman Electric Company, assignee: *See*—
Sparklin, Charles H.
Bloomberg, David J., Newton, Mass., assignor to General Electric Company. Double rotation turbodrive. 2,438,357, Mar. 23.
Bonte, Frederick R., assignor to The Timken Roller Bearing Company, Canton, Ohio. Graphitic steel. 2,438,267, Mar. 23.
Borg-Warner Corporation, assignee: *See*—
Holt, Ray G.
Born, Leo W., Collingswood, N. J., assignor to Radio Corporation of America. Oscillation generator. 2,438,382, Mar. 23.
Brattain, Walter H., Halesite, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrical translating materials and devices and making them. 2,438,110, Mar. 23.
Bratton, Samuel M., assignor to The Pusey & Jones Corporation, Wilmington, Del. Steam joint supporting structure. 2,438,141, Mar. 23.
Bressler, Louis R., Southampton, Mass. Flexible bristle head toothbrush. 2,438,268, Mar. 23.
Briggs Manufacturing Company, assignee: *See*—
Ball, Albert P.
Guest, James F.
Laing, Howard M.
Prance, Alvin W.
Bristol Company, The, assignee: *See*—
Jacobson, Abraham W., and Whitney.

British Insulated Callender's Cables Limited, assignee: *See*—
Hollingsworth, Douglas T.

Brock, Harold L.: *See*—
Roeder, Dale, and Brock.

Brode, Robert B., Berkeley, Calif., assignor to the United States of America as represented by the Secretary of the Navy. Unshorting switch. 2,438,383, Mar. 23.

Broudy, Albert M., Pittsburgh, assignor of one-half to J. R. Snyder, Wilkinsburg, Pa. Toilet stool. 2,438,384, Mar. 23.

Brower, Watson C., assignee: *See*—
Brower, William H.

Brower, William H., assignor of one-half to W. C. Brower, Clark, S. Dak. Air cushion pad for gun stocks. 2,438,142, Mar. 23.

Brown, Frank E., Burbank, assignor to F. M. Turnbull, Los Angeles, Calif. Cord support. 2,438,143, Mar. 23.

Buc, George L.: *See*—
Stearns, Edwin I., Jr., and Buc.

Buchet, Conrad R., Pasadena, Calif., assignor of three-fourths to B. F. B. Engineers, Incorporated, and one-fourth to M. H. Lees, Jr. Rivet stem puller and cutter. 2,438,201, Mar. 23.

Buckbee, John A., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Color television system. 2,438,269, Mar. 23.

Bunn, George P., Bartlesville, Okla., and H. J. Pankratz, Borger, Tex., assignors to Phillips Petroleum Company. Expansion joint for high temperatures. 2,438,312, Mar. 23.

Bunyar, Benn A., Jr., Kansas City, Mo. Surgical brace. 2,438,144, Mar. 23.

Burkhart, Raymond A., and W. M. Finlayson, Pittsburgh, Pa., assignors to Carnegie-Illinois Steel Corporation. Method and apparatus for cooling and lubricating bearings. 2,438,385, Mar. 23.

Burns, Frank D., Long Beach, assignor to The Hays Corporation, Michigan City, Ind. Adjustable cam. 2,438,202, Mar. 23.

Burton, Clyde E., Overton, Tex. Safety locking device for sucker rod couplings. 2,438,313, Mar. 23.

Butler, William F.: *See*—
Cutter, Fred A., and Butler.

Butterbaugh, Darrel J.: *See*—
Spence, Le Roy U., Butterbaugh, and Kundiger.

Bywater, William, Limited, assignee: *See*—
Kingston, William H.

Calcott, Walter C., assignor to Chicago Metal Hose Corporation, Maywood, Ill. Hose coupling. 2,438,472, Mar. 23.

Calico Printers' Association, Limited, The, assignee: *See*—
Lantz, Louis A., and Schofield.

California Research Corporation, assignee: *See*—
Levine, Irving E.
Lewis, Allen H.

Callahan, Hugh J., Wilmington, Del. Ship's telegraph recorder. 2,438,331, Mar. 23.

Callahan, John T., West Newton, and J. A. Gilbertson, assignors to Archer Rubber Company, Milford, Mass. Waterproof outer garment. 2,438,429, Mar. 23.

Callite Tungsten Corporation, assignee: *See*—
Kurtz, Jacob, and Zampieri.

Caminez, Harold, Williamsport, Pa., assignor to Avco Manufacturing Corporation. Making manifolds for engines. 2,438,145, Mar. 23.

Campbell, Lyman L.: *See*—
Selby, Theodore R., and Campbell.

Campbell, Richard H., assignor to Webster Electric Company, Racine, Wis. Stylus for sound reproduction. 2,438,111, Mar. 23.

Candee, Ellsworth T., and A. R. Anderson, Waterbury, Conn., assignors to The American Brass Company. Flexible metal hose. 2,438,146, Mar. 23.

Candler-Hill Corporation, assignee: *See*—
Schlosser, Arthur G.

Canister Company, The, assignee: *See*—
Di Cosmo, Pasquale V., and Ricciardi.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Burkhart, Raymond A., and Finlayson.
Dunn, Edward J.
Kinnear, James W., Jr.

Carr, Leo F., Painesville, Ohio. Grinding wheel. 2,438,203, Mar. 23.

Carter Carburetor Corporation, assignee: *See*—
Berry, Russell G.

Carter, Donald W., Cleveland Heights, Ohio. Diamond tool dresser. 2,438,147, Mar. 23.

Castiglia, Biagis, assignor to Wheel Aligning Necessities, Inc., New York, N. Y. Wheel gauge for vehicles. 2,438,358, Mar. 23.

Castner, James B., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Nitration apparatus. 2,438,204, Mar. 23.

Celanese Corporation of America, assignee: *See*—
Dodge, Frederick G.

Chamberlain, Paul A., assignor to Signode Steel Strapping Company, Chicago, Ill. Bundle binding machine. 2,438,386, Mar. 23.

Chance, A. B., Company, assignee: *See*—
Hubbard, David C.

Charney, Jesse: *See*—
Alburn, Harvey E., Charney, and Bernhart.

Chase Brass & Copper Co. Incorporated, assignee: *See*—
Trudeau, Andre J.

Chase Candy Company, assignee: *See*—
Barnett, Joseph J.

Chicago Eye Shield Company, assignee: *See*—
Malcom, Robert L.

Chicago Metal Hose Corporation, assignee: *See*—
Calcott, Walter C.

Clapp, Richard G., Haverford, assignor to Philco Corporation, Philadelphia, Pa. Television receiver circuits and apparatus. 2,438,359, Mar. 23.

Clark, Leverett M.: *See*—
Strong, Elbie C., and Clark.

Clarke, Charles J., Syracuse, N. Y. Sounding device. 2,438,332, Mar. 23.

Clurman, Albert W., trustee, assignee: *See*—
Jacobs, Maurice.

Coates, J. Edwin, assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif. Measuring instrument. 2,438,205, Mar. 23.

Colaiaco, August P., Pittsburgh, Pa., assignor, by mesne assignments, to the United States of America, as represented by the United States Atomic Energy Commission. Pump. 2,438,387, Mar. 23.

Corning Glass Works, assignee: *See*—
Hyde, James F.

Corson, Ben B., and R. S. Detrick, assignors to Koppers Company, Inc., Pittsburgh, Pa. Crude anthracene separation. 2,438,148, Mar. 23.

Cotes, Mervin F., East Lansing, assignor to Motor Wheel Corporation, Lansing, Mich. Window for cooking range oven doors. 2,438,270, Mar. 23.

Cottrell, Robert B., and W. A. Helsten, assignors to American Steel Foundries, Chicago, Ill. Brake arrangement for railway disc brakes. 2,438,473, Mar. 23.

Cuneo, Joseph F.: *See*—
Doumani, Thomas F., and Cuneo.

Curtis, Franklin E., Willoughby, Ohio, assignor to Addressograph-Multigraph Corporation, Wilmington, Del. Apparatus for indenting characters in medals and the like. 2,438,271, Mar. 23.

Cutler-Hammer, Inc., assignee: *See*—
Feldhausen, Cyril P., and Lommen.

Cutler, Wallace M., Gloucester, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Soaking, freezing, and drying by sublimation of untanned hides. 2,438,150, Mar. 23.

Cutter, Fred A., Berkeley, and W. F. Butler, Oakland, assignors to Cutter Laboratories, Berkeley, Calif. Stopper. 2,438,149, Mar. 23.

Cutter Laboratories, assignee: *See*—
Cutter, Fred A., and Butler.

Dalton, Joseph P., Berlin, N. J. Signal staff holding finger. 2,438,314, Mar. 23.

Dana Corporation, assignee: *See*—
Peterson, Carl D., and Barth.

Dance, Darnell A., Salem, Ark. Static eliminator for radio receiving sets. 2,438,272, Mar. 23.

Darlington, Sidney, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Bombsight computer. 2,438,112, Mar. 23.

Daven Company, The, assignee: *See*—
Doucette, Edmund.

Davis & Furber Machine Company, assignee: *See*—
Koolstra, John A.

Davis, Ralph B., Prestonsburg, Ky. Aircraft propulsion mechanism. 2,438,151, Mar. 23.

Dawley, Clarence E.: *See*—
Slack, Charles M., and Dawley.

Day, William P., Cleveland Heights, assignor to The International Vibration Company, Cleveland, Ohio. Rotor for vibrator units. 2,438,206, Mar. 23.

Dayton Steel Foundry Company, The, assignee: *See*—
Miller, Elmer L.

Delany, John J., Brooklyn, assignor to Delany Realty Corporation, New York, N. Y. Regulator stem seal. 2,438,360, Mar. 23.

Delany Realty Corporation, assignee: *See*—
Delany, John J.

Denmark, Robert, New York, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Method and apparatus for winding grids. 2,438,113, Mar. 23.

Dennedy, James H., Evansville, Ind., assignor to Seeger Refrigerator Company. Refrigerator construction. 2,438,114, Mar. 23.

Dennison Manufacturing Company, assignee: *See*—
Flood, Edward W. and C. A.

Derby, John H., Scarsdale, assignor of one-third to C. M. Wilson and one-third to H. D. Spencer, New York, N. Y. Means for controlling the flushing of urinals. 2,438,207, Mar. 23.

De Semple, Albert A., Portland, Oreg. Steel wool holder. 2,438,152, Mar. 23.

Detrick, Robert S.: *See*—
Corson, Ben B., and Detrick.

Dick, Burns, Ferguson, assignor to Wagner Electric Corporation, St. Louis, Mo. Piston and seal. 2,438,153, Mar. 23.

Dickens, Lonnie A., High Point, N. C. Hill-holding brake device. 2,438,154, Mar. 23.

Dickman, Joseph E., Chicago, Ill. Motion-picture projector adapter for showing still pictures. 2,438,333, Mar. 23.

Di Cosmo, Pasquale V., Phillipsburg, and M. C. Ricciardi, Dover, assignors to The Canister Company, Phillipsburg, N. J. Canister. 2,438,430, Mar. 23.

Diller, Isaac M., Glen Ridge, N. J. Welding metal bodies by high-frequency electric heating of dielectric material therebetween. 2,438,155, Mar. 23.

Dimick, Keene P.: *See*—
Fraenkel-Conrat, Heinz L., Humfeld, Lewis, Dimick, and Olcott.

Diversey Corporation, The, assignee: *See*—
Rich, Hyman R.

Dobbs, John M., Timperley, and J. H. Ludlow, Bowdon, England. Screening means for vacuum electric tube devices. 2,438,115, Mar. 23.

Doblin, Percy W., Brooklyn, and H. Ashworth, Baldwin, N. Y. Belt splicing device. 2,438,361, Mar. 23.

Dodds, John M., Timperley, and J. H. Ludlow, Bowdon, England. Uncontrolled transmitter tuning and antenna switching arrangements. 2,438,116, Mar. 23.

Dodds, John M., Timperley, and J. H. Ludlow, Bowdon, England. Multirange tuner for ultra high frequency transmitters. 2,438,474, Mar. 23.

Dodds, John M., Timperley, and J. H. Ludlow, Bowdon, England. Multirange tuner for ultra high frequency transmitters. 2,438,475, Mar. 23.

Dodds, John M., Timperley, and J. H. Ludlow, Bowdon, England. Multirange tuning means for radio frequency generators. 2,438,476, Mar. 23.

Dodds, John M., Timperley, and J. H. Ludlow, Bowdon, England. Tuning circuit for radio transmitters. 2,438,477, Mar. 23.

Dodge, Frederick G., La Vale, Md., assignor to Celanese Corporation of America. Pile materials and production thereof. 2,438,156, Mar. 23.

Dolk, Harold G., Hoquiam, Wash., assignor of one-half to C. M. Manker, Portland, Oreg. Fishing pole holder. 2,438,388, Mar. 23.

Dormeyer, A. F., Mfg. Co., assignee: *See*—
Strauss, Alfred, Feltman, Hunt, and Harbaugh.

Doucette, Edmund, assignor to The Daven Company, Newark, N. J. Attenuator. 2,438,431, Mar. 23.

Douglas Aircraft Company, Inc., assignee: *See*—
Coates, J. Edwin.

Doumani, Thomas F., Long Beach, and J. F. Cuneo, assignors to Union Oil Company of California, Los Angeles, Calif. Ketone production. 2,438,334, Mar. 23.

Dow Chemical Company, The, assignee: *See*—
Stanton, George W.

Dresser, Willis Robert: *See*—
Waller, Fred, and Dresser.

Dugas, Joseph J., assignor to Higgins Industries, Inc., New Orleans, La. Clutch mechanism. 2,438,157, Mar. 23.

Dunkelberger, George F., Yeadon, and C. A. Schehl, Manoa, Pa., assignors to General Electric Company. Wire cleat. 2,438,362, Mar. 23.

Dunlop Rubber Company Limited, assignee: *See*—
Illingworth, James W.

Dunn, Edward J., West Mifflin, Pa., assignor to Carnegie-Illinois Steel Corporation. Spectrographic pin stand. 2,438,158, Mar. 23.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Behr, Lyell C., and Schreiber.
Castner, James B.

Earl, John A., assignor to The Vitro Manufacturing Company, Pittsburgh, Pa. Making ceramic stains. 2,438,335, Mar. 23.

Eastern Air Devices, Inc., assignee: *See*—
Hamilton, Hugh G.

Eastes, James A., Mount Comfort, Ind. Wobble basket washing machine. 2,438,273, Mar. 23.

Eastman Oil Well Survey Company, assignee: *See*—
Livingston, Herman G.

Edge, Stanley H., Lincoln, England. Hydraulic selector valve mechanism for hydraulic servomotors. 2,438,389, Mar. 23.

Edwards, Samuel H., Richmond, Calif. Torsion spring mounting. 2,438,432, Mar. 23.

Eggertsen, Frank T.: *See*—
Archibald, Raymond C., Greensfelder, and Eggertsen.

Eisele, Andrew, Detroit, Mich. Internal bore gauge. 2,438,274, Mar. 23.

Electric Steel Foundry, assignee: *See*—
Babbit, Daniel R.

Ellwood, Walter B., New York, N. Y. Valve for depth charge firing mechanisms. 2,438,117, Mar. 23.

Eriand af Kleen, Nils, Stockholm, Sweden, assignor to Kleen Refrigerator, Inc., Hoboken, N. J. Refrigerating apparatus of the intermittent absorption or adsorption type. 2,438,105, Mar. 23.

Erson, Erik G., Wilkinsburg, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Control apparatus. 2,438,390, Mar. 23.

Esmco Auto Products Corporation, assignee: *See*—
Greene, David.

Ewing, Charles E., assignor to The General Industries Company, Elyria, Ohio. Two-speed drive for phonograph turntables. 2,438,266, Mar. 23.

Ex-Cell-O Corporation, assignee: *See*—
Snader, Ira J., and Seyferth.

Faber, John P., assignor to Ransome Machinery Company, Dunellen, N. J. Concrete spreader. 2,438,159, Mar. 23.

Fairbanks, Morse & Co., assignee: *See*—
Pedersen, Tage.

Fairchild Camera and Instrument Corporation, assignee: *See*—
Moore, David W., Jr.

Farboil Paint Company, Inc., assignee: *See*—
Swartz, Milton D., and Yellott.

Farmers and Merchants Bank, assignee: *See*—
Reynolds, Theron E., and Fyffe.

Farnsworth Research Corporation, assignee: *See*—
Buckbee, John A.

Fazzio, Santo J., Glassboro, N. J. Hydraulic press. 2,438,433, Mar. 23.

Fein, Martin L.: *See*—
Fisher, Charles H., and Fein.

Feldhausen, Cyril P., Wauwatosa, and R. M. Lommen, assignors to Cutler-Hammer, Inc., Milwaukee, Wis. Controller for motor-driven printing presses and other machines. 2,438,276, Mar. 23.

Fell, Raymond E., and J. W. Miller, assignors to Motor Wheel Corporation, Lansing, Mich. Fuel supply control means for combustion apparatus. 2,438,275, Mar. 23.

Feltman, Eric G.: *See*—
Strauss, Alfred, Feltman, Hunt, and Harbaugh.

Ferber, William: *See*—
Patrosio, William, and Ferber.

Fife, Roy E. and R. E., Jr., Long Beach, Calif. Oil well mast. 2,438,277, Mar. 23.

Fife, Roy E., Jr.: *See*—
Fife, Roy E. and R. E., Jr.

Filachione, Edward M., Philadelphia, and C. H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture. Continuous converting lactic acid to polylactic acid. 2,438,208, Mar. 23.

Finlayson, William M.: *See*—
Burkhart, Raymond A., and Finlayson.

Fischer, Herbert G. M.: *See*—
Tyson, Charles W., Fischer, and Murphree.

Fisher, Charles H., Abington, Pa., and M. L. Fein, Riverside, N. J., assignors to the United States of America, as represented by the Secretary of Agriculture. Azeotropic distillation of acetic anhydride. 2438,278, Mar. 23.

Flood, Carl A.: *See*—
Flood, Edward W. and C. A.

Flood, Edward W. and C. A., assignors to Dennison Manufacturing Company, Framingham, Mass. Tag printing machine. 2,438,118, Mar. 23.

Ford Motor Company, assignee: *See*—
Roeder, Dale, and Brock.

Forney, James D., Fort Collins, Colo. Electrode holder. 2,438,279, Mar. 23.

Fox, Arthur G., Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave transmission. 2,438,119, Mar. 23.

Fraenkel-Conrat, Heinz L., H. Humfeld, and J. C. Lewis, Berkeley, and K. P. Dimick, Lafayette, and H. S. Olcott, Berkeley, Calif., assignors to the United States of America, as represented by the Secretary of Agriculture. Reaction product of gramicidin and formaldehyde and method of production. 2,438,209, Mar. 23.

Frey, Frederick E., Bartlesville, Okla., assignor to Phillips Petroleum Company. Dehydrogenation of 2,3-dimethylbutane. 2,438,315, Mar. 23.

Frevgang, Walter H., Essex Fells, N. J., assignor to Kidde Manufacturing Co., Inc. Apparatus for dehumidifying air. 2,438,120, Mar. 23.

Friedman, Jules, New York, N. Y. Button broaching machine. 2,438,363, Mar. 23.

Friedman, Theodore, New York, N. Y. Collapsible container. 2,438,434, Mar. 23.

Frisch, Marie: *See*—
Ryer, August I., and Frisch.

Fullers' Earth Union Limited, The, assignee: *See*—
Speakman, John B., and Whewell.

Fyffe, Everett: *See*—
Reynolds, Theron E., and Fyffe.

G. M. S. Corporation, assignee: *See*—
Morton, William A., and Sloan.

Gabriel, Adam, River Forest, assignor, by mesne assignments, to Acme Industrial Hydraulics, Inc., Chicago, Ill. Pressure fluid follow-up servomotor. 2,438,316, Mar. 23.

Gabriel, Adam, River Forest, assignor, by mesne assignments, to Acme Industrial Hydraulics, Inc., Chicago, Ill. Servo actuator. 2,438,317, Mar. 23.

Gagnon, Jules, Verdun, Quebec, Canada. Combined lock and key. 2,438,435, Mar. 23.

Gailey, Florence L., Los Angeles, Calif. Stocking heel protector. 2,438,280, Mar. 23.

Gallagher, Mabel H., Chicago, Ill. Jointed structure. 2,438,391, Mar. 23.

Garrett Corporation, Airesearch Manufacturing Company division, The, assignee: *See*—
Morris, Charles O.

Gates Rubber Company, assignee: *See*—
Nassimbene, Ernest.

General Aniline & Film Corporation, assignee: *See*—
Johnston, Robert C.
Martin, Willibald.

General Electric Company, assignee: *See*—
Bloomberg, David J.
Dunkelberger, George F., and Schehl.
Keister, James E.
Mendelsohn, Lewis I.
Oppel, John A.

General Electric X-Ray Corporation, assignee: *See*—
Kizaur, Arthur J.

General Industries Company, The, assignee: *See*—
Bender, Joseph, Jr.
Ewing, Charles E.
Metzner, Robert G.

General Motors Corporation, assignee: *See*—
Storer, Richard M.

Gerber, Paul D., Woodlynne, N. J., assignor to Radio Corporation of America. Oscillation generation control. 2,438,392, Mar. 23.

Gies, Harry H., assignee: *See*—
Morden, Harley W.

Gilbertson, John A.: *See*—
Callahan, John T., and Gilbertson.

Gleason Works, assignee: *See*—
Wildhaber, Ernest.

Gluckin, Edwin W., Brooklyn, N. Y. Brassière. 2,438,210, Mar. 23.

Goldbaum, Milton B., Brooklyn, N. Y. Bunion protector and means thereon for holding the same in place. 2,438,364, Mar. 23.

Goldsby, Arthur R.: *See*—
Sensel, Eugene E., Smith, and Goldsby.

Gordon, Alexander M., Providence, R. I., assignor to Money-Meters, Inc. Coin receiving device. 2,438,336, Mar. 23.

Gordon, Louis J., Chicago, Ill. Combination rule and compass. 2,438,337, Mar. 23.

Gordon, Sheldon, Madison, Wis., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Method for processing plastic sheets. 2,438,281, Mar. 23.

Gorin, Everett: *See*—
Harrington, George A., and Gorin.

Gorin, Manuel H., and L. G. Sharp, Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Process using aluminum bromide-hydrocarbon complex to promote alkylation of aromatic hydrocarbons by olefins of more than two carbon atoms per molecule. 2,438,211, Mar. 23.

Grand Rapids Metal Cabinet Company, assignee: *See*—
Stevenson, Ralph, and Nadolsky.

Graves, Reber, Glen Ellyn, Ill. Plate hanger. 2,438,436, Mar. 23.

Green, James H., West Orange, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control of swaging temperatures. 2,438,160, Mar. 23.

Greene, David, assignor to Esmco Auto Products Corporation, Brooklyn, N. Y. Combination ladder stool. 2,438,212, Mar. 23.

Greenlee, Harry R., Indianapolis, assignor to The Studebaker Corporation, South Bend, Ind. Temperature control for engines. 2,438,161, Mar. 23.

Greensfelder, Bernard S.: *See*—
Archibald, Raymond C., Greensfelder, and Eggertsen.

Gregg, David, Caldwell, assignor to Bendix Aviation Corporation, Teterboro, N. J. System and means for returning leakage fluid to a main fluid supply. 2,438,245, Mar. 23.

Grinnell Corporation, assignee: *See*—
Linker, William L., and Welshman.

Gruver, John H., East Cleveland, and C. J. Hueber, Euclid, assignors to Addressograph-Multigraph Corporation, Cleveland, Ohio. Index tab for printing devices. 2,438,282, Mar. 23.

Guest, James F., Royal Oak, assignor to Briggs Manufacturing Company, Detroit, Mich. Jig or fixture. 2,438,162, Mar. 23.

Gustin, Daniel S.: *See*—
Morehead, Chalmers, and Gustin.

Haas, Otto R., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Fuse setting mechanism. 2,438,165, Mar. 23.

Haling, Otto W., Rochester, Minn. Inner piston ring. 2,438,163, Mar. 23.

Hall, Ike D., Baytown, Tex., assignor to Standard Oil Development Company. Separation of diolefins and contaminating hydrocarbons from rich ammoniacal aqueous solutions. 2,438,437, Mar. 23.

Hamilton Art Metal Corporation, assignee: *See*—
Wedemeyer, Eric.

Hamilton, Hugh G., Baldwin, assignor to Eastern Air Devices, Inc., Brooklyn, N. Y. Gyroscope erection system. 2,438,213, Mar. 23.

Hammond, John H., Jr., Gloucester, Mass. Bomb detonating mechanism. 2,438,438, Mar. 23.

Hamner, James C.: *See*—
Hamner, James H., J. C., and L. H.

Hamner, James H., J. C., and L. H., Clarksdale, Miss. Machine for picking cotton. 2,438,393, Mar. 23.

Hamner, Lloyd H.: *See*—
Hamner, James H., J. C., and L. H.

Harbaugh, Watson D.: *See*—
Strauss, Alfred, Feltman, Hunt, and Harbaugh.

Hardinge Brothers, Inc., assignee: *See*—
Strom, David W.

Harrington, George A., and E. Gorin, Dallas, Tex., assignors to Socony-Vacuum Oil Company, Incorporated. Production of methacrylic acid. 2,438,164, Mar. 23.

Harvey, Thomas H.: *See*—
Johnson, Wallace J. S., and Harvey.

Hawes, Harold B., Fairfield, Conn. Roof ventilator. 2,438,166, Mar. 23.

Hays Corporation, The, assignee: *See*—
Burns, Frank D.

Hazeltine Research, Inc., assignee: *See*—
Wheeler, Harold A.

Heard, Edward C., Los Angeles, Calif. Burglar alarm. 2,438,167, Mar. 23.

Hearst, Gabrielle M.: *See*—
Hearst, Walter R. and G. M.

Hearst, Walter R. and G. M., San Francisco, Calif. Stabilization of shell eggs. 2,438,168, Mar. 23.

Hegy, Louis, Burbank, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind. Switching system. 2,438,283, Mar. 23.

Helsten, Wesley A.: *See*—
Cottrell, Robert B., and Helsten.

Hemminger, Charles E.: *See*—
Russell, Robert P., Murphree, and Hemminger.

Hemminger, Charles E., Westfield, N. J., assignor to Standard Oil Development Company. Chemical process for the catalytic conversion of hydrocarbon oils. 2,438,439, Mar. 23.

Henne, Albert L., assignor to The Ohio State University Research Foundation, Columbus, Ohio. Fluorinated dibasic acids and preparing same. 2,438,484, Mar. 23.

Henne, Albert L., assignor to The Ohio State University Research Foundation, Columbus, Ohio. Fluorinated dibasic acids and preparing same. 2,438,485, Mar. 23.

Henry, George L., assignor to American Molded Products Co., Chicago, Ill. Facial analysis chart. 2,438,246, Mar. 23.

Hepp, Carlos A., Palisade, and P. Schoenster, assignors, by mesne assignments, to Alfred Hofmann & Company, West New York, N. J. Stop means for textile apparatus and the like. 2,438,365, Mar. 23.

Hercules Powder Company, assignee: *See*—
Lorand, Eugene J., and Reese.

Herman Pneumatic Machine Company, assignee: *See*—
Johnston, Loyal L.

Hetzel, Stanford J.: *See*—
Kennedy, Robert M., and Hetzel.

Hetzel, Stanford J., Cheltenham, and R. M. Kennedy, Drexel Hill, assignors to Sun Oil Company, Philadelphia, Pa. Preparation of cyclopentadiene. 2,438,400, Mar. 23.

Hetzel, Stanford J., Cheltenham, and R. M. Kennedy, Drexel Hill, assignors to Sun Oil Company, Philadelphia, Pa. Treatment of hydrocarbons. 2,438,404, Mar. 23.

Higgins Industries, Inc., assignee: *See*—
Dugas, Joseph J.

Hines, Claude M., Verona, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Electronic vehicle control apparatus. 2,438,394, Mar. 23.

Hirsch, Stephen G., assignor to Ocean City Manufacturing Company, Philadelphia, Pa. Spool for fishing reels. 2,438,440, Mar. 23.

Hofmann, Albert: *See*—
Stoll, Arthur, and Hofmann.

Hofmann, Alfred, & Company, assignee: *See*—
Hepp, Carlos A., and Schoenster.

Hollingsworth, Douglas T., assignor to British Insulated Callender's Cables Limited, London, England. Detecting leaks in electric cables containing fluid under pressure. 2,438,441, Mar. 23.

Holt, Ray G., Euclid, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Pump with differential impeller control. 2,438,442, Mar. 23.

Homeyer, August H.: *See*—
Wallingford, Vernon H., and Homeyer.

Hopper, Dwight L., Wilkinsburg, Pa., assignor, by mesne assignments, to the United States of America, as represented by the United States Atomic Energy Commission. Pump. 2,438,395, Mar. 23.

Horger, Ralph E., assignor to The Timken Roller Bearing Company, Canton, Ohio. Roller bearing railway car axle and journal box assembly. 2,438,214, Mar. 23.

Horn, Harry J., assignor to Motor Wheel Corporation, Lansing, Mich. Vehicle wheel. 2,438,284, Mar. 23.

Horn, Jacque E., New York, N. Y. Pad-mounting device for applying and distributing wax, oil, and other like material to floors and like surfaces. 2,438,338, Mar. 23.

Hotton, George R., assignee, et al.: *See*—
Birdsall, Robert E.

Houldsworth, Robert, Breightmet, Bolton, England. Telescopic hydraulic jack. 2,438,285, Mar. 23.

Hoyt, Lester F., East Aurora, assignor to Allied Chemical & Dye Corporation, New York, N. Y. Manufacture of detergents. 2,438,169, Mar. 23.

Hubbard, David C., assignor to A. B. Chance Company, Centralia, Mo. Tool for applying fuse links to fused cutouts. 2,438,121, Mar. 23.

Huber, John E., Cincinnati, Ohio, assignor to Illinois Watch Case Co., Elgin, Ill. Film retainer. 2,438,286, Mar. 23.

Hueber, Carl J.: *See*—
Gruver, John H., and Hueber.

Hughey, Howard G., Fanwood, N. J., assignor to Air Reduction Company, Incorporated. Gas heating torch. 2,438,170, Mar. 23.

Humfeld, Harry: *See*—
Fraenkel-Conrat, Heinz L., Humfeld, Lewis, Dimick, and Olcott.

Hunt, Melville M.: *See*—
Strauss, Alfred, Feltman, Hunt, and Harbaugh.

Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Preparing silicones and product thereof. 2,438,478, Mar. 23.

Hypnarowski, Adam, Buffalo, N. Y. Fishing reel. 2,438,287, Mar. 23.

Illingworth, James W., Little Aston, Sutton Coldfield, assignor to Dunlop Rubber Company Limited, London, England. Drying of textile materials. 2,438,366, Mar. 23.

Illinois Watch Case Co., assignee: *See*—
Huber, John E.

International Vibration Company, The, assignee: *See*—
Day, William P.

Ipatieff, Vladimir N., and L. Schmerling, Riverside, assignors to Universal Oil Products Company, Chicago, Ill. Treatment of polyalkyl aromatics. 2,438,215, Mar. 23.

Jacobs, Gordon B., Carthage, N. Y., and O. I. Steigerwalt, Chicago, Ill., assignors to the United States of America as represented by the Secretary of War. Electronic device circuit. 2,438,396, Mar. 23.

Jacobs, Maurice, Ridgefield, N. J., assignor, by mesne assignments, to A. W. Clurman, New York, N. Y., as trustee. Laminated sheet and composition for coating laminae. 2,438,339, Mar. 23.

Jacobson, Abraham W., New Haven, and E. M. Whitney, Woodbury, assignors to The Bristol Company, Waterbury, Conn. Apparatus for determining balance in an electrical network. 2,438,288, Mar. 23.

Jamieson, Ralph, Edinburgh, Scotland. Garment provided with sleeves. 2,438,171, Mar. 23.

Jerguson Gage & Valve Co., assignee: *See*—
Winton, Lewis B.

Jermyn, Arthur C., Brighton, N. Y. Egg tray for refrigerators. 2,438,443, Mar. 23.

Jessen, Arnold H., Los Angeles, Calif. Reversible clutching mechanism. 2,438,216, Mar. 23.

Johnson, Alden M., Santa Barbara, Calif. Bobby pin opener. 2,438,172, Mar. 23.

Johnson, Curtis H., San Marino, Calif., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Elimination of periodic stray signals from seismic signals. 2,438,217, Mar. 23.

Johnson, Herbert L., Norwood, assignor to Sun Oil Company, Philadelphia, Pa. Low temperature polymerization of olefinic hydrocarbons. 2,438,340, Mar. 23.

Johnson, James M., New York, N. Y., assignor to Nostrip Inc. Increasing adhesion of bituminous materials to mineral aggregate. 2,438,318, Mar. 23.

Johnson, Wallace J. S., and T. H. Harvey, Berkeley, Calif.; said Harvey assignor to said Johnson. Portable and collapsible scaffolding unit. 2,438,173, Mar. 23.

Johnston, Loyal L., Zelienople, assignor to Herman Pneumatic Machine Company, Pittsburgh, Pa. Molding machine. 2,438,218, Mar. 23.

Johnston, Robert C., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Projection light source for photographic devices. 2,438,219, Mar. 23.

Jonas & Naumburg Corporation, assignee: *See*—
Naumburg, Robert E.

Jones, Minor C. K., Mountainside, and E. R. Retailliau, Cranford, N. J., assignors to Standard Oil Development Company. Removing diolefins from an olefinic feed stock. 2,438,444, Mar. 23.

Kantola, Carl F., Dumont, N. J. Locomotive tender and water scoop. 2,438,397, Mar. 23.

Karaang, Lawrence B., Santa Maria, Calif. Beet harvesting machine. 2,438,289, Mar. 23.

Kaulakis, Arnold F., Roselle, N. J., assignor to Standard Oil Development Company. Acid-treating of catalytically cracked naphtha. 2,438,445, Mar. 23.

Keeling, William O., assignor to Koppers Company, Inc., Pittsburgh, Pa. Purifying benzene. 2,438,368, Mar. 23.

Keister, James E., Scotia, N. Y., assignor to General Electric Company. Transmitter-receiver switching system. 2,438,367, Mar. 23.

Kennedy, Robert M.: *See*—
Hetzel, Stanford J., and Kennedy.

Kennedy, Robert M., Drexel Hill, assignor to Sun Oil Company, Philadelphia, Pa. Preparation of cyclopentadiene. 2,438,398, Mar. 23.

Kennedy, Robert M., Drexel Hill, and S. J. Hetzel, Cheltenham, assignors to Sun Oil Company, Philadelphia, Pa. Preparation of cyclopentadiene. 2,438,399, Mar. 23.

Kennedy, Robert M., Drexel Hill, and S. J. Hetzel, Cheltenham, assignors to Sun Oil Company, Philadelphia, Pa. Preparation of cyclopentadiene. 2,438,401, Mar. 23.

Kennedy, Robert M., Drexel Hill, and S. J. Hetzel, Cheltenham, assignors to Sun Oil Company, Philadelphia, Pa. Preparation of cyclopenadiene. 2,438,402, Mar. 23.

Kennedy, Robert M., Drexel Hill, and S. J. Hetzel, Cheltenham, assignors to Sun Oil Company, Philadelphia, Pa. Preparation of cyclopentadiene. 2,438,403, Mar. 23.

Ketting, Leendert, Secaucus, assignor to Keuffel & Esser Company, Hoboken, N. J. Drafting machine. 2,438,220, Mar. 23.

Keuffel & Esser Company, assignee: *See*—
Ketting, Leendert.
Patrosio, William, and Ferber.

Kidde Manufacturing Co., Inc., assignee: *See*—
Freygang, Walter H.

Kilham, Peter, Attleboro, Mass. Bending brake. 2,438,319, Mar. 23

Kingston, William H., Drighlington, Bradford, assignor of one-half to William Bywater Limited, Holbeck, Leeds, England. Felt hardening machine. 2,438,320, Mar. 23.

Kinnear, James W., Jr., Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation. Manufacturing bimetallic bodies. 2,438,405, Mar. 23.

Kizaur, Arthur J., Cicero, assignor to General Electric X-Ray Corporation, Chicago, Ill. Electrocardiograph. 2,438,341, Mar. 23.

Kleen Refrigerator, Inc., assignee: *See*—
Erland af Kleen, Nils.

Knudsen, Hans, London, England. Preheating and vaporization of fuel for internal-combustion reaction motors. 2,438,247, Mar. 23.

Konet, Henry, Paramus, assignor to Bendix Aviation Corporation, Teterboro, N. J. Vane type transmitter. 2,438,406, Mar. 23.

Kooistra, John A., assignor to Davis & Furber Machine Company, North Andover, Mass. Scavenger roll mechanism. 2,438,290, Mar. 23.

Koppers Company, Inc., assignee: *See*—
Corson, Ben. B., and Detrick.
Keeling, William O.

Koza, Charles A., Pittsburgh, Pa. Angle drive construction. 2,438,291, Mar. 23.

Kreuser, John A., Chicago, Ill. Heating plant and furnace. 2,438,407, Mar. 23.

Krobath, Vincent J., Jr., St. Louis, Mo., and R. J. Roenigk, Jr., Houston, Tex. Bearing greasing device. 2,438,122, Mar. 23.

Kundiger, Donald G.: *See*—
Spence, Le Roy U., Butterbaugh, and Kundiger.

Kurtz, Jacob, Teaneck, and E. Zampieri, assignors to Callite Tungsten Corporation, Union City, N. J. Making a hard facing alloy. 2,438,221, Mar. 23.

Laing, Howard M., assignor to Briggs Manufacturing Company, Detroit, Mich. Fastener applying tool. 2,438,174, Mar. 23.

Lambert, Robert D., and C. L. Bailey, Knoxville, Tenn., assignors to Tennessee Valley Authority. Charging seal for stoves. 2,438,123, Mar. 23.

Lancaster, John T., Newton, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Axially engaging positive clutch. 2,438,175, Mar. 23.

Lantz, Louis A., and A. Schofield, assignors to The Calico Printers' Association Limited, Manchester, England. Production of gasproof compound fabrics. 2,438,176, Mar. 23.

Lavenburg, Albert, assignee: *See*—
Alexander, Focsaneanu.

Lear, Incorporated, assignee: *See*—
Lear, William P.

Lear, William P., North Hollywood, Calif., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich. Magnetic sound translating system. 2,438,222, Mar. 23.

Lear, William P., North Hollywood, Calif., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich. Magnetically actuated clutch and brake construction. 2,438,223, Mar. 23.

Lecher, Hans Z., Plainfield, R. P. Parker, and R. S. Long, Somerville, N. J., assignors to American Cyanamid Company, New York, N. Y. Production of 1,2-disubstituted 3-cyanoguanidines. 2,438,124, Mar. 23.

Lees, Milton H., Jr., assignee, et al.: *See*—
Buchet, Conrad R.

Leland, Hollis L., Cranford, N. J., assignor to Standard Oil Development Company. Lubricant and hydraulic fluid composition. 2,438,446, Mar. 23.

Leland Stanford Junior University, Board of Trustees of The, assignee: *See*—
Hansen, William W., and Varian.

Levine, Irving E., Berkeley, assignor to California Research Corporation, San Francisco, Calif. Production of dicarboxylic acids or anhydrides thereof. 2,438,369, Mar. 23.

Lewis, Allen H., Berkeley, assignor, by mesne assignments, to California Research Corporation, San Francisco, Calif. Insecticide. 2,438,370, Mar. 23.

Lewis, James C.: *See*—
Fraenkel-Conrat, Heinz L., Humfeld, Lewis, Dimick, and Olcott.

Lima-Hamilton Corporation, assignee: *See*—
Spier, Hans G.

Linde Air Products Company, The, assignee: *See*—
Meincke, Edward.

Linker, William L., Warwick, and J. R. Welshman, Cranston, assignors to Grinnell Corporation, Providence, R. I. Means to flare tube ends and to prevent their rupture. 2,438,292, Mar. 23.

Livingston, Herman G., Houston, Tex., assignor to Eastman Oil Well Survey Company, Denver, Colo. Bottom hole orientation. 2,438,293, Mar. 23.

Lommen, Robert M.: *See*—
Feldhausen, Cyril P., and Lommen.

Long, Robert S.: *See*—
Lecher, Hans Z., Parker, and Long.

Lorand, Eugene J., and J. E. Reese, assignors to Hercules Powder Company, Wilmington, Del. Stabilization of oxidized aromatic hydrocarbons. 2,438,125, Mar. 23.

Lott, William A., East Orange, and F. H. Bergeim, Highland Park, N. J., assignors to E. R. Squibb & Sons, New York, N. Y. C-p-aminobenzenesulfonamido-substituted thiazolines and their production. 2,438,177, Mar. 23.

Ludlow, John H.: *See*—
Dodds, John M., and Ludlow.

Maag-Zahnräder und-Maschinen Aktiengesellschaft, assignee: *See*—
Aeppli, Albert.

Macé, John A., Tampa, Fla. Flexible cigarette case with reinforcing means. 2,438,408, Mar. 23.

Madison, Harry, Fullerton, Calif. Tire chain linkage. 2,438,248, Mar. 23.

Malcom, Robert L., Chicago, Ill., assignor to Chicago Eye Shield Company. Adjustable headband construction. 2,438,409, Mar. 23.

Malhiot, Clarence J., Oak Park, assignor to F. B. Redington Co., Chicago, Ill. Mechanism for conveying, discharging, and assorting wrapped articles. 2,438,178, Mar. 23.

Maling, Roy, Chestnut Hill, Mass. Footwear. 2,438,321, Mar. 23.

Mallinckrodt Chemical Works, assignee: *See*—
Wallingford, Vernon H., and Homeyer.

Mallory, Edward B., Tenafly, N. J. Waste liquor aerator. 2,438,342, Mar. 23.

Manker, Clarence M., assignee: *See*—
Dolk, Harold G.

Marholz, Richard C., assignor, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill. Disengageable electrical circuit connector. 2,438,371, Mar. 23.

Marihart, Leo A., Salinas, Calif. Plant thinning machine. 2,438,224, Mar. 23.

Marinsky, Davis, assignee: *See*—
Morin, Louis H.

Martin, Willibald, Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Cover and receptacle for dry printing machines. 2,438,225, Mar. 23.

Mason, Julien J., Montclair, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Vapor filled electronic device. 2,438,179, Mar. 23.

Mathieson Alkali Works, Inc., The, assignee: *See*—
Richardson, Chester N.

Matthews, Albert, Cincinnati, assignor to The American Laundry Machinery Company, Norwood, Ohio. Position indicator for cylinder doors. 2,438,294, Mar. 23.

Mattison, Frank R., Burbank, Calif. Roller exercising machine. 2,438,249, Mar. 23.

May, Harry C., East McKeesport, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Manually operative selective control device. 2,438,410, Mar. 23.

Maynard, James, Hawthorne, assignor to Elgin Rowland Parker, Seal Beach, Calif. Burner valve device. 2,438,447, Mar. 23.

McClellan, Cyril E., Catonsville, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. High-frequency radiation system. 2,438,343, Mar. 23.

McDermott, Henry J., Prospect Park, Pa., assignor to American Viscose Corporation, Wilmington, Del. Tension device. 2,438,180, Mar. 23.

McDonough, William P., Gunnison, assignor to R. Andrews, Colorado Springs, Colo. Cattle restraining chute. 2,438,322, Mar. 23.

McGann, Richard W., assignee, et al.: *See*—
Sebell, Harry.

McGill Metal Products Corporation, assignee: *See*—
Stilson, Herbert A.

McNall, John W.: *See*—
Steele, Howard L., Jr., and McNall.

Meilier, Daniel V., Maywood, J. D. Preble, La Grange, and L. W. Tuttle, Mount Prospect, Ill. Chimney construction and fitting therefor. 2,438,411, Mar. 23.

Meincke, Edward, Scotch Plains, N. J., assignor to The Linde Air Products Company. Automatic rod feed for metal removal. 2,438,344, Mar. 23.

Mendelsohn, Lewis I., Lynn, Mass., assignor to General Electric Company. Precision magnetometer. 2,438,372, Mar. 23.

Metropolitan-Vickers Electrical Company, Limited, assignee: *See*—
Scoles, Graham J., and Miller.

Metzner, Robert G., Los Angeles, Calif., assignor to The General Industries Company, Elyria, Ohio. Two-speed phonograph turntable drive. 2,438,265, Mar. 23.

Miller, August E., Cliffside Park, N. J. Crystal oven. 2,438,345, Mar. 23.

Miller, Charles W.: *See*—
Scoles, Graham J., and Miller.

Miller, Elmer L., assignor to The Dayton Steel Foundry Company, Dayton, Ohio. Tractor fifth wheel mounting. 2,438,323, Mar. 23.

Miller, John W.: *See*—
Fell, Raymond E., and Miller.

Minnesota Mining & Manufacturing Company, assignee: *See*—
Tierney, Hubert J.

Money-Meters, Inc., assignee: *See*—
Gordon, Alexander M.

Mooney, Charles F., Charlotte, N. C. Safety device for trailers. 2,438,346, Mar. 23.

Moore, David W., Jr., New York, N. Y., assignor to Fairchild Camera and Instrument Corporation. Film-type resistor and manufacturing the same. 2,438,250, Mar. 23.

Moran, J. Arthur, assignee, et al.: *See*—
Birdsall, Robert E.

Morden, Harley W., assignor of fifty per cent to H. H. Gies, Toronto, Ontario, Canada. Clip for forming neckties. 2,438,295, Mar. 23.

Morehead, Chalmers, East Orange, and D. S. Gustin, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Fluorescent and/or cathode glow lamp and method. 2,438,181, Mar. 23.

Morin, Louis H., assignor of one-half to D. Marinsky, Bronx, N. Y. Coaxial cable. 2,438,347, Mar. 23.

Morin, Louis H., assignor of one-half to D. Marinsky, Bronx, N. Y. Forming and arranging castings on an elongated mounting. 2,438,348, Mar. 23.

Morris, Charles O., Van Nuys, assignor to The Garrett Corporation, Airesearch Manufacturing Company division, Los Angeles, Calif. Conduit coupling. 2,438,412, Mar. 23.

Morton, Charles D.: *See*—
Schultz, Edward S., and Morton.

Morton, William A., and T. H. Sloan, assignor to G. M. S. Corporation, Pittsburgh, Pa. Apparatus for continuously drawing elongated products. 2,438,448, Mar. 23.

Mosesman, Max A., Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Synthesis of hydrocarbons and oxygenated compounds. 2,438,449, Mar. 23.

Motor Wheel Corporation, assignee: *See*—
Cotes, Mervin F.
Fell, Raymond E., and Miller.
Horn, Harry J.

Muller, Carl W., Osborn, Ohio. Mechanical signal and volume control for miniature radio ranges. 2,438,126, Mar. 23.

Murphree, Eger V.: *See*—
Russell, Robert P., Murphree, and Hemminger.
Tyson, Charles W., Fischer, and Murphree.

Nadolsky, Isaac: *See*—
Stevenson, Ralph, and Nadolsky.

Nash Engineering Company, assignee: *See*—
Adams, Harold E.

Nassimbene, Ernest, assignor to Gates Rubber Company, Denver, Colo. Cover on take-up roll for looms. 2,438,296, Mar. 23.

National Aluminate Corporation, assignee: *See*—
Ryznar, John W.

Naumburg, Robert E., West Englewood, N. J., assignor to Jonas & Naumburg Corporation, New York, N. Y. Carroting and drying of fur-bearing animal skins. 2,438,226, Mar. 23.

Naumburg, Robert E., West Englewood, N. J., assignor to Jonas & Naumburg Corporation, New York, N. Y. Apparatus for treating fur-bearing animal skins. 2,438,227, Mar. 23.

Navy, United States of America as represented by the Secretary of, assignee: *See*—
Brode, Robert B.
Swenson, Carl E.

Nelson, Karl J., Cranford, N. J., assignor to Standard Oil Development Company. Drying of microspherical gels. 2,438,450, Mar. 23.

New Products Corporation, assignee: *See*—
Banker, Oscar H.

Newkirk, Thomas A.: *See*—
Bennett, Frederick D., and Newkirk.

Nostrip Inc., assignee: *See*—
Johnson, James M.

Ocean City Manufacturing Company, assignee: *See*—
Hirsch, Stephen G.

Ohio Brass Company, The, assignee: *See*—
Taylor, John J., and Ross.

Ohio State University Research Foundation, The, assignee: *See*—
Henne, Albert L.

Olcott, Harold S.: *See*—
Fraenkel-Conrat, Heinz L., Humfeld, Lewis, Dimick, and Olcott.

Oppel, John A., Upper Darby, Pa., assignor to General Electric Company. Electric switch. 2,438,373, Mar. 23.

Osten, Reuben A., Wilmington, Del., assignor to Wyandotte Chemicals Corporation, Wyandotte, Mich. Manometer. 2,438,228, Mar. 23.

Owen, John J., Baton Rouge, La., assignor to Standard Oil Development Company. Activation of clay. 2,438,451, Mar. 23.

Pacific Mills, assignee: *See*—
Wilkie, Robert C.

Pankratz, Howard J.: *See*—
Bunn, George P., and Pankratz.

Parker, Arnold G., Longueuil, Quebec, Canada. Motion-transmitting unit. 2,438,182, Mar. 23.

Parker, Elgin R., assignee: *See*—
Maynard, James.

Parker, Robert P.: *See*—
Lecher, Hans Z., Parker, and Long.

Paterson Engineering Company Limited, The, assignee: *See*—
Smalley, William.

Patrosio, William, Jersey City, and W. Ferber, assignors to Keuffel & Esser Company, Hoboken, N. J. Dustproof leveling screw. 2,438,479, Mar. 23.

Pedersen, Tage, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill. Engine fuel supply means. 2,438,251, Mar. 23.

Peterson, Carl D., deceased, and E. J. Barth; M. F. Peterson executrix, assignors to Dana Corporation, Toledo, Ohio. Power take-off. 2,438,183, Mar. 23.

Peterson, Marion F., executrix: *See*—
Peterson, Carl D., and Barth.

Pfeffer, Anton W., Spokane, Wash. Dryer frame. 2,438,324, Mar. 23.

Pfister, Harry C., Long Beach, assignor to U. S. Slicing Machine Company, La Porte, Ind. Food tendering machine. 2,438,184, Mar 23.

Philco Corporation, assignee: *See*—
Clapp, Richard G.

Phillips Petroleum Company, assignee: *See*—
Bunn, George P., and Pankratz.
Frey, Frederick E.

Pollak, Frederick F., New York, N. Y. Bending of corkwood. 2,438,349, Mar. 23.

Pollock, Robert T., New York, N. Y. Diesel engine fuel. 2,438,452, Mar. 23.

Pope, Winslow B., Detroit, Mich., assignor, by mesne assignments, to United States of America. Recoilless gun. 2,438,297, Mar. 23.

Pophal, Eric G., St. Pauls, N. C. Collar stay and necktie support. 2,438,325, Mar. 23.

Poskin, Irvin C., Los Angeles, Calif. Bed davenport. 2,438,127, Mar. 23.

Powell, Winfred T., assignor to Stromberg-Carlson Company, Rochester, N. Y. Airport lighting control and indication system. 2,438,453, Mar. 23.

Power Jets (Research and Development) Limited, assignee: *See*—
Whittle, Frank.

Poyner, Frank C., San Diego, Calif. Lubrication adapter. 2,438,128, Mar. 23.

Prance, Alvin W., Royal Oak, assignor to Briggs Manufacturing Company, Detroit, Mich. Door structure for motor vehicles. 2,438,185, Mar. 23.

Preble, J. Donald: *See*—
Meilier, Daniel V., Preble, and Tuttle.

Price, Eugene A., Spokane, Wash. Pendulously operated crank timing indicator. 2,438,229, Mar. 23.

Productive Inventions, Inc., assignee: *See*—
Smulski, Theodore J.

Pryde, Margaret S., executrix, et al.: *See*—
Smith, Robert A.

Pusey & Jones Corporation, The, assignee: *See*—
Bratton, Samuel M.

Quaker Oats Company, The, assignee, et al.: *See*—
Turner, Charles W., and Reineke.

Radio Corporation of America, assignee: *See*—
Born, Leo W.
Gerber, Paul D.
Vance, Arthur W.

Ramsey, Justin H., Allendale, N. J. Apparatus for fluid-treating lengthy material. 2,438,374, Mar. 23.

Randall, Ross D., assignor to Stewart-Warner Corporation, Chicago, Ill. Time-delay switch. 2,438,186, Mar. 23.

Ransome Machinery Company, assignee: *See*—
Faber, John P.

Redington, F. B., Co., assignee: *See*—
Malhiot, Clarence J.

Reed, Jesse C., Dayton, Ohio. Liquid elevating apparatus. 2,438,298, Mar. 23.

Reese, John E.: *See*—
Lorand, Eugene J., and Reese.

Reichard, William C., Stanhope, N. J. Test probe. 2,438,350, Mar. 23.

Reineke, Ezra P.: *See*—
Turner, Charles W., and Reineke.

Relis, Walter, Lomita, Calif. Infant's formula can and can-opener and nipple attachment. 2,438,299, Mar. 23.

Renner, Harold G., Detroit, Mich. Low-pressure tire signal. 2,438,413, Mar. 23.

Retailliau, Edmond R.: *See*—
Jones, Minor C. K., and Retailliau.

Reynolds, Theron E., and E. Fyffe, assignors to Farmers and Merchants Bank, Lodi, Calif. Florist's wire twisting machine. 2,438,187, Mar. 23.

Riboud, Jacques M. J., Mount Washington, Md., assignor to Specialty Equipment and Machinery Corp., New York, N. Y. Traction reducer. 2,438,414, Mar. 23.

Riboud, Jacques M. J., Mount Washington, Md., assignor to Specialty Equipment and Machinery Corp., New York, N. Y. Lifting device. 2,438,415, Mar. 23.

Ricciardi, Matthew C.: *See*—
Di Cosmo, Pasquale V., and Ricciardi.

Rich, Hyman R., Milwaukee, Wis., assignor, by mesne assignments, to The Diversey Corporation, Chicago, Ill. Vapor disseminator. 2,438,129, Mar. 23.

Richardson, Chester N., Youngstown, assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Purification of hydrogen peroxide by a nonconcentrating distillation. 2,438,252, Mar. 23.

Riebe, Theodore C., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Mounting arrangement for electrical equipment. 2,438,454, Mar. 23.

Rochester, Nathaniel, Milton, assignor to Sylvania Electric Products Inc., Salem, Mass. Power regulator. 2,438,486, Mar. 23.

Roeder, Dale, and H. L. Brock, Detroit, assignors to Ford Motor Company, Dearborn, Mich. Transmission operating device and interlock. 2,438,455, Mar. 23.

Roenigk, Ray J., Jr.: *See*—
Krobath, Vincent J., Jr., and Roenigk.

Rogow, Sydney, New York, N. Y. Apparatus for feeding fuel cables to furnaces. 2,438,375, Mar. 23.

Röhm & Haas Company, assignee: *See*—
Spence, Le Roy U., Butterbaugh, and Kundiger.

Ross, Paul M.: *See*—
Taylor, John J., and Ross.

Ruegg, Rudolf, assignor to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland. Pulverized fuel burning gas heater. 2,438,416, Mar. 23.

Russell, Frederick A., Summit, N. J., assignor to the United States of America, as represented by the Secretary of War. Amplitude controlled current regulator. 2,438,417, Mar. 23.

Russell, Robert P., Short Hills, E. V. Murphree, Summit, and C. E. Hemminger, Westfield, N. J., assignors to Standard Oil Development Company. Hydrocarbon conversion. 2,438,456, Mar. 23.

Ryer, August I., and M. Frisch, New York, N. Y., assignors to Schering Corporation, Bloomfield, N. J. Isolation of oleandrin. 2,438,418, Mar. 23.

Ryznar, John W., La Grange, assignor to National Aluminate Corporation, Chicago, Ill. Production of aqueous sols of hydrous oxides. 2,438,230, Mar. 23.

Sandoz Ltd., assignee: *See*—
Stoll, Arthur, and Hofmann.

Schehl, Charles A.: *See*—
Dunkelberger, George F., and Schehl.

Schering Corporation, assignee: *See*—
Ryer, August I., and Frisch.

Schlosser, Arthur G., assignor to Candler-Hill Corporation, Detroit, Mich. Shaft seal. 2,438,457, Mar. 23.

Schmerling, Louis: *See*—
Ipatieff, Vladimir N., and Schmerling.

Schmidt, Paul A., near Earlville, Ill. Insulator. 2,438,419, Mar. 23.

Schniepp, Lester E., Peoria, Ill., assignor to the United States of America, as represented by the Secretary of Agriculture. Purification of acetic acid by azeotropic distillation. 2,438,300, Mar. 23.

Schoenster, Peter: *See*—
Hepp, Carlos A., and Schoenster.

Schofield, Arthur: *See*—
Lantz, Louis A., and Schofield.

Schopmeyer, Herman H., Hammond, Ind., assignor to American Maize-Products Company. Lactic acid composition. 2,438,326, Mar. 23.

Schreiber, Richard S.: *See*—
Behr, Lyell C., and Schreiber.

Schuler, Leo T., Ruthven, Iowa. Slip ring cutting machine. 2,438,130, Mar. 23.

Schulte, James A., Sperry, Iowa. Mixing and self-unloading farm truck. 2,438,301, Mar. 23.

Schultz, Edward S., Buffalo, N. Y., and C. D. Morton, Oak Park, Ill.: said Morton assignor to said Schultz. Closure for fountain pens and the like. 2,438,231, Mar. 23.

Schumaker, Albert J. R., Harpers Ferry, W. Va. Calculator. 2,438,458, Mar. 23.

Scoles, Graham J., East Sheen, London, and C. W. Miller, Sale, assignors to Metropolitan-Vickers Electrical Company, Limited, London, England. Calibration of cathode ray oscillographs. 2,438,420, Mar. 23.

Seaman, Harry J., Milwaukee, Wis. Rotary groundworking implement. 2,438,189, Mar. 23.

Sebell, Harry, Marblehead, assignor of one-half to R. W. McGann, Lexington, and one-half to Bell Products Corporation, Boston, Mass. Sewing machine. 2,438,459, Mar. 23.

Seeger-Refrigerator Company, assignee: *See*—
Dennedy, James H.

Selby, Theodore R., and L. L. Campbell, Chicago, Ill., assignors to Wilson & Company, Inc. Manufacture of sutures. 2,438,131, Mar. 23.

Senard, Pierre, Bapeaume-les-Rouen, France. Saw blade planishing machine. 2,438,460, Mar. 23.

Sensel, Eugene E., W. R. Smith, and A. R. Goldsby. Beacon, assignors, by mesne assignments, to The Texas Company, New York, N. Y. Isomerization of paraffinic hydrocarbons. 2,438,421, Mar. 23.

Seyferth, Harold N.: *See*—
Snader, Ira J., and Seyferth.

Sharp, Lorld G.: *See*—
Gorin, Manuel H., and Sharp.

Shell Development Company, assignee: *See*—
Archibald, Raymond C., Greensfelder, and Eggertsen.

Sheppard, Richard H., Hanover, Pa. Fuel injection pump. 2,438,190, Mar. 23.

Shirling, Hollis V., Haverhill, Mass. Heel-seating plate. 2,438,253, Mar. 23.

Showalter, Jere C., Goose Creek, Tex., assignor to Standard Oil Development Company. Cutting oil composition. 2,438,461, Mar. 23.

Sifferd, Robert H., Hollywood, assignor to Armour and Company, Chicago, Ill. Preparation of cholic acid. 2,438,232, Mar. 23.

Signode Steel Strapping Company, assignee: *See*—
Chamberlain, Paul A.

Simcich, Matt, Los Angeles, Calif. Percolator bowl strainer. 2,438,302, Mar. 23.

Simmon, Alfred, Jackson Heights, assignor to Simmon Brothers, Inc., Long Island City, N. Y. Device for making color prints. 2,438,303, Mar. 23.

Simmon Brothers, Inc., assignee: *See*—
Simmon, Alfred.

Sines, Harold S., Chicago, Ill. Conductor grip for insulators. 2,438,233, Mar. 23.

Slack, Charles M., Glen Ridge, and C. E. Dawley, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. High-pressure modulator tube. 2,438,191, Mar. 23.

Slingerland, Charles L., Niagara-on-the-Lake, Ontario, Canada. Slicing device with a vertically reciprocating cutter. 2,438,304, Mar. 23.

Sloan, Theodore H.: *See*—
Morton, William A., and Sloan.

Smalley, William, assignor to The Paterson Engineering Company Limited, London, England. Apparatus for adding one liquid to another. 2,438,327, Mar. 23.

Smith, Mary G., executrix, et al.: *See*—
Smith, Robert A.

Smith, Robert A., Mahwah, N. J.; M. G. Smith, M. S. Pryde, and M. S. van Brederode, executrices of said R. A. Smith, deceased, assignors to Smith & Serrell, Inc., Newark, N. J. Bearing. 2,438,192, Mar. 23.

Smith, Ronald B., East Orange, N. J. Metered spraying device for mixed liquids. 2,438,462, Mar. 23.

Smith & Serrell, Inc., assignee: *See*—
Smith, Robert A.

Smith, Wayne, Decatur, Ga. Shoe anti-skid device. 2,438,193, Mar. 23.

Smith, William R.: *See*—
Sensel, Eugene E., Smith, and Goldsby.

Smulski, Theodore J., Gary, Ind., assignor to Productive Inventions, Inc. Windshield wiper arm. 2,438,305, Mar. 23.

Snader, Ira J., Detroit, and H. N. Seyferth, East Detroit, assignors to Ex-Cell-O Corporation, Detroit, Mich. Fluid pressure actuated motor. 2,438,463, Mar. 23.

Snow, Donald L., Hempstead, N. Y., assignor to The Sperry Corporation. Electron discharge apparatus. 2,438,132, Mar. 23.

Snyder, James R., assignee: *See*—
Broudy, Albert M.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Gorin, Manuel H., and Sharp.
Harrington, George A., and Gorin.
Johnson, Curtis H.
Utterback, Ernest.

Souther, Benjamin F., Seattle, Wash. Hose storage reel. 2,438,306, Mar. 23.

Spanel, Abraham N., Princeton, N. J. Flexible collapsible fluid bladder. 2,438,351, Mar. 23.

Sparklin, Charles H., Chicago, Ill., assignor to Birtman Electric Company. Split cylindrical housing for suction cleaners. 2,438,133, Mar. 23.

Speakman, John B., and E. W. Whewell, Leeds, assignors to The Fullers' Earth Union Limited, Redhill, England. Finishing textile materials composed of or containing animal fibres. 2,438,328, Mar. 23.

Specialty Equipment and Machinery Corp., assignee: *See*—
Riboud, Jacques M. J.

Spence, Le Roy U., Elkins Park, D. J. Butterbaugh, and D. G. Kundiger, assignors to Röhm & Haas Company, Philadelphia, Pa. Catalytic process for producing butadiene. 2,438,464, Mar. 23.

Spencer, H. Dorsey, assignee, et al.: *See*—
Derby, John H.

Sperry Corporation, The, assignee: *See*—
Snow, Donald L.

Spier, Hans G., Hamilton, Ohio, assignor, by mesne assignments, to Lima-Hamilton Corporation, New York, N. Y. Free piston engine. 2,438,134, Mar. 23.

Squibb, E. R., & Sons, assignee: *See*—
Lott, William A., and Bergeim.

Squires, George R., Rockaway, N. J. Can opener. 2,438,376, Mar. 23.

Stalker, Edward A., Bay City, Mich. Aircraft. 2,438,254, Mar. 23.

Stalker, Edward A., Bay City, Mich. Wing lift control for aircraft. 2,438,255, Mar. 23.

Standard Knitting Mills, Inc., assignee: *See*—
Ashe, Edward J., and Webber.

Standard Oil Development Company, assignee: *See*—
Hall, Ike D.
Hemminger, Charles E.
Jones, Minor C. K., and Retaillliau.
Kaulakis, Arnold F.
Leland, Hollis L.
Mosesman, Max A.
Nelson, Karl J.
Owen, John J.
Russell, Robert P., Murphree, and Hemminger.
Showalter, Jere C.
Tyson, Charles W., Fischer, and Murphree.
Wasson, Jones I., and Wilson.

Stanton, George W., assignor to The Dow Chemical Company, Midland, Mich. Purification of vinyl halide and vinylidene halide polymers. 2,438,480, Mar. 23.

Stearns, Edwin I., Jr., North Plainfield, and G. L. Buc, Orange, N. J., assignors to American Cyanamid Company, New York, N. Y. Photometric apparatus giving readings invariant with azimuth on polarizing samples. 2,438,422, Mar. 23.

Steele, Howard L., Jr., Bloomfield, and J. W. McNall, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Magnetron. 2,438,194, Mar. 23.

Steigerwalt, Oliver I.: *See*—
Jacobs, Gordon B., and Steigerwalt.

Stein, John I., Muncie, Ind. Television cabinet. 2,438,256, Mar. 23.

Steinmiller, Adelbert A., Wilkinsburg, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Control valve device. 2,438,423, Mar. 23.

Stevenson, Ralph, and Isaac Nadolsky, assignors to Grand Rapids Metal Cabinet Company, Grand Rapids, Mich. Knockdown sheet metal cabinet. 2,438,257, Mar. 23.

Stewart, Charles H., Wilmington, Del. Rotatably adjustable pipe joint. 2,438,234, Mar. 23.

Stewart-Warner Corporation, assignee: *See*—
Randall, Ross D.

Stilson, Herbert A., Chicago, assignor to McGill Metal Products Corporation, Marengo, Ill. Barrier for animal traps. 2,438,377, Mar. 23.

Stokes, Rupert O., London, England. Pulp ejector. 2,438,258, Mar. 23.

Stoll, Arthur, and A. Hofmann, Basel, assignors to Sandoz Ltd., Fribourg, Switzerland. d-Lysergic acid diethyl amide. 2,438,259, Mar. 23.

Storer, Richard M., Denver, Colo., assignor to General Motors Corporation, Dayton, Ohio. Ice tray and grid arrangement. 2,438,260, Mar. 23.

Strauss, Alfred, and E. G. Feltman, Chicago, and M. M. Hunt, Park Ridge, and W. D. Harbaugh, Evanston, Ill., assignors to A. F. Dormeyer Mfg. Co. Food processor gearing. 2,438,465, Mar. 23.

Strom, David W., assignor to Hardinge Brothers, Inc., Elmira, N. Y. Clamping machine parts to beds. 2,438,235, Mar. 23.

Strom, David W., assignor to Hardinge Brothers, Inc., Elmira, N. Y. Lead screw nut construction for lathes and the like. 2,438,236, Mar. 23.

Stromberg-Carlson Company, assignee: *See*—
Powell, Winfred T.

Strong, Elbie C., Long Island City, and L. M. Clark, Tuckahoe, assignors, by mesne assignments, to Waugh Equipment Company, New York, N. Y. Control apparatus. 2,438,352, Mar. 23.

Studebaker Corporation, The, assignee: *See*—
Greenlee, Harry R.

Sun Oil Company, assignee: *See*—
Hetzel, Stanford J., and Kennedy.
Johnson, Herbert L.
Kennedy, Robert M.
Kennedy, Robert M., and Hetzel.

Swartz, Milton D., Baltimore, and K. N. Yellott, Cockeysville, assignors to Farboil Paint Company, Inc., Baltimore, Md. Handling coated articles during drying. 2,438,135, Mar. 23.

Swenson, Carl E., Rockford, Ill., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of the Navy. Fabricating track laying vehicle shoes. 2,438,424, Mar. 23.

Sylvania Electric Products Inc., assignee: *See*—
Rochester, Nathaniel.

Szucs, Joseph, Yonkers, N. Y. Producing citric acid. 2,438,136, Mar. 23.

Tack, Carl E., assignor to American Steel Foundries, Chicago, Ill. Disc brake arrangement. 2,438,481, Mar. 23.

Tack, Carl E., assignor to American Steel Foundries, Chicago, Ill. Railway disc brake arrangement. 2,438,482, Mar. 23.

Tack, Carl E., assignor to American Steel Foundries, Chicago, Ill. Brake shoe and head arrangement. 2,438,483, Mar. 23.

Taylor, John J., and P. M. Ross, Wadsworth, assignors to The Ohio Brass Company, Mansfield, Ohio. Nonmetallic mine. 2,438,307, Mar. 23.

Tennessee Coal, Iron and Railroad Company, assignee: *See*—
Auten, Claude I.

Tennessee Valley Authority, assignee: *See*—
Lambert, Robert D., and Bailey.

Texas Company, The, assignee: *See*—
Sensel, Eugene E., Smith, and Goldsby.

Thompson Grinder Company, The, assignee: *See*—
Toulmin, Harry A., Jr.

Thrower, William J., Chester, W. Va. Clothes line reel. 2,438,188, Mar. 23.

Tierney, Hubert J., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Pressure-sensitive adhesive tape. 2,438,195, Mar. 23.

Timken Roller Bearing Company, The, assignee: *See*—
Bontee, Frederick R.
Horger, Ralph E.

Tobey, Raymond E., Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Ice cube freezing apparatus. 2,438,466, Mar. 23.

Toelke, August F., St. Louis County, assignor to The Alamo Corporation, Clayton, Mo. Fence knob. 2,438,237, Mar. 23.

Tonkin, George, Klamath Falls, Oreg. Motor vehicle door lock. 2,438,238, Mar. 23.

Toulmin, Harry A., Jr., Dayton, assignor to The Thompson Grinder Company, Springfield, Ohio. Ball grinding machine. 2,438,239, Mar. 23.

Trudeau, André J., assignor to Chase Brass & Copper Co. Incorporated, Waterbury, Conn. Straightening rods. 2,438,240, Mar. 23.

Turnbull, Frederick M., assignee: *See*—
Brown, Frank E.

Turner, Charles W., and Ezra P. Reineke, Columbia, Mo., assignors to American Dairies Incorporated, Kansas City, Mo., and The Quaker Oats Company, Chicago, Ill. Controlling the growth and fattening rate of livestock and poultry and composition used in connection therewith. 2,438,353, Mar. 23.

Tuttle, Loren W.: *See*—
Meiller, Daniel V., Preble, and Tuttle.

Tyson, Charles W., Summit, H. G. M. Fischer, Westfield, and E. V. Murphree, Summit, assignors to Standard Oil Development Company. Catalytic conversion of hydrocarbons. 2,438,467, Mar. 23.

Union Oil Company of California, assignee: *See*—
Doumani, Thomas F., and Cuneo.

United Aircraft Corporation, assignee: *See*—
Zimmerman, Charles H.

United Shoe Machinery Corporation, assignee: *See*—
Cutler, Wallace M.
Haas, Otto R.
Lancaster, John T.

United States Atomic Energy Commission, United States of America, as represented by the, assignee: *See*—
Calaiaco, August P.
Hopper, Dwight L.

United States of America, assignee: *See*—
Pope, Winslow B.

U. S. Slicing Machine Company, assignee: *See*—
Pfister, Harry C.

Universal Oil Products Company, assignee: *See*—
Ipatieff, Vladimir N., and Schmerling.
Watson, Charles C.

Unterbrink, Victor, Ottawa, Ohio. Applicator for bowling alley finishes. 2,438,354, Mar. 23.

Utterback, Ernest, New York, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for conversion of fluid hydrocarbons. 2,438,261, Mar. 23.

Van Brederode, Mary S., executrix, et al.: *See*—
Smith, Robert A.

Vance, Arthur W., Cranbury, N. J., assignor to Radio Corporation of America. Computing device. 2,438,425, Mar. 23.

Vitarama Corporation, The, assignee: *See*—
Waller, Fred, and Dresser.

Vitro Manufacturing Company, The, assignee: *See*—
Earl, John A.

Wagner Electric Corporation, assignee: *See*—
Dick, Burns.

Waller, Fred, Huntington, N. Y., and W. R. Dresser, Long Hill, Conn., assignors to The Vitarama Corporation, Huntington Station, N. Y. Apparatus for projecting motion pictures. 2,438,137, Mar. 23.

Wallingford, Vernon H., Ferguson, and A. H. Homeyer, Webster Groves, assignors to Mallinckrodt Chemical Works, St. Louis, Mo. Metallation of beta-keto esters. 2,438,241, Mar. 23.

War, United States of America, as represented by the Secretary of, assignee: *See*—
Gordon, Sheldon.
Jacobs, Gordon B., and Steigerwalt.
Russell, Frederick A.

Washington, Lemuel H., Portsmouth, Va. Headlight and supporting means therefor. 2,438,196, Mar. 23.

Wasson, Jones I., Union, and C. J. Wilson, Westfield, N. J., assignors to Standard Oil Development Company. Oil composition. 2,438,468, Mar. 23.

Watkin, Harold G., Liverpool, England. Electric welding machine. 2,438,262, Mar. 23.

Watson, Charles C., assignor to Universal Oil Products Company, Chicago, Ill. Catalytic reactor. 2,438,242, Mar. 23.

Waugh Equipment Company, assignee: *See*—
Strong, Elbie C., and Clark.

Webber, Otis E.: *See*—
Ashe, Edward J., and Webber.

Webster Electric Company, assignee: *See*—
Campbell, Richard H.

Wedemeyer, Eric, Floral Park, assignor to Hamilton Art Metal Corporation, New York, N. Y. Snuffer cap assembly. 2,438,378, Mar. 23.

Welshman, James R.: *See*—
Linker, William L., and Welshman.

Westinghouse Air Brake Company, The, assignee: *See*—
Erson, Erik G.
Hines, Claude M.
May, Harry C.
Steinmiller, Adelbert A.
Whitney, Ralph T.

Westinghouse Electric Corporation, assignee: *See*—
Arnott, Edward G. F.
Denmark, Robert.
Green, James H.
Mason, Julien J.
McClellan, Cyril E.
Morehead, Chalmers, and Gustin.
Slack, Charles M., and Dawley.
Steele, Harold L., Jr., and McNall.
Tobey, Raymond E.

Wheaton, Evalyn, Detroit, Mich. Waterproof hosiery protector. 2,438,308, Mar. 23.

Wheel Aligning Necessities, Inc., assignee: *See*—
Castiglia, Biagia.

Wheeler, Harold A., Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Phase-selective variable-frequency oscillatory system. 2,438,197, Mar. 23.

Whewell, Emma: *See*—
Speakman, John B., and Whewell.

Whitney, Elliott M.: *See*—
Jacobson, Abraham W., and Whitney.

Whitney, Ralph T., Irwin, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Control apparatus. 2,438,427, Mar. 23.

Whittle, Frank, Rugby, assignor to Power Jets (Research and Development) Limited, London, England. Centrifugal compressor. 2,438,426, Mar. 23.

Wildhaber, Ernest, Brighton, assignor to Gleason Works, Rochester, N. Y. Producing face clutches. 2,438,329, Mar. 23.

Wilkie, Robert C., Andover, assignor to Pacific Mills, Lawrence, Mass. Method and apparatus for converting bulk filament into staples. 2,438,469, Mar. 23.

Wilson, C. Milton, assignee, et al.: *See*—
Derby, John H.

Wilson, Carrol J.: *See*—
Wasson, Jones I., and Wilson.

Wilson & Company, Inc., assignee: *See*—
Selby, Theodore R., and Campbell.

Wilson, Emery E., Portland, Oreg. Fountain fixture cooled by forced air circuit. 2,438,355, Mar. 23.

Wilson, Harry B., Brooklyn, N. Y. Radiant gas toaster and broiler. 2,438,470, Mar. 23.

Winton, Lewis B., Greenwich, Conn., assignor, by mesne assignments, to Jerguson Gage & Valve Co. Liquid level indicator. 2,438,330, Mar. 23.

Wyandotte Chemicals Corporation, assignee: *See*—
Osten, Reuben A.

Wyeth Incorporated, assignee: *See*—
Alburn, Harvey E., Charney, and Bernhart.

Yellott, Kinloch N.: *See*—
Swartz, Milton D., and Yellott.

Yoder, John H.: *See*—
Barler, Richard C., and Yoder.

Zampieri, Enrico: *See*—
Kurtz, Jacob, and Zampieri.

Zimmerman, Charles H., Nichols, assignor to United Aircraft Corporation, East Hartford, Conn. Control device for airplanes. 2,438,309, Mar. 23.

Zoromskis, Stanley M., Kenosha, Wis. Internal-combustion engine piston. 2,438,243, Mar. 23.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 23D DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Drape rod hanging means, Window. F. X. Ganter. Re. 22,989, Mar. 23.
Implement construction. R. B. Hitchcock and W. C. Rosenthal. Re. 22,991, Mar. 23.
Modulation system. W. W. Hansen and R. H. Varian. Re. 22,990, Mar. 23.

LIST OF PLANT INVENTIONS

Apple tree. R. S. Rogers. 794, Mar. 23.
Peach tree. F. D. Williams. 795, Mar. 23.
Plum tree. D. R. Kellogg. 793, Mar. 23.

LIST OF DESIGN INVENTIONS

Abacus. C. Mooney. 149,083, Mar. 23.
Bench, Radio service. C. A. Brown and H. Faber. 149,044, Mar. 23.
Bib. J. Seidenbaum. 149,092, Mar. 23.
Book end or similar article. W. H. Miller. 149,082, Mar. 23.
Bottle stopper or similar article, Perfume. J. Herbst. 149,062–5, Mar. 23.
Box or similar article, Ring. E. Groos. 149,058, Mar. 23.
Bracket, Wall. J. Lucchesi. 149,078, Mar. 23.
Brooch or similar article. A. Katz. 149,067–8, Mar. 23.
Brooch or similar article, Separable. A. Katz. 149,069, Mar. 23.
Brooch or similar article. A. Philippe. 149,087, Mar. 23.
Brooch or the like. M. Slater. 149,095, Mar. 23.
Brush attachment for vacuum cleaners. R. E. Harvuot. 149,060, Mar. 23.
Building. R. Loewy. 149,076–7, Mar. 23.
Cabinet, X-ray shoe fitting. J. O. Reinecke. 149,088, Mar. 23.
Carrier, Bottle. G. M. Acton. 149,034, Mar. 23.
Casing, Clock. F. Lux. 149,079, Mar. 23.
Chain link, Antiskid. C. H. Sloan. 149,096, Mar. 23.
Chair. J. D. Barber. 149,038, Mar. 23.
Clock. M. E. Schlenker. 149,091, Mar. 23.
Closure for bung holes or the like. J. Levine. 149,074, Mar. 23.
Coin bank or similar article. S. L. Seymour. 149,093, Mar. 23.
Container, Condiment. J. E. Davis. 149,049, Mar. 23.
Decanter or the like. E. S. Rixson. 149,089, Mar. 23.
Display stand, Overhead counter. S. Malkin. 149,080, Mar. 23.
Display unit, Refrigerated. J. V. Avila. 149,036, Mar. 23.
Dress. B. Cooper and S. S. Bickel. 149,048, Mar. 23.
Fabric or similar article, Textile. J. P. Arcuni. 149,035, Mar. 23.
Fabric, Woven plastic. G. Backer. 149,037, Mar. 23.
Font of type or similar article. B. Goldsmith, Jr. 149,057, Mar. 23.
Glove. H. Woller-Duff. 149,101, Mar. 23.
Hatchet, Double-headed. M. W. Lewis. 149,075, Mar. 23.
Holder, Comb. E. M. Hanrahan. 149,059, Mar. 23.
Holder, Soap cake. R. R. Ward. 149,100, Mar. 23.
Knife, Shrimp. R. W. Nelson. 149,084, Mar. 23.
Lace or similar article. O. Frei. 149,054–6, Mar. 23.
Nozzle attachment for vacuum cleaners. R. E. Harvuot. 149,061, Mar. 23.
Nutcracker or similar article. K. Clark and W. M. Allen. 149,047, Mar. 23.
Orphrey or similar article. O. A. Scheurmann. 149,090, Mar. 23.
Pendant or similar article. M. Koven. 149,071, Mar. 23.
Picking finger unit, Chicken. B. T. Norman. 149,086, Mar. 23.
Pin, Push. H. E. Sweet. 149,099, Mar. 23.
Platter or similar article, Meat. N. S. Newman. 149,085, Mar. 23.
Range, Kitchen. C. G. Bjorncrantz. 149,045, Mar. 23.
Ribbon unit for marking machines, Transfer. H. E. Edwards. 149,051, Mar. 23.
Ring, Finger. F. P. Kinsley. 149,070, Mar. 23.
Ring or similar article, Finger. V. Sorrentino. 149,097, Mar. 23.
Rocking horse. S. Stein. 149,098, Mar. 23.
Shoe or similar article, Lady's. D. E. Levin. 149,073, Mar. 23.
Slip or similar article. L. Silverman. 149,094, Mar. 23.
Soap dish, Hygienic. B. D. Kaplan. 149,066, Mar. 23.
Stocking, Christmas. K. F. Donohue. 149,050, Mar. 23.
Support, Plant. H. Epstein. 149,053, Mar. 23.
Table, Aquarium. L. A. Bouligny. 149,043, Mar. 23.
Tire. W. F. Billingsley. 149,042, Mar. 23.
Towel and soap cabinet, Violet ray. M. A. Michaels. 149,081, Mar. 23.
Toy, Figure S. L. Beder. 149,041, Mar. 23.
Toy, Wheeled pull. O. F. Larsen, Jr. 149,072, Mar. 23.
Tray, Hostess. D. Blumenthal and H. L. Seiden. 149,046, Mar. 23.
Watch case and band, Combined. R. A. Barré. 149,040, Mar. 23.
Watch case and wrist band, Combined. R. A. Barré. 149,039, Mar. 23.
Wrench. A. O. Elnes. 149,052, Mar. 23.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 23D DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acid, Preparation of cholic. R. H. Sifferd. 2,438,232, Mar. 23.
Acid, Producing citric. J. Szucs. 2,438,136, Mar. 23.
Acid-treating of catalytically cracked naphtha. A. F. Kaulakis. 2,438,445, Mar. 23.
Activation of clay. J. J. Owen. 2,438,451, Mar. 23.
Adhesion of bituminous materials to mineral aggregate, Increasing. J. M. Johnson. 2,438,318, Mar. 23.
Adhesive tape, Pressure-sensitive. H. J. Tierney. 2,438,195, Mar. 23.
Aerator, Waste liquor. E. B. Mallory. 2,438,342, Mar. 23.
Aircraft. E. A. Stalker. 2,438,254, Mar. 23.
Aircraft propulsion mechanism. R. B. Davis. 2,438,151, Mar. 23.
Alloy, Making a hard facing. J. Kurtz and E. Zampieri. 2,438,221, Mar. 23.
Aluminum bromide-hydrocarbon complex to promote alkylation of aromatic hydrocarbons by olefins of more than two carbon atoms per molecule, Process using. M. H. Gorin and L. G. Sharp. 2,438,211, Mar. 23.
Amplitude controlled current regulator. F. A. Russell. 2,438,417, Mar. 23.
Apparatus for adding one liquid to another. W. Smalley. 2,438,327, Mar. 23.
Apparatus for continuously drawing elongated products. W. A. Morton and T. H. Sloan. 2,438,448, Mar. 23.
Apparatus for dehumidifying air. W. H. Freygang. 2,438,120, Mar. 23.
Apparatus for determining balance in an electrical network. A. W. Jacobson and E. M. Whitney. 2,438,288, Mar. 23.
Apparatus for feeding fuel cables to furnaces. S. Rogow. 2,438,375, Mar. 23.
Apparatus for fluid-treating lengthy material. J. H. Ramsey. 2,438,374, Mar. 23.
Apparatus for indenting characters in medals and the like. F. E. Curtis. 2,438,271, Mar. 23.
Apparatus for projecting motion pictures. F. Waller and W. R. Dresser. 2,438,137, Mar. 23.
Apparatus for treating fur-bearing animal skins. R. E. Naumburg. 2,438,227, Mar. 23.
Applicator for bowling alley finishes. V. Unterbrink. 2,438,354, Mar. 23.
Arm, Windshield wiper. T. J. Smulski. 2,438,305, Mar. 23.
Attenuator. E. Doucette. 2,438,431, Mar. 23.
Automatic rod feed for metal removal. E. Meincke. 2,438,344, Mar. 23.
Axially engaging positive clutch. J. T. Lancaster. 2,438,175, Mar. 23.
Azeotropic distillation of acetic anhydride. C. H. Fisher and M. L. Fein. 2,438,278, Mar. 23.
Barrier for animal traps. H. A. Stilson. 2,438,377, Mar. 23.
Bearing. R. A. Smith. 2,438,192, Mar. 23.
Bearing greasing device. V. J. Krobath, Jr., and R. J. Roenigk, Jr. 2,438,122, Mar. 23.
Belt splicing device. F. W. Doblin and H. Ashworth. 2,438,361, Mar. 23.
Bending brake. P. Kilham. 2,438,319, Mar. 23.
Bending of corkwood. F. F. Pollak. 2,438,349, Mar. 23.
Bimetallic bodies, Manufacturing. J. W. Kinnear, Jr. 2,438,405, Mar. 23.
Binding machine, Bundle. P. A. Chamberlain. 2,438,386, Mar. 23.
Bladder, Flexible collapsible fluid. A. N. Spanel. 2,438,351, Mar. 23.
Bomb detonating mechanism. J. H. Hammond, Jr. 2,438,438, Mar. 23.
Bombsight computer. S. Darlington. 2,438,112, Mar. 23.
Bottom hole orientation. H. G. Livingston. 2,438,293, Mar. 23.
Brake: *See*—
Bending brake.
Brake arrangement, Disc. C. E. Tack. 2,438,481, Mar. 23.
Brake arrangement for railway disc brakes. R. B. Cottrell and W. A. Helsten. 2,438,473, Mar. 23.
Brake arrangement, Railway disc. C. E. Tack. 2,438,482, Mar. 23.
Brake device, Hill-holding. L. A. Dickens. 2,438,154, Mar. 23.
Brake shoe and head arrangement. C. E. Tack. 2,438,483, Mar. 23.
Brassière. E. W. Gluckin. 2,438,210, Mar. 23.
Broaching machine, Button. J. Friedman. 2,438,363, Mar. 23.
Bulk filament into staples, Method and apparatus for converting. R. C. Wilkie. 2,438,469, Mar. 23.
Burglar alarm. E. C. Heard. 2,438,167, Mar. 23.
Burner valve device. J. Maynard. 2,438,447, Mar. 23.
C-p-aminobenzenesulfonamido-substituted thiazolines and their production. W. A. Lott and F. H. Bergeim. 2,438,177, Mar. 23.
Cabinet: *See*—
Knockdown sheet metal Television cabinet.
cabinet.
Cabinet and making the same, Sheet metal. R. C. Barler and J. H. Yoder. 2,438,108, Mar. 23.
Cable: *See*—
Coaxial cable.
Transmission cable.
Calculator. A. J. R. Schumaker. 2,438,458, Mar. 23.
Calibration of cathode-ray oscillographs. G. J. Scoles and C. W. Miller. 2,438,420, Mar. 23.
Cam, Adjustable. F. D. Burns. 2,438,202, Mar. 23.
Can and can-opener and nipple attachment, Infant's formula. W. Rells. 2,438,299, Mar. 23.
Canister. P. V. Di Cosmo and M. C. Ricciardi. 2,438,430, Mar. 23.
Cap assembly, Snuffer. E. Wedemeyer. 2,438,378, Mar. 23.
Carroting and drying of fur-bearing animal skins. R. E. Naumburg. 2,438,226, Mar. 23.
Castings on elongated mountings, Forming and arranging. L. H. Morin. 2,438,348, Mar. 23.
Catalytic conversion of hydrocarbons. C. W. Tyson, H. G. M. Fischer, and E. V. Murphree. 2,438,467, Mar. 23.
Catalytic process for producing butadiene. L. U. Spence, D. J. Butterbaugh, and D. G. Kundiger. 2,438,464, Mar. 23.
Catalytic reactor. C. C. Watson. 2,438,242, Mar. 23.
Centrifugal compressor. F. Whittle. 2,438,426, Mar. 23.
Chart, Facial analysis. G. L. Henry. 2,438,246, Mar. 23.
Chemical catalytic conversion of hydrocarbon oils. C. E. Hemminger. 2,438,439, Mar. 23.
Chimney construction and fitting therefor. D. V. Meiller, J. D. Preble, and L. W. Tuttle. 2,438,411, Mar. 23.
Chute, Cattle-restraining. W. P. McDonough. 2,438,322, Mar. 23.
Cigarette case with reinforcing means, Flexible. J. A. Mace. 2,438,408, Mar. 23.
Circuit: *See*—
Electronic device circuit.
Clamping machine parts to beds. D. W. Strom. 2,438,235, Mar. 23.
Cleat, Wire. G. F. Dunkelberger and C. A. Schehl. 2,438,362, Mar. 23.
Clip for forming neckties. H. W. Morden. 2,438,295, Mar. 23.
Closure for fountain pens and the like. E. S. Schultz and C. D. Morton. 2,438,231, Mar. 23.
Clothesline reel. W. J. Thrower. 2,438,188, Mar. 23.
Clutch: *See*—
Axially engaging positive
clutch.
Clutch and brake construction, Magnetically actuated. W. P. Lear. 2,438,223, Mar. 23.
Clutch mechanism. J. J. Dugas. 2,438,157, Mar. 23.
Coated articles during drying, Handling. M. D. Swartz and K. N. Yellott. 2,438,135, Mar. 23.
Coaxial cable. L. H. Morin. 2,438,347, Mar. 23.
Coin receiving device. A. M. Gordon. 2,438,336, Mar. 23.
Collapsible container. T. Friedman. 2,438,434, Mar. 23.
Collar stay and necktie support. E. G. Pophal. 2,438,325, Mar. 23.
Computing device. A. W. Vance. 2,438,425, Mar. 23.
Conduit coupling. C. O. Morris. 2,438,412, Mar. 23.
Connector: *See*—
Disengageable electrical
circuit connector.
Container: *See*—
Collapsible container.
Control apparatus. E. G. Erson. 2,438,390, Mar. 23.
Control apparatus. E. C. Strong and L. M. Clark. 2,438,352, Mar. 23.
Control apparatus. R. T. Whitney. 2,438,427, Mar. 23.
Control device for airplanes. C. H. Zimmerman. 2,438,309, Mar. 23.
Control of swaging temperatures. J. H. Green. 2,438,160, Mar. 23.
Control valve device. A. A. Steinmiller. 2,438,423, Mar. 23.
Controller for motor-driven printing presses and other machines. C. P. Feldhausen and R. M. Lommen. 2,438,276, Mar. 23.

Controlling the flushing of urinals. J. H. Derby. 2,438,207, Mar. 23.
Controlling the growth and fattening rate of livestock and poultry and composition used in connection therewith. C. W. Turner and E. P. Reineke. 2,438,353, Mar. 23.
Conversion of fluid hydrocarbons, Method and apparatus for. E. Utterback. 2,438,261, Mar. 23.
Converting lactic acid to polylactic acid, Continuous process of. E. M. Filachione and C. H. Fisher. 2,438,208, Mar. 23.
Cooling and lubricating bearings, Method and apparatus for. R. A. Burkhart and W. M. Finlayson. 2,438,385, Mar. 23.
Cord support. F. E. Brown. 2,438,143, Mar. 23.
Coupling: *See*—
Conduit coupling. Pipe coupling.
Hose coupling.
Cover and receptacle for dry printing machines. W. Martin. 2,438,225, Mar. 23.
Cover on take-up roll for looms. E. Nassimbene. 2,438,296, Mar. 23.
Crude anthracene separation. B. B. Corson and R. S. Detrick. 2,438,148, Mar. 23.
Davenport, Bed. I. C. Poskin. 2,438,127, Mar. 23.
Dehydrogenation of 2,3-dimethylbutane. F. E. Frey. 2,438,315, Mar. 23.
d-Lysergic acid diethyl amide. A. Stoll and A. Hofmann. 2,438,259, Mar. 23.
Device for applying and distributing wax, oil and other like material to floors and like surfaces, Pad-mounting. J. E. Horn. 2,438,338, Mar. 23.
Device for making color prints. A. Simmon. 2,438,303, Mar. 23.
Device for trailers, Safety. C. F. Mooney. 2,438,346, Mar. 23.
Diamond tool dresser. D. W. Carter. 2,438,147, Mar. 23.
Diolefins from an olefinic feed stock, Removing. M. C. K. Jones and E. R. Retallliau. 2,438,444, Mar. 23.
Discharge device, Gaseous. F. Alexander. 2,438,356, Mar. 23.
Disengageable electrical circuit connector. R. C. Marholz. 2,438,371, Mar. 23.
Door structure for motor vehicles. A. W. Prance. 2,438,185, Mar. 23.
Drafting machine. L. Ketting. 2,438,220, Mar. 23.
Drive construction, Angle. C. A. Koza. 2,438,291, Mar. 23.
Dryer frame. A. W. Pfeffer. 2,438,324, Mar. 23.
Drying of microspherical gels. K. J. Nelson. 2,438,450. Mar. 23.
Drying of textile materials. J. W. Illingworth. 2,438,366, Mar. 23.
Egg tray for refrigerators. A. C. Jermyn. 2,438,443, Mar. 23.
Ejector, Pulp. R. O. Stokes. 2,438,258, Mar. 23.
Electric switch. J. A. Oppel. 2,438,373, Mar. 23.
Electric welding machine. H. G. Watkin. 2,438,262, Mar. 23.
Electrical translating materials and devices and making them. W. H. Brattain. 2,438,110, Mar. 23.
Electrocardiograph. A. J. Kizaur. 2,438,341, Mar. 23.
Electrode holder. J. D. Forney. 2,438,279, Mar. 23.
Electron discharge apparatus. D. L. Snow. 2,438,132, Mar. 23.
Electronic device circuit. G. B. Jacobs and O. I. Steigerwalt. 2,438,396, Mar. 23.
Electronic device, Vapor filled. J. J. Mason. 2,438,179, Mar. 23.
Electronic vehicle control apparatus. C. M. Hines. 2,438,394, Mar. 23.
Engine: *See*—
Free piston engine.
Engine fuel supply means. T. Pedersen. 2,438,251, Mar. 23.
Fabricating track laying vehicle shoes. C. E. Swenson. 2,438,424, Mar. 23.
Fastener applying tool. H. M. Laing. 2,438,174, Mar. 23.
Felt hardening machine. W. H. Kingston. 2,438,320, Mar. 23.
Film retainer. J. E. Huber. 2,438,286, Mar. 23.
Film-type resistor and manufacturing the same. D. W. Moore, Jr. 2,438,250, Mar. 23.
Finger, Signal staff holding. J. P. Dalton. 2,438,314, Mar. 23.
Fishing pole holder. H. G. Dolk. 2,438,388, Mar. 23.
Fishing reel. A. Hypnarowski. 2,438,287, Mar. 23.
Fitting, Pump discharge. R. G. Berry. 2,438,311, Mar. 23.
Flare tube ends and to prevent their rupture, Means to. W. L. Linker and J. R. Weishman. 2,438,292, Mar. 23.
Fluid pressure actuated motor. I. J. Snader and H. N. Seyferth. 2,438,463, Mar. 23.
Fluorescent and/or cathode glow lamp and method. C. Morehead and D. S. Gustin. 2,438,181, Mar. 23.
Fluorinated dibasic acids and preparing same. A. L. Henne. 2,438,484–5, Mar. 23.
Food processor gearing. A. Strauss, E. Feltman, M. M. Hunt, and W. D. Harbaugh. 2,438,465, Mar. 23.
Food tendering machine. H. C. Pfister. 2,438,184, Mar. 23.
Footwear. R. Maling. 2,438,321, Mar. 23.
Fountain fixture cooled by forced air circuit. E. E. Wilson. 2,438,355, Mar. 23.
Frame: *See*—
Dryer frame.
Free piston engine. H. G. Spier. 2,438,134, Mar. 23.
Freezing apparatus, Ice cube. R. E. Tobey. 2,438,466, Mar. 23.
Fuel, Diesel engine. R. T. Pollock. 2,438,452, Mar. 23.
Fuel injection pump. R. H. Sheppard. 2,438,190, Mar. 23.
Fuel supply control means for combustion apparatus. R. E. Fell and J. W. Miller. 2,438,275, Mar. 23.
Fuse setting mechanism. O. R. Haas. 2,438,165, Mar. 23.
Gage: *See*—
Internal bore gauge.
Garment provided with sleeves. R. Jamieson. 2,438,171, Mar. 23.
Garment, Waterproof outer. J. T. Callahan and J. A. Gilbertson. 2,438,429, Mar. 23.
Gauge: *See*—
Internal bore gauge.
Generator: *See*—
Oscillation generator.
Grids, Method and apparatus for winding. R. Denmark. 2,438,113, Mar. 23.
Grinding machine, Ball. H. A. Toulmin, Jr. 2,438,239, Mar. 23.
Grinding wheel. L. F. Carr. 2,438,203, Mar. 23.
Grip for insulators, Conductor. H. S. Sines. 2,438,233, Mar. 23.
Gun, Recoilless. W. B. Pope. 2,438,297, Mar. 23.
Gyroscope erection system. H. G. Hamilton. 2,438,213, Mar. 23.
Hanger: *See*—
Plate hanger.
Harvesting machine, Beet. L. B. Karaang. 2,438,289, Mar. 23.
Headband construction, Adjustable. R. L. Malcom. 2,438,409, Mar. 23.
Headlight and supporting means therefor. L. H. Washington. 2,438,196, Mar. 23.
Heater: *See*—
Pulverized fuel burning gas heater.
Heat-treatment of low grade coal, Method and apparatus for the. H. E. Becker. 2,438,199, Mar. 23.
Heating plant and furnace. J. A. Kreuser. 2,438,407, Mar. 23.
High-frequency radiation system. C. E. McClellan. 2,438,343, Mar. 23.
High-pressure modulator tube. C. M. Slack and C. E. Dawley. 2,438,191, Mar. 23.
Holder: *See*—
Electrode holder. Steel wool holder.
Fishing pole holder.
Hose coupling. W. C. Calcott. 2,438,472, Mar. 23.
Hose, Flexible metal. E. T. Candee and A. R. Anderson. 2,438,146, Mar. 23.
Hose storage reel. B. F. Souther. 2,438,306, Mar. 23.
Housing for suction cleaners, Split cylindrical. C. H. Sparklin. 2,438,133, Mar. 23.
Hydraulic press. S. J. Fazzio. 2,438,433, Mar. 23.
Hydraulic selector valve mechanism for hydraulic servomotors. S. H. Edge. 2,438,389, Mar. 23.
Hydrocarbon conversion. R. P. Russell, E. V. Murphree, and C. E. Hemminger. 2,438,456, Mar. 23.
Ice tray and grid arrangement. R. M. Storer. 2,438,260, Mar. 23.
Implement, Rotary groundworking. H. J. Seaman. 2,438,189, Mar. 23.
Index tab for printing devices. J. H. Gruver and C. J. Hueber. 2,438,282, Mar. 23.
Indicator: *See*—
Liquid level indicator.
Pendulously operated crank-timing indicator.
Inner piston ring. O. W. Haling. 2,438,163, Mar. 23.
Insecticide. A. H. Lewis. 2,438,370, Mar. 23.
Insulator. P. A. Schmidt. 2,438,419, Mar. 23.
Internal bore gauge. A. Eisele. 2,438,274, Mar. 23.
Internal-combustion engine piston. S. M. Zoromskis. 2,438,243, Mar. 23.
Isolation of oleandrin. A. I. Ryer and M. Frisch. 2,438,418, Mar. 23.
Isomerization of paraffinic hydrocarbons. E. E. Sensel, W. R. Smith, and A. R. Goldsby. 2,438,421, Mar. 23.
Jack: *See*—
Telescopic hydraulic jack.
Jig or fixture. J. F. Guest. 2,438,162, Mar. 23.
Joint: *See*—
Rotatably adjustable pipe joint.
Joint for high temperatures, Expansion. G. P. Bunn and H. J. Pankratz. 2,438,312, Mar. 23.
Jointed structure. M. H. Gallagher. 2,438,391, Mar. 23.
Ketone production. T. F. Doumani and J. F. Cuneo. 2,438,334, Mar. 23.
Knob, Fence. A. F. Toelke. 2,438,237, Mar. 23.
Knockdown sheet metal cabinet. R. Stevenson and I. Nadolsky. 2,438,257, Mar. 23.
Lactic acid composition. H. H. Schopmeyer. 2,438,326, Mar. 23.
Laminated sheet and composition for coating laminae. M. Jacobs. 2,438,339, Mar. 23.

Lead screw nut construction for lathes and the like. D. W. Strom. 2,438,236, Mar. 23.
Leakage fluid to a main fluid supply, System and means for returning. D. C. Gregg. 2,438,245, Mar. 23.
Leaks in electric cables containing fluid under pressure, Detecting. D. T. Hollingsworth. 2,438,441, Mar. 23.
Leveling screw, Dustproof. W. Patrosio and W. Ferber. 2,438,479, Mar. 23.
Lifting device. J. M. J. Riboud. 2,438,415, Mar. 23.
Lighting control and indication system, Airport. W. T. Powell. 2,438,453, Mar. 23.
Linkage, Tire chain. H. Madison. 2,438,248, Mar. 23.
Liquid elevating apparatus. J. C. Reed. 2,438,298, Mar. 23.
Liquid level indicator. L. B. Winton. 2,438,330, Mar. 23.
Lock: *See*—
Motor vehicle door lock.
Lock and key, Combined. J. Gagnon. 2,438,435, Mar. 23.
Locking device for sucker rod couplings, Safety. C. E. Burton. 2,438,313, Mar. 23.
Lockup one-way torsional force exerting device. O. H. Banker. 2,438,381, Mar. 23.
Low-pressure tire signal. H. G. Renner. 2,438,413, Mar. 23.
Lubricant and hydraulic fluid composition. H. L. Leland. 2,438,446, Mar. 23.
Lubrication adapter. F. C. Poyner. 2,438,128, Mar. 23.
Machine for grinding tooth flanks by means of profile generating discs. A. Aeppli. 2,438,138, Mar. 23.
Machine for picking cotton. J. H., J. C., and L. H. Hamner. 2,438,393, Mar. 23.
Magnetometer, Precision. L. I. Mendelsohn. 2,438,372, Mar. 23.
Magnetron. H. L. Steele, Jr., and J. W. McNall. 2,438,194, Mar. 23.
Manifolds for engines, Making. H. Caminez. 2,438,145, Mar. 23.
Manometer. R. A. Osten. 2,438,228, Mar. 23.
Manufacture of detergents. L. F. Hoyt. 2,438,169, Mar. 23.
Manufacture of sutures. T. R. Selby and L. L. Campbell. 2,438,131, Mar. 23.
Mast, Oil well. R. E. and R. E. Fife, Jr. 2,438,277, Mar. 23.
Measuring instruments. J. E. Coates. 2,438,205, Mar. 23.
Mechanism for conveying, discharging, and assorting wrapped articles. C. J. Malhiot. 2,438,178, Mar. 23.
Mercury pool electronic device. E. G. F. Arnott. 2,438,139, Mar. 23.
Metallation of beta-keto esters. V. H. Wallingford and A. H. Homeyer. 2,438,241, Mar. 23.
Metered spraying device for mixed liquids. R. B. Smith. 2,438,462, Mar. 23.
Molding machine. L. L. Johnston. 2,438,218, Mar. 23.
Motion-transmitting unit. A. G. Parker. 2,438,182, Mar. 23.
Motor: *See*—
Fluid pressure actuated motor.
Motor vehicle door lock. G. Tonkin. 2,438,238, Mar. 23.
Mounting: *See*—
Torsion spring mounting.
Tractor fifth wheel mounting.
Mounting arrangement for electrical equipment. T. C. Riebe. 2,438,454, Mar. 23.
N,N'-Bis(3-diethylaminopropylamide) of dibasic aliphatic acids. L. C. Behr and R. S. Schreiber. 2,438,200, Mar. 23.
Nitration apparatus. J. B. Castner. 2,438,204, Mar. 23.
Nonmetallic mine. J. J. Taylor and P. M. Ross. 2,438,307, Mar. 23.
Oil composition. J. I. Wasson and C. J. Wilson. 2,438,468, Mar. 23.
Oil composition, Cutting. J. C. Showalter. 2,438,461, Mar. 23.
Opener, Bobby pin. A. M. Johnson. 2,438,172, Mar. 23.
Opener, Can. G. R. Squires. 2,438,376, Mar. 23.
Oscillation generation control. P. D. Gerber. 2,438,392, Mar. 23.
Oscillation generator. L. W. Born. 2,438,382, Mar. 23.
Oscillatory system, Phase-selective variable-frequency. H. A. Wheeler. 2,438,197, Mar. 23.
Oven, Crystal. A. E. Miller. 2,438,345, Mar. 23.
Pad for gun stocks, Air cushion. W. H. Brower. 2,438,142, Mar. 23.
Paddle target unit for ball games. D. S. Alves. 2,438,263, Mar. 23.
Pendulously operated crank timing indicator. E. A. Price. 2,438,229, Mar. 23.
Periodic stray signals from seismic signals, Elimination of. C. H. Johnson. 2,438,217, Mar. 23.
Peroral penicillin compositions. H. E. Alburn, J. Charney, and F. W. Bernhart. 2,438,106, Mar. 23.
Phonograph driving mechanism. J. Bender, Jr. 2,438,264, Mar. 23.
Photometric apparatus giving readings invariant with azimuth on polarizing samples. E. I. Stearns, Jr., and G. L. Buc. 2,438,422, Mar. 23.
Pile materials and production thereof. F. G. Dodge. 2,438,156, Mar. 23.
Pipe coupling. D. R. Babbitt. 2,438,107, Mar. 23.
Piston and seal. B. Dick. 2,438,153, Mar. 23.
Plant thinning machine. L. A. Marihart. 2,438,224, Mar. 23.
Plastic and metal building construction, Combination. C. I. Auten. 2,438,140, Mar. 23.
Plate hanger. R. Graves. 2,438,436, Mar. 23.
Plate, Heel-seating. H. V. Shirling. 2,438,253, Mar. 23.
Polymerization of olefinic hydrocarbons, Low temperature. H. L. Johnson. 2,438,340, Mar. 23.
Position indicator for cylinder doors. A. Matthews. 2,438,294, Mar. 23.
Power regulator. N. Rochester. 2,438,486, Mar. 23.
Power take-off. C. D. Peterson and E. J. Barth. 2,438,183, Mar. 23.
Preheating and vaporization of fuel for internal-combustion reaction motors. H. Knudsen. 2,438,247, Mar. 23.
Preparation of cyclopentadiene. R. M. Kennedy. 2,438,398, Mar. 23.
Preparation of cyclopentadiene. S. J. Hetzel and R. M. Kennedy. 2,438,400, Mar. 23.
Preparation of cyclopentadiene. R. M. Kennedy and S. J. Hetzel. 2,438,399, Mar. 23.
Preparation of cyclopentadiene. R. M. Kennedy and S. J. Hetzel. 2,438,401–3; Mar. 23.
Press: *See*—
Hydraulic press.
Processing plastic sheets. S. Gordon. 2,438,281, Mar. 23.
Producing face clutches. E. Wildhaber. 2,438,329, Mar. 23.
Production of aqueous sols of hydrous oxides. J. W. Ryznar. 2,438,230, Mar. 23.
Production of catalysts. R. C. Archibald, B. S. Greensfelder, and F. T. Eggertsen. 2,438,379, Mar. 23.
Production of dicarboxylic acids or anhydrides thereof. I. E. Levine. 2,438,369, Mar. 23.
Production of gasproof compound fabrics. L. A. Lantz and A. Schofield. 2,438,176, Mar. 23.
Production of methacrylic acid. G. A. Harrington and E. Gorin. 2,438,164, Mar. 23.
Production of 1,2-disubstituted 3-cyanoguanidines. H. Z. Lecher, R. P. Parker, and R. S. Long. 2,438,124, Mar. 23.
Projection light source for photographic devices. R. C. Johnston. 2,438,219, Mar. 23.
Projector adapter for showing still pictures, Motion picture. J. E. Dickman. 2,438,333, Mar. 23.
Protector: *See*—
Stocking heel protector.
Waterproof hosiery protector.
Protector and means thereon for holding the same in place, Bunion. M. B. Goldbaum. 2,438,364, Mar. 23.
Puller and cutter, Rivet stem. C. R. Buchet. 2,438,201, Mar. 23.
Pulverized fuel burning gas heater. R. Ruegg. 2,438,416. Mar. 23.
Pump: *See*—
Fuel injection pump.
Pump. H. E. Adams. 2,438,104, Mar. 23.
Pump. A. P. Colaiaco. 2,438,387, Mar. 23.
Pump. D. L. Hopper. 2,438,395, Mar. 23.
Pump with differential impeller control. R. G. Holt. 2,438,442, Mar. 23.
Purification of acetic acid by azeotropic distillation. L. E. Schniepp. 2,438,300, Mar. 23.
Purification of hydrogen peroxide by a nonconcentrating distillation. C. N. Richardson. 2,438,252, Mar. 23.
Purification of vinyl halide and vinylidene halide polymers. G. W. Stanton. 2,438,480, Mar. 23.
Purifying benzene. W. O. Keeling. 2,438,368, Mar. 23.
Railway car axle and journal box assembly, Roller bearing R. E. Horger. 2,438,214, Mar. 23.
Reaction product of gramicidin and formaldehyde and production. H. L. Fraenkel-Conrat, H. Humfeld, J. C Lewis, K. P. Dimick, and H. S. Olcott. 2,438,209, Mar. 23.
Recorder, Ship's telegraph. H. J. Callahan. 2,438,331, Mar. 23.
Reel: *See*—
Clothesline reel. Hose storage reel.
Fishing reel.
Refrigerating apparatus of the intermittent absorption or adsorption type. Nils Erland af Kleen. 2,438,105 Mar. 23.
Refrigeration construction. J. H. Dennedy. 2,438,114 Mar. 23.
Regulator: *See*—
Amplitude controlled current regulator. Power regulator.
Reversible clutching mechanism. A. H. Jessen. 2,438,216 Mar. 23.
Ring: *See*—
Inner piston ring.
Rods, Straightening. A. J. Trudeau. 2,438,240, Mar. 23.
Roller exercising machine. F. R. Mattison. 2,438,249, Mar. 23.
Rotatably adjustable pipe joint. C. H. Stewart. 2,438,234, Mar. 23.
Rotor for vibrator units. W. P. Day. 2,438,206, Mar. 23.
Rule and compass, Combination. L. J. Gordon. 2,438,337, Mar. 23.
Saw blade planishing machine. P. Senard. 2,438,460, Mar. 23.

Scaffolding unit, Portable and collapsible. W. J. S. Johnson and T. H. Harvey. 2,438,173, Mar. 23.
Scavenger roll mechanism. J. A. Koolstra. 2,438,290, Mar. 23.
Screening means for vacuum electric tube devices. J. M. Dodds and J. H. Ludlow. 2,438,115, Mar. 23.
Seal for stoves, Charging. R. D. Lambert and C. L. Bailey. 2,438,123, Mar. 23.
Seal, Regulator stem. J. J. Delany. 2,438,360, Mar. 23.
Seal, Shaft. A. G. Schlosser. 2,438,457, Mar. 23.
Selective control device, Manually operative. H. C. May. 2,438,410, Mar. 23.
Separation of diolefins and contaminating hydrocarbons from rich ammoniacal aqueous solutions. I. D. Hall. 2,438,437, Mar. 23.
Separation of liquid emulsions. M. Biazzi. 2,438,244, Mar. 23.
Servo actuator. A. Gabriel. 2,438,317, Mar. 23.
Servo-motor, Pressure fluid follow-up. A. Gabriel. 2,438,316, Mar. 23.
Sewing machine. H. Sebell. 2,438,459, Mar. 23.
Shoe antiskid device. W. Smith. 2,438,193, Mar. 23.
Signal: *See*—
  Low-pressure tire signal.
Signal and volume control for miniature radio ranges, Mechanical. C. W. Muller. 2,438,126, Mar. 23.
Silicones and product thereof, Preparing. J. F. Hyde. 2,438,478, Mar. 23.
Slicing device with a vertically reciprocating cutter. C. L. Slingerland. 2,438,304, Mar. 23.
Slip ring cutting machine. L. T. Schuler. 2,438,130, Mar. 23.
Soaking, freezing, and drying by sublimation of untanned hides. W. M. Cutler. 2,438,150, Mar. 23.
Sounding device. C. J. Clarke. 2,438,332, Mar. 23.
Spool for fishing reels. S. G. Hirsch. 2,438,440, Mar. 23.
Spectrographic pin stand. E. J. Dunn. 2,438,158, Mar. 23.
Spraying apparatus. A. P. Ball. 2,438,471, Mar. 23.
Spreader, Concrete. J. P. Faber. 2,438,159, Mar. 23.
Stabilization of oxidized aromatic hydrocarbons. E. J. Lorand and J. E. Reese. 2,438,125, Mar. 23.
Stabilization of shell eggs. W. R. and G. M. Hearst. 2,438,168, Mar. 23.
Stains, Making ceramic. J. A. Earl. 2,438,335, Mar. 23.
Stand: *See*—
  Spectrographic pin stand.
Static eliminator for radio receiving sets. D. A. Dance. 2,438,272, Mar. 23.
Steam joint supporting structure. S. M. Bratton. 2,438,141, Mar. 23.
Steel, Graphitic. F. R. Bonte. 2,438,267, Mar. 23.
Steel wool holder. A. A. De Semple. 2,438,152, Mar. 23.
Stocking heel protector. F. L. Galley. 2,438,280, Mar. 23.
Stool, Combination ladder. D. Greene. 2,438,212, Mar. 23.
Stool, Toilet. A. M. Broudy. 2,438,384, Mar. 23.
Stop means for textile apparatus and the like. C. A. Hepp and P. Schoenster. 2,438,365, Mar. 23.
Stopper. F. A. Cutter and W. F. Butler. 2,438,149, Mar. 23.
Strainer, Percolator bowl. M. Simcich. 2,438,302, Mar. 23.
Stylus for sound reproduction. R. H. Campbell. 2,438,111, Mar. 23.
Surgical brace. B. A. Bunyar, Jr. 2,438,144, Mar. 23.
Support: *See*—
  Collar stay and necktie support. Cord support.
Switch: *See*—
  Electric switch. Unshorting switch.
  Time-delay switch.
Switching system. L. Hegy. 2,438,283, Mar. 23.
Synthesis of hydrocarbons and oxygenated compounds. M. A. Mosesman. 2,438,449, Mar. 23.
Tag printing machine. E. W. and C. A. Flood. 2,438,118, Mar. 23.
Telescopic hydraulic jack. R. Houldsworth. 2,438,285, Mar. 23.
Television cabinet. J. I. Stein. 2,438,256, Mar. 23.
Television receiver circuits and apparatus. R. G. Clapp. 2,438,359, Mar. 23.
Television system, Color. J. A. Buckbee. 2,438,269, Mar. 23.
Temperature control device. F. D. Bennett and T. A. Newkirk. 2,438,109, Mar. 23.
Temperature control for engines. H. R. Greenlee. 2,438,161, Mar. 23.
Tender and water scoop, Locomotive. C. F. Kantola. 2,438,397, Mar. 23.
Tension device. H. J. McDermott. 2,438,180, Mar. 23.
Test probe. W. C. Reichard. 2,438,350, Mar. 23.
Textile materials composed of or containing animal fibres, Finishing. J. B. Speakman and E. Whewell. 2,438,328, Mar. 23.
Time-delay switch. R. D. Randall. 2,438,186, Mar. 23.
Toaster and boiler, Radiant gas. H. B. Wilson. 2,438,470, Mar. 23.
Tool: *See*—
  Fastener applying tool.
Tool for applying fuse links to fused cutouts. D. C. Hubbard. 2,438,121, Mar. 23.
Toothbrush, Flexible bristle head. L. R. Bressler. 2,438,268, Mar. 23.
Torch, Gas heating. H. G. Hughey. 2,438,170, Mar. 23.
Torsion spring mounting. S. H. Edwards. 2,438,432, Mar. 23.
Traction reducer. J. M. J. Riboud. 2,438,414, Mar. 23.
Tractor fifth wheel mounting. E. L. Miller. 2,438,323, Mar. 23.
Translating system, Magnetic sound. W. P. Lear. 2,438,222, Mar. 23.
Transmission cable. C. A. Arens. 2,438,380, Mar. 23.
Transmission operating device and interlock. D. Roeder and H. L. Brock. 2,438,455, Mar. 23.
Transmitter-receiver switching system. J. E. Keister. 2,438,367, Mar. 23.
Transmitter tuning and antenna switching arrangements, Unicontrolled. J. M. Dodds and J. H. Ludlow. 2,438,116, Mar. 23.
Transmitter, Vane type. H. Konet. 2,438,406, Mar. 23.
Treatment of hydrocarbons. S. J. Hetzel and R. M. Kennedy. 2,438,404, Mar. 23.
Treatment of polyalkyl aromatics. V. N. Ipatieff and L. Schmerling. 2,438,215, Mar. 23.
Truck, Mixing and self-unloading farm. J. A. Schulte. 2,438,301, Mar. 23.
Tube: *See*—
  High-pressure modulator tube.
Tubular package forming and filling method and apparatus. J. J. Barnett. 2,438,198, Mar. 23.
Tuner for ultra high frequency transmitters, Multirange. J. M. Dodds and J. H. Ludlow. 2,438,474–5, Mar. 23.
Tuning circuit for radio transmitters. J. M. Dodds and J. H. Ludlow. 2,438,477, Mar. 23.
Tuning radio frequency generators, Multirange. J. M. Dodds and J. H. Ludlow. 2,438,476, Mar. 23.
Turbodrive, Double rotation. D. J. Bloomberg. 2,438,357, Mar. 23.
Two-speed drive for phonograph turntables. C. E. Ewing. 2,438,266, Mar. 23.
Two-speed phonograph turntable drive. R. G. Metzner. 2,438,265, Mar. 23.
Undergarment. E. J. Ashe and O. E. Webber. 2,438,310, Mar. 23.
Unshorting switch. R. B. Brode. 2,438,383, Mar. 23.
Valve for depth charge firing mechanisms. W. B. Ellwood. 2,438,117, Mar. 23.
Vapor disseminator. H. R. Rich. 2,438,129, Mar. 23.
Vehicle wheel. H. J. Horn. 2,438,284, Mar. 23.
Ventilator, Roof. H. B. Hawes. 2,438,166, Mar. 23.
Wall construction. R. E. Birdsall. 2,438,428, Mar. 23.
Washing machine, Wobble basket. J. A. Eastes. 2,438,273, Mar. 23.
Waterproof hosiery protector. E. Wheaton. 2,438,308, Mar. 23.
Wave transmission. A. G. Fox. 2,438,119, Mar. 23.
Welding metal bodies by high-frequency electric heating of dielectric material therebetween. I. M. Diller. 2,438,155, Mar. 23.
Wheel: *See*—
  Grinding wheel.
  Vehicle wheel.
Wheel gauge for vehicles. B. Castiglia. 2,438,358, Mar. 23.
Window for cooking range oven doors. M. F. Cotes. 2,438,270, Mar. 23.
Wing lift control for aircraft. E. A. Stalker. 2,438,255, Mar. 23.
Wire twisting machine, Florist's. T. E. Reynolds and E. Fyffe. 2,438,187, Mar. 23.

CLASSIFICATION OF PATENTS

ISSUED MARCH 23, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

1— 3: 2,438,361

Condition of Applications Under Examination at Close of Business Mar. 5, 1948

(Total number of applications awaiting action, exeluding Trade-Mark Division, 152,914; Trade-Mark Division, 33,539. Oldest new case, Apr. 2, 1946; oldest amended, Feb. 19, 1946.)

DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting office action: New	Amended	Applications awaiting action
1. GOLDBERG, A. J., Food Apparatus; Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons, Sewerage.	June 12	June 29	3,621
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Bee Culture; Dairy; Animal Husbandry; Presses; Tobacco; Textile Wringers; Butchering.	Apr. 19	Mar. 14	4,088
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	†June 2	Nov. 27	1,520
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	July 20	July 1	4,097
5. ROBINSON, C. W., Harvesters; Acoustics; Sound Recording; Knotters	Apr. 3	Apr. 11	1,876
6. SURLE, H., Carbon Chemistry (part)	†May 15	†Feb. 12	1,833
7. HANLIN, GEORGE, Optics; Photographic Apparatus	†May 22	†Jan. 27	1,790
8. IMUS, A. E., Furniture; Racks and Cabinets	June 4	May 13	4,058
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	July 31	Apr. 16	2,371
10. ANDRUS, L. M., Radiant Energy (part, e.g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	†Apr. 7	Dec. 30	1,376
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	†June 17	†June 20	825
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	†May 13	June 20	2,094
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	May 21	Apr. 22	2,471
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	†Mar. 31	†Jan. 27	1,200
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	Sept. 9	Apr. 25	1,941
16. LOVEWELL, N. N., Telegraphy, Telephony	†June 2	Oct. 11	1,862
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	Sept. 7	May 9	1,861
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	Aug. 28	Apr. 12	1,744
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	Aug. 16	Aug. 9	1,897
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	July 10	July 26	2,089
21. MADER, R. C., Textiles	†Apr. 23	†Feb. 26	1,187
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	Aug. 26	July 8	1,903
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	June 25	May 28	1,822
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	†May 7	†May 12	1,877
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	†Feb. 7	June 14	1,741
26. YOUNG, R. R., Electricity—Generation and Motive Power	†Feb. 3	June 10	1,488
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush; Broom and Mop Making.	Sept. 13	Aug. 30	3,052
28. SOLYOM, H. L., Heating; Metallurgical Apparatus; Internal-Combustion Engines (part); Cylinders; Pistons.	Dec. 20	Oct. 25	1,215
29. SHKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools.	Oct. 10	June 21	2,954
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Illumination; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	†Mar. 12	Aug. 5	2,407
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	†May 22	†June 2	2,139
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	June 28	May 3	2,874
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	May 25	Apr. 22	3,434
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators	July 19	May 15	1,343
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	Aug. 10	July 16	2,662
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	May 10	Apr. 12	2,017
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	†Apr. 15	Oct. 18	1,499
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	Oct. 10	Sept. 12	1,704
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	Apr. 26	Apr. 1	2,848
40. DRUMMOND, E. J., Receptacles (part); Packages	†Feb. 3	Aug. 13	3,018
41. HERTZ, M., Recorders; Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	May 4	Apr. 2	2,720
42. MARANS, H., Electric Signaling; Variable Transformer and Reactor Structure; Electricity, Voltage Magnitude and Phase Control Systems.	†June 7	†June 10	878
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	†May 24	†May 23	1,455
44. HARVEY, L. P., Refrigeration; Preserving	Apr. 2	Apr. 20	1,315
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Land Vehicles (part); Spring, Weight and Horsepower Motors.	June 6	May 9	2,828
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	Aug. 2	June 4	1,864

Note.—The dates given are 1946 except where † indicates 1947.

(Total number of applications awaiting action, excluding Trade-Mark Division, 152,914; Trade-Mark Division, 33,539. Oldest new case, Apr. 2, 1946; oldest amended, Feb. 19, 1946.)

DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting office action: New	Amended	Applications awaiting action
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	†Apr. 17	Nov. 15	1,909
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	Aug. 26	July 31	1,564
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	†Jan. 24	July 15	1,536
50. LEVIN, SAMUEL, Synthetic Resins	†May 29	Nov. 1	2,334
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	†Apr. 25	Sept. 16	1,817
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	†Mar. 5	July 25	3,853
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter; Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	July 22	Mar. 14	3,659
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	†May 1	Nov. 6	1,863
55. BOWEN, S. T., Artificial Body Members; Dentistry; Surgery; Toilet	Nov. 13	Apr. 5	1,820
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Acetylene; Gas Mixing	†May 6	†Mar. 21	1,151
57. NICOLSON, G. D., Toys; Amusement and Exercising Devices; Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Jewelry; Nut and Bolt Locks.	July 5	May 3	3,605
58. DOWELL, E. F., Abrading; Bottles and Jars; Stone Working; Making Metal Tools and Implements	†Apr. 2	Sept. 14	1,342
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part).	July 12	June 5	2,087
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	†May 14	Nov. 8	1,482

DECISIONS IN PATENT AND TRADE-MARK CASES

Supreme Court of the United States

FUNK BROTHERS SEED COMPANY

v.

KALO INOCULANT COMPANY

No. 280. Decided February 16, 1948

[—U. S. —; 76 USPQ 280]

1. PATENTS — PRODUCTS — MIXED CULTURES—DISCOVERY OF LAW OF NATURE—SEC. 4886 R. S. CONSTRUED.
Where the patentee did not create a state of inhibition or of non-inhibition in the mixed culture defined in the patent claims, but merely discovered that certain strains of each species of these bacteria can be mixed without harmful effect to the properties of either, which is a discovery of their qualities of non-inhibition, *Held* that it is no more than the discovery of some of the handiwork of nature and hence is not patentable.

2. SAME—SAME—SAME—SAME—SAME.
He who discovers a hitherto unknown phenomenon of nature has no claim to a monopoly of it which the law recognizes. If there is to be invention from such a discovery, it must come from the application of the law of nature to a new and useful end.

3. SAME—SAME—SAME—AGGREGATION.
The aggregation of select strains of the several species into one product, wherein each of the species infects the same group of plants which it always infected, wherein no species acquires a different use, wherein the combination of species produces no new bacteria, no change in the six species of bacteria and no enlargement of the range of their utility, wherein each species has the same effect it always had, and wherein their use in combination does not improve in any way their natural functioning, *Held* that that aggregation of species fall short of invention within the meaning of the patent statutes.

4. SAME—SAME—SAME—SAME.
Though there is an advantage in the combination, *Held* that a product must be more than new and useful to be patented; it must also satisfy the requirements of invention or discovery.

5. SAME—SAME—SAME—SEC. 4886 R. S. CONSTRUED.
Product claims defining a plurality of selected mutually non-inhibitive strains of different species of bacteria of the genus Rhizobium *Held* not within the meaning of invention or discovery of the patent statutes.

ON WRIT of certiorari to the United States Circuit Court of Appeals for the Seventh Circuit.

REVERSED.

H. A. Toulmin, Jr. (*D. C. Staley* of counsel) for Funk.

J. Bernhard Thiess (*Sidney Neuman* and *M. Hudson Rathburn*, of counsel) for Kalo.

MR. JUSTICE DOUGLAS delivered the opinion of the Court.

This is a patent infringement suit brought by respondent. The charge of infringement is limited to certain product claims[1] of Patent No. 2,200,532 issued to Bond on May 14, 1940. Petitioner filed a counterclaim asking for a declaratory judgment that the entire patent be adjudged invalid.[2] The district court held the product claims invalid for want of invention and dismissed the complaint. It also dismissed the counterclaim. Both parties appealed. The circuit court of appeals reversed, holding that the product claims were valid and infringed and that the counterclaim should not have been dismissed. 161 F.2d 981. The question of validity is the only question presented by this petition for certiorari.

Through some mysterious process leguminous plants are able to take nitrogen from the air and fix it in the plant for conversion to organic nitrogenous compounds. The ability of these plants to fix nitrogen from the air depends on the presence of bacteria of the genus Rhizobium which infect the roots of the plant and form nodules on them. These root-nodule bacteria of the genus Rhizobium fall into at least six species. No one species will infect the roots of all species of leguminous plants. But each will infect well-defined groups of those plants.[3] Each species of root-nodule bacteria is made up of distinct strains which vary in efficiency. Methods of selecting the strong strains and of producing a bacterial culture from them have long been known. The bacteria produced by the laboratory methods of culture are placed in a powder or liquid base and packaged for sale to and use by agriculturists in the inoculation of the seeds of leguminous plants. This also has long been well known.

It was the general practice, prior to the Bond patent, to manufacture and sell inoculants containing only one species of root-nodule bacteria. The inoculant could therefore be used successfully only in plants of the particular cross-inoculation group

[1] The product claims in suit are 1, 3, 4, 5, 6, 7, 8, 12, and 14. Claim 4 is illustrative of the invention which is challenged. It reads as follows:
"An inoculant for leguminous plants comprising a plurality of selected mutually non-inhibitive strains of different species of bacteria of the genus Rhizobium, said strains being unaffected by each other in respect to their ability to fix nitrogen in the leguminous plant for which they are specific."

[2] The patent also contains process claims.

[3] The six well-recognized species of bacteria and the corresponding groups (cross-inoculation groups) of leguminous plants are:

Rhizobium trifolii	Red clover, crimson clover, mammoth clover, alsike clover
Rhizobium meliloti	Alfalfa, white or yellow sweet clovers
Rhizobium phaseoli	Garden beans
Rhizobium leguminosarum	Garden peas and vetch
Rhizobium lupini	Lupines
Rhizobium japonicum	Soy beans

corresponding to this species. Thus if a farmer had crops of clover, alfalfa, and soy beans he would have to use three separate inoculants.[4] There had been a few mixed cultures for field legumes. But they had proved generally unsatisfactory because the different species of the Rhizobia bacteria produced an inhibitory effect on each other when mixed in a common base, with the result that their efficiency was reduced. Hence it had been assumed that the different species were mutually inhibitive. Bond discovered that there are strains of each species of root-nodule bacteria which do not exert a mutually inhibitive effect on each other. He also ascertained that those mutually non-inhibitive strains can, by certain methods of selection and testing, be isolated and used in mixed cultures. Thus he provided a mixed culture of Rhizobia capable of inoculating the seeds of plants belonging to several cross-inoculation groups. It is the product claims which disclose that mixed culture that the circuit court of appeals has held valid.

[1] We do not have presented the question whether the methods of selecting and testing the non-inhibitive strains are patentable. We have here only product claims. Bond does not create a state of inhibition or of non-inhibition in the bacteria. Their qualities are the work of nature. Those qualities are of course not patentable. For patents cannot issue for the discovery of the phenomena of nature. See *Le Roy* v. *Tatham*, 14 How. 156, 175. The qualities of these bacteria, like the heat of the sun, electricity, or the qualities of metals, are part of the storehouse of knowledge of all men. They are manifestations of laws of nature, free to all men and reserved exclusively to none. He who discovers a hitherto unknown phenomenon of nature has no claim to a monopoly of it which the law recognizes. [2] If there is to be invention from such a discovery, it must come from the application of the law of nature to a new and useful end. See *Telephone Cases*, 126 U. S. 1, 532–533, 43 O. G. 377; *De Forest Radio Co.* v. *General Electric Co.*, 283 U. S. 664, 684–685, 408 O. G. 283; *Mackay Radio & Tel. Co.* v. *Radio Corp.*, 306 U. S. 86, 94, 501 O. G. 567; *Cameron Septic Tank Co.* v. *Saratoga Springs*, 159 F. 453, 462–463, 187 O. G. 232. The circuit court of appeals thought that Bond did much more than discover a law of nature, since he made a new and different composition of non-inhibitive strains which contributed utility and economy to the manufacture and distribution of commercial inoculants. But we think that that aggregation of species fell short of invention within the meaning of the patent statutes.

[3] Discovery of the fact that certain strains of each species of these bacteria can be mixed without harmful effect to the properties of either is a discovery of their qualities of non-inhibition. It is no more than the discovery of some of the handiwork of nature and hence is not patentable. The aggregation of select strains of the several species into one product is an application of that newly-discovered natural principle. But however ingenious the discovery of that natural principle may have been, the application of it is hardly more than an advance in the packaging of the inoculants. Each of the species of root-nodule bacteria contained in the package infects the same group of leguminous plants which it always infected. No species acquires a different use. The combination of species produces no new bacteria, no change in the six species of bacteria, and no enlargement of the range of their utility. Each species has the same effect it always had. The bacteria perform in their natural way. Their use in combination does not improve in any way their natural functioning. They serve the ends nature originally provided and act quite independently of any effort of the patentee.

[4] There is, of course, an advantage in the combination. The farmer need not buy six different packages for six different crops. He can buy one package and use it for any or all of his crops of leguminous plants. And, as respondent says, the packages of mixed inoculants also hold advantages for the dealers and manufacturers by reducing inventory problems and the like. But a product must be more than new and useful to be patented; it must also satisfy the requirements of invention or discovery. *Cuno Engineering Corp.* v. *Automatic Devices Corp.*, 314 U. S. 84, 90, 91, 534 O. G. 699, and cases cited; 35 U. S. C. § 31, R. S. § 4886. The application of this newly-discovered natural principle to the problem of packaging of inoculants may well have been an important commercial advance. But once nature's secret of the non-inhibitive quality of certain strains of the species of Rhizobium was discovered, the state of the art made the production of a mixed inoculant a simple step. Even though it may have been the product of skill, it certainly was not the product of invention. There is no way in which we could call it such unless we borrowed invention from the discovery of the natural principle itself. That is to say, there is no invention here unless the discovery that certain strains of the several species of these bacteria are non-inhibitive and may thus be safely mixed is invention. But we cannot so hold without allowing a patent to issue on one of the ancient secrets of nature now disclosed. All that remains, therefore, are advantages of the mixed inoculants themselves. They are not enough.

[5] Since we conclude that the product claims do not disclose an invention or discovery within the meaning of the patent statutes, we do not consider whether the other statutory requirements contained in 35 U. S. C. § 31, R. S. § 4886, are satisfied.

REVERSED.

MR. JUSTICE FRANKFURTER (*concurring*):

My understanding of Bond's contribution is that prior to his attempts, packages of mixed cultures of inoculants presumably applicable to two or more different kinds of legumes had from time to time been prepared, but had met with indifferent success. The reasons for failure were not understood, but the authorities had concluded that in general pure culture inoculants were alone reliable because mixtures were ineffective due to the mutual inhibition of the combined strains of bacteria. Bond concluded that there might be special strains which lacked this mutual inhibition, or were at all events mutually compatible. Using techniques that had previously been developed to test efficiency in promoting nitrogen fixation of various bacterial strains, Bond tested such efficiency of various mixtures of strains. He confirmed his notion that some strains were mutually compatible by finding that mixtures of these compatible strains gave good nitrogen fixation in two or more different kinds of legumes, while other mixtures of certain other strains proved mutually incompatible.

If this is a correct analysis of Bond's endeavors two different claims of originality are involved: (1) the idea that there are compatible strains, and (2) the experimental demonstration that there were in fact some compatible strains. Insofar as the court below concluded that the packaging of a particular mixture of compatible strains is an invention and as such patentable, I agree, provided not only that a new and useful property results from their combination, but also that the particular strains are identifiable and adequately identified. I do not find that Bond's combination of strains satisfies these requirements. The strains by which Bond secured compatability are not identified and are identifiable only by their compatability.

Unless I misconceive the record, Bond makes no claim that Funk Brothers used the same combination of strains that he had found mutually compatible. He appears to claim that since he was the originator of the idea that there might be mutually compatible strains and had practically demonstrated that some such strains exist, everyone else is forbidden to use a combination of strains whether they are or are not identical with the combinations that Bond selected and packaged together. It was this claim that, as I understand it, the district court found not to be patentable, but which, if valid, had been infringed.

The circuit court of appeals defined the claims to "cover a composite culture in which are included a plurality of species of bacteria belonging to the general Rhizobium genus, carried in a conventional base." 161 F.2d 981, 983. But the phrase "the claims cover a composite culture" might mean "a particular composite culture" or "any composite culture." The circuit court of appeals seems to me to have proceeded on the assumption that only "a particular composite culture" was devised and patented by Bond, and then applies it to "any composite culture" arrived at by deletion of mutually inhibiting strains, but strains which may be quite different from Bond's composite culture.

The consequences of such a conclusion call for its rejection. Its acceptance would require, for instance in the field of alloys, that if one discovered a particular mixture of metals, which when alloyed had some particular desirable properties, he could patent not merely this particular mixture but the idea of alloying metals for this purpose, and thus exclude everyone else from contriving some other combination of metals which, when alloyed, had the same desirable properties. In patenting an alloy, I assume that both the qualities of the product and its specific composition would need to be specified. The strains that Bond put together in the product which he patented can be specified only by the properties of the mixture. The district court, while praising Bond's achievement, found want of patentability. The circuit court of appeals reversed the judgment of the district court by use of an undistributed middle—that the claims cover a "composite culture"—in the syllogism whereby they found patentability.

It only confuses the issue, however, to introduce such terms as "the work of nature" and the "laws of nature." For these are vague and malleable terms infected with too much ambiguity and equivocation. Everything that happens may be deemed "the work of nature," and any patentable composite exemplifies in its properties "the laws of nature." Arguments drawn from such terms for ascertaining patentability could fairly be employed to challenge almost every patent. On the other hand, the suggestion that "if there is to be invention from such a discovery it must come from the application of the law of nature to a new and useful end" may readily validate Bond's claim. Nor can it be contended that there was no invention because the composite has no new properties other than its ingredients in isolation. 'Bond's mixture does in fact have the new property of multi-service applicability. Multi-purpose tools, multivalent vaccines, vitamin complex composites, are examples of complexes whose sole new property is the conjunction of the properties of their components. Surely the Court does not mean unwittingly to pass on the patentability of such products by formulating criteria by which future issues of patentability may be prejudged. In finding Bond's patent invalid I have tried to avoid a formulation which, while it would in fact justify Bond's patent, would lay the basis for denying patentability to a large area within existing patent legislation.

MR. JUSTICE BURTON, with whom MR. JUSTICE JACKSON concurs (dissenting):

On the grounds stated by the circuit court of appeals the judgment should be affirmed.

When the patentee discovered the existence of certain strains of bacteria which, when combined with certain other strains of bacteria, would infect two or more leguminous plants without loss of their respective nitrogen-fixing efficiencies, and utilized this discovery by segregating some of these mutually non-inhibitive strains and combining such strains into composite inoculants, we agree with MR. JUSTICE FRANKFURTER that the combinations so produced satisfied the statutory requirements of invention or discovery.[5] These products were a prompt

[4] See note 3, supra.

[5] R. S. 4886, as amended, 46 Stat. 376; 53 Stat. 1212, 35 U. S. C. § 31.

and substantial commercial success, filling a long-sought and important agricultural need.

However, we do not agree that the patent issued for such products is invalid for want of a clear, concise description of how the combinations were made and used. The statutory requirement is that the inventor or discoverer—

"shall file in the Patent Office a written description of the same, and of the manner and process of making, constructing, compounding, and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art or science to which it appertains, or with which it is most nearly connected, to make, construct, compound, and use the same; and in case of a machine, he shall explain the principle thereof, and the best mode in which he has contemplated applying that principle, so as to distinguish it from other inventions; and he shall particularly point out and distinctly claim the part, improvement, or combination which he claims as his invention or discovery . . . No plant patent shall be declared invalid on the ground of noncompliance with this section if the description is made as complete as is reasonably possible." [*]

The completeness and character of the description must vary with the subject to be described. Machines lend themselves readily to descriptions in terms of mechanical principles and physical characteristics. On the other hand, it may be that a combination of strains of bacterial species, which strains are distinguished from one another and recognized in practice solely by their observed effects, can be definable reasonably only in terms of those effects. In the present case, the patentee has defined the combinations in terms of their mutually inhibiting and non-inhibiting effects upon their respective abilities to take free nitrogen from the air and place it in the soil. These combinations were discovered by observation of these effects—they are in practice identified by these effects for the commercial uses for which they are made. It is these effects that differentiate them from the other bacteria heretofore generally identified only as common members of the same species and not commercially valuable for use with leguminous plants of more than one of the groups named in the opinion of the Court. The identification of the strains stated in the patent is that which the patentee used in making the novel combinations of them that have been shown to be highly useful. There appears to be no question but that the petitioners are now able to identify and use the strains in the manner described in the patent. The record thus indicates that the description is sufficiently full, clear, concise and exact to enable persons skilled in the art or science to which this discovery appertains or with which it is most nearly connected to make, construct, compound and use the same. There is no suggestion as to how it would be reasonably possible to describe the patented product more completely. The patent covers all composite cultures of bacterial strains of the species described which do not inhibit each other's ability to fix nitrogen. Bacteriologists, skilled in the applicable art, will not have difficulty in selecting the non-inhibitive strains by employing such standard and recognized laboratory tests as are described in the application for this patent.

The statute itself shows that Congress has recognized the inherent difficulty presented. While this patent may not be technically a "plant patent" in the precise sense in which that term is used in this section, the references in the section to the differences in descriptions expected in mechanical patents and plant patents obviously support the position here taken. An inventor should not be denied a patent upon an otherwise patentable discovery merely because the nature of the discovery defies description in conventional terms. Terms ordinarily unsuitable to describe and distinguish products that are capable of description and distinction by their appearance may be the most appropriate in which to describe and distinguish other products that are not reasonably possible of identification by their appearance, but which are easily identified by their effects when being sought for or described by those skilled in the art.

[*] R. S. 4888, as amended, 38 Stat. 958–959; 46 Stat. 376, 35 U. S. C. § 33.

U. S. Court of Customs and Patent Appeals

IN RE LAMBERT

No. 5361. Decided January 6, 1948

[— F.2d —; 76 USPQ 310]

1. PATENTABILITY—OLD COMBINATION—IMPROVED ELEMENT.

It is well settled that the improvement of an old combination will not support the allowance of claims to the improved element in association with the old elements of the combination, unless the improved element coacts in a new way with those which are disclosed in the prior art. In order to justify the allowance of a combination claim, the operation of the old parts, as well as that of the improved part, must be modified as a result of the improvement.

2. SAME—SAME—CENTRIFUGAL GOVERNOR.

Certain claims to a centrifugal governor for controlling the speed of an electric motor *Held* properly rejected on the ground of old combination.

APPEAL from the Patent Office. Serial No. 482,502.

AFFIRMED.

Charles W. Parker, Max D. Farmer, and *Edwin B. Gary for Lambert.*

W. W. Cochran for the Commissioner of Patents.

HATFIELD, *J.:*

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all of the claims, Nos. 1 to 12, inclusive, in appellant's application for a patent for an alleged invention relating to a centrifugal governor for controlling the speed of an electric motor.

Claim 2 is representative of the appealed claims. It reads:

A centrifugal governor for controlling the speed of an electric motor of the type having a rotor shaft and an electric circuit controlling its operation, comprising the combination with said motor and circuit, of means formed for connection to said shaft to be driven therefrom and having a member rotated at a selected speed ratio to that of said shaft, a switch device mounted on said member for rotation therewith, said device having a closed generally spherical chamber with a peripheral wall not wet by mercury and eccentric to but facing the axis of rotation of said member, a conductor extending into said chamber and terminating therein in a generally ball-like head only partially filling said chamber, a second conductor in said chamber and having an exposed portion along the chamber wall and spaced in a radial direction in said chamber from said head, both of said conductors extending exteriorly of said chamber and being connected in series in said controlling circuit, a globule of liquid mercury within and only partially filling said chamber and of a size to assume a curved form that holds a substantial portion thereof, solely by its surface tension opposing gravity, away from, and against spreading along, that peripheral wall zone of said chamber against which said globule will be confined when said member is rotated, said conductors being electrically connected and disconnected within said chamber by said globule as the globule is flattened to different extents by the centrifugal and tangential forces created on the globule by its rotation with said member in opposition to its inherent surface tension, as the speed of rotation of said member varies on opposite sides of a critical speed.

The references relied upon are: Dean, 1,419,233, June 13, 1922; Lambert, 2,301,217, November 10, 1942.

Appellant's application discloses an electric motor which, as shown, is used for driving a calculating machine, although the claims are not limited to such use. The circuit of the motor is controlled by a rotary switch mechanism, which may be mounted directly on the motor shaft or may be driven by the shaft through change speed gearing. The switch mechanism includes a generally cylindrical, sealed glass housing having a post of glass or other insulating material extending axially within and spaced from the inner wall of the housing. Two electrical conductors are wound about the post in spaced relation to each other. The housing is positioned with its axis horizontal and a globule of mercury is located between the post and the side wall of the housing. The globule of mercury is of such size that it ordinarily bridges the gap between the conductors which are wound around the post and, since the conductors are included in the motor circuit, the mercury globule closes that circuit under normal operating conditions. The housing is mounted eccentrically and, when it is rotated by the motor, the centrifugal force acting on the mercury globule will tend to flatten it to an extent which is proportional to the speed of the motor. If the flattening becomes sufficiently great, the mercury will move entirely away from the conductors on the post, thus breaking the motor circuit, with the result that the motor slows down until the surface tension of the mercury causes it to resume its globular form and thus closes the circuit. The glass housing may, if desired, be substantially spherical instead of cylindrical.

Other modifications are disclosed involving the same general principle of controlling a motor circuit by the flattening of a mercury globule due to centrifugal force. In one of those modifications the flattening of the mercury globule under the action of centrifugal force causes it to close a circuit through two spaced contact members in the housing, and the closing of the circuit energizes a relay which opens the motor circuit.

The patent to Dean shows an electric motor. On the shaft of the motor is mounted a flywheel on which is mounted a weighted member carrying an electrical contact. When the speed of the motor reaches the predetermined limit this member flexes, due to centrifugal force, in such manner as to bring the contact into engagement with a fixed contact, thus closing the circuit of a relay which opens the motor circuit. This causes the motor to slow down, lessening the centrifugal force and permitting the contacts to separate, whereupon the relay circuit is opened and the relay closes the motor circuit.

Appellant's prior patent, granted on an application copending with the one here involved, discloses a centrifugally actuated mercury globule switch of the type shown in the application here involved.

The involved claims were held by both the Examiner and the Board to be drawn to a combination of a motor and a centrifugally actuated switch for governing the motor speed, which combination, it was held, is old, as disclosed in the patent to Dean.

It is evident that, in view of the disclosure in the Dean patent, there is nothing of patentable novelty in the claims apart from the specific structure of the switch mechanism. The introduction of change-speed gearing between this mechanism and the motor, as called for by some of the claims, is an obvious mechanical expedient. The claims involve merely a change or improvement in the centrifugally actuated switch mechanism disclosed in the patent to Dean.

[1] It is well settled that the improvement of one element of an old combination will not support the allowance of claims to the improved element in association with the old elements of the combination, unless the improved element coacts in a new way with those which are disclosed in the prior art. In order to justify the allowance of a combination claim, the operation of the old parts, as well as that of the improved part, must be modified as a result of the improvement. *Lincoln Engineering Co.* v. *Stewart-Warner Corp.*, 303 U. S. 545, 490 O. G. 8; *In re Allatt*, 28 CCPA (Patents) 1367, 121 F.2d 545, 50 USPQ 214, 532 O. G. 767; and *In re Pineo, deceased, American Cyanimid Co., assignee*, 33 CCPA (Patents) 1148, 156 F.2d 173, 70 USPQ 230, 591 O. G. 329, and authorities there cited.

The function of the switch called for by the appealed claims is the same as that of the switch of the Dean patent, namely, to effect the opening of the motor circuit when the motor exceeds a predetermined speed and to close the circuit when the speed of the motor falls below the predetermined speed. The operation of the motor is not modified by the particular form of the centrifugally actuated switch which opens and closes its circuit.

Counsel for appellant argues that appellant's switch is more sensitive and acts more quickly than that disclosed in the patent to Dean. It is stated by the patentee that his switch "responds very quickly to speed changes" and that there are "frequent cycles of speed retardation and speed acceleration at all times within very narrow limits, producing the desired effect of maintaining a very constant motor and therefore a very constant turn-table speed." The patentee Dean thus asserts that he obtains the same advantage claimed by appellant, and there are no affidavits or other factual evidence to show that appellant's device is superior in this respect to that of Dean.

Counsel for appellant also contends that the effect of inertia on the mercury globule, while the motor

is accelerating or decelerating quickens the response of the switch to the change in speed, and argues that there is a coaction between that circumstance and the fact that the switch controls the motor. However, the action of the mercury in response to acceleration or deceleration is the same regardless of the cause of the acceleration or deceleration. Accordingly, if the contentions of counsel for appellant are sound, they merely mean that appellant's switch is exceptionally sensitive to changes in speed. This is a desirable property in any speed-responsive switch, whether it controls a motor, a speed indicator, or any other device. The difference in sensitiveness, if there is such a difference, between appellant's device and that of the patentee Dean, is one of degree only and does not result in a new type of motor operation.

It is further argued by counsel for appellant that appellant's device has peculiar advantages in the operation of calculating machines. The appealed claims, however, are not limited to calculating machines, and claims cannot be allowed on the basis of limitations which they do not contain. Even if it be assumed that appellant's switch has a special coaction with a motor of a particular type or which is used for a particular purpose, this would not justify the allowance of claims which do not call for such type or purpose.

[2] The various arguments and authorities relied on by appellant have been carefully considered, but we are of opinion, for the reasons hereinbefore stated, that the rejection of the appealed claims, on the ground of old combination, was proper and should be sustained.

The Board of Appeals further rejected the claims on the ground of double patenting in view of appellant's patent but, in view of our conclusion that the claims are drawn to an old combination, it is unnecessary that we consider that issue.

We are of opinion that the Board of Appeals reached the right conclusion. Accordingly, the decision of the Board is affirmed.

AFFIRMED.

BLAND, *J.*, sat during the argument of this case, but resigned before the opinion was prepared.

U. S. Court of Customs and Patent Appeals

CHRISTIAN
v.
MULLER

MULLER
v.
CHRISTIAN

Nos. 5345 and 5346. Decided January 6, 1948

[— F.2d —; 76 USPQ 306]

1. INTERFERENCE—APPLICANT AND PATENT—RIGHT TO MAKE PATENT CLAIM—"TOTAL-TAKING CONTROL MEANS."

Where the claim originates in a patent and the term therein is not ambiguous, we cannot reasonably read limitations into it.

2. SAME—SAME—SAME—"INDEPENDENT DRIVING MECHANISM."

Where the Board of Interference Examiners held that because the counts at issue are, except for immaterial limitations, claims from the patent, and an examination of the patent shows clearly that the term "independent" is used in the sense of distinct or separate, and that applicant's means is not separate or distinct, *Held* that we find no error in its holding that applicant is not entitled to make those counts, and that priority thereof was properly awarded to the patentee.

APPEAL from the Patent Office. Interference No. 80,490.

AFFIRMED.

Clarence B. DesJardins (*George Ramsey* of counsel) for Christian.

Fidler and Crouse (*Charles M. Thomas*, *Raymond E. Fidler*, and *Carl W. Crouse* of counsel) for Muller.

JACKSON, *J.*:

These are cross appeals in an interference proceeding from a decision of the Board of Interference Examiners of the United States Patent Office awarding priority of invention to the party Christian with respect to counts 1, 2, and 3 and to the party Muller with respect to counts 4, 5 and 6.

The interference involves an application for a patent, Serial Number 653,838, filed January 27, 1933, by the senior party Christian and assigned to the National Cash Register Company and a patent of the junior party Muller, Number 2,288,916, dated July 7, 1942, on an application filed February 6, 1939, and said to be a continuation-in-part of an application filed February 17, 1936. The Burroughs Adding Machine Company is the assignee of the Muller patent.

The interference generally relates to calculating machines, particularly with reference to the carriage or paper holding equipment on a front-feed multiple-columnar tabulating machine.

The machines of the parties are designed to operate in sequence on a great number of successive ledger sheets in the usual columnar fashion and simultaneously to make a record of the entries in tabulated form. The machines operate with a minimum control by the operator and to this end the front-feed mechanism is power operated and controlled in such fashion that when the carriage carrying the platen, over which the paper extends, is moved to a desired position the depression of a certain key causes the platen to move from closed-feed printing position to an open front-feed position.

Counts 1 and 4 are illustrative of the involved subject matter and read as follows:

1. A front-feed machine of the class described having front-feed means for receiving and holding a work sheet in front-fed position, said front-feed means being movable from closed to open-throat condition and vice versa, columnar-printing control means for controlling the columnar printing on said work sheet, *total-taking control means, and power means under the joint control of said total-taking control means and said columnar-printing control means* acting automatically to move said front-feed means to open-throat condition during a total-taking cycle of operation and after the total has been taken and without requiring a change in the columnar setting of said columnar-printing control means. [Italics ours.]

4. In a front-feed machine of the class described adapted to be driven through cycles of operation, the combination of front-feed means for receiving and holding a work sheet in front-fed position, said front-feed means being movable from a closed to an open-throat condition and vice versa, an electric motor, *direct independent driving connections* between said motor and said front-feed means, and means controlling said driving connections operable to condition said driving connections to cause said front-feed means to be moved to open-throat condition by said motor. [Italics ours.]

The party Christian copied claims from the Muller patent in order to provoke an interference. After various proceedings, which are of no importance here, the Board awarded priority to the parties as aforesaid on the grounds that the party Christian could make counts 1, 2 and 3, and that he could not make counts 4, 5 and 6.

The Christian application discloses a National Cash Register Company calculating machine known as the "Ellis" type and the Muller patent discloses a Burroughs calculating machine of the "Moon-Hopkins" type.

The Christian machine comprises a key-board on which are carried the usual amount keys and control and function keys, including a number of totalizer keys. There is also an overdraft key and an overdraft indicator which may be seen by the operator and which indicates at all times whether the balance is in a plus or minus amount. Should the indicator show a minus balance, the overdraft key may be depressed by the operator thereby causing an overdraft printing in distinctive color to appear on the record sheet. When the key is depressed, certain mechanism operates through three separate and distinct cycles, in the first of which a totalizing operation occurs causing the complement of the overdraft to be temporarily transferred to a different mechanism thereby clearing the totalizer. The second cycle then occurs in which there is a subtraction operation and in the subsequent third cycle a final balance is printed on the record sheet. When the printing has been done the mechanism moves to rock the platen out of printing position and also moves the pressure rolls so as to provide an open throat for the front feeding of another sheet. After a fresh sheet has been inserted, the operator may put into motion the proper control to close the throat, throwing the platen back into printing position.

It may be noted that during the first two cycles, while the overdraft key is depressed, the printing mechanism does not operate. The first and third cycles are totalizing operations and the second cycle is a subtracting operation. It will be seen that depression of the overdraft key results in the printing of an overdraft balance, and subsequent to such printing the throat of the machine opens and the platen moves to a front feed position.

[1] It is the contention of the party Muller that the Christian overdraft key is not, as was held by the Board, a "total-taking control means" as called for in counts 1, 2 and 3. The depression of the overdraft key, for the reason that it controls the first cycle which prints a total and the third cycle in which the printing of the balance is done, may properly be designated as a total-taking control means even though the second cycle is a subtracting operation. The carriage control functions while the key is depressed, and necessarily there must, in our opinion, be a joint control of the total-taking control means and the columnar printing control means of the Christian machine. Even though the final balance may be minus, the fact that it is a debit rather than a credit does not, in our opinion, change the nature of the control. Counts 1, 2 and 3 define broadly a "total-taking control means," and we agree with the statement of the Board that "The term is not ambiguous and while it originates in a patent we cannot reasonably read limitations into it."

While it may be true, as contended by the party Muller, that the end carriage control of the Christian apparatus will function after any operation as long as the carriage is in the balance columnar position, there is no limitation in counts 1, 2 and 3 which limits such control to any particular operation.

Since it is clear to us that the overdraft key of the Christian machine when broadly considered is a total-controlling means, we are of opinion that the contention of the party Muller, that the final operation is not under the joint control of the totalizer and columnar printing-control means, as heretofore noted is not well taken. It appears to us that because the third cycle of the overdraft operation is controlled by Christian's overdraft key, and because the throat opening means is power operated and controlled within that cycle, the overdraft key should properly be held to control the power means for opening the front feed means.

[2] Counts 4, 5 and 6 call for "direct independent driving" means connecting the driving motor with the front feed mechanism. In the Muller apparatus the machine power is transmitted from the driving motor through the motor shaft, the clutch control, and suitable gearing and linkage to the means which controls the platen feed mechanism. There is no inclusion in that connection of any other functional mechanism and the connection will not of itself cause the machine to cycle.

In the Christian machine the connecting mechanism between the driving motor and the platen-rocking device includes the printer shaft. It is contended by the party Muller that the driving connections in the Christian machine between the motor and the front feed means are neither independent nor direct as defined in counts 4, 5 and 6.

With respect to those counts, the Examiner held that they may be construed to read upon the Christian disclosure as having "direct independent driving connections." In the opinion of the Examiner the word "independent" is not of necessity confined to the structure of the Muller device, but could well be disclosed in a structure "where the drive is independent part of the way." For that reason the Primary Examiner held that the party Christian could make counts 4, 5 and 6.

The Board did not agree with the reasoning or holding of the Examiner on those counts and in this connection stated as follows:

We do not concur in this view as to the significance of the term "independent" in a situation such as that at

bar. In particular, a structure in which "the drive is independent part of the way," or in other words, where it has some dependency cannot, it seems to us, at the same time be held to be independent. The two positions are incompatible. The counts at issue are, except for immaterial limitations, claims from the Muller patent and an examination of the patent is believed to show clearly the meaning in which the term is used. In the patent, it is used in the sense of distinct or separate. The Christian interlinking mechanism, having within itself as one of the necessary power conveying elements, the printer shaft 143, cannot be considered independent of the printer mechanism.

As to the term "direct" occurring in the three counts we believe that Christian is clearly entitled to this expression, at least to the same extent as Muller. In neither machine is the connection between motor and feed mechanism strictly "direct," since it is through devious intermediate linkages, but to the extent that connecting mechanism of Muller with its levers, gears, etc., is direct, we feel that the mechanism of Christian is no less so.

In view of the above analysis, it is our opinion that the party Christian cannot make counts 4, 5 and 6 because his interconnecting means is not separate and distinct or "independent" from all other functional parts of the machine.

We do not think it would serve any useful purpose, in view of our agreement with the reasoning of the Board with respect to the significance attaching to the term "independent," to reiterate its reasoning in other language and thus unnecessarily lengthen this opinion. It suffices to say that we agree with the reasoning of the Board as to claims 4, 5 and 6, and find no error in its holding that the party Christian is not entitled to make those counts and that priority of the invention of the subject matter thereof was properly awarded to the party Muller.

For the reasons set forth herein, the decision of the Board of Interference Examiners is affirmed.

AFFIRMED.

BLAND, *J.*, sat during the argument of this case, but resigned before the opinion was prepared.

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 2,317,357, L. G. S. Brooker and H. W. J. Cressman, Dye intermediates, decided Jan. 2, 1948, claims 5 and 9.

Pat. 2,330,203, L. G. S. Brooker and W. W. Williams, Dye intermediates, decided Jan. 2, 1948, claim 8.

Pat. 2,379,368, M. P. Matuszak, Hydrocarbon alkylation process, decided Dec. 22, 1947, claims 1 and 2.

Disclaimers

2,400,636.—*Oscar Fregeolle*, Central Falls, R. I. NEEDLE LEVELER AND LATCH OPENER. Patent dated May 21, 1946. Disclaimer filed Feb. 13, 1948, by the assignee, *Hemphill Company.*

Hereby enters this disclaimer to claims 2, 3, 4, and 5 of said patent.

2,404,181.—*William Klocke*, Woodhaven, N. Y. MECHANICAL DRAWING PRESS. Patent dated July 16, 1946. Disclaimer filed Feb. 17, 1948, by the inventor.

Hereby enters this disclaimer from claim 1, of any arrangement of the link connected to the slide which does not extend upwardly from the bell-crank.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

The Procter & Gamble Company hereby grants a free, irrevocable, and unlimited license to bakers and the general public of the United States and its possessions to practice the processes set forth in the patents listed below (Reg. Nos. 9,357 to 9,369 inclusive) for the manufacture of the baked goods therein described and claimed, in their own plants or homes and for their own use, and to use and sell the said baked goods. No rights are herein granted to have shortenings containing improving agents made for licensees, nor to sell such shortenings under any claims of said Letters Patent claiming such shortenings, nor are any rights herein granted under any other Letters Patent now or hereafter owned by The Procter & Gamble Company, excepting such rights as may be necessary to effectuate the license hereinabove granted. Detailed information concerning the patents may be obtained from W. P. Bell, Patent Department, The Procter & Gamble Company, M. A. & R. Bldg., Ivorydale, Cincinnati 17, Ohio.

Pat. 1,971,886. PROCESS OF MAKING CAKE AND THE RESULTING PRODUCT. Patented Aug. 28, 1934. There is a tendency for cakes of the white layer type to fall as the proportion of sugar to flour and liquid ingredients is increased. The sugar-carrying capacity of this type of cake is specifically increased by the addition of 0.1–0.3% of lecithin to the batter. The cake produced has improved appearance and eating quality by reason of its uniformly light and tender texture. Group 20—51—92. Reg. No. 9,357.

Pat. 2,024,357. METHOD OF MAKING CAKE. Patented Dec. 17, 1935. If a small proportion of a hydrophilic lipin is incorporated in the shortening added to the batter of the yellow cake type, a smoother batter is obtained. Greater quantities of sugar may be used without increasing the amount of yolk material in the batter. The substance may be added to the shortening at any time, the proportion ranging from 1 to 5%. Cake made with the improved shortening has a better grain and enhanced keeping qualities. Group 20—51—92. Reg. No. 9,358.

Pat. 2,061,121. BAKED GOODS AND PROCESS OF MAKING SAME. Patented Nov. 17, 1936. A cake of light texture and increased volume results if 2–10% of the shortening used is replaced by a free fatty acid of edible grade (such as that derived from hydrogenated cottonseed oil or 66 iodine value). The free fatty acid may be incorporated at any point in the mixing procedure. Group 20—51—92. Reg. No. 9,359.

Pat. 2,123,880. COMPOSITIONS OF MATTER. Patented July 19, 1938. Sugar-carrying capacities of cakes made with the use of shortening show improvement in volume and texture by incorporation of a small quantity of soap in the batter (equal to about .025% of the weight of the total cake batter). Soaps used are obtained from strictly edible fats or oils having a low congealing point. Group 20—51—92. Reg. No. 9,360.

Pat. 2,132,396. BAKED GOODS AND METHOD OF MAKING SAME. Patented Oct. 11, 1938. Group 20—51—92. Reg. No. 9,361.

Pat. 2,132,397. BAKED GOODS AND PROCESS OF MAKING SAME. Patented Oct. 11, 1938. Group 20—51—92. Reg. No. 9,362.

Pat. 2,132,700. METHOD OF PREPARING YEAST RAISED DOUGHS. Patented Oct. 11, 1938. Group 20—51—92. Reg. No. 9,363.

Pat. 2,132,701. SHORTENING AND METHOD OF BAKING THEREWITH. Patented Oct. 11, 1938. Group 20—51—92. Reg. No. 9,364.

In these four patents, a superglycerinated fat, incorporated in cake batter as a substitute for the usual shortening, acts as a shrinkage reducer for cakes having a high ratio of sugar to flour. Cakes utilizing the usual shortening and the same proportion of ingredients are denser and less palatable. In Patent 2,132,396 the shrinkage reducer is a mixture of monoglycerides and diglycerides of higher fatty acids; in Patent 2,132,397 a shortening blended of 98% partially hydrogenated cottonseed oil (or a like triglyceride mixture) and 2% of esters similar to monoglyceride is used. Patents 2,132,700 and 2,132,701 are somewhat similar except that the former patent pertains mainly to bread and sweet doughs having increased tenderness.

Pat. 2,132,416. SHORTENING MATERIAL AND CAKE MADE THEREFROM. Patented Oct. 11, 1938. Group 20—51—92. Reg. No. 9,365.

Pat. 2,132,687. SHORTENING MATERIAL AND CAKE MADE THEREFROM. Patented Oct. 11, 1938. Group 20—51—92. Reg. No. 9,366.

Staling of baked products is retarded, according to these two patents, by increased moisture and better emulsifications made possible by the addition of 1–2% monostearin or a like hydrophilic lipin to partially hydrogenated cottonseed oil or a similar shortening.

Pat. 2,132,417. CAKE. Patented Oct. 11, 1938. If a fatty acid ester of a polyglycerol containing free hydroxyl groups and also monoglyceride are added to cake batter, a larger proportion of moisture (in the form of milk or whole eggs) may be used without the addition of more yolk material. The proportion of sugar to flour may also be increased without disturbing the cake structure. The final baked product has improved texture and keeps long. Group 20—51—92. Reg. No. 9,367.

Pat. 2,132,430. FOOD MATERIAL AND METHOD OF MAKING SAME. Patented Oct. 11, 1938. This patent refers to the preparation of several cake compositions which include ingredients and a hydrophilic lipin coated baking powder or a like leavening agent in dry form. Group 20—51—92. Reg. No. 9,368.

Pat. 2,158,775. CAKE BATTER AND SHORTENING FOR MAKING CAKE. Patented May 16, 1939. Sulphated monoolein distearate or a like sulphated triglyceride is featured in this patent as an improving agent which may be incorporated with shortening and flour, etc., to produce a superior bakery product having improved grain, color and texture. Group 20—51—92. Reg. No. 9,369.

Pat. 2,401,177. DISPLAY CARD. Patented May 28, 1946. Display card on which price and other indicia may be inscribed is designed to be attached to boxes, cans, or other containers so that it will stand out rigidly from one side. It may also be attached to the usual price-card-retaining strips of shelves. An adhesive strip is secured along the left vertical edge of card so that about half its width extends beyond such edge to provide a tacky flange. Top edge of card is slit inwardly to form two tabs with scoring to facilitate folding of tab on the left. The tacky flange is transversely severed opposite scoring where tab folds. To attach card to a box, tacky flange below severed part is pressed vertically against side of box and card swung angularly outwardly. Tab is then folded rearwardly at right angles to card, and tacky flange on end of tab pressed against box. When attaching card to a retaining strip, the folded tab is inserted within retaining groove of strip. The cards are supplied in pads being held together by the tacky flanges. (Owner) Claude Newman, 1726 S. 27th St., Lincoln, Nebr. Groups 26—91; 39—93; 40. Reg. No. 9,370.

Pat. 2,428,194. AIRCRAFT CONTROL. Patented Sept. 30, 1947. This patent provides pitch-control and lift-increasing structure for aircraft. Generally described, high-lift flaps, corresponding to the elevator surfaces of conventional craft, and an airfoil, which acts as a pitch-control surface, are hingedly associated with the main wing. The pitch-control surface is placed forward of the center of gravity of the aircraft and is automatically and simultaneously movable with the high-lift flaps by spring-urged linkage connected to the dashpot of the craft. In response to variations in aerodynamic pressure the surfaces automatically maintain the craft in trim without requiring the special attention of the pilot or disturbing the usual manual control required. The structure is not limited to the tailless pusher type craft illustrated. (Owner) George E. Bockrath, 4317 Maury Ave., Long Beach 7, Calif. Group 37—22. Reg. No. 9,371.

Pat. 2,342,697. STEERING MECHANISM FOR TRAILERS. Patented Feb. 29, 1944. This patent shows steering mechanism for tandem rear wheels of a trailer of the heavy-duty type which has its front end pivotally connected to a tractor by mechanism including what is commonly known as a "fifth wheel." The steering mechanism is actuated in response to normal turning movements of the tractor to negotiate sharp turns and permit maneuvering in restricted areas. During steering movements the rear trailer wheels are pivotally deflected through a greater steering angle than the front wheels, and the wheels on the inside of a curve are deflected at a greater angle than the outside wheels. The steering mechanism also includes "throw out" mechanism which automatically functions to prevent the transmission of steering movements to the trailer wheels after the tractor assumes an angular position beyond that of natural turning, such as when backing or jackknifing the tractor. The steering mechanism is designed to permit each of the tandem axles to be independently connected to the trailer frame by springs. The springs may be mounted in any suitable fashion without interfering with steering movements. (Owner) Charles Runyan, The Charles Runyan Garage, Great Meadows, N. J. Groups 35—63; 38—11. Reg. No. 9,372.

Pat. 2,383,216. TRAILER VEHICLE. Patented Aug. 21, 1945. This patent shows steering mechanism for self-supporting farm trailers of the type having a pair of pivoted front and rear wheels and a tongue for detachably connecting trailer to a tractor. During steering, the rear trailer wheels are deflected in a direction opposite from that of the front trailer wheels, to permit extremely sharp turns even with a trailer having a long wheel base. The trailer may be either automatically steered in response to movements of the tractor, or manually steered independently of movements of the tractor. The trailer is equipped with control levers and a steering wheel, all in convenient reach of the tractor operator. These levers are used to adjust the steering mechanism for either automatic or manual operation. When maneuvering in restricted areas, especially when backing, the tractor operator may, after manipulating the levers, use the trailer steering wheel to steer the rear trailer wheels only, or, if desired, steer both front and rear wheels together. When maneuvering in extremely restricted areas, as when backing into a shed, a helper may stand alongside the trailer near the rear end and independently steer the rear wheels by using a detachable bar to actuate the rear wheel steering mechanism. (Owner) Charles Runyan, The Charles Runyan Garage, Great Meadows, N. J. Groups 35—22; 37—99. Reg. No. 9,373.

Pat. 2,410,331. FISHING ROD AND REEL. Patented Oct. 29, 1946. Rod comprises two separable half sections and is provided with sheave-carried pulleys for passing a line. The reel, which is recessed in the handle and has inner and outer handle grips on its rear and forward side, may be held against rotation by diametrically opposite leaf-spring guards controlled by a sliding and locking button in the forward handle grip. The line is carried through a flattened tubular passage in the underside of the forward handgrip so that the possibility of a slack line jumping the reel is prevented. The rod and reel are intended for deep-water trolling and include several features such as a measuring gauge to indicate the amount of line payed out, a scale arrangement to determine the weight of the pull on the hook, etc. The reel is capable of handling from 500 to 1000 feet of metallic line. (Owner) O. J. Aubertin, P. O. Box 18, Matachewan, Ontario, Canada. Group 39—49. Reg. No. 9,374.

Pat. 2,431,480. LOCK WASHER. Patented Nov. 25, 1947. Lock washer may be used with screw plugs, caps or the like which are screwed into sockets of vibrating structures such as lubricant chambers of locomotives. Washer is a flat sheet metal plate having a pair of triangularly shaped and rearwardly bent wings between which a laterally extending tongue is formed. When a flanged plug or cap equipped with the washer is tightly screwed into a socket of a lubricant chamber, the wings embrace the opposed outer flat surface of the socket and prevent rotation of the washer. The tongue is then bent forwardly and downwardly so that its edge coacts with the wrench-engaging surface of the plug to prevent rotation of the plug. (Owner) Denis V. Hornsby, 1317 Briarwood Ave., Columbus 11, Ohio. Group 33—91. Reg. No. 9,375.

Pat. 2,431,299. AUTOMATIC PLUG VALVE LUBRICATOR. Patented Nov. 18, 1947. This patent relates to rotary plug valves of the type wherein a lubricant feed screw is movable axially in the stem of the plug to force a lubricant between the coacting surfaces of the plug and casing to insure free turning and minimum wear. The valve is provided with an attachment which automatically turns the screw to force it inwardly when the valve is opened and closed. The attachment includes a socket wrench of the reversible type. A rotatable ratchet ring in the head of the wrench is provided with an elongated upstanding wrench socket which surrounds and engages the head of the screw to turn it. The wrench may be adjusted to reverse the direction of the ratchet ring to move the screw either inwardly or outwardly upon opening and closing of the valve. (Owner) William A. Pochek, 604A Veronica Ave., East St. Louis, Ill., and R. R. 1, Caseyville, Ill. Groups 33—61; 35—69. Reg. No. 9,376.

Pat. 2,420,197. SYSTEM FOR SUPERVISING THE TAKING OF MOVING PICTURES. Patented May 6, 1947. This system for controlling and supervising the taking of moving pictures utilizes a combined motion picture and television camera cooperating with a remotely placed television picture reproducer and screen. Thus the picture is shown, during the taking process, under conditions similar to the later theater showing, and the director, producer, and head cameraman are enabled to supervise and remotely control the taking of the picture. The scene can be explored and controlled in any manner, such as viewing angle, close-up or long-range shot, focus, etc., avoiding costly misjudgments, retakes, and waste of personnel, time and film. Means are provided for a universal remote control of the camera. Parallax is compensated automatically in a purely electrical manner. (Owner) Adolph H. Rosenthal, 230 Central Park West, Apt. 10B, New York 24, N. Y. Groups 36—61; 39—12. Reg. No. 9,377.

Pat. 2,418,948. CALCULATING DEVICE. Patented Apr. 15, 1947. Pocket-size calculating device may be used for addition, measuring lengths, and similar purposes. The device comprises a pair of telescoping casings, one of which is indexed. The casings house a roller carrying a spring-biased retractable tape which may be unwound for selected lengths. The tape has a series of perforations which are engaged by a spring catch actuated by any one of a series of offset selector keys which bear numerals or like insignia. The tape is prevented from returning to its former position until released, and is wound or unwound on its roller by a winding crank. A pencil end may be carried on one end of the device. Several modifications are shown. (Owner) Carl L. Ludwig, 6314 S. Overhill Drive, Los Angeles 43, Calif. Groups 35—65; 39—11—51; 40. Reg. No. 9,378.

Pat. 2,431,582. ELECTRIC PRESSURE POT AND AUTOMATIC COOKER. Patented Nov. 25, 1947. This electric cooker has insulated hollow walls of metal which house an inner ceramic section wound with heating coils. A cover, likewise insulated, is fitted with a safety valve. Mounted on the outer wall of the cooker are a pressure valve and a heat control which may be set for heating soups, vegetables, meats, etc., at high, low, or medium heat. A rheostat control is provided, which shuts off automatically when set heat and pressure are reached. The cooker is economic in use and may be employed as a hot plate, automatic pressure cooker, electric broiler, or fireless cooker. By reason of its insulation, the outside of the cooker remains cool. The device may be manufactured to hold any standard-size pressure cooker. (Owner) Irving Page, 509 W. 174th St., New York 33, N. Y. Group 36—21. Reg. No. 9,379.

Pat. 2,428,508. TOOLHOLDER APPLIANCE FOR LATHES. Patented Oct. 7, 1947. This appliance includes a fixed capstan with teeth around its entire edge and a detachable toolholder having interior teeth which mesh with those of the capstan. The appliance is held to the lathe by a pair of retractable jaws mounted on a shaft fitted with a crank handle. Each of the jaws ends in a boss which fits a slot of corresponding shape in the toolholder. The jaws press the capstan and toolholder together, keeping the latter in position. The toolholder may be brought into varying angular positions in relation to the capstan, and tools easily replaced or interchanged. (Owners) Jacques Edouard Weigle and Jean Minder. Address correspondence to K. A. Mayr, 21 E. 40th St., New York 16, N. Y. Group 35—43. Reg. No. 9,380.

Pat. 2,431,118. IMPLEMENT HOLDER. Patented Nov. 18, 1947. A holder for rigidly supporting screwdrivers, files, putty knives, thin cutter blades, etc., designed to fit the holder. The holder is made up of a tubular handle having a tightly fitting removable plug at one end and a sleeve with a threaded bore, the sleeve telescoping within the handle at the opposite end. A springed plunger is screwed within the sleeve. By pressing the sleeve inwardly a hook at the end of the plunger is projected through a bore in the plug to permit attachment of a desired implement. When released, the spring forces the sleeve outwardly to draw the hook in a groove at the end of the plug. The blade is locked into position by turning the sleeve until it abuts the handle. (Owner) George P. Heigle, 612 Massachusetts Ave., Boston, Mass. Groups 33—52; 39—81; 40. Reg. No. 9,381.

Pat. 2,430,883. CUTTER. Patented Nov. 18, 1947. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A removable cutter assembly for refacing the corroded edges of handhole openings in the wall of a boiler header containing superheater tubes. The cutter assembly consists of a base and plate which are adjustably engageable with the opening of a boiler header wall. The plate carries a cam having a face approximating the shape of the opening. A shank equipped with a rotary cutter is adjustable in a cross head which cooperates with the cam. In operation the shank is

adjusted vertically in the cross head so that the teeth on the cutter engage the corroded portion of the handhole. A conventional power drive is applied to a fitting in the shank to operate the cutter. Rotation of the cross head (by handle means) enables the shank portion of the cutter assembly to follow the edge of the cam. The cam, being of the same shape as the handhole, effects the refacing operation. (Owner) Emil R. Miller, 862 N. 26th St., Lincoln 3, Nebr. Group 35—43. Reg. No. 9,382.

Pat. 2,433,203. VACUUM PRODUCING MASSAGE DEVICE. Patented Dec. 23, 1947. Electrical device for massaging the skin and removing blackheads. The device consists of a cylindrical casing housing a reciprocating piston controlled by a switching mechanism of the flasher type which incorporates a solenoid. Intermittent energization of the solenoid moves a piston longitudinally within the casing creating a vacuum. The piston is returned to its normal position by a spring arrangement. A flexible tube connected to the device has a suitable massaging or applicator head on its free end. (Owner) Clarence N. Debaugh, 400 Allegheny Ave., Towson 4, Md. Groups 36—21; 39—91. Reg. No. 9,383.

The American Cyanamid Company, 1937 W. Main St., Stamford, Conn., will issue non-transferable, non-exclusive licenses to practice the methods, with material from any source, at a reasonable royalty rate, of the two following patents:

Pat. 2,341,867. TREATMENT OF PLANT BUDS. Patented Feb. 15, 1944. Group 28—33—71—89. Reg. No. 9,384.

Pat. 2,341,868. TREATMENT OF STORAGE ORGANS. Patented Feb. 15, 1944. Group 28—33—71—89. Reg. No. 9,385.

These two patents relate to chemical compounds which are used to temporarily retard plant growth. Patent 2,341,867 is particularly adapted to extend the dormant or rest period of fruit trees by preventing premature development of buds. The compound used is naphthaleneacetic acid (alpha or beta) in an alcohol solution. The compound may be sprayed or dusted, the treatment lasting from one to two weeks, after which, if danger of frost is not over, the treatment may be repeated. Patent 2,341,868 is a somewhat similar compound and is used to delay the sprouting of bulbs, roots, tubers, etc., while in storage or transit. Tulip bulbs, potatoes, beets, nursery stock, etc., to be treated are loosely packed in an enclosure (for example, a storage room or cellar) or in a container (such as a box or bag) and the space permeated with the compound in vapor form. Depending on the strength of the compound used, the treatment may last from one to six months. Numerous methods of applying the compound are given in the patent.

Pat. 2,432,648. HOSE PROTECTOR. Patented Dec. 16, 1947. Protector made of rubber or other waterproof material prevents back of hose from becoming soiled when wearer is walking on wet or slushy surfaces. It is substantially U-shaped in cross section so that it will cover only the back of hose and leave front exposed. Two identical sections connected by a sipper are shaped to fit neatly around the top of a shoe heel and the lower rear portion of a person's leg. A fixed loop strap fits around shoe directly in front of heel, and adjustable straps fit around front of leg. When properly adjusted, the protector may be slipped off and on by manipulating the sipper without disturbing the straps. A pair of protectors may be folded, slipped into a small case, and carried in handbag. (Owner) Gretchen Beckwith, 520 Broadway, Clarksburg, W. Va. Groups 30—21; 31—41; 39—81; 40. Reg. No. 9,386.

Patents Dedicated to the Public

The following patents held by Selenium Corporation of America and Tellurium Corporation of America, an affiliated company, of 2160 East Imperial Highway, El Segundo, Calif., have been dedicated to the people of the United States of America by instruments recorded in the United States Patent Office. The instruments read in part as follows:

"• • • hereby assign, transfer and dedicate to the people of the United States of America all its rights, title and interest in, to and under the said Letters Patent for their free use thereof throughout the United States, its territories and possessions for the full term thereof."

Pat. 2,414,233. PHOTOELECTRIC CELL. Patented Jan. 14, 1947. This patent provides a method for the manufacture of photoelectric cells of the barrier- or blocking-layer type which possess uniform characteristics, a result not always possible by previous methods. A selenium coating is applied to an iron disc or base by conventional methods, after which follows a sputtered-on, semi-transparent layer of selenium and selenium oxides, a similar layer of cadmium and cadmium oxides, and a top layer comprised of a homogeneous mixture of platinum and gold. Modification shown. Group 36—62.

Pat. 2,418,516. AMPLIFIER. Patented Apr. 8, 1947. A dry type element such as a selenium-coated plate is utilized in this amplifier. The inherent characteristics of this type of element permit the construction of compact and light-weight amplifiers which require little associated apparatus and are capable of large current output. For example, an element of 10 amperes capacity weighs less than 2 ounces, compared to a saturated current reactor of similar capacity which weighs about 4 pounds. The selenium coating is also unaffected by temperature changes. The amplifier is thus adapted to hearing aids, aircraft apparatus, etc. Group 36—61—99.

Pat. 2,430,350. RECTIFIER. Patented Nov. 4, 1947. The usual dry-plate rectifier is formed of alternate metal layers (which constitute electrodes) between which is interposed a rectifying layer of selenium (or a like substance capable of conducting a circuit in one direction only). A radially slotted disc having a central dished portion and a number of radially extending fingers serves as a resilient conductor which may be pressed into engagement with one of the electrodes to conduct the circuit. Varnish, usually applied to the rectifier as a protective coating, has a tendency to impair the contact by seeping into the slots. This is overcome by the provision of a second conductor which is shaped to overlie the slots of the first conductor so that there are no open spaces. Group 36—19.

Pat. 2,430,351. RECTIFIER. Patented Nov. 4, 1947. This patent provides a small-sized dry-plate rectifier of simple construction adapted for full-wave rectification. A pair of identical layers of selenium, for use with a center-tapped transformer, are formed directly on a circular iron plate which constitutes a base and a back electrode. The layers, one of which forms a front electrode, are spaced to avoid contact. Terminals are provided for the electrodes, a pair of the terminals utilizing the space between the selenium layers. An insulated cover plate is clamped to the base by an insulated bolt which serves as a means of mounting the rectifier to a panel without disturbing the assembly, and of spacing the rectifier from the panel so that air may circulate to cool the rectifier. Group 36—19.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 23, 1948

[VOL. 608. NO. 4]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 2

RECEPTACLES

Ser. No. 513,698. UNION STEEL CHEST CORPORATION, Leroy, N. Y. Filed Dec. 4, 1946.

UNION

The words "Quality Since 1893" are disclaimed apart from the mark shown. Applicant owns Reg. No. 151,267.

FOR TOOL CHESTS OF METAL AND SOLD EMPTY.

Claims use since 1932.

Ser. No. 519,708. THE VERMONT STORE, INC., Northampton, Mass. Filed Mar. 27, 1947.

COVERED BRIDGE

FOR WOODEN BOWLS, AND WOODEN TRAYS.

Claims use since December 1946.

Ser. No. 525,378. OAKES & COMPANY, Chicago, Ill. Filed July 1, 1947.

FARMITT

FOR MILK PAILS, MILK CANS, HAND-OPERATED OILERS, CORN BINS, SPRINKLING CANS, VACUUM BOTTLES, VACUUM JARS, STEEL TOOL BOXES, MOP WRINGER PAILS, AND ONE, TWO, AND FIVE GALLON OIL AND GASOLINE CANS.

Claims use since May 22, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 505,898. HARTMANN COMPANY, Racine, Wis. Filed July 19, 1946.

SKYMATE

FOR SUITCASES, LUGGAGE-CARRYING CASES, AND WARDROBE SUITCASES.

Claims use since June 1946.

Ser. No. 514,715. JOHN D. MOREHOUSE, Oakhurst, Calif. Filed Dec. 23, 1946.

Snowline

FOR HANDBAGS, KEY CASES, COIN PURSES, AND WALLETS.

Claims use since June 19, 1946.

Ser. No. 518,747. ABRAHAM BORETZ, doing business as Boretz Manufacturing Company, New York, N. Y. Filed Mar. 10, 1947.

The picture of the men is fanciful.

FOR TRUNKS, TRAVELING BAGS, POCKETBOOKS, OVERNIGHT BAGS, HAT BOXES, VALISES, GLADSTONE BAGS, BRIEF CASES, CATALOG CASES, AND SAMPLE DISPLAY CASES.

Claims use since Jan. 2, 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 500,796. CONSOLIDATED COSMETICS, Chicago, Ill. Filed Apr. 24, 1946.

SMOLDERING

FOR TOILET SOAP AND LAUNDRY SOAP.
Claims use since Mar. 28, 1944.

Ser. No. 507,141. P & H PRODUCTS, INC., Memphis, Tenn. Filed Aug. 9, 1946.

LETS-GO

FOR PAINT CLEANERS.
Claims use since June 28, 1946.

Ser. No. 508,244. QUICKWAY PRODUCTS, INCORPORATED, Charleston, W. Va. Filed Aug. 29, 1946.

Arylite

FOR SYNTHETIC COMPOUND USED AS A DETERGENT FOR CLEANING AUTOMOBILES, AIRPLANES, BUSSES, AND THE LIKE.
Claims use since May 1, 1946.

Ser. No. 513,613. DUNLOP TIRE AND RUBBER CORPORATION, Buffalo, N. Y. Filed Dec. 3, 1946.

GOLD CUP

FOR FABRIC CLEANER, PRE-WAX CLEANER, CHROME POLISH.
Claims use since Oct. 8, 1946.

Ser. No. 523,144. HALSEY PRODUCTS COMPANY, Cedar Knolls, N. J. Filed May 27, 1947.

RUG-STOP

The word "Rug" is disclaimed.
FOR POWDERED COMPOSITIONS TO BE APPLIED TO THE BACKS OF RUGS TO PREVENT SLIPPING.
Claims use since Mar. 31, 1947.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 480,527. DR. SALSBURY'S LABORATORIES, Charles City, Iowa. Filed Mar. 5, 1945.

REN-O-SAL

FOR TONIC AND ALTERATIVE FOR CHICKENS, TURKEYS, AND OTHER DOMESTIC FOWL.
Claims use since June 3, 1944.

Ser. No. 487,857. THE NATIONAL MINERAL COMPANY, Chicago, Ill., now by change of name Helene Curtis Industries, Inc., a corporation of Illinois. Filed Aug. 31, 1945.

POTENT RED

Applicant disclaims the word "Red" apart from the mark.
FOR LIPSTICKS.
Claims use since Aug. 9, 1945.

Ser. No. 493,763. SIDNEY GOLDBLUM, doing business as Majestic Drug Co., New York, N. Y. Filed Dec. 22, 1945.

EPSO-PINE

The word "Pine" is disclaimed apart from the mark shown.
FOR BATH SALTS.
Claims use since April 1945.

Ser. No. 499,711. JAYBRA PRODUCTS, INC., New York, N. Y. Filed Apr. 5, 1946.

JAYBRA

FOR POWDER FOR USE IN REMOVING SUPERFLUOUS HAIR AND HAIR LOTION.
Claims use since January 1936.

Ser. No. 501,836. PAUL DOWNING, doing business as The London Manufacturing Chemists, Portland, Oreg. Filed May 10, 1946.

modern genie

FOR COSMETIC PREPARATIONS, PREPARATIONS FOR THE HAIR, AND PREPARATIONS FOR PERMANENT WAVING OF THE HAIR—NAMELY, CREAMS, LOTIONS, SHAMPOO, AND HAIR LACQUER.
Claims use since Feb. 14, 1946.

Ser. No. 502,705. THE GLENN L. MARTIN COMPANY, Middle River and Baltimore, Md. Filed May 24, 1946.

The drawing is lined for red, yellow, and blue. The words "Mulsion" and "Martin" are disclaimed apart from the mark shown.
FOR PHOTOGRAPHIC EMULSION.
Claims use since Jan. 22, 1946.

Ser. No. 503,428. JOHN C. CORBITT, Nashville, Tenn. Filed June 7, 1946.

PES-EZE

FOR REMEDY FOR ATHLETE'S FOOT.
Claims use since May 16, 1946.

Ser. No. 503,666. THE DAN PERKINS COMPANY, Memphis, Tenn. Filed June 11, 1946.

FLAVORITE SUGAR CURE

The words "Sugar Cure" are disclaimed apart from the mark shown.
FOR CURING COMPOUND FOR MEATS.
Claims use since June 22, 1944.

Ser. No. 503,864. BURMA-VITA COMPANY, Minneapolis, Minn. Filed June 14, 1946.

BURMA-VITA

Applicant disclaims exclusive use of the word "Burma" apart from the combination shown.
FOR TOOTH POWDER.
Claims use since June 3, 1946.

Ser. No. 509,640. CUTTER LABORATORIES, Berkeley, Calif. Filed Sept. 24, 1946.

Diptussis (Alhydrox)

FOR ALUMINUM HYDROXIDE ADSORBED BIOLOGICAL PRODUCTS FOR ACTIVE IMMUNIZATION AGAINST DIPHTHERIA AND WHOOPING COUGH.
Claims use since June 1943.

Ser. No. 510,334. JAMES LYLE MILLER, New York, N. Y. Filed Oct. 5, 1946.

U-MIX-IT

FOR CHEMICALS USED FOR MOTH-PROOFING.
Claims use since July 18, 1946.

Ser. No. 513,901. G. D. RUNNELS, New York, N. Y. Filed Dec. 7, 1946.

ANIMETICS

FOR SHAMPOO, FLEA REPELLENT AND INSECT REPELLENT POWDER AND LOTION, FOR USE ON DOGS.
Claims use since Nov. 18, 1946.

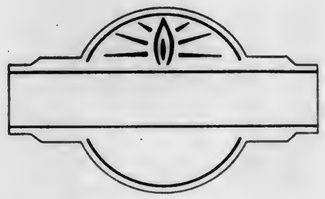
Ser. No. 514,871. YANKEE BOTTLED GAS CORP., Westville, N. H., and Lexington, Mass. Filed Dec. 26, 1946.

YANKEE

FOR BOTTLED LIQUEFIED PETROLEUM GAS, USED FOR COOKING AND HEATING.
Claims use since Nov. 27, 1946.

Ser. No. 515,085. CULLIGAN ZEOLITE COMPANY, Northbrook Ill. Filed Dec. 31, 1946.

CULLON



FOR WATER SOFTENING MATERIALS COMPOSED OF RESINOUS AND SYNTHETIC GEL ZEOLITES FOR USE IN WATER CONDITIONING EQUIPMENT.
Claims use since Dec. 1, 1945.

Ser. No. 516,021. KATHLEEN MARY QUINLAN, INC., New York, N. Y. Filed Jan. 20, 1947.

balanced beauty

No claim is made to the word "Beauty" apart from the mark.
FOR SKIN CREAMS USED AS NIGHT CREAMS AND CLEANSERS.
Claims use since Jan. 7, 1947.

Ser. No. 516,415. HOME GAS COMPANY, Minneapolis, Minn. Filed Jan. 27, 1947.

FOR LIQUID PETROLEUM GAS.
Claims use since Mar. 19, 1935.

Ser. No. 516,581. SCHENLEY LABORATORIES, INC., New York, N. Y. Filed Jan. 29, 1947.

DAIRYCILLIN

FOR PENICILLIN FOR USE IN TREATMENT OF COWS AND OTHER MILK-PRODUCING ANIMALS.
Claims use since Oct. 21, 1946.

Ser. No. 516,638. ROBERT B. SAHAGEN & COMPANY, INC., Rochdale, Mass. Filed Jan. 30, 1947.

The abbreviation "Co." and the word "Fuels" are disclaimed.
FOR COMPRESSED AND LIQUEFIED GASEOUS FUEL.
Claims use since Jan. 15, 1944.

Ser. No. 517,868. PRO-PHY-LAC-TIC BRUSH COMPANY, Northampton, Mass. Filed Feb. 20, 1947. Under section 5b of the act of 1905 as amended in 1920.

Pro-phy-lac-tic

FOR INSECT REPELLENT.
Claims use since May 22, 1944.

Ser. No. 518,400. GENERAL CHEMICAL COMPANY, New York, N. Y. Filed Mar. 3, 1947.

SULFAN

FOR LIQUID SULFUR TRIOXIDE FOR USE AS A SOURCE OF HIGH STRENGTH SO_3 IN THE INDUSTRIAL ARTS, AS, FOR EXAMPLE, IN THE FORTIFICATION OF OLEUM, IN SULFONATION PROCESSES, AND IN THE FORMATION OF CHEMICAL COMPOUNDS.
Claims use since Jan. 27, 1947.

Ser. No. 518,430. SALES AFFILIATES, INC., New York, N. Y. Filed Mar. 3, 1947.

NOTOXIDE

FOR OXIDIZING AGENT FOR USE AS AN ANTISEPTIC, DISINFECTANT, MOUTH WASH, NOSE DOUCHE, GARGLE, HAIR BLEACH, AND SIMILAR PURPOSES.
Claims use since April 1926.

Ser. No. 521,844. G. H. WOOD & COMPANY LIMITED, Toronto, Ontario, Canada. Filed May 3, 1947.

OZIUM

FOR AIR FRESHENING DEODORANT HAVING INCIDENTAL GERMICIDAL PROPERTIES.
Claims use since Oct. 30, 1945.

Ser. No. 523,973. MIDO PRODUCTS, Torrance, Calif. Filed June 11, 1947.

di-d-san

The letters "di-d" are disclaimed.
FOR DEODORANT AND DISINFECTANT COMPOSITIONS.
Claims use since Apr. 1, 1947.

Ser. No. 525,304. DARWORTH INCORPORATED, Simsbury, Conn. Filed July 1, 1947.

DARWORTH

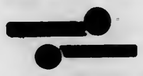
FOR INSECTICIDES.
Claims use since June 11, 1947.

Ser. No. 525,922. NATIONAL CARBON COMPANY, INC., New York, N. Y. Filed July 3, 1947.

National

FOR ACCELERATOR FOR SYNTHETIC RESIN CEMENT.
Claims use since 1944.

CLASS 8



SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 518,906. THE REISS-PREMIER CORPORATION, West New York, N. J. Filed Mar. 12, 1947.

The trade-mark consists of a white rectangular shaped bar inlaid in the stem of the smokers' pipes.
FOR SMOKERS' PIPES.
Claims use since July 12, 1944.

Ser. No. 518,908. THE REISS-PREMIER CORPORATION, West New York, N. J. Filed Mar. 12, 1947.

The trade-mark consists of two offset horizontal bars having a dot at the opposite end of each of the respective bars, the mark being inlaid in the stems of the smokers' pipes.
FOR SMOKERS' PIPES.
Claims use since June 8, 1946.

Ser. No. 521,623. THE REISS-PREMIER CORPORATION, West New York, N. J. Filed Apr. 30, 1947.

The trade-mark consists of a representation of a circle which is inlaid on the stem of the smokers' pipes.
FOR SMOKERS' PIPES.
Claims use since July 15, 1932.

Ser. No. 521,624. THE REISS-PREMIER CORPORATION, West New York, N. J. Filed Apr. 30, 1947.

The trade-mark consists of a representation of a propeller which is inlaid on the stem of the smokers' pipes.
FOR SMOKERS' PIPES.
Claims use since April 1929.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 513,196. OLIN INDUSTRIES, INC., East Alton, Ill. Filed Nov. 25, 1946.

BIG INCH

FOR DETONATORS.
Claims use since Oct. 17, 1946.

Ser. No. 529,916. E. MYERS LYE CORPORATION, St. Louis, Mo. Filed July 29, 1947.

WATCH DOG

Applicant claims ownership of registration No. 223,184.
FOR CHLORINATED LIME.
Claims use since October 1939.

Ser. No. 532,357. STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 25, 1947.

CHLORDUST

FOR INSECTICIDES.
Claims use since Apr. 3, 1947.

Ser. No. 533,139. CAMPANA SALES COMPANY, doing business as Old South Perfumers, Batavia, Ill. Filed Sept. 3, 1947.

OLD SOUTH

Applicant claims ownership of registrations Nos. 381,789, 383,838, 383,839, 383,867, and 390,154.
FOR COLOGNES, PERFUMES, LOTIONS FOR THE SKIN, FACE POWDERS, BODY POWDERS, BATH OILS, BATH ESSENCES, BATH SALTS, AND SACHET POWDERS.
Claims use since Feb. 22, 1940.

Ser. No. 533,776. GEORGE REINING, doing business as Reining's Physio-Therapy System, Freeport, Ill. Filed Sept. 8, 1947.

M-C-7

FOR OINTMENT.
Claims use since Aug. 22, 1947.

Ser. No. 534,203. ROSE STARR, doing business as Starr Pharmacal Co., New York, N. Y. Filed Sept. 11, 1947.

AMPHOBESE

FOR PREPARATION FOR THE TREATMENT OF OBESITY, IN CAPSULE AND TABLET FORM.
Claims use since Mar. 15, 1941.

Ser. No. 534,409. AYERST, MCKENNA & HARRISON LIMITED, New York and Rouses Point, N. Y. Filed Sept. 13, 1947.

TOMECTIN

FOR NICKEL PECTINATE COMPOUND.
Claims use since June 23, 1947.

Ser. No. 536,126. PARKE, DAVIS & COMPANY, Detroit, Mich. Filed Sept. 29, 1947.

VERATRONE

FOR PREPARATION USED AS A VASODILATOR.
Claims use since Mar. 16, 1905.

Ser. No. 536,495. CARBIDE AND CARBON CHEMICALS CORPORATION, New York, N. Y. Filed Oct. 2, 1947.

CRAG

FOR AGRICULTURAL FUNGICIDES.
Claims use since July 30, 1947.

Ser. No. 536,714. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Oct. 3, 1947.

CREMOSTATICIN

FOR PREPARATION USEFUL IN ANTIBACTERIAL THERAPY.
Claims use since Sept. 29, 1947.

Ser. No. 537,032. FIRST NATIONAL LABORATORIES, INC., Lehighton, Pa. Filed Oct. 7, 1947.

LONG LEADER

FOR PREPARATION USED IN THE TREATMENT OF COUGHS, HOARSENESS, AND MINOR IRRITATIONS OF THE THROAT WHEN THESE CONDITIONS ARE DUE TO COLDS.

GREEN CROSS SHOE

The word "Shoe" is disclaimed.
FOR SHOES MADE OF FABRIC, LEATHER, AND/OR RUBBER.
Claims use since Oct. 28, 1935.

Reg. No. 337,346. Registered Aug. 4, 1936. MOE LEVY & SON, INC., New York, N. Y. Republished by Stuarts Clothes, Inc., New York, a corporation of New York.

Tom Collins

FOR MEN'S AND BOYS' SUITS.
Claims use since Mar. 15, 1936.

Reg. No. 349,005. Registered Aug. 17, 1937. ROBERT W. HAMILTON, New York, N. Y. Republished by Robert W. Hamilton, Inc., New York, N. Y., a corporation of New York.

Lady Hamilton

CASTLE

FOR LADIES' DRESSES OF SILK, COTTON OR WOOL.
Claims use since July 1, 1936.

Reg. No. 349,084. Registered Aug. 17, 1937. INTERNATIONAL CELLUCOTTON PRODUCTS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

DO-DADS

FOR SANITARY BABY DIAPERS.
Claims use since Mar. 26, 1937.

Reg. No. 353,797. Registered Jan. 18, 1938. PIONEER SUSPENDER COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

PIONEER

FOR SUSPENDERS, GARTERS, AND BELTS FOR OUTER WEAR.
Claims use since July 21, 1937.

Reg. No. 357,483. Registered June 7, 1938. HUBRITE INFORMAL FROCKS, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

Joyce Hubrite

FOR WOMEN'S, LADIES' AND MISSES' DRESSES.
Claims use since Nov. 1, 1937.

Reg. No. 365,340. Registered Mar. 7, 1939. FRANCO CORSET COMPANY, New York, N. Y., a firm. Republished by registrant.

bialastic

FOR CORSETS.
Claims use since on or about Apr. 1, 1938.

Reg. No. 367,159. Registered May 9, 1939. NORTHMONT HOSIERY CORPORATION, Reading, Pa., a corporation of Pennsylvania. Republished by registrant.

Stretchette

FOR HOSIERY.
Claims use since Oct. 20, 1938.

Reg. No. 367,924. Registered June 6, 1939. THE UNITED STATES SHOE CORPORATION, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

FOUNDATION LAST No.

The words "Last No." are disclaimed.
FOR SHOES MADE OF LEATHER, RUBBER, FABRIC AND/OR A COMBINATION OF THESE MATERIALS.
Claims use since Apr. 10, 1933.

Reg. No. 387,871. Registered June 3, 1941. AMOSKEAG PAJAMA CO. INC., Boston, Mass. Republished by Amoskeag Pajama Co., Inc., Boston, Mass., a corporation of Massachusetts.

HIPPO SEAT

The word "Seat" is disclaimed.
FOR PAJAMAS FOR MEN AND BOYS.
Claims use since Jan. 4, 1941.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Reg. No. 348,928. Registered Aug. 17, 1937. INTERNATIONAL CELLUCOTTON PRODUCTS COMPANY, Chicago, Ill., A corporation of Delaware. Republished by registrant.

GEORGIAN

FOR SANITARY NAPKINS.
Claims use since Nov. 30, 1936.

CLASS 45

SOFT DRINKS AND CARBONATED WATERS

Reg. No. 381,245. Registered Sept. 17, 1940. CRANBERRY CANNERS, INC., South Hanson, Mass. Republished by National Cranberry Association, Hanson, Mass., a corporation of Delaware.

CRAN

FOR CRANBERRY JUICE FOR BEVERAGE PURPOSES.
Claims use since Apr. 8, 1939.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Reg. No. 167,111. Registered Apr. 24, 1923. BLANKE-BAER EXTRACT & PRESERVING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

TRI-SUM

FOR JELLY, APPLE BUTTER, AND FRUIT PRESERVES.
Claims use since Feb. 20, 1922.

Reg. No. 337,592. Registered Aug. 11, 1936. THE ROBINSON MILLING COMPANY, Salina, Kans., a corporation of Kansas. Republished by registrant.

ROBIN'S BEST

The word "Best" is disclaimed.
FOR WHEAT FLOUR.
Claims use since Feb. 7, 1919.

Reg. No. 347,659. Registered June 29, 1937. UNITED PURE FOOD CO., New York, N. Y., a corporation of New York. Republished by registrant.

PREZIOSO

FOR EDIBLE VEGETABLE OILS.
Claims use since 1893.

Reg. No. 354,361. Registered Feb. 8, 1938. KELLOGG SEED COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

PETAMINE

FOR FOOD FORMULA FOR CAGE BIRDS.
Claims use since June 21, 1937.

Reg. No. 355,950. Registered Apr. 5, 1938. NEIL'S LABORATORY, Los Angeles, Calif. Republished by Neil Products Inc., Los Angeles, Calif., a corporation of California.

Neil's

FIXOID-BUMOR

FOR FLAVORING EXTRACTS FOR FOODS AND FROZEN CONFECTIONS.
Claims use since Aug. 9, 1937.

Reg. No. 356,069. Registered Apr. 12, 1938. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

ORO

FOR SHORTENING COMPRISING HYDROGENATED UNSATURATED OILS AND FATS.
Claims use since Sept. 2, 1937.

Reg. No. 356,629. Registered May 3, 1938. J. C. WALKER BROTHERS, INC., Exmore, Va. a corporation of Virginia. Republished by registrant.

SEASIDE

FOR OYSTERS AND SALT WATER FISH—NAMELY, CROAKERS, WEAK FISH, MACKEREL, PORGIES, AND OTHER LESS IMPORTANT FISH.
Claims use since early in 1889.

Reg. No. 357,104. Registered May 24, 1938. VITAMINERALS, INC., Los Angeles, Calif. Republished by Vitaminerals, Inc. (1946), Los Angeles, Calif., a corporation of California.

The address "3636 Beverly Blvd., Los Angeles, Calif." is disclaimed.
FOR CONCENTRATED DEHYDRATED, VEGETABLE MILK, AND FRUIT PRODUCT WITH ADDED NATURAL VITAMIN CONCENTRATES OBTAINED FROM VEGETABLE AND FISH OIL SOURCES.
Claims use since Aug. 1, 1933.

Reg. No. 359,940. Registered Sept. 6, 1938. THE KELLING NUT CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

DOUBLE KAY

FOR SALTED, CANDIED, AND PLAIN NUT MEATS.
Claims use since 1907.

Reg. No. 360,359. Registered Sept. 13, 1938. UNITED PURE FOOD CO., New York, N. Y., a corporation of New York. Republished by registrant.

CENTEN

FOR OLIVE OIL.
Claims use since Feb. 3, 1938.

Reg. No. 361,939. Registered Nov. 8, 1938. STANDARD MILLING COMPANY, New York, N. Y. Republished by Standard Milling Company, Chicago, Ill., a corporation of Illinois.

GULF PRIDE

FOR WHEAT FLOUR.
Claims use since Sept. 14, 1937.

Reg. No. 367,392. Registered May 16, 1939. UNITED PURE FOOD CO., New York, N. Y., a corporation of New York. Republished by registrant.

KING MINOS

FOR CANNED VEGETABLES, DRIED VEGETABLES, CANNED FRUITS, DRIED FRUITS, OLIVE OIL, OLIVES, FRUIT JUICES FOR FOOD PURPOSES, AND CHEESE.
Claims use since July 18, 1938.

Reg. No. 368,701. Registered June 27, 1939. CHOCOLATE PRODUCTS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Stillicious

FOR INGREDIENTS FOR MAKING PUDDINGS OF VARIOUS FLAVORS, SUCH AS CHOCOLATE OR VANILLA FLAVORED PUDDINGS, SAID INGREDIENTS BEING IN POWDERED FORM AND COMPRISING ESSENTIALLY SUGAR, TAPIOCA, STARCH, YEAST AND SALT, TO WHICH MILK OR THE LIKE IS ADDED BY THE CONSUMER TO MAKE A PASTE TO POUR INTO MOLDS IN THE FORM OF PIES, CUPS, OR THE LIKE.
Claims use since Oct. 30, 1935.

Reg. No. 388,962. Registered July 22, 1941. STANDARD MILLING COMPANY, New York, N. Y. Republished by Standard Milling Company, Chicago, Ill., a corporation of Illinois.

N. W.
IMPERIAL

FOR WHEAT FLOUR.
Claims use since Aug. 31, 1939.

CLASS 47

WINES

Reg. No. 28,269. Registered May 19, 1896. AMERICAN WINE COMPANY, St. Louis, Mo. Republished by American Wine Company, St. Louis, Mo., a corporation of Delaware.

COOK'S Imperial

FOR CHAMPAGNE—WINE.
Claims use since abont 1875.

Reg. No. 44,662. Registered July 18, 1905. AMERICAN WINE COMPANY, St. Louis, Mo. Republished by American Wine Company, St. Louis, Mo., a corporation of Delaware.

COOK'S Imperial

FOR CHAMPAGNE OR SPARKLING WINE.
Claims use since 1870.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 337,230. Registered Aug. 4, 1936. P. BALLANTINE AND SONS, Newark, N. J., a corporation of New Jersey. Republished by registrant.

The representation of the label is disclaimed. The drawing is lined to indicate copper color.
FOR BEER AND ALE.
Claims use since Sept. 25, 1935.

Reg. No. 354,655. Registered Feb. 15, 1938. THE GEO. WIEDEMANN BREWING CO., INC., Newport, Ky., a corporation of Kentucky. Republished by registrant.

WIEDEMANN

FOR BEER.
Claims use since on or about Jan. 1, 1882.

Reg. No. 365,939. Registered Mar. 21, 1939. HORLACHER BREWING COMPANY, Allentown, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR BEER AND ALE.
Claims use since Oct. 27, 1938.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 347,081. Registered June 15, 1937. ABRAM SMITH BOWMAN, Sunset Hills, Va. Republished by registrant.

VIRGINIA GENTLEMAN

FOR DISTILLED ALCOHOLIC LIQUORS.
Claims use since Jan. 14, 1937.

Reg. No. 362,915. Registered Dec. 6, 1938. ABRAM SMITH BOWMAN, Sunset Hills, Va. Republished by registrant.

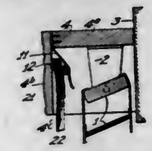
Old Virginia Hills

The word "Virginia" is disclaimed.
FOR WHISKEY.
Claims use since May 14, 1938.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

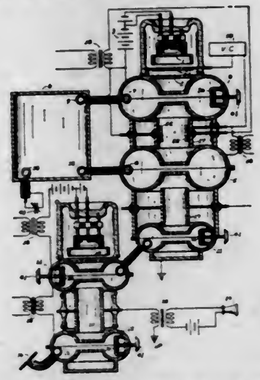
Reg. No. 353,871. Registered Jan. 18, 1938. RESPRO INC., Cranston, R. I., a corporation of Rhode Island. Republished by registrant.



RESKRAF

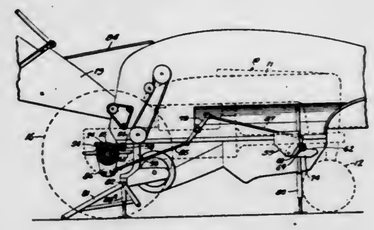
FOR ARTIFICIAL LEATHER.
Claims use since July 14, 1937.

REISSUES



MARCH 23, 1948

22,989
WINDOW DRAPE ROD HANGING MEANS
Francis X. Ganter, Los Angeles, Calif.
Original No. 2,391,150, dated December 18, 1945, Serial No. 477,589, March 1, 1943. Application for reissue December 16, 1946, Serial No. 716,517
18 Claims. (Cl. 160—19)



1. In a means of the class described, a relatively flat horizontal support, and a plurality of resilient brackets, each secured at one end to the outer edge of the support, and the opposite end extending angularly and downwardly therefrom, said opposite end of each bracket having a hook portion for supporting a curtain rod.

22,990
MODULATION SYSTEM
William W. Hansen, Garden City, and Russell H. Varian, Wantagh, N. Y., assignors to The Board of Trustees of The Leland Stanford Junior University, Stanford University, Calif., a corporation of California
Original No. 2,281,935, dated May 5, 1942, Serial No. 326,150, March 27, 1940, which is a division of Serial No. 201,898, April 14, 1938. Application for reissue March 1, 1943, Serial No. 477,668
78 Claims. (Cl. 179—171.5)

23. The method of modulating the envelope of the high frequency output of ultra high frequency electron beam apparatus which consists of initiating recurrent changes in electron velocity of the beam at ultro high frequency at a region in the path thereof, absorbing energy from the beam, and effecting modulation of said ultra high frequency by changing the time of flight of the electrons in the beam between said region and the point of said energy absorption in accordance with an applied modulation signal.

22,991
IMPLEMENT CONSTRUCTION
Rex B. Hitchcock, Brussels, Belgium, and William C. Rosenthal, Chicago, Ill., assignors to International Harvester Company, a corporation of New Jersey
Original No. 2,376,539, dated May 22, 1945, Serial No. 490,267, June 10, 1943. Application for reissue August 21, 1946, Serial No. 691,894
41 Claims. (Cl. 56—20)

3. In combination, a tractor having a body, an axle, and a wheel on the axle spaced from the body to provide space for an implement, an implement positioned in said space, a mounting structure on the tractor, said structure having an element in engagement with the implement to be carried by the tractor in said space, and structure for shifting the mounting means with respect to the tractor to shift the implement bodily between a position in which it is carried by the tractor raised and operative and between the wheel and the body and a position in which it rests inoperative upon the ground to enable the tractor with the mounting structure thereon to be moved away from the implement.

PLANT PATENTS

GRANTED MARCH 23, 1948

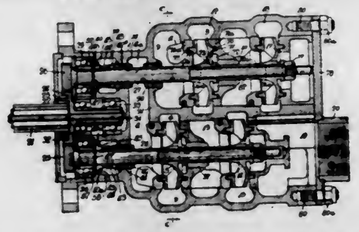
Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

793
PLUM TREE
De Ross Kellogg, Milford, Conn., assignor to Stark Bro's Nurseries and Orchards Company, Louisiana, Mo., a corporation of Missouri
Application December 13, 1946, Serial No. 716,010
1 Claim. (Cl. 47—62)

A new and distinct variety of plum tree, having a similarity to the Compass Cherry plum variety but distinguished therefrom in respect to the large size of its fruit, superiority of the flavor and good disease resistance of the fruit, hardiness and vigor of growth of the tree, good disease resistance thereof, and regularity and productivity of its bearing, substantially as shown and described.

794
APPLE TREE
Rowland Sigel Rogers, deceased, late of Bloomfield, Ind., by Everett R. Bridges, administrator, Bloomfield, Ind., assignor to Stark Bro's Nurseries and Orchards Company, Louisiana, Mo., a corporation of Missouri
Application March 20, 1947, Serial No. 735,848
1 Claim. (Cl. 47—62)

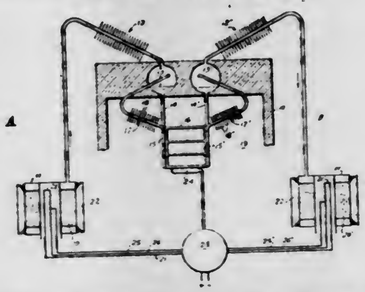
A new and distinct variety of apple tree, characterized as to novelty by the bright red striped or streaked coloring of the fruit over yellow ground color; outstanding heavy bearing habit of the tree, producing big crops regularly every year; its earlier ripening period relative to Grimes Golden and Jonathan varieties; and the superior eating quality of the fruit, substantially as shown and described.



795
PEACH TREE
Fred D. Williams, Porterville, Calif.
Application March 23, 1946, Serial No. 656,593
1 Claim. (Cl. 47—62)

A new and distinct variety of peach tree substantially as herein disclosed, characterized by freestone fruit having a substantially higher coloring, which is predominately a deep reddish color, and an almost total lack of fuzz; both as compared to the Elberta and Fay Elberta varieties, but retaining the rich flavor of the fruit of said varieties and equaling the latter in ability to bear, tree vigor, size of crop, freedom from disease, and keeping quality of the fruit.

PATENTS

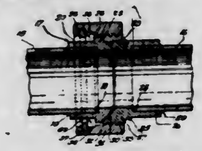


GRANTED MARCH 23, 1948

2,438,104
PUMP
Harold E. Adams, Norwalk, Conn., assignor to Nash Engineering Company, South Norwalk, Conn., a corporation of Connecticut
Application September 23, 1944, Serial No. 555,444
5 Claims. (Cl. 103—108)

1. A centrifugal pump comprising a plurality of stages, each stage comprising an impeller and a volute therefor, a plurality of shafts, one of said impellers being on each of said shafts, means whereby the volute of one of said stages discharges directly into the inlet of the impeller of another stage, a casing enclosing said stages, and including an inlet chamber means, means constituting a chamber in said casing separate from the inlet chamber means through which chamber at least one of said shafts passes, a bearing for said shaft on the side of said separate chamber removed from the inlet chamber means, means for lubricating the bearing, sealing means in the separate chamber to impede leakage of fluid from said bearing into said chamber and from said inlet chamber means into said separate chamber, and means for drawing such leakage fluid as may pass said sealing means from the separate chamber.

2,438,105
REFRIGERATING APPARATUS OF THE INTERMITTENT ABSORPTION OR ADSORPTION TYPE
Nils Erland af Kleen, Stockholm, Sweden, assignor to Kleen Refrigerator, Inc., Hoboken, N. J., a corporation of Delaware
Application September 14, 1942, Serial No. 458,240
1 Claim. (Cl. 62—5)

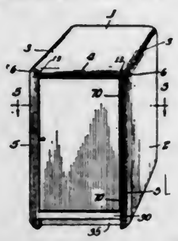


Refrigerating apparatus including two intermittent absorption refrigerating units having alternate heating and cooling periods, heating means for each of said units to effect generation of refrigerant vapor, means for varying the heating rate of said heating means in accordance with the demands for refrigeration to vary correspondingly the rate of generation of refrigerant vapor per unit of time, and mechanism for controlling the operation of said heating means to heat each of said units intermittently and in out of phase relationship with respect to one another including means constructed and arranged to terminate operation of the heating means of a respective unit at the end of the heating period thereof and simultaneously initiate operation of the heating means of the other unit but at a rate insufficient to effect generation of refrigerant vapor for a predetermined period at the beginning of the cooling period of the first-named unit.

2,438,106
PERORAL PENICILLIN COMPOSITIONS
Harvey E. Alburn, West Chester, Pa., Jesse Charney, New York, N. Y., and Finn W. Bernhart, Solon, Ohio, assignors to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application June 9, 1944, Serial No. 539,598
5 Claims. (Cl. 167—55)

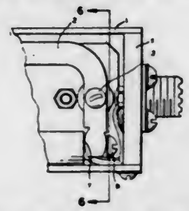
1. A therapeutic composition in dosage form for oral administration producing higher blood-levels of penicillin than are obtained upon oral administration of penicillin alone comprising penicillin and sodium citrate in an amount sufficient to protect the penicillin against therapeutically significant destruction by gastric hydrochloric acid.

3. A therapeutic composition in dosage form for oral administration producing higher blood-levels of penicillin than are obtained upon oral administration of penicillin alone comprising penicillin in an orally effective amount and a non-toxic amount of a penicillin-compatible buffering agent of the type failing to evolve carbon dioxide upon acidification, the amount of said buffering agent being sufficient to protect a substantial portion of the penicillin against therapeutically significant destruction by gastric hydrochloric acid.



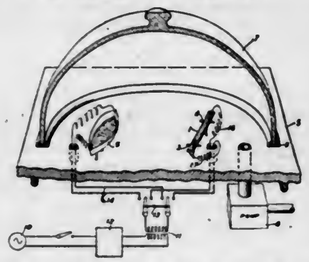
2,438,107
PIPE COUPLING
Daniel R. Babbitt, Portland, Oreg., assignor to Electric Steel Foundry, Portland, Oreg., a corporation of Oregon
Application June 6, 1946, Serial No. 674,787
5 Claims. (Cl. 285—122)

1. A pipe coupling for separably joining the ends of two pipes and comprising, in combination, coacting flanged fittings adapted to be se-



cured to said ends of the two pipes by fluid-tight joints and having tapered end surfaces for separably seating together in fluid-tight relationship, one of said flanged fittings having a threaded outer surface of a diameter greater than that of the pipe to which it is secured, the other of said flanged fittings having an enlarged end portion of a diameter substantially equal to the minor diameter of said threads and a collar portion of lesser diameter than the enlarged end portion joined by a shoulder surface facing away from said one of the flanged fittings, a nut having an end portion internally threaded to fit the threaded outer surface of said one of the fittings, the entire other end portion of said nut having an internal diameter greater than the major diameter of the threads and having therein an annular groove separated from the threaded end portion by a shouldered intermediate portion, a split ring including two semicircular halves of a size to fit said collar portion in a position abutting said shoulder surface and to fit within said shouldered intermediate portion of the nut between the threaded portion and said annular groove, and a snap ring having normally separated ends and of a size to fit into said annular groove with an edge portion abutting the ends of the halves of said split ring to retain the split ring in place within the nut, said snap ring having an internal diameter sufficiently greater than one of the pipes that the separated ends thereof may be forced together to effect removal of the snap ring and split ring.

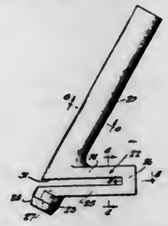
2,438,108
SHEET METAL CABINET AND METHOD OF MAKING THE SAME
Richard C. Barler, Goshen, and John H. Yoder, Waterford, Ind.; said Yoder assignor to said Barler
Application November 17, 1943, Serial No. 510,616
7 Claims. (Cl. 312—141)



4. A sheet metal cabinet having a top wall, side walls and a back wall, in which the side walls extend integrally from the top wall and the back comprises two sections extending integrally from said side walls respectively, and connected together, completing the back wall and spacing the side walls from top to bottom, the portion connecting each side wall with the top wall being smoothly rounded, the front margin of the top wall being rounded downwardly and the front margins of the side walls being rounded inwardly toward each other, the front corners of the top and the upper front corners of the sides being rounded to form mitered joints with said top corners, the extreme marginal portions of said top and sides beyond their rounded portions being bent back toward the interior of the cabinet, and reinforcing angle fittings each disposed opposite the inner, unexposed surfaces of adjoining rounded portions and their bent-back marginal portions and secured in rigid engagement with said bent-back portions.

2,438,109
TEMPERATURE CONTROL DEVICE
Frederick D. Bennett, Dayton, and Thomas A. Newkirk, Fairfield, Ohio
Application June 3, 1944, Serial No. 538,676
1 Claim. (Cl. 297—11)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

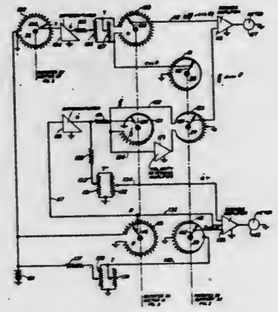
In a device of the character described, a metallic case, a bell-crank lever carried by said case and pivotally mounted therein, a rod having a coefficient of expansion different than that of said case and anchored at one end to that end of the case remote from the lever pivot, one end of said lever having opposed convex surfaces one of which contacts the free end of the rod and adjustable, threaded fastening means passing through said convex surfaces into said rod, said fastening means being loose enough to allow continuous, free-sliding, rocking, surface-contact of the lever on and between said rod and fastening means.



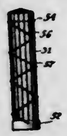
2,438,110
ELECTRICAL TRANSLATING MATERIALS AND DEVICES AND METHOD OF MAKING THEM
Walter H. Brattain, Halesite, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 28, 1943, Serial No. 496,416
5 Claims. (Cl. 250—31)

1. The combination in an electrical translating device of a translating element comprising a metallic base having a layer of silicon deposited thereon, the surface of said silicon layer containing an alloy of silicon and lead, and a spring contact wire making a point-contact with the surface of said silicon layer.

3. The method of making a translating device for electric waves of ultra-high frequency which comprises depositing a layer of silicon upon the surface of a metal base, causing a reaction to take place between the silicon of said layer and a metallic compound to form an alloy of the metal with the silicon near the surface of the silicon layer and to form a silicate of the metal covering the surface of the silicon layer, and removing the covering of silicate to expose the surface of the silicon layer.



2,438,111
STYLUS FOR SOUND REPRODUCTION
Richard H. Campbell, Racine, Wis., assignor to Webster Electric Company, Racine, Wis., a corporation of Delaware
Application November 26, 1945, Serial No. 630,732
1 Claim. (Cl. 274—38)

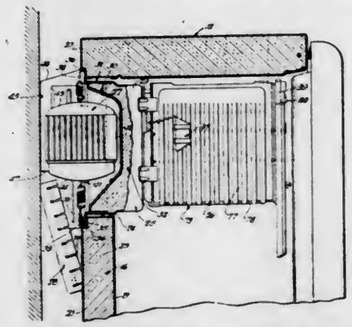


A stylus for sound reproduction, comprising a metal member having a shank for securement in a chuck, said shank supporting a substantially U-shaped laterally extending integral spring, said spring having a pair of relatively flat parallel legs separated by a parallel sided slot, the shank being secured to one of said legs, and the other of said legs supporting an enlargement of minimum size adapted to be provided with a socket for receiving a point member, a point member located in said socket and having a minimum length to reduce the unsprung mass of the point supporting portion of said stylus, said U-shaped spring extending substantially parallel to a record, when the stylus shank is disposed at a predetermined tracking angle, and the other of said flat legs of said spring being longer, to locate the point member substantially on the axis of the shank, thereby eliminating any tendency of the point member to turn the stylus in its chuck, the said slot between the legs of said U-shaped spring being open, and the walls thereof being spaced slightly from each other so that when a tone arm bearing the needle is dropped, the spring may take up the shock, but the shock will result in the momentary closing of the end of the slot without permanent deformation of the stylus, said stylus having an inherent needle resonance frequency of more than 10,000 cycles per second, and the cross-sectional shape of the parts of said spring being substantially rectangular and of wider dimension laterally than vertically, whereby the lateral compliance is low in comparison with the vertical compliance, the low lateral compliance preventing an excessive loss in driving power applied to the needle chuck.

2,438,112
BOMBSIGHT COMPUTER
Sidney Darlington, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 29, 1943, Serial No. 492,729
6 Claims. (Cl. 235—61.5)

1. In a system for indicating that the correct track is being flown by an aerial vehicle so that a bomb dropped from said vehicle will land on a target, a grounded source of voltage, means connected to said source and controlled by observations of said target to fractionate the voltage from said source proportionally to the rate of change in the angle between a fixed direction and the vertical plane including said vehicle and said target, a first potentiometer having a first wiper connected to said means and adjusted to select a voltage proportional to the trail of said bomb, and a winding, means on said vehicle controlled by observations of said target including a first shaft moved proportionally to the horizontal range from said vehicle to said target and a second shaft moved proportionally to the angle between the axis of said vehicle and said plane, a second potentiometer having a second wiper connected to the winding of said first potentiometer and moved by said second shaft and a winding varying in resistance with a sinusoidal function connected to ground, and a third potentiometer having a winding connected across the winding of said first potentiometer and a third wiper moved by said first shaft to select a voltage proportional to said rate of change multiplied by the ratio of said range to said trail plus the cosine of said latter angle.

2,438,113
METHOD AND APPARATUS FOR WINDING GRIDS
Robert Denmark, New York, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 5, 1943, Serial No. 509,145
17 Claims. (Cl. 140—71.5)

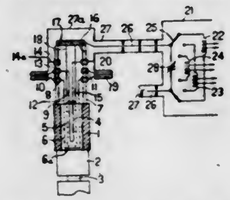


1. The method of manufacturing grids for electronic devices comprising forming a loop of one, then a loop of another, then another loop of the first, then another loop of said other, and so on until all of said loops are made, securing bands to the individual wires of said grids at the adjacent portions thereof in order to maintain the desired relationship between said wires, winding a wire helically around said assembled loops and securing thereto, and securing the corresponding end of said helical wire to said band.

2,438,114
REFRIGERATOR CONSTRUCTION
James H. Dennedy, Evansville, Ind., assignor to Seeger Refrigerator Company, a corporation of Minnesota
Application February 28, 1946, Serial No. 650,804
9 Claims. (Cl. 62—116)

1. A removable refrigerator unit comprising an insulating plug having an inner metallic shell to

be located inside the cabinet and an outer metallic shell, the said shells being joined by breaker strips at their edges and the outer shell being recessed to receive and house a portion of a motor compressor unit, the space between said shells being filled with suitable heat insulation, forming a plug adapted to close an aperture in the rear of a refrigerator cabinet, said plug supporting an evaporator on its inner shell and said plug supporting a motor compressor unit in the recess of its outer shell, said motor compressor unit having an external cylindrical surface, a chimney member open at its upper end and lower end and enclosing the projecting part of said



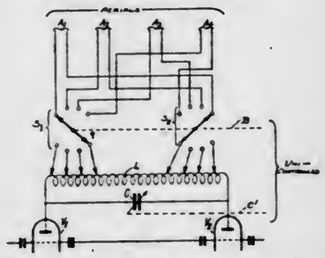
motor compressor unit to form an air circulation chimney about the motor compressor unit, a condenser for said unit located to extend across the lower opening of said chimney whereby the air heated by said condenser will pass up said chimney and induce convection air currents past said motor compressor unit to cool the latter, and a cooling unit for said motor compressor unit, comprising a cylindrical body complementary in shape to the exterior cylindrical surface of the motor compressor, said cylindrical body having a multiplicity of laterally extending fins projecting from each of its opposite sides, the fins being located parallel to each other and to said chimney member.

2,438,115

SCREENING MEANS FOR VACUUM ELECTRIC TUBE DEVICES

John Mathieson Dodds, Timperley, and John Heywood Ludlow, Bowdon, England

Application December 29, 1943, Serial No. 516,107
In Great Britain May 13, 1938
3 Claims. (Cl. 250—40)



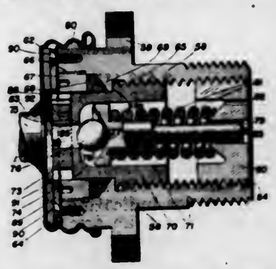
1. In a radio transmitter for high frequencies, a valve having a control grid and anode, a resonant circuit electrically connected with said control grid, a screening electrode separating the control grid and anode, a conductive support for said screening electrode forming an electrically continuous connection therewith, an electrical screening enclosing said resonant circuit, electrical screening enclosing the connection between the control grid and resonant circuit and forming a continuous electrical connection on the one side with the screening electrode support and on the other side with the resonant circuit screen, the arrangement being such as to form an electrically continuous screen between the control grid circuit and anode circuit both internally and externally of the valve.

2,438,116

UNICONTROLLED TRANSMITTER TUNING AND ANTENNA SWITCHING ARRANGEMENT

John Mathieson Dodds, Timperley, and John Heywood Ludlow, Bowdon, England

Application December 29, 1943, Serial No. 516,109
In Great Britain April 16, 1940
2 Claims. (Cl. 250—17)



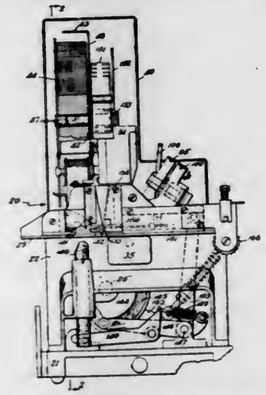
2. In a radio transmitter, a pair of output valves, a tuning inductance connected between the anodes of said valves, a variable condenser forming a tuned circuit with said inductance, a plurality of aerials, a plurality of simultaneously operable means to selectively connect each one of said aerials to two respective ones of a plurality of points of said inductance means, and uni-control means to operate said last-named means and to vary said condenser.

2,438,117

VALVE FOR DEPTH CHARGE FIRING MECHANISMS

Walter B. Ellwood, New York, N. Y.

Application August 25, 1942, Serial No. 456,047
2 Claims. (Cl. 251—121)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a submersible hydrostatically operable device into which a pressure liquid is admissible, a ball valve for said device comprising a relatively stationary valve body, a seat member having a liquid inlet orifice defining a seat in communication with the interior of said valve body, the ball valve being initially spaced from but engageable with the seat, said seat member having a chamber and being adjustable in the valve body to eventually close said spacing, a circular ball-centering flange occupying the chamber in the seat member, said flange backing the ball and having a stem, a spring engaging the back of the flange but initially lacking compression to produce said initial spacing of the ball valve, and a tail support having a guide bore for said stem, said bore and chamber having relatively close clearances around the respective stem and circular flange.

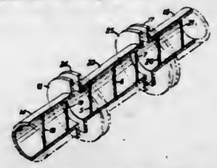
2,438,118

TAG PRINTING MACHINE

Edward W. Flood and Carl A. Flood, Framingham, Mass., assignors to Dennison Manufacturing Company, Framingham, Mass., a corporation of Massachusetts

Application October 10, 1942, Serial No. 461,564
4 Claims. (Cl. 101—288)

1. A tag printing machine comprising periodically operating means for advancing the tag lengthwise, a type-carrying printing head arranged to print on a longitudinally extending zone of the tag, means, acting between successive operations of the lengthwise advancing means, for causing between such operations a cycle of back and forth shifting movement of the relative positions of the printing head and tag transversely of the path of advance to relative positions of the printing head and tag in which different longitudinally extending zones of the same tag are presented to the same type of said printing head, and means for operating the printing head a plurality of times for each said cycle of transverse relative shifting movement between successive operations of the lengthwise advancing means, at times when the respective different longitudinally extending zones of the tag are presented to said same type.



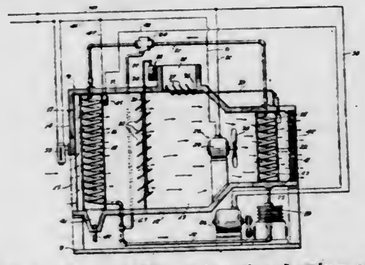
2,438,119

WAVE TRANSMISSION

Arthur Gardner Fox, Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application November 3, 1942, Serial No. 464,333
46 Claims. (Cl. 178—44)

1. A phase shift section for guided electromagnetic waves comprising a wave guide and three spaced polar reactive impedances connected in shunt thereto, the reactances of said impedances being chosen to provide the desired phase shift at a certain frequency, the spacing between said impedances being adjusted for maximum



transmission of energy at said frequency, and the intermediate of said impedances having a reactance approximately half as large as the reactance of each of the other of said impedances.

2,438,120

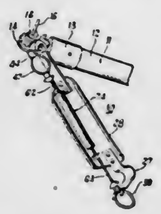
APPARATUS FOR DEHUMIDIFYING AIR

Walter H. Freygang, Essex Fells, N. J., assignor to Kidde Manufacturing Co., Inc., a corporation of Delaware

Application January 27, 1944, Serial No. 519,840
8 Claims. (Cl. 62—6)

1. In a dehumidifier, a housing having oppositely disposed inlet and outlet openings to permit air to be dehumidified to be circulated through said housing, a refrigerating unit associated with said housing and having an evaporator and a condenser disposed in said housing adjacent said inlet and outlet openings, respectively, air propelling means for propelling air through said evaporator and said condenser, a shutter mounted in said housing between said condenser and said evaporator for controlling the rate of flow of the air through said evaporator, a thermostat mounted outside of said housing and connected to said shutter for operating the latter, said housing being provided with an inlet conduit between said shutter and said condenser for admitting air into said housing to increase the rate of flow of the air through said condenser, means for controlling the admission of air into said housing through said conduit and including a thermostat operated by the temperature of the air passing through said condenser, and dual control means responsive to the temperatures of the air outside and inside of said housing for controlling the operation of said refrigerating unit.

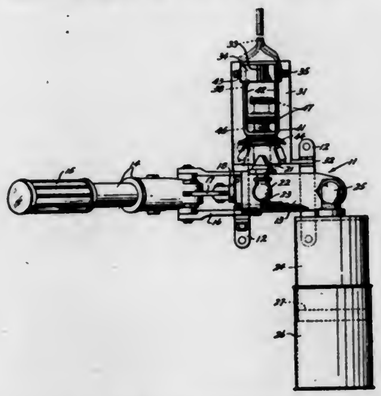
2,438,121



TOOL FOR APPLYING FUSE LINKS TO FUSED CUTOUTS

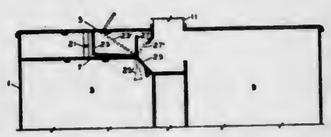
David C. Hubbard, Centralia, Mo., assignor to A. B. Chance Company, Centralia, Mo., a corporation of Missouri

Application February 12, 1947, Serial No. 728,122
9 Claims. (Cl. 294—19)



7. A tool for applying fuse links to a fused cutout assembly comprising an insulating shield

comprising a section of a tubular member adapted to extend about a portion of the fuse link, said tubular section supporting at one end a rigid metal member which extends axially and has a transversely extending grooved arm for engagement with the loop of a fuse link, said tubular section supporting at its other end a leaf spring which extends axially and is transversely bent and provided with a grooved formation at its end for engagement with the other loop of a fuse link, whereby the fuse link is placed under sufficient tension to hold it on the tool, and means for mounting said tool upon an insulating pole, said



means comprising a supporting member having a substantially circular flange provided with an inwardly extending slot adapted to receive a clamping screw bolt, said flange having its face provided with radial ribs and grooves for engagement with a complementary member on the pole, said supporting member being pivotally secured for tight frictional pivotal movement on said rigid metal member whereby the fuse link may, when supported on the tool, be adjusted universally to extend in the direction in which the contacts are arranged on a fused cutout assembly when the operator is in position to install the fuse link.

2,438,122
BEARING GREASING DEVICE
Vincent J. Krobath, Jr., St. Louis, Mo., and Ray J. Roenigk, Jr., Houston, Tex.
Application June 22, 1945, Serial No. 601,049
5 Claims. (Cl. 184—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

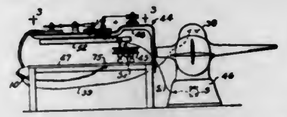
3. A bearing lubricator comprising supporting means, a hand-operated pump supported on said means, a reservoir mounted on the pump, a nozzle on the pump and fed from the reservoir by operation of said pump, said reservoir including a barrel portion open at its end and being constructed to have a grease containing can with an open end mounted to slide inwardly on said barrel portion by the force of suction during operation of the pump, a lever and means for pivoting it on said supporting means, and a cup-shaped seat carried by the lever to cooperate with said nozzle for holding a bearing in place, said lever with the seat thereon being arranged for quick swinging movement toward and away from the nozzle and for clamping the bearing in place while greasing it to facilitate speedy mounting and greasing and dismounting of the bearing.

2,438,123
CHARGING SEAL FOR STOVES
Robert D. Lambert and Charles L. Bailey, Knoxville, Tenn., assignors to Tennessee Valley Authority, a corporation of the United States of America
Application November 18, 1943, Serial No. 510,770
6 Claims. (Cl. 126—287)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a magazine heater comprising an outer shell, a combustion chamber and fuel magazine with an independent top within said shell, a top to said shell, a smoke channel through said outer shell top communicating with said combustion chamber, a fuel inlet and cover therefor in said outer shell top above said magazine, and a secondary fuel inlet and cover therefor in said independent top of said magazine below the first mentioned fuel inlet and cover, wherein the top of said magazine, the top of said shell above said magazine and the portions of said shell adjacent thereto form a zone which is enclosed except for an outlet communicating with said smoke channel with said outlet of configuration such that it may be closed or opened by the operation of a closure associated therewith; an automatic charging damper which comprises an outlet near the top of said magazine communicating with said smoke channel, closures for said outlets, and means associated with said secondary cover and responsive to the position of the latter to vary the position of said closures in relation to their respective outlets.

2,438,124
PRODUCTION OF 1,2-DISUBSTITUTED 3-CYANOGUANIDINES
Hans Z. Lecher, Plainfield, and Robert P. Parker and Robert S. Long, Somerville, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 22, 1945, Serial No. 618,068
5 Claims. (Cl. 260—551)

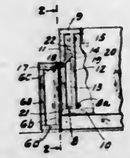
1. As new compounds, the 1,2-dihydrocarbon-substituted-3-cyanoguanidines having at least one aliphatic hydrocarbon substituent.



2,438,125
STABILIZATION OF OXIDIZED AROMATIC HYDROCARBONS
Eugene J. Lorand and John E. Reese, Wilmington, Del., assignors to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 4, 1945, Serial No. 614,434
9 Claims. (Cl. 260—592)

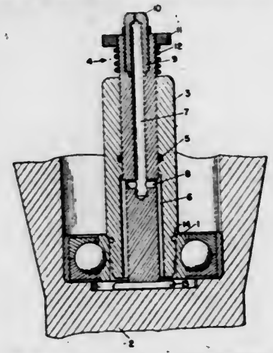
1. The process of stabilizing a reaction mixture produced by the oxidation of an alkyl-substituted aromatic organic compounds having the structural formula

in which R_1 and R_2 represent alkyl groups and Ar represents a substituent selected from the group consisting of aryl and alkaryl groups, said process comprising heating said reaction mixture at a temperature between about 100° C. and about 130° C. in the presence of aqueous alkali.



2,438,126
MECHANICAL SIGNAL AND VOLUME CONTROL FOR MINIATURE RADIO RANGES
Carl W. Muller, Osborn, Ohio
Application February 17, 1940, Serial No. 319,498
14 Claims. (Cl. 35—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. In combination, an aviation ground trainer for simulating the flight of an aircraft, a reference surface, a course indicator movable relative to said reference surface under the directional control of said trainer in a manner equivalent to the simulated flight course of said aircraft, a signal generator for generating signals simulating the signals of a "radio range" transmitting station, a signal receiver connected to said signal generator and mounted in the cockpit of said trainer, a control means for said signal generator for controlling the character of positional signals transmitted to said signal receiver and a means operatively connected to said course indicator and to said control means for actuating said control means responsive to the position of said course indicator relative to predetermined zones on said reference surface representing a radio range signal pattern.

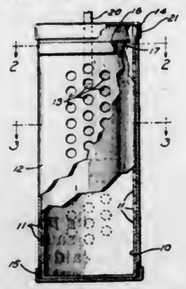


2,438,127
BED DAVENPORT
Irvin C. Poskin, Los Angeles, Calif.
Application October 27, 1944, Serial No. 560,607
8 Claims. (Cl. 5—38)

2. A sofa having an elongated seat portion supported by and between end pieces which project above the ends of said seat portion, a back member extending substantially the entire length of said seat portion and hinged adjacent to the back side thereof to swing from an upstanding to a substantially horizontal position and vice versa, legs having end portions pivotally attached to said back member, and latching means to at times hold said back member in an upstanding position, said latching means comprising stationary parts carried by said end pieces and hooked members pivoted to said back member, said hooked members each having a hook at one side of its pivotal mounting and a tailpiece at the opposite side

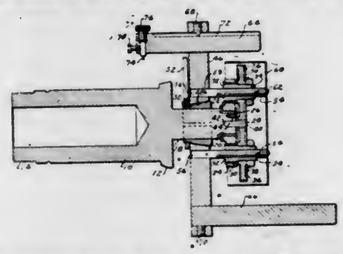
thereof, said tailpieces being positionable to overlie the free end portions of said legs to keep them in an inswung relation to said back member when the hooks are in engagement with the aforesaid stationary parts of the latching means.

2,438,128
LUBRICATION ADAPTER
Frank C. Poyner, San Diego, Calif.
Application February 4, 1946, Serial No. 645,423
4 Claims. (Cl. 184—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. An adapter for transmitting a lubricant under pressure, comprising, a cylindrical casing having a smaller bore along one portion than along the remaining portion thereof; a plunger resiliently reciprocably mounted within said casing, the plunger walls engaging the casing walls along the portion of the latter having the smaller bore and being spaced from the casing walls along the portion of larger bore, said plunger having an end portion shaped for cooperable engagement with apparatus supplying said lubricant under pressure, and having an opening extending therethrough from said end portion into the space between said plunger and said casing.

2,438,129
VAPOR DISSEMINATOR
Hyman Richard Rich, Milwaukee, Wis., assignor, by mesne assignments, to The Diversey Corporation, Chicago, Ill., a corporation of Illinois
Application December 13, 1944, Serial No. 567,973
1 Claim. (Cl. 299—24)



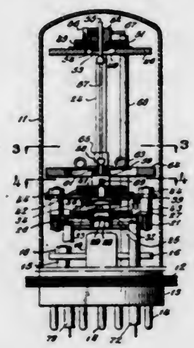
A vapor disseminator comprising: a cylindrical container having perforations in the wall thereof; a cylindrical sealing member encompassing the cylinder side of said container and shiftable thereon, said sealing member having perforations arranged to be brought into registration with said

first mentioned perforations; and means for limiting the shifting of said sealing member in one direction with said perforations in registration

and in the other direction with said perforations out of registration, said means comprising an annular band member at one end of the sealing member and an interfitting projection and notch on said members.

2,438,130
SLIP RING CUTTING MACHINE
Leo T. Schuler, Ruthven, Iowa
Application June 30, 1945, Serial No. 602,623
5 Claims. (Cl. 82—4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. A portable turning tool for refinishing the slip rings on a propeller hub which comprises, an arbor adapted to fit the bore of the propeller hub, a tool guide carried by the arbor and axially aligned therewith, a journal, coaxially supported by said arbor, a sun gear coaxially supported by said arbor, a planetary gear carrier rotatable on said journal, axially parallel and axially equidistant internally threaded planetary gear and journal units, said journals having rotative bearing in openings in said carrier and said gears being in toothed engagement with said sun gear, a cutter arm movable axially on said tool guide, feed screws having one end anchored in said cutter arm and the other end threaded and fitted to the internal threads in said planetary gear and journal units, radially adjustable cutting means supported by said cutter arm, and means to rotate said cutter arm.

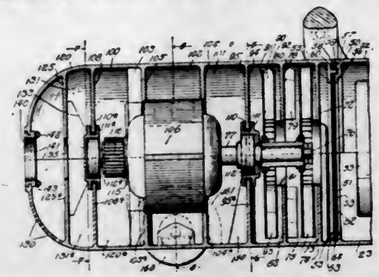


2,438,131
MANUFACTURE OF SUTURES
Theodore R. Selby and Lyman L. Campbell, Chicago, Ill., assignors to Wilson & Company, Inc., a corporation of Delaware
Application August 24, 1945, Serial No. 612,464
7 Claims. (Cl. 57—164)

1. The method of forming a continuous gut string which comprises moistening a split casing, pressing the casing to extrude water laterally therefrom and thereby spread the normally curling edges of the casing, overlapping make-up gut a small distance at the end of the first mentioned casing while both are in a flat ribbon form,

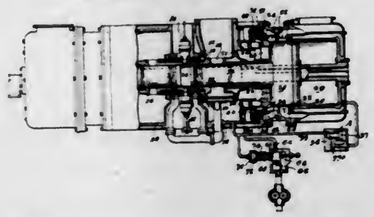
curling the composite ribbon into a longitudinal spiral, pressing the spiral into a narrower tape than the original ribbon, curling the tape, forming it into a substantially cylindrical body, and twisting the cylindrical body while still plastic from moisture.

2,438,132
ELECTRON DISCHARGE APPARATUS
Donald L. Snow, Hempstead, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application November 29, 1943, Serial No. 512,221
19 Claims. (Cl. 250—27.5)



1. High frequency apparatus comprising a hollow resonator having a movable portion for varying the frequency of said resonator, and means for controllably moving said portion comprising an expansible and contractible substantially non-rigid frequency control member coupled to said movable portion, and means for maintaining said member under tension comprising resilient lever means coupled thereto.

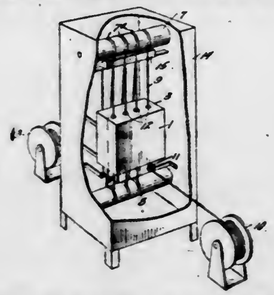
2,438,133
SPLIT CYLINDRICAL HOUSING FOR SUCTION CLEANERS
Charles H. Sparklin, Chicago, Ill., assignor to Birtman Electric Company, a corporation of Illinois
Application August 10, 1944, Serial No. 548,920
6 Claims. (Cl. 183—37)



1. A suction cleaner comprising a cast housing including a suction chamber, a motor chamber with a motor mounting therein, a fan chamber, and a dust collecting chamber having a mounting for a dust collecting means, said housing being split centrally and horizontally into upper and lower housing members provided with a plurality of integrally cast transverse partition walls, at least a pair of which define a fan chamber and

are adapted for mounting centrally therein a plurality of enclosed fans, at least one of which

rotates and moves air in direct contact with the housing walls.

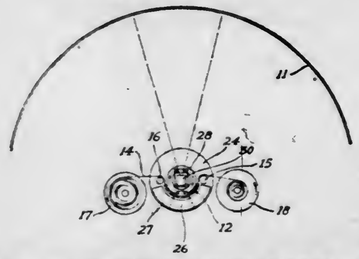


2,438,134
FREE PISTON ENGINE
Hans George Spier, Hamilton, Ohio, assignor, by mesne assignments, to Lima-Hamilton Corporation, New York, N. Y., a corporation of Virginia
Application April 17, 1946, Serial No. 662,883
12 Claims. (Cl. 123—46)

7. In an internal combustion engine of the free piston type, a power cylinder, a compressor cylinder, connected pistons in each of said cylinders, a scavenging air receiver taking the discharge from said compressor cylinder and supplying said power cylinder, a movable end wall defining one end of said compressor cylinder, one side of said end wall being exposed to the pressure in said scavenging air receiver and urged thereby in a direction tending to reduce the volume of said compressor cylinder, means to bias said one end wall in a direction tending to increase the volume of said compressor cylinder, and hydraulic dashpot means tending to lock said end wall in the position of greatest volume reduction and operative to permit a volume increase only in response to a sustained reduction in pressure in said scavenging air receiver.

2,438,135
METHOD OF HANDLING COATED ARTICLES DURING DRYING
Milton D. Swartz, Baltimore, and Kinloch N. Yellott, Cockeysville, Md., assignors to Farboil Paint Company, Inc., Baltimore, Md., a corporation of Maryland
Application March 26, 1942, Serial No. 436,344
2 Claims. (Cl. 117—103)

2. The method of treating an electrical conductor carrying a newly applied coating composition having a volatile solvent component as the electrical conductor passes in a coating and drying apparatus from application means to and around rotary guide means provided with a contact surface, comprising passing the electrical conductor through the apparatus at such a linear speed that the volatile component of the coating composition is incompletely evaporated and the coating is incompletely dried during the time the electrical conductor passes from the application means to and around the rotary guide means,



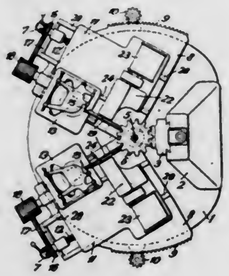
and inhibiting any substantial disfigurement of the undried coating by maintaining a wool grease base on the guide means, said wool grease base being incapable when admixed with the coating composition of affecting the drying rate of the coating and of destroying the predetermined desirable properties of the coating composition during the time the electrical conductor is coated and dried.

2,438,136
METHOD OF PRODUCING CITRIC ACID
Joseph Szucs, Yonkers, N. Y.
No Drawing. Application April 16, 1946, Serial No. 662,610
9 Claims. (Cl. 195—36)

1. A method of producing citric acid by submerged fermentation, comprising subjecting a sugar material to the action of *Aspergillus niger* in an agitated, aqueous solution containing nutrient mineral substances and milk, and passing an oxygen-containing gas through said solution.

2,438,137
APPARATUS FOR PROJECTING MOTION PICTURES
Fred Waller, Huntington, N. Y., and Willis Robert Dresser, Long Hill, Conn., assignors to The Vitarama Corporation, Huntington Station, N. Y., a corporation of New York
Application December 21, 1943, Serial No. 515,112
7 Claims. (Cl. 88—18)

1. Motion picture projecting apparatus comprising in combination, a curved concave screen, a curved cylindrical gate having an aperture therein extending through an arc of less than



360°, means for holding a frame of a motion picture film stationary in said curved gate, means for scanning said stationary frame with a rotating beam of light passing through a rotating lens to project an image in successive increments progressively across said screen, said scanning means including means for rotating said beam of light and said lens about a common center through an arc of 360°, and means for feeding said film when said rotating beam is directed away from said gate aperture, said gate aperture being disposed on the side of said center opposite said screen, and said beam of light being directed through said film and lens from a device which rotates about said center.

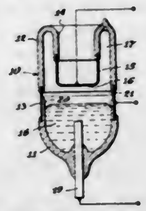
2,438,138

MACHINE FOR GRINDING TOOTH FLANKS BY MEANS OF PROFILE GENERATING DISCS

Albert Aeppli, Zurich, Switzerland, assignor to Maag-Zahnräder und -Maschinen Aktiengesellschaft, Zurich, Switzerland

Application November 12, 1943, Serial No. 510,029
In Germany June 18, 1942
1 Claim. (Cl. 51—92)

In a machine for grinding tooth flanks by means of profile generating discs, means for holding in working position a workpiece to be formed with gear teeth, said work-holding means having an axis of rotation corresponding with the axis of the workpiece, means for moving the work holder axially to gradually bring the whole face width of the workpiece into contact with the grinding disc, two grinding discs having a profiled grinding edge each cooperating at the same time with a different tooth flank of said workpiece, said flanks facing in relatively opposite circumferential directions of the work, a mounting support arranged in the machine for each of said grinding discs, and means associated with both of said mounting supports for pivotally adjusting the respective mounting supports about the axis of rotation of the workpiece through an angle corresponding to the pitch of at least one tooth.



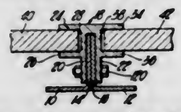
2,438,139

MERCURY POOL ELECTRONIC DEVICE

Edward G. F. Arnott, Upper Montclair, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application October 26, 1946, Serial No. 705,896
7 Claims. (Cl. 250—27.5)

1. In a discharge device having an envelope, a pool cathode and an anode spaced therefrom and with a discharge region between the cathode and anode, an annular ignitor constituting a sustaining part of said envelope and coaxial with the cathode and anode, said ignitor having a conductive portion and an internal dielectric coating thereon and sustained thereby and in



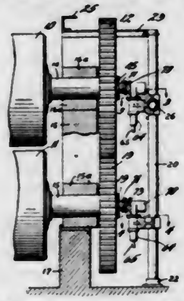
part engaged by said pool cathode and in part exposed to said discharge region and said pool cathode being maintained out of contact with said conductive portion of the ignitor by said dielectric coating.

2,438,140

COMBINATION PLASTIC AND METAL BUILDING CONSTRUCTION

Claude I. Auten, Birmingham, Ala., assignor to Tennessee Coal, Iron and Railroad Company, Birmingham, Ala., a corporation of Alabama

Application May 24, 1943, Serial No. 488,248
4 Claims. (Cl. 189—34)



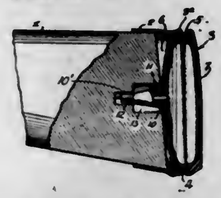
1. In a building including panels extending in substantially the same plane and an elongated metallic supporting member of T-shaped cross-section at the juncture of a pair of panels, means for joining said panels to said supporting member comprising a preformed unitary plastic structural member having a longitudinal groove receiving the leg of said metallic supporting member, a portion of said plastic member lying between the edge faces of said panels, and flanges on opposite faces of said plastic member engaged with said panels.

2,438,141

STEAM JOINT SUPPORTING STRUCTURE

Samuel M. Bratton, Wilmington, Del., assignor to The Pusey & Jones Corporation, Wilmington, Del., a corporation of Delaware

Application July 9, 1945, Serial No. 603,797
11 Claims. (Cl. 34—119)



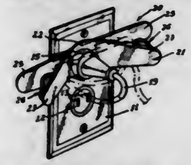
7. The combination with a plurality of steam heated drying rolls in a paper mill, of means for supporting a corresponding number of joint assemblies for delivering steam to and removing condensate from the rolls, said means comprising a series of vertical frame members and a series of horizontal frame members, one series for the upper rolls and the other for the lower rolls, a plurality of manifolds carried by the horizontal supports in vertical alignment with and at a lower level than the associated roll axes, a plurality of manifolds carried by and offset laterally from the vertical supports and aligned with and positioned at a lower level than the other roll axes, steam and water lines independent of said frame members permanently connected to said manifolds, and a joint assembly removably supported upon each manifold and establishing communication between said steam and water lines and the rolls.

2,438,142

AIR CUSHION PAD FOR GUNSTOCKS

William H. Brower, Clark, S. Dak., assignor of one-half to Watson C. Brower, Clark, S. Dak.

Application February 22, 1945, Serial No. 579,297
1 Claim. (Cl. 42—74)



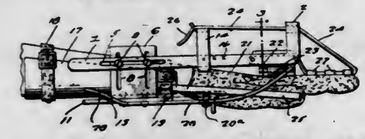
A pad for the butt of a gun-stock comprising an air cushion having a front wall for contacting the gun-stock and a rear wall, a curved peripheral wall joining said other two walls, said curved wall being circumferentially indented, and a resilient boot having an open end adapted to snugly fit over the gun-stock, the other end of the boot being securely and permanently connected throughout its periphery to the curved wall of the pad in the indentation thereof.

2,438,143

CORD SUPPORT

Frank E. Brown, Burbank, Calif., assignor to Frederick M. Turnbull, Los Angeles, Calif.

Application September 10, 1945, Serial No. 615,286
2 Claims. (Cl. 173—361)



1. In a support for an electric cord having a cap for releasable connection to a socket, the combination of: a plane section adapted for reception between the cap and socket while the cap and socket are electrically connected; arms extending outwardly from said plane section; and auxiliary arms projecting from said plane section and in the plane of said plane section and behind said arms, said arms and said auxiliary arms being so spatially related as to retain coils of the electric cord therebetween during connection of the cap to and its disconnection from the socket, said plane section being formed of a dielectric material sufficiently resilient as to loosen the cap from the socket by its deformation responsive to manual force urging said arms together.

2,438,144

SURGICAL BRACE

Benn A. Bunyar, Jr., Kansas City, Mo.

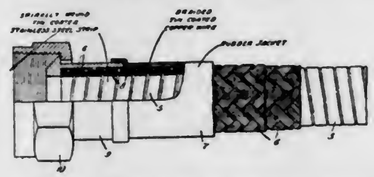
Application July 6, 1945, Serial No. 603,444
3 Claims. (Cl. 272—67)

1. A surgical brace for treatment of the flexor and extensor muscles of the digits of the hand comprising rigid, longitudinally-disposed, parallel side bars provided at their forward extremities with transverse, upturned portions adapted to serve as a suspension bridge to maintain the retractile elements for the finger digits in separate relation, a curvilinear plate adjustably mounted between said side bars and adapted to retain the fore-arm, wrist and hand in proper position, a hand rest connected with said fore-arm plate, retractile elements for the fingers adapted to be suspended on said transverse member of the frame and removably attached to the fingers, the rear ends of said retractile elements being attached to the frame, a retractile element attached at one end to the curvilinear plate and removably attachable at the other end to the thumb, an arched member mounted on said frame and provided with means for attachment of the forward ends of the retractile elements for the fingers, means for regulating the tension on same comprising a plurality of vertical, rectangular slots in the upper edges of the said bars of the frame, rectangular pins projecting from the inner vertical surfaces of said arched member and adapted to seat in oppositely-disposed vertical slots in said bars, and means for adjusting the fore-arm plate in relation to the side bars of the frame.

2,438,145

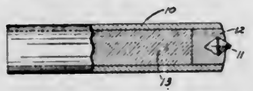
METHOD OF MAKING MANIFOLDS FOR ENGINES

Harold Caminez, Williamsport, Pa., assignor to Avco Manufacturing Corporation, a corporation of Delaware



Application November 27, 1942, Serial No. 467,105
1 Claim. (Cl. 29—157)

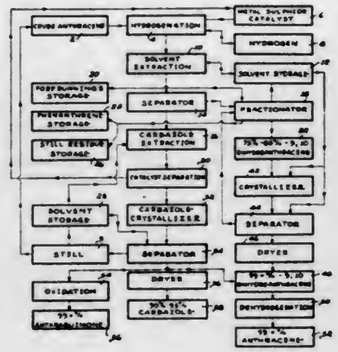
That improvement in fabricating a manifold for an internal combustion engine with an expansion joint for connecting a pair of pipe-sections endwise of each other for the flow of fluid therethrough and provided with out-turned flanges at, and straight cylinder portions adjacent their ends which comprises, assembling an elastic ring in overlapping relation with the end-portions of both sections, the ring in its normal shape having an annular groove in its bore into which the flanges extend when the ring is placed around the sections, assembling around the ring a substan-



tially straight cylindrical sleeve of sufficient length to lap the ring and both of the sections, forcing the flanged ends of the sections together and swaging the ring to straight cylindrical form of reduced diameter while the ring and the sections are confined in the sleeve and the flanges are in said groove, and thereby compressing and elongating the ring between the sleeve and the straight portions of the sections into a fluid-tight fit around sufficient areas of the sections and spreading apart the flanges for flexibly connecting the sections for the flow of fluid therethrough, the groove in the ring preventing excessive compression of the elastic material in the ring between the flanges and the sleeve.

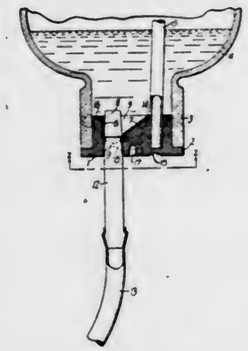
2,438,146
FLEXIBLE METAL HOSE
Ellsworth T. Candee and Alton R. Anderson, Waterbury, Conn., assignors to The American Brass Company, a corporation of Connecticut
Application June 7, 1945, Serial No. 598,090
3 Claims. (Cl. 174—68)

1. A flexible metal hose of the strip-wound interlocked type, suitable for shielding conduit, characterized in that the metal strip of which the hose is made is coated with a metal that reduces the electrical contact resistance between contacting surfaces of the strip and the surface of the metal coating is lightly roughened.



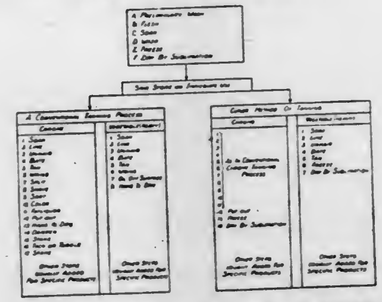
2,438,147
DIAMOND TOOL DRESSER
Donald Wood Carter, Cleveland Heights, Ohio
Application October 18, 1945, Serial No. 623,004
8 Claims. (Cl. 125—39)

1. A tool dresser comprising a steel tube formed with a relatively thin wall, a diamond mounting material in an end thereof disposed in intimate engagement with the inner surface of the tube, a diamond in said mounting material and a core formed of a material having high thermal conductivity disposed throughout the remaining length of said tube and engaged in intimate contact with the mounting material and inner surface of the tube.



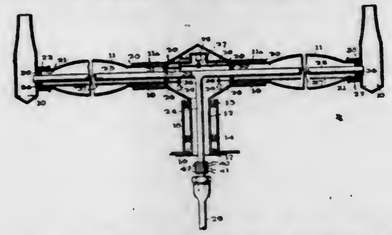
2,438,148
CRUDE ANTHRACENE SEPARATION
Ben Bennett Corson and Robert Sherman Detrick, Pittsburgh, Pa., assignors to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware
Application February 1, 1945, Serial No. 575,686
9 Claims. (Cl. 260—318)

3. A process for refining anthracene cake containing anthracene, carbazole and phenanthrene comprising: hydrogenating anthracene cake in the presence of a metallic sulfide hydrogenation catalyst at a temperature of 275° to 300° C. and a pressure of 40 to 60 atmospheres for a time period to obtain a maximum conversion of



anthracene to 9,10-dihydroanthracene, filtering the catalyst from the hydrogenation products and distilling the hydrogenation products under a comparatively high vacuum pressure to recover a comparatively pure 9,10-dihydroanthracene.

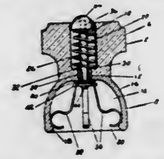
2,438,149
STOPPER
Fred A. Cutter, Berkeley, and William F. Butler, Oakland, Calif., assignors to Cutter Laboratories, Berkeley, Calif., a corporation of California
Application December 18, 1945, Serial No. 635,840
2 Claims. (Cl. 215—47)



2. A stopper for use in conjunction with a flask for making intravenous injections, the inner end of said stopper being formed with an outwardly diverging recess arranged to receive and accommodate the inner end of a connecting nipple, and which serves as a sump immediately adjacent the inner end of said nipple for the reception of solid matter when the stopper is in an inverted position, the outer end of said stopper being formed with a transversely elongated and downwardly converging hypodermic needle entrance channel overlying said recess, and wherein the depth of said stopper varies along said channel.

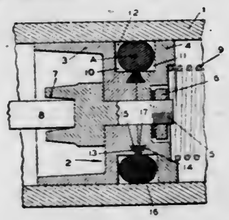
2,438,150
SOAKING, FREEZING, AND DRYING BY SUBLIMATION OF UNTANNED HIDES
Wallace M. Cutler, Gloucester, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application April 22, 1944, Serial No. 532,270
5 Claims. (Cl. 8—94.15)

1. A method of treating a fresh untanned hide which comprises soaking the hide in water to appreciably increase its weight, freezing the hide, and contacting the frozen hide with a water-absorbing medium while said hide is maintained under subfreezing conditions to dry the hide by sublimation.



2,438,151
AIRCRAFT PROPULSION MECHANISM
Ralph B. Davis, Prestonsburg, Ky.
Application November 2, 1944, Serial No. 561,590
2 Claims. (Cl. 170—135.6)

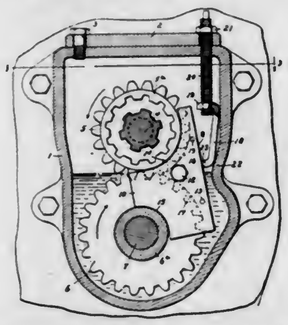
1. In a propeller mechanism for airplanes, a propeller shaft, a plurality of propeller blades rotatable on said shaft for propelling the plane forwardly at relatively low speeds, jet reaction motive force units at the distal ends of said blades, means for adjusting said units relatively to said blades to render said units effective either in the plane of rotation of said blades on the shaft to revolve said blades or in a plane transverse of said plane of rotation to propel the airplane forwardly at relatively higher speeds, and means for altering the pitch of the propeller blades to render them ineffective when the airplane is propelled by the influence of said jet reaction units.



2,438,152
STEEL WOOL HOLDER
Albert A. De Semple, Portland, Oreg.
Application July 9, 1946, Serial No. 682,169
1 Claim. (Cl. 15—209)

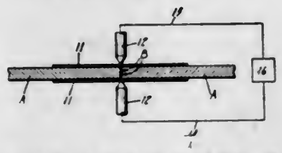
A device for holding steel wool or the like, comprising a main body portion having a central bore enlarged at its upper end to form a shoulder and opening out at its lower end to form a downwardly open recess for the reception of a portion of a wad of steel wool, the rim of said recess being inwardly extended to form an annular lip, an operating rod vertically reciprocable in said bore with its lower end extending into said recess, stop means carried by said lower end of the rod for preventing said end from moving upwards out of the recess, a push button fastened on the upper end of said rod, a spring disposed in said upper enlarged bore coaxial with said rod and acting resiliently between the shoulder of said enlarged bore and said push button for biasing said rod upwards,

and a plurality of spring fingers in said recess and secured at their upper ends to said lower end of the rod and having their lower ends biased radially outwardly against the annular lip of said recess, said lower ends of the spring fingers being formed in the shape of inturned claws for engaging a portion of a wad of steel wool whereby, upon depression of said push button said spring fingers are moved downwardly so that their lower hooked ends expand upon leaving said recess, and upon upward motion of said push button said lower claw ends of the spring fingers grasp a portion of a wad of steel wool to draw it upwards into said recess and engage said annular lip.



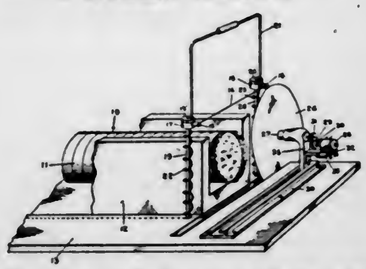
2,438,153
PISTON AND SEAL
Burns Dick, Ferguson, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application January 7, 1944, Serial No. 517,358
3 Claims. (Cl. 309—23)

1. In apparatus of the class described, a cylinder member, a piston mounted therein comprising two members with the adjacent members provided with a first annular groove in their surface and a second annular groove at the bottom of the first groove, a sealing ring positioned in the first groove and having a generally circular cross-section for engagement with the cylindrical surface of the other member, said ring having a flattened section over a part of the periphery to engage with the curved surface of the other member, said sealing member also being provided with an extending portion on its surface opposite the curved surface for reception in the second groove, said extending portion of the ring and the second groove being so associated as to prevent the ring from becoming



twisted when there is relative movement between the piston and cylinder members, and means for clamping said extending portion between said adjacent members.

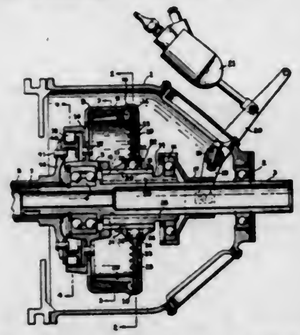
2,438,154
HILL-HOLDING BRAKE DEVICE
Lonnie A. Dickens, High Point, N. C.
Application May 13, 1946, Serial No. 669,356
2 Claims. (Cl. 192—4)



1. In transmission mechanism wherein is provided a housing containing a lubricant, a driving shaft having a driving gear located within said housing, a countershaft having a countergear meshing with said driving gear and in part at least immersed in said lubricant and a brake body located at one side of and in cooperative association with said gears and defining curved channels through which the respective gear teeth respectively pass, the improvement which comprises an inward projection of said housing defining with said brake body a tapered space, a brake lock longitudinally movable in said tapered space in engagement with said inward projection and said brake body, and means operable from the outside of said housing for moving said brake lock in said space to move said brake body toward said gear or release said body accordingly as said brake lock is moved in one direction or the other.

2,438,155
PROCESS OF WELDING METAL BODIES BY HIGH-FREQUENCY ELECTRIC HEATING OF DIELECTRIC MATERIAL THEREBETWEEN
Isaac M. Diller, Glen Ridge, N. J.
Application August 4, 1945, Serial No. 608,905
5 Claims. (Cl. 219—10)

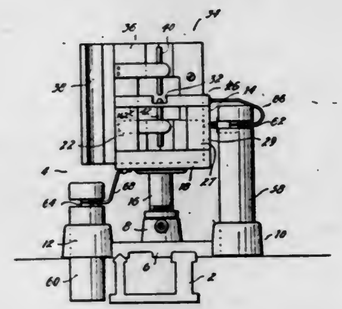
1. The process of electric welding the edges of metal bodies which comprises juxtaposing the edges to be welded and establishing between the edges a zone having the qualities of a highly imperfect dielectric and passing through said zone an electric current having a frequency of the order of at least one megacycle per second, thereby heating the material in the zone by dielectric losses therein to fuse the edges into a weld.



2,438,156
PILE MATERIALS AND PRODUCTION THEREOF
Frederick G. Dodge, La Vale, Md., assignor to Celanese Corporation of America, a corporation of Delaware
Application June 5, 1943, Serial No. 489,866
13 Claims. (Cl. 18—1)

1. Process for the production of pile materials, which comprises associating a thermoplastic material in filamentary form in substantially parallel relationship to form a bundle, causing said filamentary thermoplastic materials to become fused to each other at points along the length of said bundle so as to cause said filamentary thermoplastic material to form at the area of fusion a substantially unitary structure consisting of said thermoplastic material, and then cutting said bundle at a point intermediate said fused portions without fusing said thermoplastic materials.

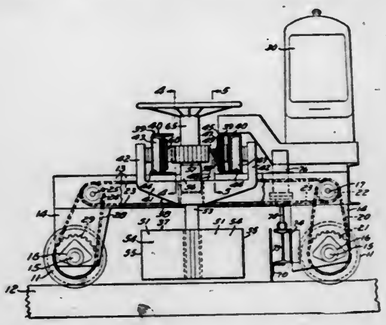
8. In apparatus for the production of pile materials having a basis of thermoplastic filaments, the combination with means for holding a plurality of thermoplastic filaments in substantially parallel relationship, of a wire maintained at an elevated temperature and adapted to be brought in contact with said filaments, whereby the latter are simultaneously fused and severed at the point of contact with said wire, and cutting means spaced from the fusing means for severing said filaments at a point intermediate said fused portions without fusing said filaments.



2,438,157
CLUTCH MECHANISM
Joseph J. Dugas, New Orleans, La., assignor to Higgins Industries, Inc., New Orleans, La., a corporation of Louisiana
Application October 9, 1945, Serial No. 621,245
3 Claims. (Cl. 192—53)

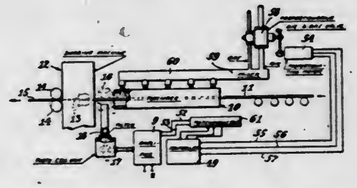
1. Power transmission device comprising axially aligned shafts, a drum clutch member fixedly

associated with one shaft, said drum clutch formed with a hub having circumferentially arranged spline teeth, the drum portion having an inwardly open peripheral groove, a sleeve splined for axial movement only on the other shaft, said sleeve formed with outwardly directed spline teeth arranged to engage the spline teeth of the drum clutch hub, said outwardly directed spline teeth formed with a dwell groove, a second drum clutch having a hub formed with inwardly directed spline teeth adapted to slide axially on the sleeve member, and locking members carried by the second drum clutch having parts arranged to selectively engage the dwell groove in the sleeve member or the peripheral groove of the first-mentioned drum clutch.



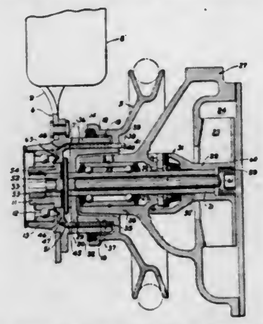
2,438,158
SPECTROGRAPHIC PIN STAND
Edward J. Dunn, West Mifflin, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application February 12, 1947, Serial No. 727,988
10 Claims. (Cl. 315—76)

1. A spectrographic pin stand comprising a holder adapted to be mounted on an optical bench, said holder comprising a vertical frame having a vertical guideway extending substantially therethrough, the frame being made up of a lower horizontal electrically conducting member, an upper horizontal electrically conducting member parallel thereto, and laterally and longitudinally spaced vertical electrically insulating members connecting the upper and lower conducting members, the lateral spacing of the vertical members being sufficient to form the aforementioned guideway, an electrode carrying slide adapted to be snugly received in the guideway of the frame, means on the slide to mount an electrode in position for excitation and means on the slide comprising a resiliently mounted contact making electrical connection between one of the electrically conducting members of the frame and the mounting means for the electrode.



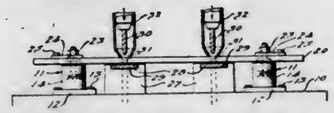
2,438,159
CONCRETE SPREADER
John P. Faber, Dunellen, N. J., assignor to Ransome Machinery Company, Dunellen, N. J., a corporation of New Jersey
Application September 28, 1944, Serial No. 556,128
20 Claims. (Cl. 94—45)

14. In apparatus for spreading concrete deposited upon a road bed, a main frame traversable longitudinally along said bed, said frame having a transverse trackway; a wheeled carriage mounted on said trackway; power operated means for reciprocating said carriage upon the trackway; a spreading blade mounted by the



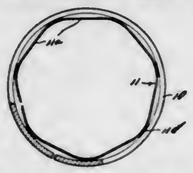
carriage for movement relative thereto about a vertical axis; and mechanism for so moving the blade throughout traverse of the carriage on the trackway.

2,438,160
CONTROL OF SWAGING TEMPERATURES
James H. Green, West Orange, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 19, 1944, Serial No. 519,240
6 Claims. (Cl. 236—15)



1. In combination, a furnace for heating metal, means for supplying heat to said furnace, controlling means for said heat supplying means, a photoelectric cell receiving radiations from said metal as it issues from said furnace, means filtering the visible portion of said radiations so that substantially nothing but the infra-red portion reaches the photoelectric cell, means connecting said cell to said controlling means through an amplifying circuit for maintaining constant the temperature of said furnace and issuing metal, a pair of tubes in said circuit, each tube containing a thermionic cathode, a grid, and a plate, means electrically connecting said tubes in balanced relation, including a direct connection between the cathodes and a connection between the grids through a resistance, a source of biasing potential impressed between the midpoint of said resistance and said cathode connection, means connecting said plates to said controlling means and also through a variable resistance, said photoelectric cell being connected to the grid of one tube and to an intermediate point on the variable plate resistance, and a voltage-regulating diode with bleeder and series resistances forming a closely-regulated source of potential impressed between said direct cathode connection and the connection from the cell to said intermediate plate-resistance point.

2,438,161
TEMPERATURE CONTROL FOR ENGINES
Harry R. Greenlee, Indianapolis, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a corporation of Delaware
Application June 22, 1945, Serial No. 600,855
14 Claims. (Cl. 123—178)

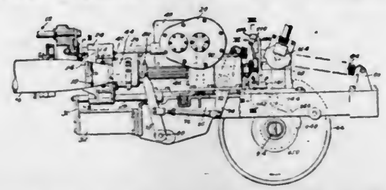


8. In an internal combustion engine having a fluid circulatory cooling system and a pump chamber therefor, the combination of driving means, a pump adapted to be disposed in said pump chamber and drivingly connected to said driving means, driven means, a fan for directing a cooling medium for cooling the fluid in said circulatory system and drivingly connected with said driven means, said driving and driven means comprising coaxially extending cylindrical surfaces arranged in spaced apart and overlapping relation, a coil spring arranged between the cylindrical surfaces of said driving and driven means and fixed at one of its ends to one of said means, a clutch plate at the other end of said coil spring and having a clutch surface, said driven means having a clutch surface adapted to be engaged by the clutch surface of said clutch plate, and a temperature responsive means comprising a rod extending coaxially of said driving and driven means, an expansible bellows at one end of said rod and adapted to be disposed in said pump chamber, a pin extending transversely of said rod adjacent its other end, said flexible bellows being expansible upon a predetermined temperature of the fluid in said pump chamber for shifting said rod axially outwardly thereof to engage the pin at the other end of the latter with said clutch plate to cause the friction surface thereof to engage the friction surface of said driven means whereby said coil spring is caused to be expanded radially to engage the cylindrical surface of said driven means to clutch said driving and driven means together for conjoint rotation.

2,438,162
JIG OR FIXTURE
James F. Guest, Royal Oak, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application March 20, 1943, Serial No. 479,854
14 Claims. (Cl. 77—62)

1. A jig or fixture comprising a gage plate, work supporting means, a plurality of vertically movable plungers, springs associated with said plungers to urge them into predetermined extended positions, said plungers having tapered ends cooperable with tapered portions of said plate to locate and support the same independently of said supporting means, and means for drawing down said plate to clamp a workpiece on said supporting means while depressing said plungers against the action of the springs.

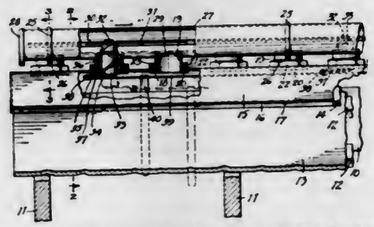
2,438,163
INNER PISTON RING
Otto W. Haling, Rochester, Minn.
Application January 19, 1944, Serial No. 518,853
10 Claims. (Cl. 309—43)



1. An inner ring for a piston ring adapted to be disposed in the ring groove of a piston with said piston ring comprising a substantially polygonal resilient strip having a number of portions adapted to extend about the inner wall of said piston ring in spaced relation thereto, and portions adapted to lie adjacent said wall between said first mentioned portion, and a thin plate secured to said inner ring at said last mentioned portions, said plate having a width substantially the same as the width of said inner ring and being adapted to engage said wall throughout the circumferential extent of said plate to take the wear caused by flexing of said inner ring whereby the resiliency of said inner ring will not be reduced in operation.

2,438,164
PROCESS FOR THE PRODUCTION OF METHACRYLIC ACID
George A. Harrington and Everett Gorin, Dallas, Tex., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application March 28, 1946, Serial No. 657,900
13 Claims. (Cl. 260—526)

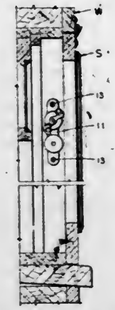
13. A process for the production of methacrylic acid which comprises contacting a vaporous reactant mixture of chloretone and constant boiling aqueous hydrochloric acid with a compound selected from the class consisting of the phosphates and acid phosphates of the heavy metals of subgroups 1, 2, 3, and 4 of the periodic table of the elements and carrier supported phosphoric acid as the catalytic agent at a temperature of from about 200° C. to about 400° C. in a reaction zone to form methacrylic acid and hydrogen chloride and recovering the methacrylic acid so formed from the product mixture.



2,438,165
FUSE SETTING MECHANISM
Otto R. Haas, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application January 31, 1945, Serial No. 575,514
10 Claims. (Cl. 89—6)

1. Fuse-setting mechanism comprising a set of knives engageable with a round to hold it against rotation and a second set of knives engageable with the fuse ring of a round, means for causing the application of equal pressures by said two sets of knives on the round, and means for

moving said second set of knives relatively to the first set to effect a fuse-setting operation.



2,438,166
ROOF VENTILATOR
Harold B. Hawes, Fairfield, Conn.
Application December 4, 1944, Serial No. 566,548
6 Claims. (Cl. 98—42)

1. A ventilator, comprising a base adapted to be mounted over an elongated opening and having a series of longitudinally spaced upwardly extending tubular pipe members carried by said base and providing a series of longitudinally spaced vertical air-flow passages, the outer surfaces of said pipe members being spaced apart to provide spaces between said pipe members constituting a series of longitudinally spaced transverse air-flow passages across said base, and a longitudinally extending cap member disposed in spaced relation above and extending between the upper ends of said pipe members and extending downwardly at each side thereof, its lower edges being transversely spaced to provide a continuous open under side in air communication with said transverse air-flow spaces and being substantially below the plane of the upper ends of said pipe members and in spaced parallel relation above said base to define with said base at each side of the ventilator longitudinal air-flow entrance spaces to said transverse air-flow passages, and support means fixing the position of said cap member with respect said pipe members.

2,438,167
BURGLAR ALARM
Edward C. Heard, Los Angeles, Calif.
Application June 25, 1946, Serial No. 679,229
2 Claims. (Cl. 116—91)

1. In combination, a movable closure for a framed opening in a building, and a noise-making alarm device, said alarm device comprising a base member adapted to be attached to the framed opening adjacent said movable closure, a pivot mounted on said base, a spiral spring attached at one end to said pivot and to the other end to an enclosing casing, a casing adapted to enclose said spring and rotate on said pivot, a striker arm attached to said casing arranged to be held against rotation by contact with said closure, strikers pivotally mounted on the said arm and adapted to permit said arm to continue rotation after one of said strikers strikes a bell, and a bell attached to said base in position to be

struck by said strikers, said striker arm being freed for rotation by said rotary means when said closure is moved from its striker arm holding position.

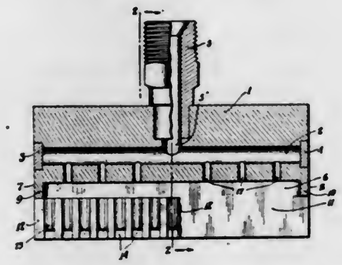
2,438,168
STABILIZATION OF SHELL EGGS
Walter R. Hearst and Gabrielle M. Hearst, San Francisco, Calif.
No Drawing. Application September 25, 1944, Serial No. 555,754
4 Claims. (Cl. 99—170)

1. In the preservation of eggs in the shell the process which comprises preparing an oil-in-water emulsion from a plurality of waxes of different melting points applying said emulsion as a coating to said eggs and irradiating said waxes with ultra-violet rays prior to the coating operation.

2,438,169
MANUFACTURE OF DETERGENTS
Lester Francis Hoyt, East Aurora, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application July 12, 1945, Serial No. 604,731
17 Claims. (Cl. 252—121)

1. In the manufacture of a milled soap from a mixture comprising water and at least the following components: (1) a soap which forms solid masses under normal atmospheric conditions and which is selected from the group consisting of the alkali metal, ammonium, and organic amine salts of higher fatty acids containing 10 to 20 carbon atoms, and (2) a higher petryl sulfonate, the improvement which comprises incorporating (3) starch into a mixture of said type containing an amount of (4) inorganic salt ranging from 0% to 25% of the weight of the mixture, milling and plodding the resulting mixture; and controlling the workability of the mixture in the milling and plodding operations by proportioning the amounts of components (1), (2), and (3) so that their relative weights, on the basis of a total weight of 100 parts of components (1), (2), (3), and (4), lie within the following ranges:

Component:	Parts
Soap	15 to (85–X), where X equals the weight of inorganic salt
Higher petryl sulfonate	at least 6
Starch	5 to 40



and limiting the amount of water in said mixture to 6 to 15 parts per 100 parts of the total weight of components (1), (2), (3), and (4).

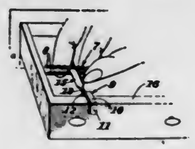
9. A milled soap composition comprising as its essential components: (1) a soap which forms solid masses under normal atmospheric conditions and which is selected from the group consisting of the alkali metal, ammonium, and organic amine salts of higher fatty acids containing 10 to 20 carbon atoms, (2) a higher petryl sulfonate, and (3) starch, together with (4) inorganic salt in an amount ranging from 0% to 20% of the total weight of said four components, the proportions by weight of said components (1), (2), and (3), on the basis of a total weight of 100 parts of said four components, lying within the following ranges:

Component	Parts
Soap	15 to (85–X), where X equals the weight of inorganic salt
Higher petryl sulfonate	at least 6
Starch	5 to 40

said composition containing not more than 15 parts of water per 100 parts of the total weight of said four components.

2,438,170
GAS HEATING TORCH
Howard G. Hughey, Fanwood, N. J., assignor to Air Reduction Company, Incorporated, a corporation of New York
Application December 7, 1944, Serial No. 567,061
3 Claims. (Cl. 158—27.4)

1. A gas torch having a tip comprising an elongated block, a longitudinal channel in the block of less length than the block, a second channel in the block below the first channel and extending into the block from the discharge face thereof, said second channel extending the entire length of the block, an insert completely occupying the second channel, the upper wall of said insert forming with said first channel a gas distributing chamber, said insert having a row of slots in a side face, said slots extending in a direction substantially at right angles to the discharge face of the block and being closed at their outer sides by an adjacent side wall of the block to form a longitudinal series of jet passages, all of said passages being in communication with said distributing chamber, and means for supplying gas to said distributing chamber.



2,438,171
GARMENT PROVIDED WITH SLEEVES
Ralph Jamieson, Edinburgh, Scotland
Application July 25, 1945, Serial No. 606,938
In Great Britain May 10, 1945
3 Claims. (Cl. 2—93)

1. A sleeved garment with high close fitting armholes of conventional formation formed of a body portion with arm holes having gaps on the undersection thereof, the opposite sides of the gaps being straight, and sleeves fitted into said armholes, each of said sleeves having a pair of straight sided angled extensions the sides of which make sharply defined angles with the

sleeve ends, the said extensions, when the sleeves are so fitted, filling the aforesaid gaps and folding at their base to form with the underside of the sleeves definite controlled creases on the bias of the cloth, said creases forming the under section of the high close fitting armholes.
